Bowling looked up and saw that, owing to the converging movement, the first French line had drawn in to nearly half its former breadth, and that the ships on his port bow had converged somewhat more than those on his starboard, having made a more sudden turn. In an instant, therefore, he ordered his own helm to be put somewhat over to starboard, thus bringing his course nearly parallel with that of the right flank of the French. At the same time he gave the word to open fire, and every gun in the ship at once answered him.

The *Mary Rose's* last movement had had the effect of placing all the French cruisers except one upon her starboard bow and beam. To get near her, the vessels which had been carrying starboard helm would, Bowling knew, have either to risk making an awkward turn, which would expose them to his ram, or to continue going round to port. The one evolution would get them into difficulties with their ships of the left flank, the other would cause them to lose a great amount of valuable time. As a matter of fact, none of these ships ventured to port the helm, but the outside ship, seeing herself, as it were, cut off for the moment from her friends, was obviously determined to endeavour to ram.

She was easily recognised as the *Davout*, a fine steel twin-screw protected cruiser of over 3,000 tons displacement, and 9,000 indicated horse-power, that had been launched at Toulon in 1889, and, as she

headed straight for the privateer's port bow, and came on rapidly, she towered a magnificent object. Bowling shifted his helm a point or so, so as to offer his bow, and shouted in rapid succession: "Ready, bow tube!" "Fire, bow tube!" Then, when the two ships were almost in collision, he swung the *Mary Rose's* head still more to port.

The torpedo hit its mark, striking the *Davout* on the port bow immediately under the anchor davit; and even while the huge column of white from the explosion was still in the air, the *Mary Rose* swept close along the *Davout's* starboard side, and, with guns depressed to their utmost limit, fired down through her armoured deck. The *Davout's* people must have been lying down in preparation for the shock of ramming, for only one of her guns replied to that tremendous salvo; but that one sent its 6-in. shell clean through the privateer's thin citadel armour. It burst, with terrible result, on the main deck close to the wheel above which Bowling stood, and killed or wounded every man in the vicinity; but Bowling, although temporarily blinded and half-suffocated by the smoke and dust which poured up through the scuttle at his feet, was unhurt, and, almost ere the ship had had time to fall off, the wheel was taken by others.

The *Mary Rose* had passed the line of cruisers. She had still to pass the line of battleships a couple of miles ahead, and she now had half-a-dozen cruisers close at her heels.

"I can't see astern as well as ahead," cried Bowling to Maintruck. "Station someone here to pass the word down promptly. I must go into the conning tower or on to the bridge, and chance it." And up he went.

There was but a brief respite. The privateer headed due east, and plunged gallantly through the seas towards the second line, and in three minutes she was in the thick of a fire ten times heavier than anything which she had previously experienced. Strange to say, the machinery in the conning tower worked. The unseen brain in that little steel bandbox directed, for a few moments, everything and everybody in the ship. The manoeuvre which had succeeded so well with the *Davout* was tried again and again more or less successfully with an ironclad. The after torpedo was also discharged. The wheel on the maindeck spun this way and that. The ship darted hither and thither in the smoke. She trembled with the bursting of shells. She echoed with the short shrieks of injured men, she shook with the firing of her own guns, she heeled as the helm was put hard over in order to avoid a blow. But all happened so quickly that to tell it would occupy an hour for each minute of that sharp, hot piece of work. Somehow, to be brief, the *Mary Rose* got through the line, thanks to the guiding eye of Bowling; but barely was she clear ere a shell first against the conning tower and wrecked it. In a moment the guiding intelligence ceased to influence her. Everyone was conscious of the change, and would have been, even had the cause of it not been so plainly evident.

"Poor old Bowling!" cried Tompion to the first lieutenant. "Take command, Maintruck. The skipper's done for. God rest him!"

And, so, therefore, it was to Maintruck that fell the duty now that the *Mary Rose* had traversed her enemies, of saving her from their pursuit. Yet happily Bowling was not done for. The shell had shattered everything in the conning tower, and the flying objects had injured him seriously. Moreover, he was stunned by the shock, and, when found, was bleeding from eyes, nose, mouth, and ears, and was quite unconscious; but though the sight of one eye was destroyed and he had received a dozen other wounds, he had sustained no mortal hurt.

Would that as much could be said for the members of the brave ship's company! Lieutenant Day had his left arm broken by an iron splinter; Lieutenant Saltbush had an ugly wound in the chest from a machine-gun bullet; Mr. Roberts, midshipman, and Mr. Plane, carpenter, were killed by the bursting of the same shell, and of the crew, fifty-seven were killed, and thirty-nine badly wounded. Of small wounds nearly everyone had several, for enormous numbers of splinters had been flying about. Indeed, scarcely a single person, except those whose duties had kept them below, had escaped unscathed; and Dr. Rhubarb had his hands full. Burnt with powder, stained, with blood, splashed with horrible relics of unrecognisable humanity, the main and upper decks of the *Mary Rose* presented a sickening sight. The two quick-firing guns on the starboard quarter were literally covered with the mangled remains of the guns' crews, who had been blown to pieces at their duty; the starboard sponson gun had become unshipped from its mounting, and had to be lashed for safety, and almost every place between decks was simply a hole full of wreckage.

But the engines and machinery, and, indeed the

ship as a whole, was as sound as ever. Very little water came in over the armoured deck, and none below it, and Maintruck, as he looked back at the French cruisers, now in full pursuit, and saw the glint of the rising sun upon their white bow waves, felt easier concerning them than he had felt at midnight.

(TO BE CONTINUED.)

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 39.

WHITE. 1—B to Q R 5 BLACK. Kt x K, or moves, or K to Q sq.

2—Q to K 8 mate

if advances P

2—R x B mate

if K to Q B 3

2—P to Q Kt 8,

becomes Kt and mate.

Correct solutions received from Ed. B., Scacchi, W.H.S., Omicron, Omega, J.W.E., and J.D.

PROBLEM No. 41.

By T. M. BROWN.

White to play and mate in two moves.

We are glad to learn that the Yokohama Chess Club has moved into excellent quarters at No. 86, Main Street, and the first Tournament of the present season will be at once begun. All chess-playing visitors to this port will be heartily welcome at the Club Rooms on Mondays and Thursdays, where the Secretary of the Club will be delighted to entertain strangers who are votaries of the noble game.

In contrast with the fiery Cochrane games last week, we give below one of the most cool calculations of modern play. It well illustrates the peculiar genius of the present English champion in making the best of a bad situation when he is cornered. The introduction, game, and notes are from a Home paper.

The Members of the Yokohama Chess Club are expected to muster in full force at the Club rooms on Monday, 24th, at 5 p.m. for the purpose of welcoming to Yokohama Mr. James Marshall, erstwhile one of the strong players of the famous Glasgow Chess Club, and now a resident of Kobe.

The following is the notification for the Tourney in the Y. C. C. of which we spoke a week or two ago.

AUTUMN TOURNEY.

Entries are invited for a short Tourney (to be finished by Christmas).

The Tournament will be an open one with no handicap. There will be no entrance fee and no prizes. It will not be conducted on the same plan as previous Tournaments in this Club but be played-off in rounds: two wins to decide a round; draws not counting. The play will be governed by Staunton's Rules of Chess as adopted by the Club.

Entries will close on the 31st instant at 5 p.m. in the Club rooms, when all players will be paired-off by lot.

The following is perhaps, the most extraordinary game played at the Dresden Congress. M. Winawer adopted an entirely novel defence against what is commonly known as the "slow" form of attack in the "Ruy Lopez" Opening, and obtained by it an overwhelming counter attack. When completely at his opponent's mercy, Mr. Blackburne executed one of those subtle and brilliant strokes for which he is justly famous, and forced stalemate by the sacrifice of Queen and Rook. We are indebted to the *Storning Post* for the notes:—

"RUY LOPEZ."

WHITE—BLACKBURNE. BLACK—WINAWER.

Drawn game.

- (a) Bold and original, and, if this game is any test, quite sound.
(b) Black has already an overwhelming superiority in position, proving clearly that White's development must be radically wrong.
(c) Creating a hole, of which Black, later on, does not fail to take advantage. The move is, however, more or less forced, for White could not allow the threatened onslaught, commencing with P-R 6.
(d) Preparing to land ultimately at Kt 6, via B 3 and R 4.
(e) Having established his forces firmly on the King's side, he now aims at weakening the Queen's flank.
(f) P-Kt 5 was quite safe; but Mr. Blackburne was evidently desirous to force an opening. He must have overlooked Black's forcible reply, which loses a piece.
(g) The Knight has no escape.
(h) All this is finely played on the part of the Russian master.
(i) Necessary. Black threatened to win at once with B x R P.
(j) Also beautifully played.
(k) Mr. Winawer had a simple win at this point if instead of the text he had played R-B 8. If, then, 48 R x R, Black replies with Kt-B 7 eb, winning the Queen. White's only defence is 48 Q-Kt 2, when Black has simply to exchange Queens and Rooks, and remain with a piece and pawn ahead.
(l) He could not stand a check either at B 6 or II 8.
(m) Overlooking the highly ingenious resource which his opponent has in reserve, he could still win with the greatest ease if instead of taking the Bishop he had exchanged Queens at R 7. As it is, White draws by effecting a stale-mate as follows:—50 R x B ch, K x R; 49 Q-R 6 ch. If Black plays Kt x Q White is stale-mated, and if Black moves his K, White continues to check and forces the sacrifice of his Q. Mr. Blackburne is entitled to the highest credit for avoiding a loss in such a clever manner, especially with the attack against which he had to contend.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 17th.

A Manifesto has been issued by the committee of the unemployed urging a thousand unemployed to join the Lord Mayor's procession, and afterwards to meet at Trafalgar Square.

The conservative candidate has been elected at Cirencester by a small majority.

REPORTS.

The British steamer *Empress of Japan*, Captain Lee, reports:—Left Hongkong the 8th October at 1 p.m.; passed Breaker Point the same day at 10 p.m.; Lamock Light the 9th at 2.10 a.m., and sighted Hea Chu the 12th at 10 a.m.; passed Steep Island the same day at 9.30 p.m. and arrived at Woosung the 13th at 5.50 a.m. From Hongkong to Breaker Point; had light N.E. winds and fine weather; Breaker Point to the Lamocks the wind increased to moderate head gale with barometer slowly falling. On the 9th the wind increased from a strong to a heavy N.E. gale with thick weather with nothing visible beyond 1 mile. On the 10th weather getting worse still thick and heavy sea running and steady N. by E. winds throughout the passage; barometer at midnight 29.49. On the 11th a furious N.E. gale until 9 p.m. wind shifting and the north and mountainous sea running ship being off Turnabout with a current of 4 knots against her; at 2 p.m. barometer lowest reading 29.30. On the 12th at daylight, wind backing N.N.W., weather clearing and sea going down ship stood in for Hea Chu Island, which were passed at noon; thence to Gutzlaff strong N.N.W. winds with fine clear weather. From 2.10 a.m. on the 9th after passing the Lamock Lights until the morning of the 12th no land was sighted, weather being thick with heavy head gales and a dangerous sea running with an average current against the ship of 3½ knots per hour. Balance of trip variable winds and cloudy weather.

LATEST COMMERCIAL.

IMPORTS.

More business has been done; 9 lbs. Shirtings being especially enquired for. Yarns also are selling at an advance of 50 cents per picul on some sorts. Turkey Reds are quieter; but Woolens are

in more demand. Sellers are firm and market generally is steady.

COTTON PICKS GOODS.

Russian Moon	1.65 to 1.67½

SUGAR.

We noted in our last the excitement existing in this market, which has not abated, buyers—in their anxiety to get sugar—paying all sorts of prices and each bidding a little higher than his neighbour, with the result that rates close firm at quotations noted below:

	PER PICUL.
Brown Takao	\$4.00 to 4.45
Brown Daitong	4.75 to 4.80
Brown Canton	6.45 to 6.50
White Java and Penang	5.65 to 7.90

EXPORTS.

RAW SILK.

Our last was dated the 14th instant. Since then settlements by foreigners amount to 433 piculs, divided thus:—*Hanks*, 39 piculs; *Filatures*, 205 piculs; *Re-reels*, 74 piculs; *Kakeda*, 40 piculs; *Oshu*, 75 piculs. In addition to this direct shipments have been about 100 bales, bringing the total export business for the week up to 550 piculs.

While writing, buyers have again entered the market for America, and about 500 piculs additional have been settled within a few hours for that destination.

Holders have been surprised by a sharp rise in exchange and have given way accordingly in their quotations. This has apparently brought in buyers again to some extent, especially for good summer-reeled *Filatures* which are now getting very scarce. A part of the trade here seems to expect that we shall see a quiet market until after the Presidential election in the United States.

Supplies have come in freely from the interior, but they show signs of cold weather reeling, and the conditions mentioned in our last hold good to-day.

There have been two shipping opportunities since we last wrote, the Northern Pacific steamer *Zambesi* taking 139 bales for the New York trade and the *Empress of Japan*, which left port yesterday morning, had 685 bales for the same destination. These departures bring the present export figures up to 20,758 piculs, against 16,520 piculs last year and 5,084 piculs to the same date in 1890.

Hanks.—A small business in these, principally medium *Shinshus* at \$635 to \$650. Other sorts have been neglected, but the stock is small and good quality is very scarce.

Filatures.—There has been considerable business in these, the principal portion of which will be included in our next week's figures. Prices have gradually declined with the rising exchange and show a drop of about \$20 on the week; but when quality is taken into account, they are not very much cheaper than they were ten days ago. Demand for Europe has been light, and it looks as though we might have a dragging market for some little time to come.

Re-reels.—These may also be quoted about \$10 down upon the week, but they are still some \$300 per picul dearer than they were a year ago. Of course exchange is now on a different basis to what it was then, but all the same the difference is very wide. Second grade *Re-reels* have been freely done at from \$750 to \$780, while the well known *Joshu* brands have been rather neglected.

Kakeda.—A very small business in this class. Prices could probably be reduced \$10 from last quotations just to compensate for the rise in exchange, as buyers say; but there is something more than exchange in the question—demand for this class of silk having fallen very light, and during the week there were no transactions of any moment.

Oshu.—The long inaction has been varied by the purchase of 75 piculs *Hamatsuki*, good medium, at \$630 to \$650 per picul.

WASTE SILK.

This branch seems much more quiet the last few days. The last prices are well maintained by holders, who seem to think buyers must give way in spite of the heavy stock now offering. Settlements for the week are 818 piculs, divided thus: *Cocoons*, 198 piculs; *Noshu*, 457 piculs; *Kibiso*, 149 piculs; *Sundries*, 14 piculs.

The market has lost much of its firm tone, at least on the side of buyers, and some people think that the present high quotations cannot be maintained. Consumers may be obliged to follow these prices, but they will do so unwillingly as they claim that there must be a reduction in the price of their raw material rather than an advance, the spinning trade having been unprofitable for some time past. The only shipments made during the week have

Original from

been 125 bales Pierced Cocoons which were shipped to New York via the Suez Canal by the steamer *Ghasee*. The *Argyll* which follows her by the same route will carry some more similar produce for the same destination. The present export figures now stand: 6,955 piculs, against 5,358 piculs last year and 4,564 piculs at the same date in 1890.

Pierced Cocoons.—The only sale during the week has been a parcel of medium quality, about 200 piculs—at \$90 per picul.

Noshi.—A fairly large business, *Oshu*, good quality, being done at \$140 and \$146; *Shinshu*, \$114; very trifling affairs in *Filatures* at \$130; one parcel *Hachoji* booked at \$127. Nothing done the last three days.

Kibiso.—Some few parcels of *Filatures* were taken at prices ranging from \$105 to \$117½. One lot of seconds, unpicked, was weighed at \$92½. In *Hira* sorts, ordinary *Oshu* was done at from \$45 to \$50, with a small parcel *Shinshu* at \$57½.

Mawata.—Nothing done as yet. New fibre is coming in very slowly; in fact, nothing more than a few sample bales have as yet arrived.

Sundries.—The only sale reported is about 14 piculs *Neri* at \$12 for the uncleaned stock, and the quality is said to be very poor.

17.

THE GREATEST WONDER OF MODERN TIMES. HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the thoroughout World.

May 2nd, 1890.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unequalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and sealed, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

H.I.H. PRINCE KUNHIKO proceeded to Kyoto on the 22nd inst.

H.I.H. THE PRINCE IMPERIAL proceeded to the Shiba Detached Palace on the 23rd inst.

H.I.H. THE EMPRESS visited the Aoyama Palace on the 26th inst. at 2 p.m.

MR. USHIOA DENGORO was appointed, on the 21st inst., Director of the Yokohama Telephone Exchange Office.

SEVERAL leading residents of Sakai, Osaka &c, intend to establish Spinning Mills there with a capital of yen 250,000.

THE Autumn Manœuvres have been brought to a successful termination, the Emperor returning to Tokyo on the 27th instant.

THE marriage arranged between Prince Konohe Atsumaro and a sister of Marquis Mayeda will take place on the 10th proximo.

THE dividend of the Domestic Transport Company for the second half of this year is estimated at the rate of 7 per cent. per annum.

THE Tokyo City Assembly has adopted a proposition to raise City Loan Bonds to the amount of 300,000 yen for the Tokyo Water Works.

COUNT ANENOKOJI, Japanese *Chargé d'Affaires* in Berlin, has been decorated by the Emperor of Germany with the Third Class of the Order of the Crown.

At the half-yearly general meeting of Shareholders of the Japan Civil Engineering Company (Doboku Kaisha) held in the capital on the 21st inst., it was resolved to dissolve the

firm. The dividend for the past half-year was declared at the rate of 7 per cent. per annum.

DURING a violent blow on the night of the 14th inst. a fire broke out in a house at Yayoicho, Nemuro, Hokkaido, and before the firemen could successfully grapple with it, 59 buildings were burnt.

THE half-yearly general meeting of shareholders of the Kyushu Railway Company will take place on the 28th inst. at Moji. The dividend for the past half-year is estimated at 4 per cent. per annum.

A PUBLIC meeting promoted by the traders of Yokohama, was held at the Hagoromo Theatre on the 21st inst., and was attended by over 700 persons. Addresses were given by Messrs. Isobe Shiro, Otsuka Seikichi, Sudzuki Jubi, and a few others.

DURING the absence of Prince Lobanow de Rostow, Russian Vice-Consul at Yokohama, who shortly goes home on leave of absence, Mr. T. Vassilief, *Edve Interprète* of the Russian Legation, will take charge of the Russian Consulate.

PROFESSOR MOTORA YUJIRO spoke before an assembly of over sixty members of the Japan Ladies' Educational Society held at the Nobles' Club, Tokyo, on Saturday afternoon. Amongst those present were Princess Sanjo, Marchionesses Nabeshima and Mayeda, and many other noble ladies.

THE closing of the Exhibition of Pictures at the galleries of the Japan Fine Arts Society in Uyeno, has been postponed until the 10th prox. The presentation of prizes to the successful competitors at the exhibition of pictures in the rooms of the Tokyo Fine Art School at Uyeno, took place on the 28th inst.

MR. MUTSU, Minister of State for Foreign Affairs, has issued a large number of invitations for the Ministers of State, the Foreign Representatives, high officials of various Departments, the members of the Imperial Diet residing in Tokyo, newspaper reporters, distinguished Japanese and foreign gentlemen of Tokyo and Yokohama and their wives, to be present at a ball to be held at a Imperial Hotel on the 3rd prox., the Birthday of the Emperor of Japan.

THE total income of the Chikubu Railway Company during the previous half-year was yen 64,261,969, and the expenditure amounted to yen 40,109,248, leaving a profit of yen 24,152,721. Of this sum yen 1,500,000 was added to the reserve fund, yen 700,000 was set apart to defray the expenses of establishing the Company, and yen 21,544,000 was declared as dividend, yen 388,721 being written off to the next account.

THE amount of Government paper currency and bank notes in circulation on the 1st inst. was yen 46,229,585.40, of which yen 16,851,905.00 represented Government notes above a yen face value, and yen 536,076.590 Government notes under 50-sen face value, and yen 24,016,914.50 bank notes. Compared with the previous month the above shows a decrease of yen 374,415.45 in Government notes, and yen 124,798.00 in bank notes.

DURING the month of August last the quantity of coals that arrived at Shanghai was as follows:—Wollongong (Australia) coal, 2,815 tons; Hankow (China) coal, 150 tons; Kaiping (China) coal, 2,464 tons; Tonquin coal, 95 tons; Takashima coal (lump), 1,460 tons; Takashima coal (dust), 4,565 tons; Miike coal

(lump), 4,862 tons; Miike coal (dust), 2,798 tons; Karatsu coal, 6,167 tons; Chikuzen coal, 5,285 tons; Imafuku coal, 5,545 tons; and Amakusa coal, 586 tons.

A GENERAL assembly of the Nippon Kangoku Kyokai, an association formed for the improvement of the prison system in Japan, will take place on the 30th inst. in the University Lecture Hall at Kanda, Tokyo. Addresses will be given by M. G. Boissonade, Mr. Ohara, a member of the House of Peers; Prof. Ume, Mr. Motoda, Mr. Nagashima, and Mr. Ohara, Chief of the Section for Prisons in the Police Bureau of the Home Department.

THE report and accounts of the Kansai Railway Company for the past half-year, presented by the Directors at the regular general meeting of shareholders, show that the receipts during the period amounted to yen 98,663,097, of which yen 46,346,250 was deducted for miscellaneous expenses, leaving a net profit of yen 52,316,847. To this sum yen 2,379,694 brought over from the last account, was added, making a total of yen 54,696,541. Of the above, yen 1,000,000 was voted for remuneration of officers, and yen 51,000,000 was distributed as a dividend among the shareholders at the rate for 3.6 per cent. per annum; yen 1,196,541 being carried forward to the new account. A sum of yen 1,500,000 was added to the expenses incurred by the recent inundations.

H.I.H. THE EMPRESS has honoured the members of the Japan Fine Art Society by visiting the Exhibition, which is now open in Uyeno Park, Tokyo. The Empress, accompanied by Viscount Kagawa, Grand Master of Services to Her Majesty; Mr. Hattori, Secretary of the Imperial Household; Dr. Sudzuki, an Imperial Court Physician; Madame Takakura, and many other Ladies in Waiting, arrived at the galleries of the Society at half-past one o'clock on Monday afternoon, and were welcomed by a large body of distinguished persons. The Imperial Party was at once conducted to a tent, where the Empress gave audience to several notables. Then Her Majesty visited Exhibition rooms under the guidance of Viscount Sugi. The Imperial procession returned to the Palace shortly after four o'clock.

THE Import trade is without much alteration, but a somewhat quieter tone prevails. Yarns are a trifle easier, but there is more enquiry for T-Cloths, Turkey Reds, and Velvets, while Shirtings, both heavy and light, are improved in value and firmly held. There has not been a great deal done in Metals, the principal business being in Bar Iron and Wire Nails, which have been taken at full rates. Small parcels of Kerosene are reported sold, and prices fully maintained; and the stock has not been further augmented by arrivals. Quotations for Sugar, both Brown and White, have declined, but stocks of the former are small and well held. There has been a fair amount of Raw Silk sold—over 1,000 piculs having been bought by foreigners, and more than 200 piculs have been shipped direct. Prime qualities have been pretty well cleared out, and many complaints are heard against the colour and quality of the fibre now being brought into market. The transactions in Waste have about kept pace with Raw as to quantity, and buyers grumble at the prices demanded, but nevertheless go on buying. Not a great deal has been done in Tea, the choice grades having entirely disappeared. Full rates have been paid for the small parcels purchased, but stocks are now both poor and small. Exchange has fluctuated, and declined on the week, rates being anything but steady at the close.

EDITORIAL NOTES.

VISCOUNT SHINAGAWA.

THAT extraordinary avowal attributed to Viscount Shinagawa in a speech delivered in Kumamoto, revived the question of official interference in the last general elections, and excited the supporters of the Popular Party so much that they subsequently subjected the Count and his followers to all kinds of rough treatment. When he arrived in Saga he was hooted in the streets, and his meetings were almost invariably disturbed. His original intention had been to travel to Osaka through Okayama and Hiroshima, but he changed his route, and went to Matsuyama in Izumo Province. There he delivered another speech, which is reported to have thrown the Popular Party into fresh excitement. Extracts from the speech are given by the *Sanin Shimbun* as follow:—"When I went to Saga Prefecture I found that the Popular Party had been destroying the bases of self-government. Thence I proceeded to Karatsu by Kurume, and on my arrival there certain members of the *Kaishin-to* instigated a crowd of about six thousand people to meet me. They beat gongs, hoisted mat-fags, and carried bamboo spears. I noticed that there were two artificial heads of cardboard stuck on the top of long poles. They were intended to represent the heads of Count Saigo and myself. My reference to staking our heads (*namakubi*) on the justice of our opinions, provoked much criticism in the press at the time, so that I am little concerned about that feature of the Karatsu demonstration. But I am more than angry that not only the "destructive" *Kaishin-to* but also the members of the Popular Party should assemble a number of ignorant people for the purpose of injuring the policy of self-government as well as the Constitution. A constitutional government cannot possibly be established unless the principle of self-government forms the foundation of the primary institutions of the country, namely, the organizations of the *Cho* and *Son*. Nevertheless, for the purpose of attaining their political objects, the Popular Party contrive to return their own men to the *Shi*, *Cho*, and *Son* Assemblies, and also to elect their own supporters as Headmen of Divisions. That done, they levy taxes from the people, but how the proceeds are spent is never reported. In fact, they employ the public revenue for their own political campaign. Further, they collect large numbers of ignorant people and educate them in rowdism. Under such circumstances, self-governing institutions become a mere farce and the people are impoverished for the sake of political agitators. I grieve that these things should be, and I would fain see them mended. The men of the Popular Party raise lawless disputes, and cry out that no one desiring to be independent must obey the orders of Local Governors. Doubtless they thus secure a fashion of independence, but it is at the expense of forgetting that there is any such thing as a controlling authority in the empire." The speaker then referred to the system of Credit Associations, a Bill for establishing which he had presented to the Diet, where it failed to come up for discussion. In conclusion he said:—"I intended to declare my own political opinions but I find myself so much irritated that I shall defer further remarks." The *Sanin Shimbun*, in reporting the above speech, says that the Viscount incessantly beat the desk with his fist while he was delivering his address.

The *Mainichi Shimbun*, a *Kaishin-to* organ, attacks the Viscount's speech in the following terms:—"Viscount Shinagawa, Vice-President of the National Union, and several of his followers, have been travelling through the southwestern provinces of the Empire for the last few weeks. What have they accomplished during that period? First, they have spread reports representing that fabulous numbers of people attended their meetings. Secondly, they have called the Popular Party a Destructive Party. Thirdly, they have acknowledged that official interference was employed in the last general elections for the purpose of preventing the return of members of that Destructive Party. As to

the first achievement, it is fruitless; for any child can see that the number of people reported to have assembled is fabulous and impossible. As to the third point, it will be made the basis of another motion in the Diet next session. Finally, in a feeble attempt to cloak his own wrong doing, the Viscount called the Popular Party a Nihilist Party and a Destructive Party, and affirmed that to control such agitators, there is no necessity to be restrained by the laws of the country. Can an argument of that nature be called reasonable? Rather must we regard it as an old dream which the Viscount dreamed when he was a member of the Cabinet!" The *Mainichi* then attacks the term "Destructive," used by the Viscount, and points out that in the address to the Throne praying for the dissolution of the Diet, the reason assigned was that the Popular Party had refused to sanction the new enterprises of the Government. Viscount Shinagawa who was one of the Ministers that signed the address, must have interpreted it thus:—"The refusal to grant appropriations for various new enterprises was a destructive act. Therefore those who refused constitute a Destructive Party." If such be the Viscount's idea, he must call the present Cabinet also a Destructive Party. For nearly all the new enterprises of the last Cabinet which the Diet rejected, have been abandoned by the present Cabinet, and will not be re-introduced next session. Count Ito and Count Inouye are strongly opposed to their re-introduction. Are these statesmen also members of the Destructive Party? Has the Viscount sufficient courage to declare that the present Cabinet is a Destructive Cabinet?

Of course there is a considerable measure of special pleading in the *Mainichi's* strictures, but there seems to be some truth also. However, we may leave the Viscount and the *Kaishin-to* organ to dispute the propriety of terms at their pleasure. The result of such a controversy interests us much less than the question which the Viscount's reputed admission has again brought upon the tapis, the question of official interference in the last general elections. Has such an admission really been made? In view of the fact that Viscount Shinagawa refrains from any attempt to contradict the newspaper reports of his extraordinary utterance, it is difficult to credit his power to contradict them. But, on the other hand, what possible purpose could he have expected to serve by making such a declaration? Why should he publicly proclaim that while holding one of the most important posts in the Administration, he abused his power in a manner effectually disposing of his claim to any measure of the nation's confidence thereafter? Nothing short of a hypothesis of temporary insanity could explain such fruitless folly. Then again, the form of speech attributed to him is quite inconsistent with the nature of the alleged declaration. He is represented as having stood up and called heaven to witness that he, Shinagawa, had actually interfered in the elections by every means in his power. We could understand his calling heaven to witness that he had *not* committed the sin of which he was accused, namely, interfering in the elections, but why on earth should he make voluntary oath to the reality of his own misdeeds? Why on earth should he swear that he *had* interfered? The thing is altogether too mysterious. But, beyond question, it has created a most uneasy feeling in the minds of those who, like ourselves, believed that, whatever indiscretions might have been committed by over-zealous local officials, the Central Government never countenanced or instigated a policy of interference. Can we reasonably cherish that faith any longer? The only saving supposition that remains is to attribute the whole discredit to Viscount Shinagawa himself. Whatever high qualities he may possess, discretion does not seem to be among them. It may be that, being entrusted with virtually complete control of election matters in his capacity of Minister of State for Home Affairs, he did actually prompt, or let it be understood that he should not reprove, recourse to measures of the

kind denounced by the Opposition. His retirement from the Cabinet when the agitation had assumed serious dimensions, would countenance this hypothesis. Under any circumstances we are fully persuaded that the Minister President, Count Matsukata, would never have been a willing party to such proceedings. But if it was the misfortune of Count Matsukata's Cabinet to have among its members a man so indifferent to one of the prime duties of a constitutional Government, then we can only say that the Diet's censure was deserved.

JOTTINGS FROM THE "JOGAKU ZASSHI."

THE *Jogaku Zasshi* (Woman's Magazine) laments the appearance of a number of false philanthropists who try to obtain money on the pretence of establishing orphan asylums. There are at present no less than twenty orphan asylums in Japan, but how many of these, asks our contemporary, are maintained by true philanthropists? The *Jogaku Zasshi* is confident that sooner or later the pretenders will be found out and will cease to damage the cause of true philanthropy.

The *Jogaku* pays a high tribute to the virtue of Bishop Williams. Doubtless, says our contemporary, the good Bishop is very far from desiring an *exposé* of his private acts of benevolence and self-denial, but his virtues must be recorded for public benefit, just as he himself recently thought it advisable to move an audience by alluding to the sincerity and devotion of Mr. Osuga, the originator and director of an asylum for orphan girls in Tokyo. The *Jogaku* states that the Bishop is content with clothes bought at a second-hand store in Hikage-cho, and that his cook estimates his table expenses at about 8 *yen* per month. The money which he thus saves is entirely devoted to benevolent purposes. The erection of his church, of the principal hall of Trinity College, and of the *kyu-iku-in* (an asylum for poor children), has been effected principally out of these savings.

For some time past there had been a reaction against female education, but the *Jogaku* states that things began to mend slowly from the summer of last year, and that a marked improvement is observable since the close of the summer vacation in the present year. The revival of a taste for learning among women is said to be specially remarkable in Osaka, Kyoto, and the districts in their neighbourhood. In Tokyo, too, the number of students is reported to be constantly increasing in several female schools.

THE VICE-MINISTER FOR JUSTICE ON THE DISMISSAL OF JUDGES.

THE public having long considered it necessary that some Judges should be placed on the Retired List, no hostile criticism on the late measure of the Judicial Department was at first published in the vernacular press. But the *Kokkai* subsequently attacked it in a long article, which was echoed by the *Hochi Shimbun*. We now read that a reporter of the *Nichi Nichi* obtained an interview with Mr. Kiyoura Keigo, Vice-Minister of Justice, and asked his opinion of the question. Mr. Kiyoura is stated to have spoken as follows:—"I have no explanation to offer, for none is required. The Minister for Justice at the request of the Presidents of the Courts of Appeal, convened a general meeting, at which a resolution was passed that received the approval of the Minister. Whether a certain Judge is considered to have become enfeebled either physically or morally, whether he is or is not competent to discharge his functions any longer, is a point to be determined solely by the Judges of the Courts of Appeal assembled in conclave. They require no doctor's certificate to guide their resolution, for nothing of the kind is provided in the law. It has been stated that the provisions of Art. 74 cannot be applied to any Judge unless he has attained an age of fifty. That is altogether an erroneous view. The word used in the law is simply "enfeebled," and "not enfeebled by old age." Hence, whether a man be young or old, so soon as his moral or physical strength is considered by the Judges of the Courts of Appeal

to be enfeebled, he may be placed on the Retired List. In the present case the Judges of Appeal held that the terms of Article 74 were applicable to certain occupants of the Bench, and the Minister of State for Justice simply adopted their view. No doubt the Judges had good reasons for believing these men to be no longer capable of discharging their duties satisfactorily. In strict accordance with the law, the judicial officers thus designated were placed on the Retired List. There can be no second opinion on the subject."

The terms of the 74th Article of the Law of the Constitution of the Law Courts, to which reference is made above, and concerning the precise significance of which some controversy has been provoked, are as follow:—

When a Judge becomes so enfeebled, whether physically or morally, that he can no longer discharge his functions, he may receive from the Minister of State for Justice, by virtue of a decision of the general assembly of Judges of the Courts of Appeal or of the Supreme Court, an order to retire from the Judicial Service.

According to the interpretation of this Article furnished by the practice just sanctioned, a Judge's competence or incompetence, capacity or incapacity, may always become a subject of discussion at a general meeting of Judges of Appeal Courts or of the Supreme Court, and if the sense of the meeting is unfavourable, a representation to that effect may be made to the Minister of State for Justice, who is then empowered to order the impugned official's retirement from the Bench. On the whole this appears to be a sound system. A Judge cannot look for a fairer tribunal than a court consisting of the seniors of his own profession, and it is easy to see that the permanency of judicial office guaranteed by the Constitution within the limits of law, might engender serious abuses were it not subject to some wholesome qualification.

THE POLICY OF THE GOVERNMENT.

Ever since Count Ito organized the present Cabinet the Opposition has been anxiously waiting to hear the policy which the Government intends to pursue towards the Diet. At first it was rumoured that the Count was compiling a formal declaration, but this report proved groundless, and a studied reticence is observed. Hence all the political parties have refrained from announcing their platforms, except the Independent Popular Party, concerning which we spoke in a previous issue. The *Fiji Shampo* now publishes a rumour to the effect that the members of the Cabinet have been profoundly considering their policy towards the Diet, but that they have yet failed to come to any definite conclusion. Moreover, the whole of the secret Reserve Fund having been spent in the last general election, an additional factor of difficulty is introduced. Several propositions, however, have been made. One is that the Government shall maintain an attitude of reserve (*Chosen-shugi*), and avoid any conflict with the House of Representatives, leaving the latter to do as it pleases. The public may be trusted to pass a just judgment, and should the Popular Party adopt too violent measures, the Upper House will assuredly stand in the breach. The Budget may again fail to come into existence, but if the Government perseveres for a year or two longer, public sentiment may turn towards it. Briefly, this policy is based on the principle that the Cabinet's first duty is to fulfil its obligations to the Sovereign by whose confidence it holds office. Such is the *Fiji's* version.

THE TONKIN COAL MINES.

The *Hongkong Daily Press* translates, from the *Avenir du Tonkin*, and the *Indépendance Tonkinoise*, two items which, whatever may be thought of their accuracy, are of much interest to coal-mine-owners in Japan. We therefore reproduce them:—

The *Avenir* of the 3rd instant says in a leading article:—The results lately obtained by the Société des Charbonnages du Tonkin at Hongay have made it a duty on our part to frankly return to-day upon the views, however slightly sceptic or pessimistic, we expressed a few years ago, at the inception of the enterprise.

We, in effect, augured ill for the success of this affair, which, on the day following its floating, saw, without plausible motive, its shares, issued at \$125, attain \$775, and we thought that these magnificent mines, destined to make the future of the country, would but serve to enrich some adventurous speculators. We are happy to state now that they have not turned out so, and we are happier still to see that the sinking of the Hongkong financial market in the beginning of 1890, thanks to the wise measures taken by the large holders of shares placed at the head of this enterprise and to the skill of the engineer M. Darand, it is upon this stock, there is no doubt, that will be based the recovery of the financial market which for the last three years has suffered such harsh probation.

The effort has been considerable, and our colony has had the satisfaction of seeing at the head of this enterprise men fully determined to well conduct it and to render it a veritable industrial enterprise. We have all witnessed the singular fact of the shares attaining by speculation a formidable price before the technical work had been commenced, and falling off simultaneously with the progress of the work till they touched \$115 per share, a rate which we shall see in a short time rapidly and logically enhanced according to the development of the exploitation and proportionately with the results obtained.

Six millions have been expended to arrive at a definite period of production which will be commenced in the beginning of October. Since the month of March, however, the steamer *Avochie* has made three regular trips per month and, owing to the increasing demand, the Society intend chartering another steamer.

The two centres of production, Nagotna and Hatou, are connected with the Hongay bay by two beautiful lines of railway, one having been in use for the last thirteen months, and the other since a fortnight ago. On a long pier, considered by competent persons as a remarkable work, run three lines and two hydraulic cranes of 50 tons capacity each, which are connected with a warehouse which will be ready in a few days. It is alongside this pier that the steamers of the Society take in their cargo.

Everything has been done so that the operations may be commenced with as little delay as possible, for besides the principal coal depot containing 30,000 tons, a platform close by the pier holds 1,200 to 1,500 tons as a reserve, which by means of ingeniously disposed trap-doors might be put into waggons with the greatest rapidity.

The sifting shop consists of three sieves working 300 tons per day each, or 900,000 kilos per 24 hours. Nagotna turns out 200 tons daily in these sieves; the first bed of Hatou, for which the Society have made arrangements with Chinese contractors, should put out 300 tons per day from the 1st September and 500 tons from January next; the second bed, situated on the opposite side and on the height of the mountain, will be exploited as soon as the miners from France have arrived.

About three thousand workmen, mostly Annamese, not counting the Chinese engaged by the Hatou contractors, are employed in the mines.

The *Indépendance Tonkinoise* of the 3rd inst. publishes a letter from Commodore Fallier dated the 26th Aug. in reply to one addressed him by the directors of the Charbonnages, asking for his opinion on the Hongay coal. It is to the following effect:—That he feels happy to be able to speak of the coal as steam coal. It doubtless possesses the following excellent qualities: it produces no smoke (when it is properly trimmed), deposits no clinkers, for it burns slowly and is entirely consumed. It leaves very little ash and fouds but slightly the tubes, and its consumption is approximately one-fifth less than that of Cardiff coal.

The adoption of this coal will modify the process of trimming, and he thinks that the day of this coal will not have arrived until the firemen understand how to use it properly; in fact it has simply to be put in the furnace little by little and left there without being stirred and it will burn itself out. When the firemen have learned this they will consider this coal particularly convenient, for it saves them the trouble of trimming the fire and cleaning the tubes and furnaces.

The *Porpoise*, which has tried the Hongay coal, has also noticed the absence of smoke and soot in the funnel; this should make it an inestimable coal for men-of-war; it is in fact, above all, a coal proper, without dust.

The Commodore has several times spoken with the Superintendent of the Peak Tramway about this coal and has watched the process of trials that have been made there; he himself verified the indications given him by the Superintendent and the good qualities pointed out by him.

According to what he heard from various sources, he confesses he had been cautious against this coal, but he thinks that the unfavourable reports must be attributed to the inferior article supplied at the outset, and to which is due its bad reputation. But the coal forwarded for trials at which he was present and that which he saw used at the Peak Tramway station are of excellent quality, and he has heard that it is similar to that which the Charbonnages are prepared to henceforward supply.

He has found that it is a slow burning coal, but thinks that a mixture of one-fifth of Cardiff coal will easily remove that drawback, and will cause the coal to burn freely.

He is so satisfied with what he has seen of this coal that he is writing to the Commandant-in-Chief asking his permission to make a trial on a large scale on board a man-of-war. On account of the qualities of the coal, and especially as it is granted that its cost is about one-half less, he considers it a dangerous competitor to Cardiff coal. He is of opinion that Hongay coal has a bright future before it.

THE BERLIN CASE.

In reference to our article upon the great Berlin libel case, a Correspondent gives us a few additional particulars about Mr. Carl Paasch, whom he knew intimately at Peking. Paasch was living at a temple, where he was very comfortably installed, and where he used to give very pleasant and elaborate little dinners. He was a particularly nice young fellow; quite a *persona grata* in society, where his talents as a violinist made him generally welcome. He was then a partner in a German firm at Shanghai, and his object in living in Peking was understood to be

a desire to learn the language—of course with a view to business. But, adds our Correspondent, he was perfectly mad on the subject of Jews; the very mention of a Jew was enough to excite him, and he was wont to launch out into the most unmeasured denunciations of the Jewish race whenever an opportunity occurred, enlarging upon their pernicious influence wherever they might be, and particularly of course in Germany, where he represented them as a standing and a growing danger to the whole Empire. He was in favour of persecution, expulsion, and the severest measures open to Government. Our Correspondent, however, had left Peking before the occurrence of the events we have now published.

MR. FROUDE AND RUDYARD KIPLING'S "EDUCATION."

"ATLAS" in the *World* says: The *Pall Mall Gazette* has been quoting some stories from an American journalist who interviewed Mr. Froude. Mr. Froude's opinion is, it seems, that Rudyard Kipling is "sharp and clever, especially in his poetry. But I should think," he adds, "he had no real education. I do not think that any real scholarship is possible without a thorough knowledge of Greek. To be sure, Carlyle had none." Was there ever a falser generalization than this? What use would a knowledge of Greek have been to Mr. Kipling? Would it have added one whit to the humour and pathos to be found in *Plain Tales from the Hills*? Would it have added greater piquancy to Bret Harte's *Heathen Chinee*, or imparted greater interest to his *Outcasts of Poker Flat*? Would a thorough knowledge of Greek, if possessed by Dickens, have added to the hilarity of Bob Sawyer's supper party; or if by Thackeray, who had but a smattering of it, to the pathetic rendering of Colonel Newcome's deathbed? Mr. Kipling will find that, for all Mr. Froude's lament, he will make infinitely more fame and money than any of the professors of classics who have ten times his education and not a quarter of his natural genius.

A NEW HARBOUR IN THE NORTH.

THERE is talk of a harbour being constructed at a place called Kominato, some thirteen miles South of Aomori, where a fine deep bay, nearly landlocked, offers exceptional inducements. The project is said to have originated with Mr. Ono, Director of the Japan Railway Company, and to have been taken up by shareholders of the Fifteenth National Bank, who, if they obtain official permission, propose to spend 250,000 yen on the works, which they will commence next December, and finish before the close of 1893. Their idea is that the Pacific Mail steamers will prefer the port to Yokohama, inasmuch as they would save 50 hours, and also that when the Siberian Railway is finished, a good port in such comparatively close proximity to Vladivostok will offer many facilities. We regard the programme as exceedingly chimerical. Passengers and goods will come to the centres of population and commerce, not to ports twenty hours distant by rail and fifty hours by steamer, Yokohama is now mistress of the situation. It has nothing to fear except from a good harbour in Tokyo, if anything of the kind were possible.

THE NEW JAPANESE REPRESENTATIVE TO ROME.

THE *Kokumin Shimbu*, a radical organ, vehemently attacks Mr. Nakajima Nobuyuki, one of the most distinguished members of the *Fiyu-to*, who has now temporarily abandoned his political career, and become Envoy Extraordinary and Minister Plenipotentiary to the Court of Rome. The article, written in the form of an address to Mr. Nakajima, is a remarkable production. The *Kokumin* alleges that the whole of Mr. Nakajima's career, ever since he attacked the late Mr. Okubo in the Senate to the moment of his election as President of the House of Representatives, was a long spell of subserviency as a tool to Mr. Mutsu, and while on the one hand he was commissioned to throw in his lot in various ways with the Radicals, he was always ready to bow down to Count Ito. His reputation, the lampooner proceeds, is now prone in the mire. A professed Christian, he failed to

Original from

raise the standard of Christianity in Japan; member of the Radical Party, he was unable to prove his sincerity; President of the House of Representatives, he could not represent popular opinion. The *Kokumin's* peroration is that Rome, the city where patriots once rose to fight for liberty, is a neglected ruin. When Mr. Nakajima sees the ruins telling of the past history of the place of martyrs to freedom, what sentiment will be awakened in his bosom?

Comical as all this is, it has an inspiring side. One may smile at such extravagant vehemence, but yet there is a ring about it that appeals to the hearts of Englishmen and of Italians no less. The *Kokumin Shimbun* is stalwart enough to think that no sound Radical should accept office from the statesmen to whom modern Japan owes everything, from the Constitution which allows Mr. Nakajima's party to have a voice in affairs of State, to the freedom which enables the *Kokumin* itself to pen such diatribes. Well, there is nothing like thoroughness. We admire the *Kokumin's* spirit, whatever we may think of its judgment. But does not our contemporary fail to perceive that a very dangerous inference is suggested by its writing: the inference that party politics exercise influence in diplomatic circles? Nothing could be more injurious than to admit such a notion into the practice of a country's representatives abroad. If there be one administrative sphere more than another from which every breath of party politics must be excluded, it is the diplomatic sphere. The rule is strictly observed by all European States. America, indeed, neglects it, but America can afford to do so, for her foreign politics have not yet become a serious chapter of her history. A British, French, German, Italian, or Dutch Representative at a foreign Court is a man absolutely neutral in domestic politics, so far as the world knows or can discover. We hope that the same wholesome principle obtains in the sphere of Japanese diplomacy. If it does, then the post of Minister in a European capital is precisely the post which can be offered to and accepted by any able man, quite irrespective of his political complexion, by any Cabinet whatever its political creed.

A EULOGY ON COUNT YAMAGATA.

THE *Kokumin Shimbun*, a Radical organ, pens a high eulogy on Count Yamagata, in his capacity of Minister of State for Justice. It alleges that the public had long been aware of the friction existing among members of the Judiciary, but that hitherto no Minister had attempted to correct the abuse. One result of the friction was the disgraceful gambling prosecution, or rather persecution, instituted by certain Judges against their colleagues. On Count Yamagata's shoulders devolved the difficult task of restoring order and he at once removed the leaders of both parties. Still the public was not satisfied, as the rest of the offenders remained undisturbed. But now, to the infinite delight of the nation, the Count has meted out to all the measure they deserved. Moreover, the organization of the Law Courts cannot be perfected unless able men are appointed to the important post of Judge, and now the Minister has removed some of the incapables. There are many others still scattered throughout the empire, who must be treated in a similar manner. "We cannot always agree," says the *Kokumin*, "with the Count's political opinions, but we are ready to express our sincere approval of what he has accomplished since he assumed the portfolio of Justice in Count Ito's Cabinet. And in praising Count Yamagata, we cannot help urging Count Inouye, who is known to be a sharp statesman, to make a clean sweep of the local Governors, for whose removal the public has long been looking."

THE BARRISTERS' EXAMINATION SCANDAL.

A COMMOTION greatly exceeding the importance of the event, has been created by the scandal in connection with the examination of barristers. That some of the papers containing questions came into the hands of candidates before the examination, there appears to be no doubt, but after all, that is not an event so unprecedented

as to throw the public into a tumult. Innumerable rumours are circulated. According to some authorities, the papers were sold for 2,000 yen, eighty candidates paying 25 yen each. Others put the original price at 200 yen, and affirm that the purchaser, having taken a copy for his own use, re-sold the information to several other candidates. Then again, we read an accusation against the Faculties of the Meiji Horitsu Gakko and the Tokyo Hoyakuin, who are charged with having divulged some of the questions at lectures. The *Nippon* capped all these stories, for it actually had the temerity to clearly indicate Mr. Namura Taizo, President of the Supreme Court and Chief Examiner, as the culprit, and to allege that he received ten thousand yen for the papers, a number of candidates clubbing to raise the money. The manifest extravagance of such a story deprives it of all value, but the *Nippon*, which was released from suspension only four weeks ago, has been placed once more under the ban, and truly we cannot pity it, for a newspaper which circulates slanders so grave on the evidence of idle talk, cannot expect to enjoy liberty of speech. There were 1,200 candidates at the examination, and the disturbance that occurred when No. 25 *ka*—the competitors sat in rows according to the syllabus—was discovered to be in possession of the questions together with previously compiled answers, is said to have been distinctly spirited and lively. Tables and chairs travelled around with considerable velocity, but it does not appear that any limbs or heads were broken. Several of the rioters were arrested, as also were six candidates suspected of having been implicated in the fraud. They are now undergoing examination. The *Kokai* does not hesitate to lay the blame on the examiners, but that is pure conjecture. Among the candidates the principal culprits, according to the News Agency, are two students of Wafutsu Horitsu Gakko, namely, Maruyama Toshio and Torii Kumakichi. At the examinations in Yokohama, also, a clerk of the Local Court who was a candidate, remained in the office throughout the night preceding the examination and, breaking the seal of the letter which came from the Department of Justice with the question papers, copied the questions and refastened the envelope. He did the thing clumsily, however, so that when Mr. Kozaka, the Public Procurator, received the letter, he suspected something, and going to the desk of the clerk after the latter had gone to the examination hall, found a copy of the paper. It would seem from all this that sufficient care is not exercised by the responsible officials. As for the examinations, they have of course been declared invalid, the Government telegraphing in that sense to every place where they were in progress.

The man who surreptitiously obtained and distributed the papers is said to have been discovered, though he is not yet arrested. It appears that nine persons were under suspicion, but on being brought before the magistrates they were released, with one exception, Takei Kumakichi, who is still in custody. This man formerly was an inmate of the house of Mr. Namura Taizo, the Chief Examiner.

Meanwhile, the occasion has been seized by the students of the Law Schools in the capital for another display of the precocious self-sufficiency so often witnessed in this country of late years. They held a meeting on the 22nd instant, and elected three representatives who were instructed to wait upon the Minister of State for Justice and convey to him a statement of the students' desires. The Minister, being absent from Tokyo at the Autumn Manoeuvres, the deputation was received by the Vice-Minister, to whom the following recommendations were presented:—First, that the last examination shall be declared altogether invalid; secondly, that another examination shall be held in the middle of December; thirdly, that the present examiners shall be relieved of that function; fourthly, that new examiners be appointed from among experts having no connec-

tion whatever with private law schools; fifthly, that the examination papers shall not be printed, but duplicated by some other method; sixthly, that a stricter system of supervision be introduced; and seventhly, that every person whose conduct in connection with the last examination was open to suspicion, shall be excluded from the next. The Vice-Minister seems to have received this youthful deputation very politely, and is said to have promised that their suggestions should receive due attention. But really it is too farcical that youths should undertake in such a manner to instruct their elders. Not one of the points advanced by these self-satisfied lads could have failed to occur to the experienced officials who have charge of the affair. In fact, it is already rumoured that, at the first intelligence of the trouble, the Minister of State for Justice resolved that men connected with private Law Schools should be excluded from the board of examiners. But the juvenile Solons of Japan think themselves endowed with divine wisdom to set the whole world straight. Their ineffable presumption is one of the most extraordinary and disquieting features of the time.

In addition to the above deputation, we read in the vernacular press that the five Law Colleges of the capital, the *Dafutsu*, the *Senshu*, the *Seimon*, the *Meiji* and the *Hogaku*, have elected committees of five each to draw up and present to the Minister of Justice a petition in the sense of the advice so kindly and gratuitously furnished by the three representatives. Truly if these young gentlemen knew how amusing their conduct seems to outsiders, they would moderate their pragmatical zeal. Did they ever hear, we wonder, of the celebrated case in America where a fertile-brained youth managed to get a copy of the examination paper by sitting down on the printer's forme, and carrying away an impression on the seat of his pantaloons. That was a phenomenal affair worthy to exercise their ingenuity of prevention, but on the present occasion they seem to be a little wasteful of their intellectual gifts. We do not for a moment mean to condone the dishonesty of those who sold and those who purchased the examination papers: such persons deserve disgrace and denunciation. The students of the law colleges, however, are only adding ridicule to the scandal.

Meanwhile, the Public Procurators are reported to have been engaged in searching for the culprit, and to have finally ordered the seizure of Nakamura Tokujiro, Superintendent of the Meiji Horitsu Gakko. According to rumour, this Nakamura has confessed that, previously to the examination, he sold the second question of the first day's papers, viz., a query as to the punishment for a crime of rape accompanied by fatal violence—to a candidate by name Yoshiike Shigenosuke, for 260 yen, through one Yonekawa Keishi. Nakamura formerly resided in the same house with Mr. Namura Taizo, President of the Supreme Court and Chief Examiner; hence the libel connecting Mr. Namura with the affair. Subsequently, Yuki Dosei and Watanabe Tomozo, students of the Meiji Horitsu Gakko, and Nagashima Shikazo, a probationer of the Judicial Department, were arrested on suspicion.

The irregularity connected with the examination was not confined to Tokyo. Similar reports have also come from Yokohama, Matsuyama, Yamagata, and Osaka. The culprit in Yokohama was discovered, as reported above, but with regard as to the rest, it is not yet known how far the rumours may be credited. As to the printers, it appears that no irregularity on their part was possible. For the Director of the Government Printing Bureau (*Insatsu Kyoku*), to which the work was entrusted, did not hand the manuscript to the printers till very late on the 23rd ultimo, the day previous to that on which they were to be sent to the Judicial Department. The composition was entrusted to a fixed number of the most trustworthy employes, under the strict supervision of the superintendent, and as the men worked all night, and the papers were

Original from

sent to the Judicial Department the following morning, there was no possibility of any proofs being stolen. So, at least, says the *Kokkai*, but we do not follow its reasoning.

This event is not without precedent. Hitherto, similar rumours have been circulated in connection with every examination for barristers, and the Authorities have been considering the propriety of altering the present system. Rumour now says that in future all examinations will be conducted at Courts of Appeal instead of at Local Courts, and will be superintended by Public Procurators attached to the Courts of Appeal. Further, the questions will be determined by the Presidents of Appeal Courts when they assemble, and will not be printed, but each question will be written on a black-board. Such precautions would no doubt prevent any repetition of the scandal.

The students of the six law colleges have presented their petition to the Minister of State for Justice. It contains the following suggestions:—(1) That examiners shall compile the questions on the day of examination, and that each question shall be written out on a blackboard. (2) That the examination questions for local districts shall be compiled separately, and despatched by the Chief Examiner himself. (3) That no name shall be signed to the answers, the number or mark of the candidate only being used. (4) That the number of marks obtained by each candidate shall be published. (5) That the examination papers ought not to be printed. (6) That the answer shall be kept in the hands of the Chief Public Procurator.

The *Jiyu* publishes a dialogue between its reporter and Mr. Namura, President of the Supreme Court and Chief Examiner. The latter declares that as he was totally ignorant of the affair, his honour cannot be impugned by idle rumours: the real culprit will soon be ascertained. He naturally laughs at the charge brought against him by the *Nippon*, and concludes by saying that though the Metropolitan Police have already found the culprit, the duty of publishing his name must be left to the proper authority.

This scandal is apparently destined to have one good result, namely, that of directing attention to several defects in the present system of examinations. As to the printing of the papers, we really fail to see that any valid objection can be raised. Examination papers are printed in all European countries, and that too for competitive contests where the inducements to fraud are incomparably greater than they can ever be in a merely qualifying examination. The Barristers' Examination in Japan is purely qualifying. Any number of candidates may present themselves, and any number may pass. It is only necessary to attain a certain standard of efficiency. If, then, the printing of question-papers can be securely managed in the West for examinations of the most keenly competitive character, surely it ought to be possible to use type in Japan without serious danger where a qualifying test alone is to be applied. The notion of writing each question on a black-board for twelve hundred candidates to copy—there was no less a multitude of would-be barristers at the recent Ueno examination—is altogether clumsy and old-fashioned. On the other hand, it is difficult to perceive why papers intended for use on October 19th should be printed on September 24th. Such an interval greatly increases the chances of mishap. The plan employed is to print all the papers at the Government Printing Bureau in Tokyo, and subsequently distribute them throughout the empire to the various places where examinations are held. If this be necessary, which we doubt, an interval of nearly a month ought not to be required. Again the signing of candidates' names to answers is distinctly objectionable. Nothing of the kind has been permitted in the West for many years—nearly half a century—and the danger of thus enabling candidates to be identified becomes doubly great when, as is the case in Japan, there are to be found among the examiners men who give instruction in

the very schools where the candidates have been educated. It seems inexpedient that even these persons should be on the board of examiners, and certainly it is most unwise that candidates should identify themselves by signing their names to papers. With regard, finally, to the question of publishing the marks obtained by each candidate, there can scarcely be any second opinion. Not only are candidates entitled to know how they stand, but the public also has a claim to be informed about the relative merits of men whose care the conduct of important suits affecting life and property may have to be entrusted.

The News Agency reports that the examination system was precisely one of the things that received attention at the hands of the new Cabinet when it came into office, and that a completely reformed plan has been prepared and is now awaiting promulgation. It cannot, however, be published until the return of the Minister of State for Justice, who is now absent at the autumn manoeuvres. There is reason to regret that this desirable step could not have been taken before its necessity was demonstrated by a scandal like that which has just occurred.

A PICKPOCKET CAPTURED.

A VERY clever capture of a pickpocket was made on Thursday last at the Shimbashi railway station by Mr. C. M. Duff. It appears that Mr. Duff was standing near the baggage office when he felt a touch in the neighbourhood of his waistcoat pocket and looking down, he perceived that his watch-chain was dangling from his button-hole. Without a moment's hesitation, he seized a stalwart Japanese who was standing beside him. The man vehemently protested his innocence, and his declarations were confirmed by two accomplices who showed a disposition to interfere violently. Mr. Duff, however, taking the law into his own hands, treated these gentlemen after a fashion which not only effectually checked their remonstrances, but also deterred the chief culprit from making any serious attempt to escape, though his shrews were sufficiently powerful to promise success had he acted promptly and boldly. A policeman's services were soon in requisition, when it was found that the man had Mr. Duff's watch in his hand, and also that he carried a pair of nippers with which the chain had evidently been cut. Probably the programme had been that, in case of seizure, the culprit should be relieved of the watch and other evidences of guilt by his two associates, but Mr. Duff's conclusive action towards the latter put them out of the arena before these details could be carried out. The man maintained an obstinate demeanour at first, but finally, seeing that the game was hopeless, he made a confession which gratified the police immensely, for it enabled them to identify in him an inveterate pickpocket who, with seven confederates, had for a considerable time been exploiting the citizens of Tokyo. The whole gang were soon in custody, and we learn that no less than thirty watches were recovered.

WINDING UP OF THE BUILDING COMPANY.

THE shareholders of the *Doboku Kaisha* (Building Company), an important enterprise started five years ago under the auspices of Messrs. Okura, Shibusawa, and other well known merchants of Tokyo, held their semi-annual general meeting on the 21st instant, when the accounts for the past half-year were read and passed, a dividend at the rate of 7 per cent. being declared. After the regular proceedings had terminated, Mr. Okura, President of the Company, rose and said that the time had arrived to take an important decision with regard to the Company's future. The enterprise had been started five years ago when numerous public and private buildings were in course, or on the eve, of erection, and had been carried on ever since without any special mishap, its condition at the present moment being one of moderate prosperity. But since the promulgation of the new Law of Finance, the provisions of which required that all public works must be

put to open tender and given to the cheapest bidders, the question of excellence of construction had been entirely subserved to that of cheapness, and it had become difficult for a Company with such aims as theirs to compete with the mushroom speculators of the hour. They could not reasonably hope, under such circumstances, for a steady continuance of prosperity, and since they were now in possession of an unimpaired reserve fund of 200,000 yen, and could wind up their affairs without incurring a *sen* of loss or causing embarrassment to anyone, he saw no better course to pursue. The proposition was adopted unanimously, and a Consultative Committee was at once appointed, consisting of Messrs. Shibusawa Yeichi, Terada Masanari, Yokoyama Magoichiro, and Shimokobe Kwanshiro. The Company has hitherto paid a steady dividend of 10 per cent., but as we have seen, altered circumstances have reduced this to 7 per cent. By gradually winding up affairs at the present moment, the shareholders will suffer no loss, the whole of their capital, two million yen being restored to them, together with a reserve fund of two hundred thousand, so that they will have a surplus of 10 per cent. to divide among them. It seems to us to be an act worthy of the reputation of the eminent business men directing this company that they should have the courage and foresight to recommend the closing of the enterprise, at a time when, not only all loss can be avoided, but also the shareholders can retire happily with an actually increased sum of capital to devote to other purposes. The example is excellent. If only it were universally followed what an incalculable amount of suffering and hardship would be avoided. Men like Messrs. Shibusawa and Okura cannot afford to have their names associated with a failure of any kind. When the public entrusts its money to such persons, it has a right to expect that they exercise their sagacity to save the subscribers from loss, and it is just as much the function of that sagacity to calculate the right moment for abandoning an enterprise as to devise clever means of carrying it on. The fact that a Company like the *Doboku Kaisha* cannot find its account in existing circumstances is regrettable, but the wisdom and self-restraint shown by the directors at the last moment establish a precedent which deserves to be noted and adopted universally.

A JAPANESE GEOGRAPHER.

THE *Keigyosha*, a well-known publishing firm in Tokyo, has just brought out a fifth edition of the "*Chiri-gaku Kōgi*" (Lectures on Geography) by Mr. Shiga, editor of the *Kokkai* and joint editor of the *Ajiya*. Mr. Shiga is a born geographer. Passionately fond of travel, he brings keen and quick powers of observation to bear upon everything met with in his journeys. His "*Nan-yo Jiji*" (Current Events in the South Sea), embodying the results of flying visits to Australia and the South Pacific seven or eight years ago, established his reputation as a successful traveller; and the little volume now before us conclusively shows that he is no less a success in the broader field of Geography. The work grew out of lectures delivered by the writer in the interval of his editorial labours before the students of the Tokyo Eigo Gakko, now the Nippon Chu-gakko. It is written in the fresh and charming style of which Mr. Shiga is a master. Its popularity may be judged by the fact that it has reached its fifth thousand in a space of three years, a reception not extended to many works in Japan. Perhaps the most noteworthy feature of the book is its general plan of arrangement. The author aims not at hammering dry facts into the students' heads, but at awakening in them an interest to study Geography, and at pointing out to them the method in which they can most usefully pursue the study. He constantly enjoins upon his readers the importance of relying more upon the power of reasoning than upon that of memory, and he illustrates every general direction by reference to facts with which most students are familiar. Moreover, in several places the book is enlivened by the insertion of very

attractive essays bearing on various topics connected with Geography. Not the least interesting and useful feature is a comparative table at the end of the volume, showing the position, area, population, general geographical features, political system, education and religion, race and character, fighting capacity, finance, climate and occupation, products and merchandize, means of communications, chief towns and ports, and weights and measures of the principal countries of the world.

OUR EAST AND ITS RESOURCES.

UNDER this title, Lieutenant M. Vacilief, of the Imperial Russian Navy, has written concerning the history, natural products and business possibilities of the regions bordering the Pacific which have been explored, settled, and controlled by those subject to the Government of the Emperor. This book contains one hundred and forty pages, in twelve sections. Following a general introduction, comes the first chapter, relating to the discovery and occupation of the shores of Okhotsk Sea, where the earliest post was established in 1659. The second chapter treats of Kamchatka, where the first block-house was erected in 1644. In the next section, we cross to the American Continent, Popof having appeared there in 1711. These pages are rich in dates, and names of the brave men who were the pioneers—those who made the history recorded in this volume. Division fourth gives us the story of the Amur district, from 1638 to the treaty with China in 1858. Subsequent chapters are devoted to the zoology, nomenclature, description of taking, uses, value, &c., of whales, seals, sea-otters, fish, seaweed and other growths of adjacent waters. Our author refers to the services rendered by vessels of the Voluntary Navy in developing the fisheries of the North Pacific. The tenth chapter treats of terrestrial animals, those of commercial value, being: sable, fox, arctic fox (white and blue) squirrel, bear (white, brown, black), otter, river beaver, ermine, reindeer, spotted deer, roebuck, musk, she-goat, mountain sheep, tiger, panther, and *muslinia gulo* (violfrass). We learn *en passant*, that, in 1696, white bears were abundant in Japan. In the eleventh chapter we are told that the vegetable kingdom of the Amur region is very rich, though hitherto little studied. The wide stretch of territory between the Okhotsk Sea and the borders of Manchuria and Korea, is covered with low forest, save some open places. In the north are the large evergreens, the finest growth being on the western slopes of the hills. The cork oak is found in Saghalien. Wild grapes have been found, but the making of wine is hardly a success, peculiarly. The Chinese sell nuts from the natural woods with good result. The mineral wealth of Eastern Siberia and adjacent neighbouring provinces is various and large: gold, silver, tin, lead, coal, amber, naphtha, marble, and many others are referred to. Some details of the working of the several industries are given. The work is printed in St. Petersburg, 1891, at the "Chief Admiralty."

THE CHOLERA AT HAMBURG.

WHEN Reuter's telegram arrived announcing the existence of a terrible state of affairs in Hamburg, during the acute stages of the cholera epidemic, great incredulity was felt here, for there seemed no reason why a town with a strong garrison, and therefore a thoroughly organized ambulance corps, should become so demoralized. But apparently the wires did not exaggerate. The following appears in the *St. James's Budget*:—

Vienna, August 31.—A Vienna doctor, in a letter to the *Neue Freie Presse*, depicts the state of affairs prevailing at Hamburg in the gloomiest colours. He states that the whole sanitary machinery is in the greatest disorder, and that everything has to be improvised. The transport of the sick is effected in sixty hired landaus, each conveying four patients, who are frequently in a dying condition. There are altogether 150 ambulance attendants, who generally wear their ordinary clothes instead of the oil-cloth garments advocated by specialists as a protection against the propagation of the disease. In the Eppendorf Hospital where there are in all 800 patients suffering from various maladies, the number of doctors is absolutely inadequate, and the medical men available have to strain every nerve to cope with the many cases requir-

ing attention. The self-sacrifice displayed by them is worthy of the highest praise. Another drawback at the Eppendorf Hospital is that whenever cholera patients are brought in, some of the ordinary cases of illness have to be removed. In one room the writer saw as many as 200 dead bodies. The epidemic, continues the letter, is raging in all the quarters of the city. At the outset every person seized succumbed, but now only 50 per cent. die. Another doctor reports that furniture vans are being brought into requisition to carry away the dead, and that the whole hospital arrangements show all the confusion incidental to hasty and haphazard initiation. It is now intended to fit up the schools and gymnastic halls as hospitals. In a second letter the writer deals with the Old Hamburg Hospital. The condition of things here is described as infinitely more horrible even than at the Eppendorf Hospital. In dirty, neglected passages bundles of clothing lie four or five hours awaiting disinfection, and in the midst of these packages are numbers of dead bodies laid there anyhow in distressing confusion. The doors of the wards with which these corridors communicate are left wide open, so that the sick can actually see the ever-growing numbers of the dead. To get into the wards themselves people have to step over the corpses and the piles of clothing. Nobody knows the number of sick and dead. The overcrowding in the wards is fearful. In a room fitted up for thirty patients there are as many as sixty, and the sick lie in such close proximity to one another that all nursing is rendered very difficult. Many rest on bare mattresses, which are filthy from use, and have no covering. For every forty to sixty patients there are but two attendants and one doctor. So absolute is the confusion that people who are not suffering from the malady at all are brought into the cholera wards there to contract the disease. Private dwellings where deaths occur are not disinfected. All that is done is to take portable articles to the public disinfection institutions, and even this is carried out without proper precautions, as the public are allowed to enter these places, and may sometimes even become infected there. The Senate has now at last voted half a million of marks to enable the authorities to cope with the epidemic. If only, says the writer in conclusion, one half of this sum had been granted a fortnight ago much misery would have been saved.

COAL AND CHICAGO.

CHICAGO appears to be the victim of a very pretty process of regrating. The elastic city and its bustling territory consume about 2,000,000 tons of anthracite coal annually. The suppliers of this coal have formed a trust, under the presidency of Mr. McLeod—the Scotchman is all there as usual—and the result is that between April and September the price of coal has been forced up at least a dollar and a half per ton. This means 3½ million dollars into the pocket of the Trust, and inasmuch as the members of the pool handle forty million tons of coal in all, there is a nice little sum of sixty millions of dollars concerned in their recent operations, even assuming that they can force the price no higher, which is a very unlikely hypothesis. They appear to be complete masters of the situation in the matter of organization and thoroughness. Such figures are almost bewildering. No wonder that the people of Chicago are beginning to rebel against being victimized by a clever combination. There are means, also, to defeat the regraters, for it appears that, in 1889, the Illinois Legislature passed a law from which the *Inter Ocean* extracts the following sections:—

If any corporation organized under the laws of this State, or any other State or country, for transacting or conducting any kind of business in this State, or any partnership or individual or other association of persons whatsoever, shall create, enter into, become a member of or a party to any pool, trust, agreement, combination, confederation or understanding with any other corporation, partnership, individual, or any other person or association of persons, to regulate or fix the price of any article of merchandise or commodity, or shall enter into, become a member of or a party to any pool, agreement, contract, combination or confederation to fix or limit the quantity of any article, commodity or merchandise to be manufactured, mined, produced, or sold in this State, such corporation, partnership, or individual, or other association of persons shall be deemed and adjudged guilty of a conspiracy to defraud, and be subject to indictment and punishment as provided in this act.

If a corporation or a company, firm or association shall be found guilty of a violation of this act, it shall be punished by a fine in any sum not less than five hundred (\$500), nor more than two thousand dollars (\$2,000), for the first offence; and for the second offence not less than two thousand dollars (\$2,000), nor more than five thousand (\$5,000); and for the third offence not less than five thousand dollars (\$5,000), nor more than ten thousand dollars (\$10,000); and for every subsequent offence and conviction thereof, shall be liable to a fine of fifteen thousand dollars (\$15,000).

Provided, that in all cases under this act either party shall have the right of trial by jury.

Any contract or agreement in violation of any provision of the preceding sections of this act shall be absolutely void.

Any purchaser of any article or commodity from any individual, company, or corporation transacting business contrary to any provision of the preceding sections of this act, shall not be liable for the price of payment for such article or commodity, and may plead this act as a defence to and suit for such price of payment.

BUDDHISM AND THE GOVERNMENT.

WE have more than once alluded to the difficulties that have arisen between rival bodies of the priests of the *Sōdō* sect, in connection with the election of their Chief Abbot. The election took place about a year ago amidst scenes of the utmost animation and confusion. When the result was declared, the unsuccessful faction raised objections on the ground of corruption and fraudulent practices, and the question still remains undecided. One of the principal reasons why the post is contested with such stubborn perseverance, is that in its occupant is vested the right of controlling the funds of the sect, which are estimated at a large figure. It is now reported that the priests of other sects have taken up the matter, and decided to endeavour to effect a compromise between the contending factions. The question is discussed in the latest issue of the *Tensoku*, which, though it has lost much of the importance it possessed when it was owned and edited by President Kato of the Imperial University alone, still justly claims attention as the organ of the rising generation of Buddhist scholars in Japan. Our contemporary thinks that every sect of Buddhism in the empire is at any moment liable to a scandal such as that now disgracing the *Sōdō Shu*. The whole Buddhist priesthood, not any particular order of it, is in danger of being periodically scorched by the common volcanic fire of avarice and corruption within itself. The *Tensoku* recommends the priests of every sect to turn their attention, not to the patching up of the present quarrel in the *Sōdō Shu*, but to the removal of the primary cause of these occasional scandals in the Buddhist community. The reformation of Buddhism, our contemporary goes on to observe, is the most difficult of the questions claiming attention at the present time. But it believes that the solution of the problem would be greatly facilitated, did the Government adopt one of two courses; namely, either to extend its sphere of control over Buddhism and impose by Ordinance a certain fixed standard of educational qualifications for all members of the Buddhist priesthood; or completely renounce interference in Buddhist affairs, and abolish the present Shrines and Temples Bureau. The former course would help to awaken the priests to the importance of education; while the latter, by inducing them to resign all thought of reliance upon the Authorities, would strengthen the wholesome influence of competition between the different sects on the ground of moral superiority. The *Tensoku* advises the Government to adopt one of these alternatives, but refrains from expressing preference for either.

Apropos Buddhism, the same journal announces the publication of a new treatise on that religion by Professor Tokunaga of the *Daigakuryo*, a college of the *Shin-shu* in Kyoto. Its title is *Shukyo Tetsugaku Gaiokoku* (Skele-ton of Philosophy of Religion). It is divided into six chapters with the following captions:—On Religion and Learning; On the Infinite and the Finite; On the Soul; On Transmigration; On Good and Evil; and On Peace of Mind and Moral Discipline.

DOUBLE MURDER.

A DOUBLE-MURDER is reported to have taken place in Ofujimura, Kaisai-gori, Aichi *Ken*, and Mr. Sano Kunihiro, an unsuccessful candidate in the recent election of members of the Prefectural Assembly, is the guilty man. Early on the morning of the 17th inst. he made a sudden attack upon his wife and child, killing them instantly. He then stabbed himself

in the throat, but not striking a vital place was interrupted by other members of the household before he could carry out his desperate intention. It is presumed that the man was insane, the disappointment of a defeat at the elections having temporarily unhinged his mind. He is now under medical treatment. He was beaten by Mr. Aoki Eiji, his rival in the election, by only one or two votes.

MR. A. B. DE GUERVILLE'S MISSION TO JAPAN.

THE exaggerations published by certain American journals with reference to the results of Mr. A. B. de Guerville's Mission to Japan were not, after all, very extraordinary, seeing that the Honorary Commissioner had the privilege of delivering before the Emperor of Japan and the Imperial Court a lecture illustrated by stereopicon views, which must have greatly aroused the Sovereign's interest in the wonderful World's Fair. But the incident recalls an old query, whence comes the material for these highly coloured narratives? Is there attached to each leading journal a writer specially endowed with imaginative faculties and commissioned to conduct the embroidery business to the limit of his capacities? Or are there, in all interesting centres of society and commerce, correspondents who despatch prismatic information on condition that their identity is concealed? These are mysteries which we, ordinary journalists, cannot hope to fathom. But Mr. de Guerville's case has perplexed us more than usual, because we lately had an opportunity of learning how plain and unvarnished were the facts submitted by that gentleman himself to the Directors of the Exhibition, and how fully credit was accorded by him to all who had assisted him, directly or indirectly, to achieve the success that has undoubtedly fallen to his share in Japan. However, nobody in the present case is seriously hurt by these highly coloured stories. Possibly the journals of the great Republic are correct in the hypothesis evidently underlying their flights of fancy, namely, that nine men out of every ten are rather elated than chagrined when a little Münchansen colouring is imparted to their achievements. But the genuinely earnest worker likes to be reckoned at what he is really worth, and not to be hoisted on windy panegyrics which virtually imply that he is not entitled to solid applause.

SPECIAL SHOOTING LICENSES.

A PARAGRAPH in the *Nichi Nichi Shimbun* perplexes us considerably. Reference is made to the custom hitherto observed of presenting shooting licenses *gratis* to the various Legations in Tokyo, each member of the Legation being furnished, so that as many as seven or eight licenses went, in some instances, to one Legation. Such a state of affairs, we read, was regarded by some officials as an abuse, and the question was raised whether, under the new Game Law, some restriction could not be put upon the number of licenses thus furnished—as, for example, one for the Minister himself and one for each of the Secretaries. It may well be supposed that the proposition was emphatically negatived by responsible officials, but the fact that any notion of the kind should have been seriously formulated and gravely recounted in a leading newspaper strikes us as very astonishing. What possible difference can it make to Japan whether ten, twenty, thirty, or even fifty free licenses are sent to every Foreign Legation in Tokyo? She surely cares nothing about the sum of money involved, whereas, unless she be greatly changed from the Japan of yore, she must care a great deal about the discourtesy and inhospitality of which she would be guilty did she either limit the number of such licenses, or attempt, as is elsewhere suggested, to exercise any scrutiny into the manner of their use. The Foreign Representatives are her most honoured guests, and it would be little short of dementia to show the slightest symptoms of reserve or illiberality towards them. Of course there is not the least fear that anything of the kind will ever be tolerated by the men at the head of affairs, but the mere ventilation of the question calls for a strong protest against a singularly unwise tendency to strain

at a gnat that is apparently growing up in certain Japanese circles. Self-assertion is a very fine thing, and sometimes its exercise becomes not only respectable, but also necessary. We do not in the least wonder that many Japanese should be inspired by such a sentiment at present. But nothing can be more ridiculous and contemptible than ebullitions of self-assertion evoked by bagatelles and finding vent in wholly wrong directions.

TOKYO WATER WORKS.

It would seem that there is at length a prospect of the Tokyo water works being started. The bill authorizing the Municipality to raise a loan of three million *yen*, was passed by the City Assembly on the 21st instant, and it is expected that steps will be immediately taken to obtain the money. What may have been the cause of the long delay, we are unable to state. Probably it would puzzle any one to give a satisfactory explanation. The question was taken up vigorously in 1886 by private enterprise, and an excellent project, accompanied by specifications, was prepared by a competent engineer. Funds were forthcoming. Everything, in short, was arranged, and there was made to the Municipality a most liberal offer which would have furnished the city with water works without making any call upon the public purse, and would have secured the possession of the concern to the Municipality after the lapse of a term of years. But this capital scheme failed to obtain sanction. The Authorities held that the works must be carried out by public enterprise, and the result is that the city, instead of being within a very brief interval of having a pure water supply, and thus being virtually guaranteed against cholera epidemics, is only now beginning to talk seriously of raising a loan to commence the works. However, better late than never. We trust that the end of these irksome and inexplicable delays has been finally reached.

HARBOUR REGULATIONS COMMITTEE.

ON Friday the 21st instant, at 10.30 a.m., the second conference of the Harbour Regulations Committee was held in the buildings of the Department of Communications. Mr. Kawazu, Vice-Minister, was absent owing to ill-health, so Mr. Utsumi, Governor of Kanagawa Prefecture, took the chair, and business was proceeded with at once. All the Articles of the draft Regulations, down to Art. 8, were passed without difficulty, but the 8th Art., which referred to the method of procedure in the event of fire on board a ship in the harbour, and the 9th Art., which prescribed the steps for controlling the shipment of explosives or other dangerous goods, provoked a prolonged debate. It was finally agreed, however, that as the exact terms need not be determined at the outset, their consideration should be postponed until the next meeting. A recess having been taken from noon until 1.10 p.m., the conference was reopened with the discussion of Art. 10, concerning which there was again much difference of opinion, but finally amendments approved by all were made. The meeting rose at 3.15 p.m., to re-assemble on Wednesday the 26th instant.

THE WOOSUNG BAR.

THE *North China Daily News*, eternally hopeful, has been endeavouring once more to direct active attention to Shanghai's bugbear, the Woosung Bar, and not without success, it would seem, but the Consular Body has taken up the matter again, and Captain Fife, who was recently in charge of the dredging operations there, has offered to dig out the junk channel to a depth of 24 feet at low water for ten thousand pounds sterling. If such a measure at such a cost would be effective, the marvel is that Shanghai has suffered through all these years without relief. It appears that some shipmasters put the Bar to a species of use, for they simply drive their vessels into the mud, and so keep them there, without the trouble of anchoring, until the tide makes. But even this sorry service must no longer be rendered by the obnoxious obstruction, for it is stated that steamers thus grounded have the effect of

raising mounds, upon which other vessels stick. It is a wretched Bar altogether. The other day, a steamer of the Japan Mail Steamship Company was detained four days before she could get out of the river, and when anxiety about the *Bokhara's* fate was keenest, the *Brindisi* and *H.M.S. Penguin*, which might have proceeded in search of the missing ship, were prevented from putting to sea by the same obstruction.

THE SILK-MEN'S DISPUTE.

ONCE more the friction among the Yokohama silk merchants has been smoothed away, but whether the peace is permanent seems to be quite uncertain. The most recent bone of contention was the question of excluding brokers from the general association of dealers in silk. It was in connection with this question that the party led by Mr. Ono were accused of having been guilty of a breach of promise, but, confident in the justice of their attitude, they determined to open a general meeting for the purpose of passing the new regulations, leaving the Kimura party to attend or not as they pleased. The latter, on their side, contended that a general meeting could not possibly be opened under the circumstances. Owing, however, to the exertions of the go-betweens this deadlock has been brought to an end, and the rival factions having agreed to come together, a meeting will probably be held in a few days.

LOSS OF THE "NAUTILUS."

THE steam whaler *Narwhal*, Captain Flanders belonging to the Eastern Whaling Company, of this port, arrived in the harbour on Monday, having on board the crew of the Company's steamer *Nautilus*, which had been wrecked on the 30th of September whilst lying at anchor in a bay between Great Shantar and Fekshiptoff in the Shantaraki Islands. Fortunately no lives were lost, and the weather not being very bad most of the gear of the *Nautilus* was saved. The *Narwhal* brings 3,582 lbs. of whalebone, and had the *Nautilus* come home to port safe the Company's position would have been good. The casualty has caused a considerable amount of discussion amongst those interested, but as an enquiry will be held we refrain from reproducing the information which has reached us in regard to the alleged causes of the disaster.

SCRIMMAGE ON SHIPBOARD.

A RATHER serious affair occurred on Tuesday on board the sailing ship *Thomasina MacLellan*, in harbour, the consequences of which necessitated the attendance of two doctors to patch up the wounded. It appears that the captain of the vessel was on shore, and the officers, with the exception of the chief mate, were on leave. Six seamen were on board, who demanded permission to go on shore, but were refused, and during an altercation that ensued, they set upon the chief officer in a body. The mate, seeing that the chances were very much against him in a scuffle with so many assailants, took vigorous measures to defend himself, and seizing a piece of deck plank of handy dimensions went in as "skimmer" on the mutinous crowd, and succeeded, after disabling some of them, in inducing the remainder to "sheer off." The officer came out of the fray with a whole skin, but it is stated that the nearest relatives of the cowardly crew would not recognise them as they appeared at the conclusion of the battle.

A DIPLOMATIC CANARD.

THE action of the Foreign Representatives with regard to the new Game Regulations is affording food for comment by the vernacular press. Latest in the field with a tale on the subject is the *Nichi Nichi Shimbun*, which says that a certain Foreign Minister having failed to attend the conference, was visited by a colleague and asked to explain his absence, whereupon he replied:—"I represent a Great Power and see no reason for holding consultations with the Representatives of petty States." The visitor is described as having been reduced to complete silence, as well indeed he might. The *Nichi Nichi* alleges ignorance of the name of

this independent Minister, but says that his identity may be inferred from his directness of speech. The story is delightful in its manifest impossibility. Our contemporary is pleased to make merry at the expense of an anonymous diplomatist, but it is scarcely necessary to remark that if such methods were pursued by Foreign Representatives, international relations would soon be in an agreeable condition.

PUBLIC WORKS IN THE HANKOW DISTRICT.

HER MAJESTY'S Consular Officers, in compliance with the instructions issued two years ago—if we remember aright—have compiled many interesting reports of the public works in their districts. Among the latest of these is a report by Mr. Consul Gardner on the public works near Hankow. He writes as follows:—

I have now the honour to state that, after despatching my trade report, I, on March 24, started in a house-boat to visit certain public works about 75 miles down the river. On the morning of the 26th I arrived at a town called Kwang-shih-Kang, where I was visited by the town justice, and by the son of the district magistrate of the Ta-yeh district—a town some 20 miles inland—who brought his father's card and excuses for not calling upon as he could not leave his district town at the time, because the Government examinations were going on. The magistrate, however, sent four civil attendants to attend me while I was in his district, and four soldiers as an escort.

About two miles further down the river we came to a place called Shih-hui-yao (the lime-kilns), where there is a large industry of slaking limestone into lime, and where the contemplated railway for bringing coal and iron from the mines of Wang-shan-shih (coal mines) and Tieh-shan-pu (iron mines) reaches the River Yangtze. From Shih-hui-yao to the iron mines at Tieh-shan-pu is a distance of 17 miles. The work of building the railway was begun about eight months before my visit, and it is contemplated that it will be completely finished in three or four months more. I found the embankment nearly completed, and two miles of rail already laid down. The rails are laid on iron sleepers, both rails and sleepers being supplied from Germany. There were about 1,500 coolies employed on the works at the rate of 5d. a day wages, but in spite of the low wages the works was costing more than it would do in English, and this for two reasons:—first, the very poor physique of the labourers; and secondly, the impracticability of getting them to work hard. Any deduction made for short work would be resented and lead to riots; hence the native officials do all in their power to keep the people in good humour, and cannot, therefore, pay the attention to economy that would be paid at home. With regard to the poorness of physique, I may mention that, in order to measure the work done, wheelbarrows have been got from Germany with iron planks to run them on. A single European could easily trundle one of these wheelbarrows full, but the Chinese put two men to each, do not half fill it, more constantly rest than a European, and do not run it nearly so fast; and yet, on the whole, it is found better work is done with these wheelbarrows than by the native mode of carrying two baskets on the shoulder by means of a pole. A slight, portable railway with trucks is found the cheapest mode of carriage of rubble, earth, &c., and of this there are some three miles or so on the line. Again, as to humouring the people, the land bought has been purchased at the rate of 30l. an acre, which is higher than the market rate, and in measuring the land the vendors have been allowed to measure in such a generous manner that the price paid has really amounted to 60l. an acre. In the 17 miles from the Yangtze to the iron mines there are 140 culverts and bridges; the line runs at the base of limestone hills, yet the cost of quarrying and cutting stones for the culverts and bridges has been very heavy, and expense of cutting and crushing rubble for ballast has been so great that, for the three miles nearest the iron mines, iron ore has been used as ballast, while it is intended to take up and slake the limestone ballast already laid down, and to use iron-ore for that purpose all along the line.

For the cementing of the culverts and bridges, Portland cement imported from England is being used.

A German gentleman, Mr. Schweidtweller, formerly an attaché to the German Legation at Peking, is the engineer who designed, and is superintending, the construction of the line.

Houses for Europeans have been erected at Shih-hui-yao, and at a spot about 10 miles up the line.

The iron-mine at Tieh-shan-pu, 17 miles inland from Shih-hui-yao, is a very interesting sight, there being a hill of iron running some 3 miles and about

400 feet high. According to Mr. Schwarze, the engineer in charge, there is enough iron to turn out 700 tons a day for 1,000 years. Three assays have been made of the iron-ore, with the following results:—One yielded 55.16 per cent. pure iron, the second 62.80 per cent., and the third 67.30 per cent. I am informed that there are similar hills of iron on a smaller scale near Bilbao in Spain, but the only hill of iron of equal dimensions, I have heard of is called Montserrat, and is situated not far from Algiers.

A Tieh-shan-pu there are evidences of great iron works in ancient days in the form of millions of tons of slag or burnt-iron ore in a heap, or rather a hill, showing that smelting must have gone on on the spot for centuries, but the work must have been abandoned many generations ago. I opine that in ancient times the whole country must have been a forest of some species of castanea, and charcoal from this wood was used for smelting the ore. At the present time the district is quite devoid of timber.

If only economic considerations had been consulted, it is on this spot, or near suitable coal-mines, that the Viceroy would have erected his iron-works instead of at Hanyang, close to Hankow; but his Excellency no doubt was influenced by the desire of having them near his official residence for the purpose of supervision. There is a hill spring close in the vicinity to provide water for the requisite engines, but, as yet, suitable coking coal has not been discovered anywhere near in sufficient quantity.

A house for Mr. Scharze has been erected on this spot, and a place to store dynamite. At present there are about 1,200 lb. of dynamite stored there.

During my trip I visited two coal-mines, one at a place called Tao-shih-fu, and the other at Wang-san-shih.

The mines at Tao-shih-fu ("Cock's Head," on the Admiralty chart) are within 600 yards of the river-bank, and the coal here is of two kinds, bituminous and anthracite, but as yet the seams are too narrow for profitable working being only 3 inches or 4 inches wide. At the time of my visit, boring work to endeavour to discover thicker seams was being actively carried on, the instrument used being Gelland's patent boring machine, of which the teeth of the drill are made of black diamonds. There were in all four small shafts at Tao-shih-fu, the deepest of which is 110 feet deep. As yet, only surface coal has been extracted, and that not of good quality, the anthracite being inferior to the soft kind.* It is feared that not much coal will be extracted from these shafts, as it is dreaded there is here a pocket of limestone, which cuts off the coal. At this place, inexpensive houses have been erected, three sinking engines and pumps complete for 360 feet provided, and a short portable railway laid down.

The coal-mine at Wang-san-shih are far more promising. There are here three seams of 24 feet, 3 feet, and 14 feet, the dip of which is at an angle of degrees, nearly due south. The geological formation is Devonian, with metamorphic quartzite, banded quartzite, and limestone to the west. A perpendicular shaft has been sunk to 6 feet with no fault. The first 25 feet were through alluvium, thence through quartzite and a few bands of shale in quartzite. The shaft is being deepened at the rate of 4 inches an hour. Wang-san-shih is only 3 miles from the line of railway and 9 miles from the works, and it was up this that the line comes within half-a-mile of the works, and it was up this that the heavy machinery was brought to the mines by the following ingenious process. A raft, drawing only an inch to the ton, was constructed, and, the machinery being shipped, was dragged up the creek till it grounded; then a dam was built behind which caused it to float, and this was successively and successfully done until the machinery was got to within half-a-mile of the mines. Hand porters took it the rest of the way.

The first sod was turned last October, when the hill was purchased at a very low price from the native owner. The coal put out so far improves as it comes from deeper down, and is of excellent quality, but it unfortunately will not coke, and therefore, though admirably suited for the cotton factory, traction engines, and steamers, is not suitable for smelting purposes.

In order to humour and educate the people, visitors are freely allowed on two days in the month. During my visit to the mines it was a visiting day, and the privilege was taken advantage of by crowds of holiday-makers, mostly women and children in gala dresses, who come with the idea of seeing a conjuring trick, for they, and even many of the higher classes, think that the

* May 29, 1892.—I was informed yesterday that excellent coking coal has never been got from this mine.

quality of the output depends on the skill of the engineer in charge.

It is as yet too early to be sure whether this coal-mine will prove a financial success, but the prospect certainly seems hopeful. It will be a great boon to our steamers, both naval and mercantile, if a good coal can be obtained in this neighbourhood at a moderate price. In all these public works of the Chinese, however, great allowances should be made for the absence of skilled labour, and for defective organisation. It is difficult, also, to make Asiatics understand the value of time; thus, delay in transmitting funds, machinery, &c., has on several occasions stopped the work.

The attitude of the people to these works is exceedingly hostile, and that in spite of the large employment and other advantages they confer. On several occasions the quarters occupied by the European engineers have been threatened; both the engineers and the line itself require the protection of troops, and the presence of numerous Chinese officials specially detached on the service of maintaining order. This is remarkable, as two or three years ago the people about were decidedly amicable, and I can only attribute their present hostility to one cause, and that is the dissemination of the abominable anti-foreign literature which I have from time to time reported on.

The demeanour of the Chinese officials to me during my trip was as courteous as I could desire, and I was treated with the honours due to my official position. Besides being always accompanied by the four civil attendants and the four soldiers sent by the Ta-yeh magistrate, I was met a mile from the mines by a guard of 20 men, and at the mines all the troops were drawn out to salute me. I accepted all outward signs of respect, as I believed that the news of my being properly honoured would have a good effect on the minds of the natives in the neighbourhood.

THE GAME REGULATIONS AGAIN.

A new aspect has been imparted to the recently promulgated Game Regulations by an article in the Law Journal (*Horitsu Shimpō*), where we find it contended that the Regulations, though not a violation of the Constitution, are distinctly a violation of the existing laws of the land. The writer of this article, strange to say, is Mr. Yegi Chu, a Councillor of the Home Department. He does not touch the question of the fees charged for licenses. Apparently he considers that phase of the matter unworthy of discussion. But he asserts that whereas there has now been granted to private individuals a right of property in game, no power to make such a grant was vested in the grantor, since the game in Japan did not belong to the Government at all. His position is that *fera natura* do not belong to any man until he has captured them; that in short, possession alone constitutes the right of property. By way of reference he adduces the case of minerals, but truly it is difficult to discover any analogy. For he claims that minerals, being actually in the ground, are naturally the property of the person owing the ground, and that the Government, before enacting any regulations to control mining operations, was under the prior necessity of assuming possession of all the minerals in the empire, which it did by a special provision in the Mining Regulations. We infer, therefore, that it would have been equally within the competence of the Government to assume possession of the game, and that, had it done so before promulgating the new Regulations, its procedure would have been perfectly *en regle*. Truly these nice distinctions may be abandoned to those that like to discuss them. To us it seems that the State's right of property in game was established fourteen years ago when all killing of game, whether for profit or pleasure, was forbidden except on payment of a certain fee. In other words, the Government has for many years been practically selling to the people permission to capture game, and if it had no title of ownership in the game, such a process of sale was decidedly peculiar.

THE PARCELS POST.

We reproduced in a recent issue a complaint preferred by the *Yomiuri Shimbun* against the Authorities in connection with the new Parcels Post, the gist of the criticism being that, inasmuch as the Department of Communications had failed to make arrangements with the various carrying companies, the latter were

Original from

competing vigorously with the Post Office, the result being that no one found it worth while to send parcels by the new system, sufficient advantages of cheapness and celerity being offered by the private companies. Hence it was predicted that the Parcels Post would be utilized only for purposes of transmission to places so remote and inaccessible that no carrying company could organize a paying service thither. This meant, of course, that the Parcels Post would prove a losing affair, and that a large appropriation of public funds would be required to carry it on. The *Nichi Nichi Shimbun* traverses the criticism. With regard to the fact that the new system has been inaugurated in Tokyo only, it is pointed out that no other course was possible, inasmuch as a grant of funds for extending the service to the localities was not procured from the Diet last session. This will be remedied from the commencement of the next fiscal year. Speaking generally, the chief use of a Parcels Post is to transmit goods to remote districts whither they cannot be carried by private enterprise with any convenient degree of punctuality. There are many localities in Japan to which no regular service gives access. A parcel sent to any of these destinations has to wait until it can be associated with a sufficiency of other parcels to warrant the carriers in undertaking the journey. The object of the Parcels Post is to correct such a state of affairs, and when the time comes to organize it on an extended basis, the Department of Communications will not fail to make suitable arrangements. No just criterion can be drawn from the working of such a service in a city like Tokyo, but unfortunately until an appropriation can be obtained from the Diet, communication with the localities cannot be established. Neither is it fair to draw any inference from the results of a month's working. The ordinary post produced a revenue of only 17,000 yen the first year, but in the following year it rose to 65,000 yen, and now it stands at 3½ millions, leaving an annual surplus of several hundred thousand yen. As for the *Yomiuri's* notion that the interest of private carrying companies are unfairly injured by the system, it would have been equally reasonable to contend that a postal service should not be established because of the *hikyaku* (letter-carriers) whose trade it destroyed. The interests of the public, not those of individuals, have to be considered. The *Yomiuri* is very kind in tendering advice as to the relations that should be established with carrying companies, but there are plenty of experts in the Government who need no such counsel.

THE AUTUMN MANŒUVRES.

THE general plan of the Autumn manœuvres, which commenced on the 23rd instant, was that an invading force, landing in Tsugaru Bay, marched southward in three divisions, its ultimate objective point being Tokyo. One division, under the command of Major-General Onuma, having reached Yaita, set out thence for Ujiye on the morning of the 23rd instant. The second division, under Major-General Yamaguchi, proceeded in the same direction *via* Sakuyama; and the third, under Lieut.-General Sakuma, took the old road towards the Kitsure River. This invading force mustered some 18,000 men, and to oppose its advance a force of about equal strength had been assembled in Utsunomiya. The Imperial Army left Utsunomiya at 5 a.m. on the 23rd, and moved in three bodies: the first, commanded by H.I.H. Prince Kitashirakawa, and the second, under Lieutenant General Yamaji, both headed for Ujiye, while the third, under Major-General Kuroki, directed its march towards the Kitsure River. The enemy not being discovered at Ujiye, a force was detached by the defending army to occupy the Kabasu route, which was considered to be one of the most important lines of advance. This body encountered the invaders at Sakurano, and became hotly engaged, whereupon the rest of Prince Shirakawa's corps moved up in support. Its advance being perceived, however, the enemy effected a clever division of force, and executed a vigorous flank attack,

which compelled the Prince's division to fall back on Baba, where a resolute stand was made, a large park of artillery being employed by the Imperial force. But it was found impossible to effect a junction with General Yamaji's corps, so that the Imperial troops were finally overpowered and driven back. Meanwhile the Emperor, leaving Utsunomiya at 7 a.m., had assumed command of the defending army in person. He saw his forces obliged to retreat to Kami Akutsu, where they were again powerfully assailed by the invaders, and being driven across the Kinu River, they retreated to Utsunomiya. At 5 p.m. the Emperor ordered the suspension of the operations. On the 24th the invaders resumed their advance, and occupying Hosekiji, unopposed, attempted to cross the Kinu river. But during the night the Imperial troops had destroyed the two bridges over the river thrown up batteries maintaining 40 guns, and posted a large force under cover along the Shinden road. The enemy were occupied until 1 p.m. bridging the Kinu, and when they resumed their advance, a hot engagement took place, the battle front extending over a mile. A flank attack was carried out by a body of Imperial troops which had crossed the Kinu higher up, but though success seemed to rest with the defenders at first, they were in the end driven back, and at 8.40 p.m. the invading army took possession of Utsunomiya. The Emperor had watched the battle on horseback from 8 a.m. till 4 p.m.

A Correspondent, writing from Utsunomiya under the date of October 25, says:—The grand manœuvres which have been held in this district since last Sunday were brought to close this morning. The final battle between the contending forces, which lasted for about four hours—from six to ten o'clock—was fought in the fields about a mile from here on the highway to the town of Mibu. The weather was fine, and the fighting was witnessed by thousands of people from Utsunomiya and surrounding villages. To-night the whole of the hitherto contending troops will be quartered in the town, and there will be hardly a house in this place that will not be occupied by soldiers. The inhabitants, however, put up with the inconvenience with good will and are high in praise of the behaviour of the men, which speaks much for the discipline maintained. The great review will be held to-morrow morning in the plains about five miles to the north of the town at the same place where yesterday's fighting took place. After the review the troops will begin to return to their respective garrisons.

RECONSTRUCTION OF THE ADMINISTRATIVE ORGANIZATION.

In a previous issue we reported that Count Ito, before attending the Cabinet meeting on Wednesday last, was received in audience by the Emperor. It is now asserted by the *Kokkai* that the Minister President submitted to the Throne on that occasion, the draft of a new scheme of Administrative Organization, and asked for the Imperial Sanction. The Sovereign addressed many questions to the Count with reference to the draft. If we may credit the above statement, the new organization will be promulgated very soon. Readers of Japanese parliamentary history will remember that the Budget Committee in the first session of the Diet proposed an extensive scheme of administrative reorganization, which was evidently identical, in its main features, with a project prepared by a Special Commission under the presidency of Count Okuma when the latter held the portfolio of Foreign Affairs in 1889. The Budget Committee's proposal, though endorsed by the House of Representatives, did not obtain the consent of the Government, and was indeed declared to be *ultra vires* and unconstitutional. Ultimately a compromise was effected on the Budget, and the Cabinet promised that when it met the next Diet administrative re-organization should be an accomplished fact. The promise was redeemed, but not in a manner that satisfied the Representatives, and it has been understood ever since that Administrative re-organization figured among

the principal planks of the Opposition's platform. The present Cabinet, apparently, has taken up the matter, and will doubtless be found to have dealt with it in a thorough and statesmanlike fashion.

THE WASEDA SCHOOL.

THE ceremony which took place on the 20th and 21st instant at the Semmon Gakko, to celebrate the tenth anniversary of that institution's establishment, seems to have been on an exceptional scale. Before 1.30 p.m., at which hour the exercises were advertised to commence, the alumni, directors, trustees and students of the school,—no outside guests had been invited—to the number of nearly a thousand, had assembled in the spacious auditorium, which, though it occupies the whole second floor of the new and handsome building completed early last year, must have had its capacities pretty severely tested by such a gathering. The proceedings were opened by Dr. Hatoyama, who introduced Mr. Okuma, Count Okuma's son, to preside instead of Count Okuma, the munificent founder and father of the institution. The Count himself has unfortunately been unable to attend any of the meetings held in the auditorium, the difficulty of getting up and down stairs since the shattering of his leg being prohibitive. Apart from this, the presidency of Mr. Okuma Junior was particularly fitting, inasmuch as he was Principal when the school was opened in 1882. The first speaker was Mr. Takata Sanaye, a prominent *Kaishin-to* member of the House of Representatives. Mr. Takata is a leading Director of the Semmon Gakko and served as Manager (*Kanji*) for more than a year. His great natural eloquence and fine address are very familiar to the House of Representatives, and were highly appreciated by his audience on the 20th, loud applause being evoked by his declaration that the Semmon Gakko graduates may yet furnish a Prime Minister or Chief Justice of the empire, and that the institution, judging from the success hitherto attained by it, was likely to become a manufactory of great men, who should fill positions of responsibility in the nation, as editors, lawyers, teachers, philosophers, politicians, and *litterateurs*. The President of the School, Dr. Hatoyama, followed with a pleasant and humorous speech, and was succeeded by Professor Tahara, who, taking the statistics of the past ten years as a basis, drew some very logical and instructive inferences for the benefit of his audience. Mr. Wataru Gaito, editor of the *Miyako Shimbun*, one of the first graduates of the School, then addressed the meeting in a speech full of witticisms and happy points which kept the assembly in a continuous roar of laughter and applause. A representative of the students, Mr. Kiichiro Masuke, of the Political class, was the next speaker. Doubtless he had been selected on account of special aptitude, but certainly the great facility and eloquence which he displayed did much credit both to himself and to the institution. Loyalty to the flourishing *aima mater* naturally formed the key note of his address, and it was plain that his hearers most heartily reciprocated his hope that the Semmon Gakko would be the School of the Empire, and its alumni the leading men of the nation. At the conclusion of the speeches hearty cheers were given for the Semmon Gakko and for Count Okuma. A capital *al fresco* refection, served under the fine old trees in the courtyard, was the next feature, and at its conclusion the "feast of reason" was renewed in the form of speeches and readings. Mr. Shimada Saburo, the *Kaishin-to* leader in the House of Representatives, was of course *en evidence*, his remarkable oratorical gifts being employed to the delight of the audience for some fifteen minutes. The Rev. Frederick T. Stanley also spoke, and it is worthy of note that no interpreter was needed to enable his audience to follow with evidence appreciation an English address of considerable length. Much enthusiasm was aroused by a happy parallel which this speaker drew when, alluding to the facts of history as accomplished on October 21st in the United States by a national celebration of the four hundredth anniversary of the discovery of America, where independence and liberty are

the foundations of the educational and political institutions, he said that the same day in Japan was linked with the history of America and distinguished in the educational annals of the country by Count Okuma's founding of the Semmon Gakko on principles of independence and liberty. In truth a political allusion is always dear to students who inevitably associate their own careers with that of the political leader to whose enterprise and generosity they owe their education. Addresses by students, reading of plays, and so forth occupied the evening until a late hour. The 21st was devoted to various social entertainments and recreations of a light character. We note that in the course of the addresses the following interesting facts were elicited:—On October the 20th, 1882, the Semmon Gakko, which then consisted of one small frame building, opened with 68 students and 7 teachers. On October 20th, 1892, it had four roomy buildings, one a large edifice of brick, standing in picturesque and spacious grounds, and 756 students with 80 teachers, including about 20 lecturers who give extra lectures on special subjects. There have been 817 graduates in special courses and 343 graduates in the general course, and about 1,000 other students have attended the school without graduating. Since the establishment of the school, its Presidents have been, Count Okuma, and Messrs. Mayeshima, Hidishima, Yamada, Takata, Amano, Tahara, Ogawa, and Hatoyama.

SELF-RECOMMENDATION.

It is not very uncommon to find in Western journals advertisements inserted by men who desire to laud their professional or expert abilities. But to Japan belongs the novelty of a gentleman advertising himself as an incomparable popular representative. Here is the announcement, translated from a vernacular local journal:—"I, the undersigned, desire to be elected member of the Prefectural Assembly. The Saga Prefectural Assembly has been for years in the hands of one political party, but we have never once seen a single good thing accomplished by it. The reason is simple enough: the members, engrossed by the interests of their party, have no time to devote to the welfare of the people at large. The Prefectural Assembly being the Parliament of the province, just and upright members should be elected, who will devote themselves to promoting the tranquillity and happiness of the people instead of scheming in the interests of a political party. If such a member be desired, elect me! To whatever party you may belong, you must elect me!"

PHOTOGRAPHING IN THIBET.

HERE is an account of the first successful photograph taken of the Thibetan Lamassera, as described by a correspondent of the *North China Daily News*, writing from Tarchendo:—

Our King, the "Wang" Tarchendo, or *Man tu-se* (Barbarian Superintendent) as he is entitled by the Chinese, and who rules the Thibetan part of the population while the Chinese immigrants are under their *Min-chen-sue*—is still away at his summer palace on the plateau. His town palace, one of the most conspicuous of our buildings, gaudily decorated and kept in better repair than Chinese official buildings are, has three heavily gilt pagoda-shaped ornaments projecting from the main roof, and is an interesting specimen of the Thibetan architecture modified by Chinese elegance of outline. This was one of the first objects which our visitors tried to photograph, but they were prevented by the crowd of followers, who succeeded in obstructing the attempted setting-up of the camera upon every occasion. Nor were our friends more successful in obtaining portraits of individual Lamas. These people are probably the most abjectly superstitious, if not the most sincerely religious, race in the world, and taking their picture means, to their minds, robbing them of their soul. Mr. Pratt, when here, was equally unsuccessful, and we believe that, during his long stay, he did not succeed in taking away with him a single portrait. However, at the great Lamassera situated on the Batong Road, a very fine building of its kind, our lady visitor was ultimately successful, although at some risk. The monastery comprises a large quadrangle, about 100 yards square, of two-storeyed houses, in which dwell the monks and their acolytes. Outside are several detached buildings, heaped full of native offerings of *Tsa-tse*, miniature pagodas of burnt clay, and covered with countless prayer flags. A really magnificent avenue of large alder trees surrounds two sides of the buildings and lines the broad road leading up to it from

Tachienlu, reminding one more of the bold conceptions of the Japanese than the commonly stunted scale upon which roads and tree-plantations are laid out in China. In the centre of the south front is an arched gateway, passing under the second storey of the Lamassera, by which access is gained to the interior of the quadrangle and the stair-cases leading up to the covered galleries and verandahs which run round the dormitories; facing the entrance and in the centre of the north side of the quadrangle is the temple, highly decorated and covered with gold and, unlike Chinese temples, in a state of perfect repair. The Lama Buddhist temples are kept locked and only opened for stated services and festivals, when the strange Thibetan dance occupies the principal part in the proceedings. Here, in an angle of the courtyard, the lady promptly set up her camera; she knew the Lamas were hostilely disposed, but ambitious to succeed where others had failed, notably Mr. Pratt, who two years ago was driven out of the place and fled to the surrounding woods, she took the photograph, and was moving off, when half-a-dozen fierce Thibetan dogs, who had been let loose meanwhile, rushed up, seized her staff with their teeth and wrested it away from her, and she was only saved from further molestation by her companions, who succeeded in keeping the dogs at bay and escorting her through the gateway. Meanwhile, a crowd of scowling Lamas stood round like statues, draped in their crimson scarves, and neither urged the dogs on nor moved a finger to call them off. Such is photography in Thibet, and the only hope is that, in this case, the resulting negatives will prove worth the risk run by the gallant lady amateur to obtain them.

CUSTOMS RETURNS.

THE following is a summary of the customs Returns for September, showing the foreign trade of the empire for the month:—

EXPORTS AND IMPORTS.	
SILVER YEN.	1891.
Exports	5,950,175.380
Imports	6,250,668.530

1892.	
Exports	10,543,729.850
Imports	6,073,117.180

Total exports and imports	16,616,847.030
Excess of exports	4470,612.670

CUSTOMS DUTIES.

DEATH OF THE HIGH PRIEST OF SIAM IN BUDDHISM.

EARLY on the 28th ult. the chief ecclesiastical dignitary in Siam, H.R.H. Somdet Krom Phra, died at the royal temple, Wat Bowarawate, at the advanced age of 80 years. He was the fifth son of the second King of the second reign

of the present dynasty, his original title being Phra Ong Chao Rök. He was subsequently elevated to the rank of Krom Mun Pawarangsri Suriya Pandhu, and, in this reign, to that of Krom Phra Pawaresri Wariya Longkorn. Some months ago His Majesty conferred on him his latest title of Somdet Krom Phra. He was a cousin of the late King, H. M. Phra Chom Klao, and one of his brethren in the priesthood. He was an accomplished scholar, and wrote the biographies of the late four Kings now used for recitation, together with an account of the origin and progress of the orthodox congregation. He also composed many religious books and commentaries on the sacred texts. As a Pali scholar he was almost unrivalled, and he also had a great *penchant* for astronomy, which science he learnt from his colleague, the late King. In the evening His Majesty visited the Wat in state, and performed the usual ceremonies, bathing the body and placing it in the funeral urn. A large concourse of Princes and nobles was present.

WHITTIER AND THE "KOKUMIN SHIMBUN."

THE death of the venerable Quaker poet has awakened an echo of regret even in far Japan. The *Kokumin Shimbun* has a eulogistic and most appreciative notice of the sweet and pure singer. It utterly rejects the notion that he belongs to the second class of poets. The themes with which he occupied himself, and which received such admirable treatment at his hands during the eighty-five years of his long life, were not less noble and various than the genius of the man was lofty and versatile. From the abolition of slavery to the lowliest incident of work-a-day life, he spoke with the same perfectly adapted eloquence. The gospel he offered to the world was sympathy with suffering and implacable opposition to tyranny in every form.

Yet here at least an earnest sense
Of human right and weal is shown;
A hate of tyranny, intense
And hearty in its vehemence
As though my brother's pain and sorrow were mine own.

He was essentially the people's poet, most dear from that point of view to the enthusiastic *Kokumin*. Our contemporary urges Japanese singers to abandon their perpetual liting to moonlight, to wavelets, and to blossoms, and to turn their lyre to some of the soul-stirring themes of active life. Apparently the *Kokumin*'s conception of such a theme is contained in a line which it quotes:

Love had he found in huts where poor men live.

THE PRESENT ASPECT OF THE RAILWAY QUESTION.

WE take from a recent issue of the *Yiji Shimo* the following note concerning the present aspect of the railway question:—The nomination of the *personnel* of the Railway Council has already taken place, but as General Kawakami, the President, and other members representing the army will take part in the manoeuvres, the Council is not likely to begin its meetings till next month; and as the engineers who were dispatched to investigate the different proposed railways will not get back for some time, the first question for the Council to deal with, when it does meet, will probably be that of the "management," or more properly speaking, the purchase of private railways. When the two Government railway bills, the railway bonds bill, and the bill for the State purchase of private railways, came before the Diet during its last session, they both, the purchase bill in particular, met with vehement opposition from the majority of the representatives. The measures finally resulted in the passage of a new bill for the "Extension of Railways," which was in a sense an amalgamation of the two Government bills, with the introduction of such modifications as the special committee of the House to which they were entrusted thought fit to make. The Government's proposed policy of State ownership of railways thereby fell through, as the new bill provided for the undertaking of such railway extensions as the country required, and limited, as stated in Chapter III. of the law under the heading of "management of private railways," the purchase by the Government of private railways to such as might be found practically necessary in the prosecution

Original from

tion of the extensions specified in the main body of the law. The railways which will from the outset come within the above limitation are those of the Kyushiu, Sanyo, and Koku Railway Companies. Perhaps there may not be any necessity for urgency about the purchase of the line of the last company, but with regard to the Kyushiu and Sanyo railways, forming as they do a part of the main trunk system of the empire, economical and strategical considerations alike render their speedy purchase by the Government necessary. Under these circumstances the question of dealing with these companies will be the first to be considered by the Authorities. We hear that the shareholders of the Kyushiu railway are prepared at any time to sell their line for the paid-up amount of their shares, so that, should negotiations be opened, the arrangement for settling the purchase will doubtless be speedily arrived at. As to the Sanyo Railway, a report is current that some of the larger shareholders will make a high demand, and that they do not think of parting with their shares unless they receive considerably more than the amount paid-up; and certain politicians have gone so far as to hint that the proposed extension of the Sanyo line from Mihara to Hiroshima, obtaining the capital for the extension by means of a loan, is simply a dodge on the part of shareholders, who, foreseeing that negotiations will soon have to be opened by the Government for the purchase of their railway, took that step with no other purpose than to augment the value of the stock. The *Yiji*, however, has no faith in such rumours and imputations, and states that not only do the terms of the charter of the Sanyo Railway make it obligatory on the part of the Company to complete the line to Hiroshima during the next year, but also they have in stock some 500,000 yen worth of unused railway material which they desire to utilize in this work; and as to the shareholders putting an excessively high valuation on their line, it is quite inconsistent with the fact that the dividends paid by the Sanyo Railway have always been below those of the Kyushiu Railway. So should the Government come to an arrangement with the Kyushiu Railway first, it is not likely that much difficulty will be experienced in making the Sanyo follow suit under similar terms. With reference to the Koku Railway, the shareholders are said to be in favour of waiting until the three lines—the line to the Tamagawa river, the Ome line, and the Kawagoe line, which are destined to become its feeders—are completed, before considering the question of effecting the sale, for until that time, they allege, no proper estimate of the value of their road can be made. At any rate, concludes the *Yiji*, should the average price of the shares and the rates of dividend for three previous years be taken into consideration in conducting the arrangements for the purchase of private railways, a satisfactory settlement ought to be arrived at without much trouble.

Thus writes the *Yiji*, and its remarks are, in the main, a corroboration of the information we ourselves have on the subject. The railways to be made with in the so-called First Construction Period, which therefore it became incumbent upon the Government to survey and report upon for the next meeting of the Diet, comprise:—

THE CENTRAL LINE.

Alternate Lines:—	Miles.
Hachioji via Ina to Nagoya.....	240
Hachioji via Chikuma to Nagoya.....	245
Gotemba via Ina to Nagoya.....	250
Gotemba via Chikuma to Nagoya.....	225

HOKURIKU LINE.

Tsuruga via Kanazawa to Toyama.....	126
-------------------------------------	-----

HOKUETSU LINE.

Alternate Lines:—	
Naotsu to Niigata and Shibata.....	110
Mayebashi to Niigata and Shibata.....	160
Toyono to Niigata and Shibata.....	139

OU LINE.

Fukushima via Yonezawa and Yamagata to Aomori.....	309
--	-----

SANYO LINE.

Mihara to Shimonoseki.....	159
Kaidaiichi to Kure.....	10

KYUSHIU LINE.

Saga to Nagasaki and Sasebo.....	85
Kumamoto via Udo to Misumi.....	24

KINKI LINE.

Alternate Lines:—	
Kyoto via Sonobe to Maizuru.....	65
Tsuchiyama via Fukuchiyama to Maizuru ..	63
Alternate Lines:—	
Osaka to Wakayama.....	44
Takata to Wakayama.....	45
Yagi to Wakayama.....	47

LINES TO CONNECT THE SANYO WITH THE SANIN SYSTEM.

Alternate Lines:—
Himeji via Tottori and Yoneko to Sakai..... 96
Okeayama via Tsuyama and Yoneko to Sakai..... 90
Kurashiki via Yoneko to Sakai..... 80
The total of these mileages (which are of course only approximate), taking in the case of alternate lines only those which come first in order, is 1,258 miles, and this represents approximately the length of the new railways which it is proposed to construct within the first period. Although some of the lines enumerated have previously been surveyed, the alternate lines are so numerous that 1,500 miles may be safely given as the lowest estimate of the distance to be covered by the surveys, for the prosecution of which there was only the interval of a few months. In July the Railway Department began to organize adequate surveying parties; all the available Engineers of the Department, together with several specially appointed experts being nominated to conduct the survey. The engineers numbered in all thirteen; one of whom was appointed as general superintendent and the others were divided into four parties, the first party having charge of the Central and Hokuriku line surveys; the second of the Hokuetsu and Ou; the third, of the Sanyo and Kyushiu and a portion of the Sanyo and Sanin connecting line; and the fourth, of the Kinki and another portion of the connecting line. These parties left the capital at the latter part of July and have since been vigorously pushing on the work in their respective districts. We hear that, according to the present outlook, the completion of the surveys and the return of the surveyors to the capital cannot be expected much before the end of November; and as some time must be required thereafter for compiling the reports, and for the Railway Council to consider them subsequently, the railway question is not likely to come up in the Diet much before the New Year's holidays. Moreover, in the event of the railway agitation now going on in the different parts of the country becoming reflected in the Diet, as there is reason to suspect, there is a strong probability of the national system of railways for which the new law provides being lost sight of altogether amid wranglings inspired by purely local interests. These circumstances give colour to the *Yiji's* statement that the Government and the Council purpose in the meanwhile to look into the question of the purchase of certain private railways, and as the Kyushiu railway is reported to be the readiest to come to terms with, there is every probability of its case being first taken into consideration. The recent prolonged sojourn of its president in the capital is viewed by some as an indication in this direction.

The Sanyo Railway numbers among its shareholders the most influential capitalists of the country, who can without experiencing inconvenience bide their time, and to the fact of the company's policy being steered by such men may be attributed the prevalence of an impression that the Sanyo Company do not intend to dispose of their property unless on exceptionally favourable terms. The subsidy which the Government grants, in accordance with the terms of the charter, in the form of a single payment of 2,000 yen per mile for every mile of new railway constructed, greatly helped, no doubt, the Company's recent decision to extend the line from the present terminus at the port of Mihara to the town of Hiroshima, a distance of about 50 miles. While the term prescribed by this provision in the charter would expire at the end of next year, the company were in possession of railway material lying idle to the value of 500,000

or 600,000 yen. The conclusion was therefore arrived at to raise the necessary funds by means of loans for 1½ or 2 million yen, and to go on with the extension works. The subsidy of 100,000 yen for the 50 miles is ample to cover the interest on the borrowed capital until it becomes converted into a productive form. Such, we believe, are the facts concerning a step, as the *Yiji* says, which has been likened by some to a man making additions to his house, not for his own requirements, but to get a better price for it from an expected purchaser.

With perhaps a single exception, namely the short line connecting Osaka with the port of Sakai, the Koku railway has been the most successful of all private railway enterprises. It is at present in a most prosperous condition, and its future presents still brighter prospects. Several new independent railways, bound to become its feeders, are about to be constructed. They are the Kawagoe railway, which is to start from the large market town of that name, situated about two ri west of the town of Ageo on the Nakasendo, and traversing a thickly populated portion of the Musashi plain for 23 miles, is to form a junction with the Koku line at the Kokubunji Station; the Ome railway, which begins at a noted chalk deposit about 1½ miles beyond the town of Ome, and is to join the Koku railway at the Tachikawa Station, a distance of about 10 miles; and a short branch line to the Tamagawa river, to be utilized in the transportation of gravel required for the Tokyo waterworks. These railways are expected to be completed within the next year, and the Koku railway will doubtless realize from them a very considerable augmentation of traffic. Besides independent lines which are destined to become its feeders, the company has a project on foot of extending its own line from the terminus at Shinjuku to Misakicho, opposite the military arsenal at Koishikawa, and close to the blocks of new houses with fireproof partitions within the Suidobashi; thus bringing its terminal station nearer the heart of the city. The grant of a special charter authorizing the extension is expected shortly to be made. This work when carried out will add greatly to the value and importance of the Koku railway. The Company, moreover, is about to declare a dividend at the rate of 8 per cent. per annum as the result of the working for the six months ended last September, and the shares, the paid-up amount of which is 45 yen, are now quoted at 62.5 yen. With such prosperity smiling on them at present and with such a bright outlook before them in the near future, it is only natural that the shareholders should wish to delay the opening of negotiations for the sale of their property. We append the approximate amount of the capital of these companies, together with the present values of their shares:—

	Capital.	Paid up amount per share.	Present quotation of shares.
	Yen.	Yen.	Yen.
Kyushiu	5,920,000.....	38.....	33.3 or 12.4% dis.
Sanyo	7,630,000.....	27.....	22.7 or 16% dis.
Koku	810,000.....	45.....	62.5 or 38.8% dis.

THE "BOKHARA."

The community in Shanghai seem to have been most deeply stirred by the Bokhara catastrophe. To them it came with appalling vividness, for only a few days previously they had entertained the members of the Hongkong cricket team with good cheer and heartiness, and had seen them sail away in all the fullness of youth and strength. In the leading columns of the Settlement's newspapers we find expressions that bear the impress of genuine feeling, and on the afternoon of the 20th instant a large meeting, including representatives of every nationality, assembled in the Court Room of H.B.M.'s Supreme Court for the purpose of placing on record the Settlement's strong pity, and adopting practical steps to succour those bereaved by the calamity. Chief-Justice Hannen presided, and introduced the subject in a brief, well conceived speech. The first resolution was moved by Mr. John Macgregor in terms so sincerely sym-

thetic that we quote the speech in full from the columns of the *North China Daily News* :—

You have heard what has been so fully spoken by our Chairman. Happily it is at but rare intervals of time that a grief like unto this sorrow falls upon any community, and I know of nothing in the history of Shanghai and Hongkong so calamitous and saddening as the occasion which has brought us together here. In the pursuance of the object of the meeting I beg to propose the following resolution which I am sure will meet with unanimous acceptance, namely—

"That this meeting of British and other residents of Shanghai, desires to express its sincere sympathy with those who have been affected by the sad loss of the P. & O. steamer *Bokhara*."

It was only a few weeks ago that I came up in the *Bokhara* from Hongkong, and I could not help observing the alert and diligent care with which Captain Sams attended to the navigation of the steamer, as well as the cordial relations which subsisted between him and his officers; and the friendly intercourse with them, and cheery, clever Dr. Pote, and the typical Chief Engineer who had grown grey in the Company's service, did much to enhance the pleasantness of an agreeable passage up the coast. These are more specially personal considerations. What is more present, I am sure, to all your minds, and what has for the last day or two cast a gloom over these settlements, is the tragic ending to the late interport cricket match in the almost total annihilation of the Hongkong team who were passengers by the *Bokhara*. As a community we deplore the terrible calamity in which our visitors were engulfed, and individually many of us have to sorrow for the loss of friends and acquaintances. Happily my own particular guest, Lieut. Markham, and the brilliant and ever cheerful Dr. Lowson, have escaped the fate of their companions, but sorrowfully we deplore the fate of the others. The Hongkong Garrison has to mourn the loss of eight good men and true, the Civil Service one, and commerce has to bewail the promising career of two men cut short in their prime. We shall long treasure the remembrance of the bright resolute-faced Captain Dunn—a Captain fit to lead anywhere; the genial and kindly umpire Major Turner, revisiting us with a warm heart after a lapse of a quarter of a century; the stalwart, steady, and soft-voiced Dawson, active, kindly Boyle, and cheerful Burnett. Tavernier, gentle always but when he smote the ball, not to speak of the staunch and loyal Goffkins, Mumford and Donegan, and Purvis and Wallace, whom I have already referred to. There is the sorrow of one amongst us who has to deplore the loss of wife and child; he has I am sure our very warmest sympathy. For details of the calamitous event we shall have to wait for the arrival of news from the south, but I am sure in the language of the resolution we all desire without hesitation to give expression to our sincere sympathy with all those who have been affected by the sad loss of the P. & O. steamer *Bokhara*. I have mentioned individual names because they happened to be known to me, but there are, alas! too many others who have also suffered the sad fate of those I have named, and these also are I am sure present to your minds at this moment. With these few imperfect remarks I will again read the resolution, which you have heard.—(Applause.)

The second resolution, proposed by Mr. H. R. Hearn, was as follows :—

That a committee be appointed to enquire what steps should be taken to alleviate the suffering which has resulted from the wreck, and to take the necessary steps to raise funds for this purpose, and that the following gentlemen form the committee, Messrs. N. J. Hansen, J. Macgregor, R. M. Campbell, C. W. Hay, E. G. Vouillemont, W. V. Drummond, J. C. Bois, A. J. H. Catlill, W. B. Russell, James Dick, A. White, Dr. Henderson, Cecil Holliday, E. A. Probst, D. W. Crawford, Brodie Clarke, and Arthur Anderson, with power to add to their number.

A picturesque feature of the affair was a speech by Mr. H. D. Pierce, formerly United States District Attorney of Indiana and now travelling in the East, who, on behalf of his countrymen, spoke some words of earnest condolence, alluding especially to the fate of Captain Sams who "had fought enemies, God only knows of what strength, and fallen in a grave, God only knows where."

The following telegram received from Hongkong was published by the *North China Daily News* on the 21st instant :—

Nothing further re other two survivors. Captain, officers, and crew highly commended; ter-

rific weather; ship helpless; stokehold flooded ten p.m.; exact position ship apparently unknown. Passengers were all below when she struck at midnight. The survivors rushed on deck and were swept off and cast ashore almost naked. Dunn was going with Lowson, but too late. Major Turner's body identified in the morning. The survivors found a fisherman's empty hut and well; they were much bruised and hurt. Wednesday noon, weather hazy, moderated, junks took them to Pehoe, where they were treated well by a Chinese priest. On Thursday they were taken to Makung and kindly treated by a mandarin; all now fairly well. There is to be a memorial service at the Cathedral Saturday afternoon, and there is a proposal before the St. Andrew's Society to abandon the ball on Nov. 30th, and devote the cost to a relief fund for those left in pecuniary difficulties.

All accounts go to show that the typhoon in which the *Bokhara* perished was of exceptional severity. It appears to have had its origin on the north-east of Luzon, and its original direction of travel should have carried it landward at some point in the neighbourhood of Amoy. But it rebounded from the shore and took its way up the Formosa Channel, sweeping along with terrible force and raising mountainous seas. Several steamers were placed in imminent danger. The *Moyune*, which sailed from Shanghai for Foochow on the day after the *Bokhara*, met such waves that grave fears were entertained for her propeller and shaft. "The *Kaifong* had her deck swept from stem to stern, houses smashed in, a boat carried away, engine-room skylights smashed, and so forth, while the firemen refused duty, and the engineers had to take their places in the stokehold. The *Protos* had boats washed away and damaged and companions broken down, while huge seas broke continually over the decks from stem to stern. The *Choyang* made it a strong gale with passing squalls of hurricane force and very high dangerous topping sea. All this was on the Sunday and Monday, the two days which were fatal to the *Bokhara*." It will be seen from the above telegram that the fires of the ill-fated ship had been extinguished, and that, becoming unmanageable, she probably drifted across and down the Formosa Channel, buffeted by such mountains of water that any attempt to let go her anchors, as a last resource, must have been impossible.

DEATH OF MRS. HARRISON.

A TELEGRAM received on Thursday in Tokyo announces the death of Mrs. Harrison on the 25th instant, at the White House, whither she had been conveyed some weeks previously by her own desire and at no little risk. The deceased lady's condition had been recognised as hopeless in the early days of this month, and it is remarkable that she lingered so long. The President appears to have been deeply attached to her. Latest accounts described him as completely broken down by the wearing anxiety of two months' watching and unhappiness. It is to be hoped that the strain of long suspense now culminating in bereavement and supplemented by the exigencies of the Presidential campaign, may not prove too much for his strength. The frequent references made to Mrs. Harrison by the Press of the United States from the time when her illness first developed serious symptoms until the day when all chance of recovery was recognised as hopeless, concur in attributing to her many noble qualities of disposition and intellect, and in ascribing to her helpful companionship much of the success achieved by her distinguished husband.

THE KOMINATO HARBOUR.

We published in a recent issue news from the vernacular press to the effect that the construction of a harbour at Kominato near Aomori, was in contemplation, and that the projectors of the scheme anticipated for the place prosperity which would prove fatal to Yokohama. The intelligence is now supplemented by a statement in the *Nichi Nichi Shimbun* that a petition seeking sanction to undertake the work has been

presented by the Fifteenth National Bank—the Nobles' Bank—to the Aomori Prefectural Assembly, the signatories being, among others, Marquis Ikeda, Marquis Hosokawa, Count Matsukata, Mr. Kawashimura, and Mr. Yamamoto. An estimate of construction expenses was not appended, the petitioners merely stating that Kominato offers the best facilities for harbour purposes of any place in the north, and that the construction of a port there would afford great convenience to the Japan Railway Company in transshipping goods. It seems, however, that the Fifteenth National Bank is not first in the field, for Messrs. Murata Tsutsumi, Takenouchi Yoyemon, and Katsura Jiro, having purchased about a hundred thousand *tsubo* (82½ acres) of land in the immediate vicinity of the proposed port, presented to the Prefectural Authorities last September a petition seeking leave to commence the work of construction. Unless, therefore, some arrangement can be effected with these prior claimants, the project of the Bank cannot receive official sanction.

THE LIBEL SUIT.

We have been curious to see what criticism would be evoked by the judgment of the Tokyo Local Court in the libel suit instituted by Mr. Ito Kenkichi against the *Katshin Shimbun*. But the affair seems to have fallen flat, though it is certainly remarkable enough to excite curiosity. The judgment was a model of brevity. It simply declared that, in the opinion of the Court, Mr. Ito had not been personally insulted, though the charge publicly preferred against him was that he had been engaged in bribing members of the Diet. If an M.P. is not insulted, and very grievously insulted, by such an accusation, we should like to know how he can be insulted. The view taken by the *Kokkai*, however, which journal alone comments on the matter, is that the Court found no evidence of malice on the part of the newspaper, and that since malice constitutes an essential element in slander, as legally defined, Mr. Ito Kenkichi cannot be said to have been legally slandered. If the Court intended to convey that meaning, it is pity that it did not manage to suggest something of the kind by its language. The *Kokkai* thinks that a very convenient precedent has been furnished for the guidance of the editor. We, too, think so, but the convenience of the public is also worth considering. The tendency of a portion of the Japanese press at present is to indulge in considerable liberty of attack, and if individuals have no better safeguard than the Tokyo Local Court provides, they are likely to suffer severely. Mr. Ito has appealed, however, so it cannot be said that any precedent has yet been established.

THE WEALTH OF THE UNITED STATES.

RECENT statistics at hand, give the wealth of the United States of America, in sum total of real estate and personal property, and the amount of money in circulation, as estimated by Secretary of the Treasury as follows :—value of all lands, buildings, railways, colleges, etc., at \$64,000,000,000, and the amount of money in circulation, or that necessary to transact all the business of the States at \$2,108,130,092. There is no fixed limit to the amount of money to be issued or coined, though Congress has the power to regulate the issue of such money. The enormous wealth of this country bids fair to compete, in the near future, in commercial transactions, with any nation now in the field.

CANTON INSURANCE OFFICE, LIMITED.

THE following Report was presented to the shareholders at the eleventh ordinary general meeting, held at the offices of the general agents (Messrs. Jardine, Matheson & Co.), on the 22nd October :—The General Agents and Consulting Committee have much pleasure in laying before the shareholders the final accounts for the year 1891, and an estimate of the present year's working to 30th ultimo. 1891 Account.—The balance at credit of this account is \$510,965.12, out of which the sum of \$227,615.80 has already been paid for a dividend of 10 per cent. to shareholders, and a bonus of 20 per cent. to contributors of premia. It has

Original from

been decided, subject to the approval of shareholders, to dispose of the remaining balance of \$283,349.32, by adding to reserve fund \$180,000, thereby increasing it to \$730,000, paying a final dividend of 6 per cent. to shareholders, and carrying forward the sum of \$73,349.32 to 1892 account. 1892 Account.—This account shows an estimated balance at credit of \$502,925. Consulting Committee.—Since the date of the last general meeting, the General Agents and Consulting Committee have had to deplore the death of the Hon. P. Ryrie. The seat rendered vacant was offered to and accepted by the Hon. C. P. Chater. Messrs. Dalrymple, Davies, Gillies, Sassoon, and Chater, retire but offer themselves for re-election. Auditors.—During the temporary absence from the colony of Mr. Fullarton Henderson, Mr. R. Lyall was appointed to act in his place. Messrs. G. S. Coxon and Fullarton Henderson retire, but offer themselves for re-election.

A BIT OF HISTORY.

HERE is a fragment of history from *Answers*:—"Few attractions drew larger audiences in the year of the first great London Exhibition than the troupe of Japanese hand-bell ringers. Amongst those who visited them were a couple of Yorkshire weavers, who had expended a portion of their savings in a trip to the metropolis. To the astonishment of these good folk, both of whom were themselves hand-bell ringers, the tunes they listened to were ones to which they were well accustomed. Drawing a little closer to the players, they discovered under Japanese attire the faces of several old Yorkshire friends. During a pause in the performance, one of the two strode up to the leader and remarked: "Jabez, thowt I know'd thy face!" "Whist!" retorted Jabez. "We talk nowt but Japanese here."

NANCY HANKS.

THIS celebrated mare, who only a few weeks ago trotted a mile in 2.5, which was two seconds better than the best on record (her own), has now beaten that performance by one second. The event came off at Terre Haute, in Indiana, on a circular track, which had been got into unusually good condition. The first quarter was trotted in 31 seconds, and the half-mile in 1.2½; the third quarter was got over in 29½ seconds, and the mile finished in 2.4. Nancy Hanks was again driven by Budd Doble, who wins \$5,000 by the event, Mr. Robert Bonner having offered a prize of that amount on the accomplishment of a mile in 2.5 on the regulation track.

HARBOUR REGULATIONS COMMITTEE.

THE members of the above committee, in their first two conferences, discussed the first ten Articles of the Draft Regulations. The *Nichi Nichi* conjectures that there must have been some hot debate on Arts. 16 and 17, which relate to the method of constructing lighthouses. Our contemporary urges that the Committee should close its conference soon, but contends that as the questions under consideration are international, the Government should not promulgate the Regulations according to the manner now said to be contemplated. The better process is that the Minister of State for Communications should present the draft of the amended Regulations to the Cabinet, and ask the latter to pass them. By that method of procedure the draft, before receiving the consent of the Cabinet, "would come into the hands of the Minister of State for Foreign Affairs, who would invite a meeting of Foreign Representatives and Foreign Consuls, and obtain their approval of the various enactments. For, though hitherto no harbour regulations have been expressly promulgated, the Treaties with Foreign Powers contain clauses bearing on the subject, and if it is intended that existing Harbour Regulations shall remain in force, their amendment is inevitable. Without preliminary negotiations, however, they cannot be amended. For instance, the Regulations for Hakodate Harbour, contained in the Convention of 1866, must either be amended greatly or abolished totally. But in accordance with the opinions of Mr. Daisuke

and Captain James, continues the *Nichi Nichi*, the object of enacting harbour regulations is simply to maintain order in harbours, to prevent the collision of ships, and to preserve the harbour. They have nothing to do with tariff questions. From the operation of such regulations every one of the Powers would derive some advantage and none would be inconvenienced or injured. As for the fines or fees levied, every country in the world resorts to similar legislation. Hence, from all points of view no difficulty can possibly arise. Such being the case, the negotiations ought not to involve any of the delay that seems to be expected. The above statement in the *Nichi Nichi* is alleged to emanate from one of the members of the Committee.

The Committee held its third conference in the buildings of the Department of Communications on Wednesday last. As Mr. Kawazu, Vice-Minister for Communications, Mr. Usami, Governor of Kanagawa Ken, and Mr. Egi were absent, Mr. Kurino Shuichiro took the chair, and the business was proceeded with at 10 a.m. The discussion of Arts. 8 and 9 occupied nearly all the time. A proposition was submitted to the effect that, though the meetings were considered secret, the proceedings had always been reported in the vernacular press, and that care ought therefore to be taken with a view to put a stop to such publicity. The proposition was passed *nem. con.* The meeting adjourned at 3.30 p.m., until the 28th inst. We take these items from the *Nichi Nichi Shimbun*. Their publication—harmless enough for the matter of that—shows that the resolution to keep the proceedings secret has not proved very effective.

THE TANKO RAILWAY COMPANY.

THE above Company held a special meeting on Tuesday last at the Koseikan, in Kobikicho. Some 90 of the principal shareholders were present. Mr. Takashima Kayemon, Director of the Company, took the chair, and the business was commenced at 2 p.m. The chairman reported that the Yubari Railway had been completed, the works having occupied three years, and that a trial trip was to be made on the 1st proximo. He spoke at some length about the result of the examination of the Company's ledgers by official auditors specially despatched to Hokkaido for the purpose. Happily everything had been found satisfactory. He then gave some explanations as to the capital and other funds of the Company, and went on to say that the railways having now been completed, the wooden-bridges built for temporary use had to be replaced by iron structures. For this purpose a sum of 500,000 yen had already been spent. But the Company's mining works had been so far developed that an amount of 250,000 yen would be recovered. With regard, further, to the purchased railways, 1,050,000 yen was needed for reconstructing bridges, repairing rails, and purchasing new carriages. Finally a sum of 50,000 yen was needed for working capital. Thus the company required a total of 1,100,000 yen. The following propositions were read out:—

1. The Company shall issue bonds for a sum of 1,100,000 yen to be raised in three years: namely 500,000 yen in 1892; 400,000 yen in 1893; and 200,000 yen in 1894. This amount shall constitute the capital of the Horonai Railway.
2. The above debt shall be paid-out of the profits accumulating from the takings of the line during 25 years, commencing from 1895.
3. The interest of the bonds shall be less than 6½ per cent. per annum. The date of their issue, as well as the method of issuing them, shall be determined by Directors in conclave.

Mr. Adachi Magoroku and some others present asked a few questions, but the propositions were voted, it being explained that the Government had promised to pay interest at the rate of 5 per cent. on 500,000 yen, and that the Company would only have to pay the interest on the remaining 600,000 yen. On the other hand, seeing that the Company had realised a profit of 400,000 yen within 3 years from the date of purchase, and seeing that there was every prospect of farther improvement, no reason existed to apprehend any difficulty in paying the interest and the principal. When the

meeting was about to be closed, Mr. Baba Iku-taro moved that whereas hitherto the Director of the Company had been appointed officially, a petition should be presented to the Government, urging the expediency of making his office elective. This idea was opposed on the ground that the by-laws of the Company did not allow a motion to be brought forward without previous notice. Considerable discussion ensued, and finally Mr. Shibusawa Eiichi having taken the chair and the arguments on both sides having been fully propounded, it was proposed that a special meeting be held after the 25th proximo, the date fixed for the general meeting, to determine the question. The proposition was approved by a large majority. Mr. Adachi Tatsu then presented an amendment of the provision relating to the distribution of rewards, but it was rejected. The meeting closed at 3.30 p.m.

THE BUDGET.

It is stated that the Ordinary Budget for next fiscal year has now received the assent of the Cabinet, and that it will be submitted for the Emperor's approval on the 29th instant. As to the extraordinary expenditure, the general idea appears to be that the Government will refrain from proposing any new enterprises, and that the Diet will be left to deal with the surplus in the Treasury. But the Tokyo News Agency alleges that this notion is not altogether correct, and that the Cabinet will not come before the Diet without a plan for disposing of the accumulations which must now amount to a considerable figure.

MACAO.

AFTER years of incessant request and at the eleventh hour, says the *Hongkong Daily Press*, the Lisbon Government has now allowed the Governor of Macao to call for tenders for the supply of a dredger and its accessories for the purpose of deepening the much silted up harbour of Macao, and we understand that Sig. Borja has invited the Hongkong and Whampoa Dock Co., Limited, and Messrs. Geo. Fenwick and Co., Limited, to compete for the contract.

TANK OIL.

THE *Murex*, which arrived here, says the *Hongkong Times*, last Thursday morning (28th ult.) brought 1,250 tons of oil, which she discharged at Messrs. Markwald's tanks in some six hours. She afterwards loaded rice in her upper hold, and left for Singapore on Saturday. She will return with another 1,200 tons of oil this week-end. The oil-drums, we learn, are being now put on the market, and are generally well-received.

RAW SILK TO AMERICA.

THE imports of Raw Silk at the Ports of New York and the Pacific Coast for the month of September, 1892, were 5,412 bales = 763,132 lbs. = \$3,623,404. The imports of Waste Silk, and Pierced Cocoons in same period were 43 packages = \$4,439.

ATTEMPTED SUICIDE OF A CHINAMAN.

A CHINESE guide, attached to No. 151, attempted to commit suicide in the Yoshiwara yesterday afternoon. He left home about 2 o'clock yesterday and was not found until this morning, when the police took him in charge. He is in a very critical condition.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The continued silence of the Cabinet as to the policy it intends to pursue, is apparently extremely vexatious to the Opposition papers and even to some of the independent journals. These papers are so embarrassed by lack of topics to assail the Cabinet, that they—especially those of the *Kaishin-to*—cry out against the Cabinet for having no policy to pursue, and accuse it of want of courage to decide upon any definite course of action. The *Mainichi Shimbun*, one of the most persistent in challenging the new Ministry to declare its programme, be-

lieves, like every other Opposition organ, that the Cabinet is bent upon pursuing "a negative policy;" in other words, the policy of projecting no new undertaking. If the Government hopes thereby to avoid collision with the Popular party, the *Mainichi* prophesies that it will be grievously disappointed. For, in the Progressionist organ's opinion, a collision between officialdom and the Opposition may be at any time brought about, first by the former's refusal to retrench administrative expenses; secondly, by its hostile attitude towards any Bill relating to the extension of popular freedom; thirdly, by its reluctance to meet out punishment to the officials charged with interference in elections; or fourthly, by its continued maintenance of the theory of Cabinet irresponsibility, that is to say, the theory that the Ministers of State are not constitutionally bound to hold themselves responsible to the Diet. Any one of these causes is sufficient to precipitate a collision between the Executive and the Legislature. What then is the use of pursuing a negative policy? Nay more, the circumstance that the Cabinet dares not submit to the Diet the projects of new undertakings which were rejected in the preceding season on the ground of want of confidence, is declared to be tantamount to a confession by the Ministers of State that they do not enjoy the confidence of the people. From what has thus far been reproduced, it is evident that the Progressionist party is determined to oppose the Government as uncompromisingly as ever. It is also worthy of notice that the *Yomiuri Shimbun*, which is regarded as expressing the views of the moderate section of the Progressionist party, has announced, though in a hesitating and undecided tone, that collision between the Government and the Opposition is unavoidable. Our contemporary bases its conviction upon nearly the same grounds as those advanced by the *Mainichi*. From this, it is to be inferred that the proposal said to have been made by Mr. Takata Sanaye for abandoning the policy of wanton opposition to the Government hitherto pursued by his party, has been rejected by his comrades, and that the moderate section led by him is powerless to sway the counsels of the whole.

It is interesting to notice that the *Mainichi Shimbun* experiences great uneasiness on account of a report that certain politicians have it in contemplation to replace the system of indiscriminate opposition to the Government by a more reasonable and moderate programme. The allusion is, no doubt, to the Radicals and to the moderate section of the Progressionist Party. Those who advocate such a policy are characterized as betrayers of the trust reposed in them by the people. On the other hand, while the Progressionist organs are beginning to declare their disapproval of the policy said to be contemplated by the Radicals, the latter's organ refrains from touching the subject and devotes its attention to the discussion of the various practical questions of the day.

The *Fiji Shimpō* also strongly condemns the negative policy which the present Cabinet is supposed to contemplate. In a certain sense such a policy may be useful at the present juncture, for it may serve to soothe the excited feelings of the people. But it is at best a time-serving policy, and altogether inadequate to constitute any permanent remedy for existing evils. A better course for the Government to pursue would be, in the *Fiji's* opinion, to apply itself to the solution of the various important problems now demanding national attention, such, for instance, as Treaty Revision, the Korean question, the augmentation of the Navy, the method of dealing with the surplus population, and so forth. Our contemporary reminds the Cabinet of the fact that, outside the ranks of party politicians, there exists a class of independent and intelligent observers who take keen interest in current politics. These men wield vast influence in the country. They have hitherto refrained from opposing the Govern-

ment, not indeed because they placed implicit confidence in its capacity and integrity, but, because, considering the past history and the present composition of the Government, they think it safer to leave national affairs in its hands than in those of party politicians. But if the Government really intends to ignore the momentous questions above alluded to, it must be prepared to forfeit the confidence of the independent section of the Diet. Our contemporary concludes its article thus:—"That, in spite of the opposition of the Popular party, the Government is able to maintain its position and power, is owing to the support it receives from the independent section of the nation. If, therefore, it should estrange men of this class, its tenure of power would be placed in serious danger. We wonder if those now in office have well revolved this circumstance in their minds. At all events, we cannot choose but call their attention to the matter."

The Radical organ, the *Fiyu*, observes that the legislation of the Government in recent years has tended to widen the gulf separating the rich and the poor, the high and the low. The creation of new nobles, the grant of official rank to persons who contributed money for coast defence, the establishment of high standards of property qualification for the members of all popular assemblies, from the Diet down to the Village Assembly—these and several other measures have combined to invest the rich and aristocratic with undue political power. The effect of such a state of affairs has been, in the *Fiyu's* opinion, to engender among the people of the lower and unprivileged classes sentiments of resentment against the rich and powerful. The strikes now prevalent among the working population are pointed to as a proof of the gradual growth of socialistic ideas in the lower and oppressed strata of society, a state of affairs which is sincerely deplored by the Radical organ.

The scandal connected with the barristers' examination has attracted much journalistic attention. Rumours of the wildest nature seem to have been eagerly devoured by newspaper readers. The imputations of corruption brought against some of the members of the Examination Committee have been too absurd to merit a moment's credence, and facts are now coming that prove the entire baselessness of these stories. The original offender seems to have been a subordinate clerk in the Department of Justice, who was employed to copy the examination papers before sending them to the printer. There are, however, newsmongers who persist in circulating damaging libels against the members of the Examination Committee, and the Opposition journals are only too ready to give credence to these rumours since they find in them an opportunity to criticise the Administration. The *Mainichi Shimbun* calls upon the Cabinet to deal with the matter in a thorough and impartial manner, taking especial care not to let the principal offenders escape the punishment which they well deserve. The *Yomiuri Shimbun* hints that the increase of uneducated and unscrupulous barristers in recent years is owing to loose and corrupt methods of conducting examinations, and urges the importance of radical reforms. The *Kokumin Shimbun* alleges that partial and corrupt procedure in the system of barrister's examinations is increasing the number of men discontented with the Government. The *Fiyu* sees in the scandal a fresh proof of the general demoralization of the Civil Service, and in strong language bids the Government introduce more rigorous discipline in the ranks of officialdom. The *Kokkai* thinks that the primary cause of such incidents lies in an abnormal increase of the number of law students, a state of affairs brought about by the encouragement which the Government has given to the study of jurisprudence. Thus, by various routes, all these journals make the Government the object of their final assault.

The *Choya Shimbun* is inclined to think that the scandal was caused chiefly by faulty methods

of appointing the Examination Committee and conducting the examination. It advises the Government, first, to fix a certain high standard of qualifications for applicants for examination; secondly, to replace the present method of written examination by oral; to appoint the Committee of Examination only one or two days previously to the date of examination; fourthly, to discontinue the practice of including in the Committee Judges or Proctors who teach in private law schools, and fifthly, to extend the sphere of the subjects of examination. Never was there such a storm about an affair in itself so trivial.

The Minister of Education is the subject of various comments in the vernacular press. The Education Department, feeling the importance of adopting a uniform system of moral teaching in primary schools throughout the country, some time ago invited the scholars of the whole Empire to compile text-books. These books were to be examined by a Committee specially appointed for the purpose, and such of the volumes as satisfied the standard contemplated by the Education Department were to be authorized for use in the schools. The Committee was actually appointed; and the task of examining the various works sent in from different parts of the country had been commenced, when reports injurious to the honour of some of the committee-men began to be circulated in Tokyo. Considerable excitement ensued in educational and publishing circles, and the Minister of Education, Mr. Kono, thought it desirable to suspend the labours of the Committee. It has accordingly been announced that the examination of the books is postponed until April, 1894. Meanwhile, those who have not yet sent in works are permitted to do so up to the above mentioned date. Most of the papers applaud the step taken by the Minister of Education. The *Kokumin Shimbun*, however, regrets that Mr. Kono has not adopted the more rational plan of abandoning altogether the policy of interfering in the choice of text books to be used in primary schools. Such a policy is calculated to defeat its own end by preventing the adoption of the best works.

The *Fiyu* discusses the importance of introducing reform in the dendrological administration of the country. There are more than 7 million *cho* (17½ million acres) of forests in the possession of the State. The expenses required for maintaining the staff charged with the management of these forests, amount to about 400,000 *yen* per annum, while yearly receipts barely exceed 700,000 *yen*. Our contemporary thinks that the revenue derived from the forests can, under proper management, be increased to ten times the above amount. The introduction of the present system of management has disturbed many of the local customs, and the umbrage of the people is occasionally expressed by wanton destruction of forests. This trouble must be very insignificant, yet the Radical organ thinks it important to revive some of the old customs and adapt the management of forests to the special conditions of each locality. Certain forests now under the direct control of the central Government may be profitably transferred to the charge of the local Governments and even to the control of communal bodies.

The *Fiji Shimpō* repeats its often expressed belief that the Government ought not to commence negotiations for Treaty Revision until all danger of internal dissension has been provided against. It observes that the consummation of this long deferred object will not be very difficult, if the statesmen now in power can preserve their concern for the required length of time. Not that the *Fiji* believes in the capacity of the present Cabinet; but it does believe in the favourable attitude of the foreign Powers towards Japan, and it advises the Ministers of the Crown to adopt every possible precaution against the danger of dissension among themselves before approaching the Powers on so important a subject.

THE FOREIGN REPRESENTATIVES AND THE GAME LAW.

THE *Hochi Shimbun* has a curious paragraph, which is worth translating:—"We have already reported that the Foreign Representatives held a secret meeting in the Italian Legation with reference to the new Game Law, and that the foreign residents also are moving in the matter. We are now in a position to give further particulars. Hitherto, when any law or regulation affecting the existing Treaties or the privileges enjoyed by foreigners was about to be promulgated, it used to be the custom to communicate the fact beforehand to the Foreign Representatives, or even to ask their advice. But the present Government has naturally refrained from taking any such course with regard to the new Game Law. The Italian Representative regards this as a violation of international usage, and therefore invited all the Representatives to his Legation to discuss the matter. His Excellency the CHEVALIER DE MARTINO having been longer in Japan than any other of the present Representatives, his opinion has generally been adopted by the rest of his colleagues, so the above question also was determined according to his view. The American Minister alone disagreed from the outset, and maintained that the Japanese Government had acted properly. Be these things as they may, however, since it is certain that no foreigner has any title to interfere with the legislative action of the Japanese Government, the Foreign Representatives may be expected to adopt a different attitude soon."

We have called this a "curious" paragraph because it attributes to the Italian Representative, and to some of his colleagues, an attitude which they cannot for a moment be supposed to have assumed. The principle underlying the question is perfectly plain. Japan is absolutely free to legislate as she pleases, provided that her legislation does not disturb any of the privileges guaranteed by treaty to foreigners. The privilege of pursuing game has never formed the subject of any treaty or convention. It has hitherto been enjoyed by foreigners under Regulations enacted by the Japanese Government of their own independent authority, and the condition attached to its enjoyment has been that every foreign holder of a shooting license should observe the prohibitions of the Regulations. It is very possible that when the Regulations were originally framed, steps were taken, as a matter of courtesy and expediency, to consult the views of the Foreign Representatives, because, since the prohibitions of a Japanese law are not considered binding on any foreigner without the intervention of his Representative, the latter's cooperation is always desirable where his nationals are likely to be concerned, and was especially desirable in the early days, seeing that the

Japanese procedure then ran the risk of being very variously and severely scrutinized. Evidently to issue Regulations embodying prohibitions which the Foreign Representatives might refuse to extend to their nationals, would be to invite the dilemma of having either to alter the Regulations subsequently, or to exclude foreigners from their privileges as a consequence of exemption from their prohibitions. Neither alternative could have been agreeable, and it is therefore very conceivable that reference was made to the Foreign Representatives previously to the promulgation of the former Gaming Regulations. But it goes without saying that a voluntary reference of that nature is incapable of being construed into a deliberate abandonment by Japan of her inherent right to legislate as circumstances may dictate for the preservation of her game birds and animals or the control of their pursuit. She has never divested herself of her title either to interdict altogether, or to permit altogether, the killing of game, should either course seem necessary in her own interests. Hence, when she decides that private property in game shall hereafter be recognised, and when, in pursuance of that principle, she enacts regulations ordaining certain new conditions and prohibitions, no manner of obligation rests on her to consult foreign Powers. Her game belongs absolutely to herself, and she is entitled to do what she likes with it. Moreover, she does not withdraw any privilege hitherto enjoyed by foreigners. They will still be competent to purchase licenses and to pursue game, either for pleasure or profit, just as they have done for the past fourteen years. These considerations admitting of no discussion, we are persuaded that the *Hochi Shimbun's* version of recent diplomatic procedure is erroneous. It took something like seven years, if we remember aright, to get the prohibitions of the former gaming regulations extended to foreigners. We cannot be surprised if the process involves a little delay on the present occasion. The only difference is that whereas, pending the issue of the old regulations, foreigners were not debarred from the privilege of shooting, they certainly will be debarred until the prohibitions of the new law become applicable to them. Their Representatives may be relied on not to expose them to any inconvenience on that score.

THE KOREAN QUESTION AND THE TIENTSIN TREATY.

THE *Fiji Shimpō* is perhaps the most persevering and plain spoken among Japanese journals on the Korean question. Hints are indeed heard in certain quarters that our contemporary is not entirely disinterested in urging the Government to pursue an active policy in Korea, it being supposed that the writer of these articles

whoever he may be, is anxious to have the San-yo Railway purchased by the State in view of its importance in case of a campaign in the little kingdom across the sea. But we cannot for an instant allow such suspicions to weaken our faith in the sincerity of the Tokyo paper, for we deem it extravagant and insulting to imagine such a journal capable of the baseness of seeking to start the country on a perilous career of aggrandizement merely for the sake of serving petty private ends. Our contemporary urges, in its latest article, the abrogation of the Tientsin Treaty of 1885, which enjoins on both China and Japan the duty of intercommunication before sending troops to the peninsular kingdom. Since the disturbance of 1884, Japan's attitude, we are told, has been that of a child which, having burned its hand, shrinks perpetually from approaching fire again. But the situation steadily becomes more critical, and it is to be feared, according to the *Fiji*, that, unless Japan is on the alert, she may some of these days find herself altogether out of the race in Korea. Russia gives most uneasiness to the *Fiji Shimpō*. It again refers to the constant stream of Korean immigrants into Russian territory; immigrants said to be treated by the Russian authorities with exceptional kindness, and even to have been appointed, in some cases, to lucrative posts. Neither are China's persistent endeavours to assert her suzerainty in the peninsula viewed with equanimity by our contemporary. Other Powers, too, as England, France, and Germany are, in the *Fiji's* opinion, evolving more or less sinister designs against the peninsular kingdom, and in view of all this, Japan must at once make up her mind as to the policy to be pursued in case of emergency. The post of Japanese Representative at Sōul must be given to a man of exceptional energy and ability: cruisers should be stationed between Jinsen and Nagasaki to secure rapidity of communication in case of trouble; and the San-yo Railway must be completed as quickly as possible. But above all, the inconvenient Treaty of Tientsin ought to be abrogated in concert with China. How is it possible to meet the requirements of an emergency, so long as each empire is bound by treaty to communicate with the other before taking a decisive step? This irksome stipulation may lead to serious misunderstanding between the two countries, and the Japanese Government is strongly urged to take prompt steps for negotiating with China the abolition of the Treaty.

The tone of the *Fiji* is somewhat contemptuous when alluding to the Tientsin Treaty, and this circumstance accounts for the vehemence with which its article has been assailed by the *Nichi Nichi Shimbun*. The *Nichi Nichi* is indignant with the *Fiji's* presumption in finding fault with the Treaty of 1885. If that agree-

ment is other than convenient to either Power, it must be to China and not to Japan. For by it China has been practically prevented from carrying into effect her claim of suzerainty over the peninsular kingdom; whereas Japan has established her claim of equal rights with China. Another result of the Treaty, in the *Nichi Nichi's* opinion, is that Japan and China have virtually entered into an alliance to preserve the integrity of the Korean kingdom against internal as well as foreign dangers. As to the complaint that the Treaty stands in the way of prompt action in case of emergency, our contemporary deems such an apprehension entirely unfounded, for the country intending to despatch troops to Korea has simply to communicate the fact, and that can be easily effected by either sending a note to the Representative of the other or by using the wire. What interests us more than this defence of the Treaty, however, is the *Nichi Nichi's* entire agreement with the *Yiji's* declaration that an active and stalwart policy must be pursued by Japan in the peninsular kingdom. The only difference in the position of these two journals is that, while the one displays a want of insight by demanding the abrogation of a Treaty more favourable to Japan than to China, the other takes the practical course of recommending both the Government and the Diet to increase the fighting capacity of the country to a degree commensurate with the bold line of policy now advocated.

The *Hochi Shimbun* writes in a more moderate strain than either of the above journals. It deplores that too many of its contemporaries, when dealing with the Korean question, indulge in the wildest language, regardless of the offence they may thereby give to the Koreans. The policy of the Japanese nation should be, in our contemporary's opinion, to win the good-will and confidence of the Koreans and to act as a friend and guide in their career of progress. Japan's diplomatic programme in Korea should be non-interference in the kingdom's domestic affairs, but to prevent other Powers like Russia and China from tampering with Korean independence. Japan has lost prestige in Korea primarily, according to the *Hochi*, because the Korean nation has become estranged from the Japanese on account of the latter's arrogance and high-handed methods of procedure.

Such are the views of the leading vernacular journals. It is distinctly a feature of the time that an influential section of the press devotes its energies to keeping the Korean question before the public, and to educating a stalwart spirit which the Government may ultimately find embarrassing.

JAPANESE LAWS AND FOREIGN RESIDENTS.

THE writings of the vernacular press with regard to the new Game Regulations indicate that considerable diversity of opinion exists as to the manner and possibility of extending the prohibitions of Japanese laws to foreigners residing in Japan. We are not at all surprised that uncertainty should be shown in dealing with a problem which has provoked so much discussion, and which still awaits a universally acknowledged solution in practice. It will, we are persuaded, be fully recognised one of these days that the only Power occupying a logical position in her relations with the empire of Japan is the United States of America. The laws of a foreign country have no inherent force in Japan. They derive their operative efficacy solely from the fact that the SOVEREIGN of Japan has by treaty placed the subjects or citizens of that particular country under the jurisdiction of their own laws while residing within his territories. The theory so often advanced by writers whose wish is father to the thought—the theory that this privilege of living under his own laws exempts the foreigner from any obligation towards the laws of Japan—cannot be brought into consonance with acknowledged principles of jurisprudence. Mr. F. T. PIGGOTT, in his recently published "Exterritoriality"—a book now accepted as the standard authority on the law relating to Consular Jurisdiction—puts the matter with admirable clearness:—"There is nothing in extraterritorial treaties to prevent the application to the case of the ordinary principle, that a foreigner owes temporary allegiance to the SOVEREIGN of the country in which he temporarily resides: owes temporary obedience to the laws of that country. The fact that his offences are decreed to be judged, and his disputes are allowed to be settled, by the law of his own country, does not remove him from the sphere of this temporary allegiance and obedience, except in so far as it may result from the application of the treaty grant. Indeed, he owes obedience to the laws of England by virtue solely of his temporary allegiance to the foreign SOVEREIGN. It is in virtue of this alone that the laws of England have any binding and executable force over him in that country. Too much emphasis cannot therefore be placed upon these fundamental principles of extraterritoriality, that it has nothing whatever to do with the Sovereign rights of the British Crown or with the so-called omnipotence of the British Parliament; that its existence depends entirely on the will of the SOVEREIGN of the country wherein it is exercised; and as its existence depends on this, so also does its extent; and its extent is to be found expressed in no other document but the Treaty." Such is the only theory consistent with the fundamental axiom of jurisprudence, and, so far as we

know, the United States of America is the only country which fully recognises it in Japan. America holds that all the powers which have not been explicitly surrendered by the SOVEREIGN of Japan, are retained by him, and that to the exercise of such powers by him American citizens are bound to submit. He has surrendered the power of enforcing the penalties of his laws in respect of American citizens, but he has by no means surrendered the right to insist that the prohibitions of his laws shall be observed by them. Hence the United States requires that its people shall obey those prohibitions, and enforces them by the penal clauses of American law, whenever directly applicable, and by the penalties attaching to misdemeanours in the absence of such clauses. Great Britain's position is different. She has never, indeed, so far as we know, openly enunciated the dogma that her subjects in Japan are free from obligation to respect the prohibitions of Japanese laws; but she has invested her Representative in Tokyo with discretionary competence to extend such prohibitions to his nationals by the process of re-enactment, appending whatever penalties may appear necessary for their enforcement. Great Britain's method satisfies all the practical requirements of the case, but is undoubtedly repugnant to the principles laid down above. Turning now from the United States and Great Britain to the other Treaty Powers, we are confronted by an often repeated assertion that they have provided no machinery for giving effective recognition to the prohibitions of a Japanese law, and that consequently no law enacted to meet conditions peculiar to Japan can be made binding upon their nationals. We believe this view to be altogether erroneous. There may indeed be one or two Powers which neither recognise their true position towards extraterritoriality, nor have supplied means to render their false position practically tenable or justifiable. But such cases are probably quite exceptional. The Foreign Representatives are understood to maintain their competence to extend the prohibitions of any Japanese enactment to their people, and an opportunity of testing the matter practically is now furnished. For although the new Game Regulations contain no reference to foreigners, the Japanese Government, it is stated, has expressed willingness to accord their privileges to any nationals observing their prohibitions. Hence a license will be procurable, and the privilege of preserving will be exercisable, by any foreigner whose Representative takes due steps to enforce the prohibitions of the Regulations with respect to his nationals. The method pursued in the case of the former shooting Regulations was peculiar: a foreigner taking out a license entered into a civil contract to obey certain rules. That singular device was not the outcome of inability on the part of the Foreign Representatives to

apply the prohibitions of the Regulations by ordinary legal processes. It resulted from the impossibility of elaborating any regulations acceptable to all the Representatives. Japanese legislators, twenty years ago, were sufficiently sanguine and inexperienced to imagine that laws having a direct interest for the foreign residents might be drafted with the preliminary cooperation of the Foreign Ministers. Seven years were expended in testing the feasibility of this hypothesis in the case of the Shooting Regulations, and patience and hope being then exhausted, the expedient of a civil contract was conceived. But nothing of the kind is possible with regard to the new Game Regulations: their prohibitions must be observed or their privileges cannot be enjoyed. Hence they afford an opportunity of determining the attitude which the various Treaty Powers practically assume towards this important question.

JAPANESE PICTURES AT MUNICH.

LAST Spring, as recounted at the time in these columns, Baron WENDELSTADT, at the request of the Commissioners of the Munich Exhibition of Pictorial Art, then in process of organization, kindly consented to approach the Japanese Authorities on the subject of a contribution from this country. His proposals did not meet with an enthusiastic reception. The Japanese officials interested in such matters understand that while, on the one hand, their country's pictorial art is passing through a transition stage and has not yet cultivated its new tendencies sufficiently to invite the judgment of the public, on the other, Western appreciation of Japanese art can scarcely be trusted to understand the points upon which the Japanese connoisseur sets most value. In a word, the new school shrinks from inviting criticism at this early stage of its career, and the old feels that it is not in touch with Occidental taste. To accentuate this timidity and reluctance we have the fact that the experiment of sending Japanese pictures to European exhibitions has hitherto been pecuniarily unsuccessful. France, which has always led the world in art matters, being formerly regarded by Japan as the most promising field to find appreciation and purchasers, an exceptional effort was made, some thirteen years ago, to send to Paris a really representative display of this country's work, but the pictures fell entirely flat and were returned to their painters in almost every case. Yet, among the number, was a very remarkable effort by the late KANO TAMBÏ, a picture of the Goddess of Mercy creating Man. Admirable in conception and execution, this painting ought to have attracted attention and applause. But whether the motive was not understood, or whether the common fault of all Japanese *aquarelles* when placed in Occidental art, in-

ment, want of assertive power, prejudiced the public, the picture found no purchaser, and, returning to Japan, was acquired for the Ueno School of Fine Art, where it now hangs, undoubtedly a work of genius though thin and unimpressive as to technique. That disastrous experience is still vividly remembered, and its consequences were encountered by Baron WENDELSTADT when he first mooted the question of a contribution to the Internationalen Kunstausstellung in Munich. Ultimately however, Mr. KUKI, Director of the Imperial Museum, and Professor OKAKURA, of the Ueno School of Art, were induced to render assistance, and by their aid a collection of twenty-two pictures was made and forwarded to Bavaria. The artists represented were IMAO KEINEN, KANO TOMONOBÛ, KAWABATA GYOKUSHO, KISHI CHIKUDO, KOMAI RIUSEN, KONO BAI-REI, KOSE SHOSEKI, MAYEDA KIMPU, MORI KAWASOBUN, OGATA GEKKO, OKAKURA SHUSUI, SUZUKI SHONEN, TAZUCHI SHUNRIN, TAKANASHI GYOKUEN, TANAKA GEKKO and UYEMURA KEIZAN, sixteen in all. The pictures were accorded a good place in the Exhibition, but had to be kept by themselves, as they did not bear contact with European paintings. They do not seem to have elicited much admiration, though seven of the twenty-two had been sold at the time of our latest advices. It is interesting and instructive to note the class of paintings that found favour. Two of the seven pictures represented carp, a subject which Japanese artists treat admirably, and were by IMAO KEINEN and TAZUCHI SHUNRIN. Two were of birds, namely, Sparrows in Snow, by KOMAI RIUSEN, and Wild Ducks, by TAKAHASHI GYOKUEN, the purchaser of the latter being the Prince Regent of Bavaria, who paid for it 300 marks (about 100 *yen*), a low figure as compared with European paintings. One was of figures, a Procession in Tokyo, by OGATA GEKKO; an exceedingly clever water colour, capably composed, and full of vigour and motion. One, strange to say, was of animals, Rabbits and Azalea, by TANAKA GEKKO; and one was a moonlight flower scene, by UYEMURA KEIZAN. The lesson taught by this list is that Europe has not changed its original verdict about Japanese painters, and that it still looks for their best efforts in the direction of birds, flowers, and fish. The bold style of HOKUSAI, TANI BUNCHO, YEI ITCHO and their school, with its admirable power of line and directness of effort, will always command approval even in figure subjects. It was fairly represented at Munich by OGATA GEKKO'S Procession. But the connoisseurs of the West evidently do not yet look for more serious achievements by Japanese painters. The two great masters of the modern school—that is to say, the school which aims at bringing Japanese motives into closer touch with Western taste and Western technique—HASHIMOTO GATO and

KAWABATA GYOKUSHO, do not appear to have been appreciated, if we may draw any inference from their failure to find purchasers. These two artists—probably well known to many of our readers by the large and imposing pictures which they displayed at the Tokyo Industrial Exhibition of 1890—sent five paintings to Munich, HASHIMOTO contributing three landscapes, and KAWABATA a seascape and a picture of squirrels. The drawings had undoubtedly much to recommend them, but it must be said generally of the new departure which HASHIMOTO and KAWABATA lead, that, while it has so far broken away from Japanese canons as to invite criticism from a new standpoint, it has not yet approached the Western School sufficiently closely to take recognised rank there. The whole matter is of the deepest interest, for there is involved in these essays and their results no less a problem than the future of Japanese pictorial art. We have not yet had an opportunity to study the criticisms of German connoisseurs, if any such have been penned, but our private advices from Munich are that the first complaint against the Japanese pictures is the impossibility of adapting them to the *entourage* of any European home. It would be strange if this were otherwise. The Japanese have always painted for their own domestic arrangements. Their *Kakemono*, from shape to mounting, are suited only to the comparative isolation of an alcove and to the chaste, sober surroundings of a Japanese room. Out of the artist's sense of congruity there was gradually evolved a love of half tones and limited effects, together with a use of colour that aimed at mellowness rather than strength. How much of this fashion has become inbred in the art, how much may be altered without changing essential characteristics, is a problem awaiting practical solution. From Munich the suggestion comes that what Japanese artists chiefly need is an opportunity to permanently study the works of the best Western masters, so as to familiarize themselves with the ideal at which the artists of the Occident are aiming now and have always aimed. This could be effected only by establishing in Tokyo a museum of ancient and modern masters. But though the moment is said to be particularly favourable for carrying out such a purpose—pressure of bad times in Italy, the cradle of pictorial art, having brought into the market, at comparatively low prices, many beautiful masterpieces—we have little hope that Japan will make the effort. The men who officially direct her art progress at present are determined that she shall strike out a line for herself without bowing to the force of foreign influences; and as for the little school of struggling artists who would fain place themselves in touch with Western methods, they have fallen upon such evil times and so completely out of official favour that no

hope of their immediate success can be entertained. Yet it is a vital question for Japan whether she can win foreign patronage, for no sufficient field offers at home. The great bulk—may we not almost say the whole?—of her art manufactures are destined for Western markets. Did not Europe and America stand ready to buy her lacquers, her porcelains, her silks, her embroideries, her carvings and her enamels, the production of these beautiful objects must come to a speedy end. Her pictorial art is similarly situated. It has lost touch of domestic taste and has not yet appealed largely to foreign fancy. In which direction is it ultimately to turn?

MR. NAKAYE TOKUSUKE.

As a politician, as a journalist, and as an author Mr. NAKAYE TOKUSUKE'S name is well known among Japanese. He was educated in France, and at one time filled the post of President of the Foreign Language School. In the first general election he was returned by a large majority to the House of Representatives. At that time he edited the *Jiyu Shimbun*, but very soon afterwards he resigned his seat in the House, and, abandoning his journalistic career, suddenly departed for Hokkaido, where he seems to have been leading an inactive life ever since. At one time, in a letter to a friend in Tokyo, he said that he had become a swine-herd, but he now, writes a vernacular paper, sends this account of himself:—"I have opened a stationery shop at last, but being without experience in such a trade, I find it extremely troublesome. My shopmen are *soshi* of the old style, and consequently are never ready to utter polite words such as *Irasshai*! or *Arigato-gozaimasu*! to a customer. Thus I am compelled to stand behind the counter myself. So, you see, I have become a humble tradesman; politics and literature trouble my brain no longer. My days are devoted to handling the abacus."

This is certainly a singular transformation. We might call the motive romance, were there anything picturesque about the occupation of a stationer. But Mr. NAKAYE'S doings have a spice of practicality which forbids us to regard him as a mere visionary. Japanese do this sort of thing, and the curious part of it is that they never appear to feel the smallest shame in the presence of any social descent not in itself immoral. Their creed seems to be that a man is not responsible for his circumstances. He can control and direct his own efforts, but he can neither control nor direct his opportunities, and if the latter do not present themselves favourably, the former must necessarily be futile. A philosophy comfortable enough and not without attractions, this way of regarding matters might pass muster were it less invertebrate. But after all, judged by practical results, is not the

creed preferable which regards a man as the absolute maker or marrer of his own fortunes? Some good, easy-going folks are prone to talk of "luck" as a determining factor in every one's career. But if any exact analysis of careers were possible, we strongly suspect that opportunities of much the same value would be found to have presented themselves to the great successes as well as to the miserable failures of humanity. The difference lies in this, that whereas some men, by diligence too stubborn to be dependent on the spur of visible incentive, prepare themselves so that they are always ready to detect and to utilize every opportunity, others are not equipped by study or training either to see their chances or to take advantage of them if they do see them. According to this creed, which, whether formulated plainly or only dimly perceived, is the directing principle of life in the Occident, a man is responsible for his lot, and must shoulder the disgrace of miscarriage by whatever train of circumstances it ensues. Hence the shame accompanying every step downwards on the social ladder, and hence also an almost universal and distinctly demoralizing tendency to make a braver show than the reality warrants. In Japan, where circumstances are apparently held superior to effort, heads need not be hung because the wave of adversity has swept over them. A man's mode of life is a frank counterpart of his means. Mr. NAKAYE, selling stationary in a remote village and struggling with the dilemma of his *soshi*'s brusqueness and of his customers' pique, looks the world as straight in the face and has just as much self-respect as Mr. NAKAYE, member of Parliament and editor of the Radical organ. He would receive his distinguished friends if they came to visit him, and he expects to be received by them, with not less ceremony than of yore, though without the "*Persicos apparatus*." No one is supposed to make any impertinent inquisition into the causes and fashion of his descent from a journalistic and parliamentary pinnacle to the slough of pettiest retail trade. That is his affair solely. But is it? Mr. NAKAYE may have excellent reasons for his choice. We know nothing about that, and we beg him to pardon us if we take him as an object lesson since we discuss not an individual case but a trait of Japanese character. Would it be well for the progress of humanity if men were free to perform these social acrobatics, and to present themselves, after each leap to a lower plane, with the smiling confidence of a public gymnast? Some calamities are too powerful to be averted by human contrivance, but on the whole we suspect that far stouter fibre is manufactured out of the creed which holds a man entirely responsible for his own lot, than out of the complaisance which suffers him to descend to any depth without reproach or scrutiny.

NEW CODES AND OLD CUSTOMS.

(COMMUNICATED.)

I.

IF no Western nation had ever transformed its laws, if each people had developed its indigenous customs into a peculiar and unique body of law, if no importations from abroad had even been employed to systematize or to replace the home product, the spectacle of the undertaking in which Japan has been engaged for 20 years might be thought a strange one. The hostile critic might have free play for his evil prognostications and might enjoyably spend his sarcasms on the doctrinaire process of transplanting and regrafting foreign customs. But, as it happens, there exist few nations of the West, outside the Anglo-American group, which are in a position to throw the first stone of the sort or have the inclination to begin such criticism. They are themselves too vulnerable, nay, they even see no wrong in such a process of transformation, and they uphold it. As England has never in 800 years felt the foot of an armed invader, so she has never in that period acknowledged a faith in any laws but her own. But it is a fact that in almost every other nation of Europe and America (except the United States) the accepted law of the land is not an indigenous one, but was borrowed from the Roman civil law and given to a people whose customs required more or less adaptation to it. This statement is not as yet true of Russia and the Scandinavian nations; but the fondness for German scientific speculation is growing daily in those countries and has made especial headway in the great northern peninsula; and if the advocates of German legal science have their way, as is not unlikely, we shall see a much greater and more important work accomplished than that which Japan is now engaged in. Nor does our statement apply to Italy, the home of Roman law, though even here Austrian law has in part given way to French law; nor to some portions of what was formerly Turkey in Europe.

But if we look elsewhere, we shall see the Western world almost covered by two great streams of legislation, which have taken their rise largely within the present century,—the one from a French source, the other from a German. The former rose earlier and has spread farther; the latter is even yet acquiring its full force. Many countries had the French Code imposed upon them by NAPOLEON, and some of these have never given up the system then received—Belgium, Baden, the Rhine provinces, Poland (in Russia), Geneva, and a few others. Poland has indeed suffered another change of laws and has come under Russian and Austrian codes. Austria herself, for nearly a century, has had a Code more or less kin to the civil law which prevails in districts having such widely distinct individualities as Bohemia,

Galicia, Dalmatia, and the Tyrol. Germany for nearly four hundred years has been slowly putting on the garb of the civil law, until it now bears the same outward resemblance to the indigenous Germanic law that the Japanese Houses of Parliament do to the *yashiki* of Prince SHIMADZU. The Goths of Spain long ago felt the yoke of the Roman law, and for centuries kept the Roman Breviary of ALARIC, under another name, until the Roman law had shaped their whole system. Servia in 1844 enacted a Code modelled on the Austrian. Roumania, in remodelling her laws in 1864, made a code reproducing exactly the order of the French Code and agreeing with it in substance. Greece is founding new Code-efforts on the French and Italian models. Scarcely a State in South America has not in its Code manufacture felt in part the French influence—notably Brazil and Bolivia. In the Orient the dependencies and protectorates of France, Spain, and Great Britain are daily mixing the leaven of European law—as yet more or less separate and intact, because personal status almost always determines the law by which each person is governed, but before long to permeate the lands which its importers govern. There is in fact a world-movement of law, slow and imperceptible, like that of a glacier, but gradually covering and enfolding all the countries lying in its path. It is an illustration of the inevitable, the vigorous and coherent prevailing over the weak and formless. In some instances the indigenous law is entirely displaced; in others it is absorbed; in still others it merely receives scientific form and statement.

We see, then, that the work of Japan is but a drop in the sea, a footpath in the midst of highways, a single shot in the cannonade of centuries. This is not depreciating the importance of the work for Japan itself; for such a task seldom comes more than once in a nation's lifetime, and for each nation it has a right to be considered as epoch-making. But the remembrance that there is in progress a whole world-movement allows us to look with greater calmness on its manifestation in any particular quarter and to judge it more intelligently.

In every country the circumstances leading to the importation of laws have varied somewhat. In every country, too, the same problem, among others, has come up, with more or less urgency,—the adaptation of the new Codes to the conditions of the country. And in every case, again, the same question has had to be met by the advocates of the new laws, viz; How far are they in harmony with existing practices? This, of course, is by no means the whole of the problem. The new rule may directly contradict the old one, and yet be decidedly preferable. Or the new rule may fill a gap which the growing complexities of commerce have left open in the old. Or, then, may be a

conflict of custom, which will justify the legislator in stepping in and settling it as he thinks best. Certainly, where the forms of commerce have changed, or where moral standards have progressed, the law should advance also; and this element of the problem is one of the most important as well as one of the most difficult. But for a greater or less part of the legal system this question will still be the decisive one: Do the new laws substantially conflict with the existing rules as understood and upheld by the people? After eliminating all these considerations of reform, there will be large portions of the law where the mere fact of a conflict must be regarded as an argument against the Code. Not that this need determine the fate of such laws or parts of the Code, for other motives may be of higher consequence than a discrepancy of law and custom. But, at least so far as such a consideration goes in the scale, it will then weigh against the new laws.

Now residents of Japan know, but readers in other countries will hardly believe, that up to the present time positively not a single attempt has been made by the lawyers of Japan to determine carefully whether or not there is such a substantial concord between the existing customs, so far as they have definiteness and legal force, and the portions of the new Codes bearing on the same subjects! Those Codes have been accessible for about two years only, but in that time no one has been found who is willing or able to consider the Code problem from what must be, for the people, if not for the Government also, the most important standpoint. We include the whole class of lawyers in our statement; but of course the supporters of the Codes have had until very lately little or no motive to make special effort on their behalf. We confess to a feeling of abounding astonishment that the Opposition lawyers, with their loud declamations that the new Codes violated the customs of the country, have utterly failed to vindicate their thesis in the only proper and effective way. Their manifesto, published last June, seems to us to be a weak concoction of unfounded charges, disingenuous innuendo, and irrelevant platitudes. The few concrete charges, inserted like plums in sailors' pudding, have been easily refuted by M. BOISSONADE'S able essay (which reads to us like training cannon on a garden gate); and they content themselves with declaring that "we cannot point out how the application of foreign laws in Japan at the present time is founded on misconceptions." This failure on their part is the less excusable as it would have required no effort on their part to secure a basis for comparison. The Government had already provided for them the material. It appears that for fifteen years there has been in existence a printed book containing an abridgment of a collection of the customary laws of Japan. The manuscript unabridged original of this is the source of

the two volumes recently published by the Asiatic Society of Japan, under the editorship of Mr. WIGMORE. These form Parts II. and V. of a series entitled "Materials for the Study of Private Law in Old Japan," and deal with the respective subjects of Contract and Property. They are the records of customary law obtained about 1877 by a Government commission appointed with a view to preparing for the compilation of the Civil Codes. We shall reserve our review of these volumes until the Introduction (Part I.) appears; but we wish here to examine them with a view to answering the question, Are the new Codes in conflict with the existing customs of Japan? The customs here recorded are those of 15 or more years ago, but we may assume that they have continued in substance to exist. The subjects covered by these volumes are of course not exhaustive. Moreover, the new Codes cover many necessary topics not contained at all in the bare records of customs. But it will be possible at least to discover whether the rights and duties established in the Code and in the customs are substantially the same as regards their bearing on the people.

II.

We shall take up our comparison in the order of the Japanese Civil Code, noting as we go the points of importance on which there appears any record in the other volumes. It will of course be impossible to make comparisons of complete validity, for the records of customs here brought before us do not recite the practices of every district on every point. We are able in many cases merely to say that a certain practice was followed in a certain region, without affirming that it was a general one. This, at least, if it is unsatisfactory for our present purpose, is decidedly suggestive of the need of some uniform law to cement in a community of legal rules the regions so long Sundered and embarrassed by feudalism.

Of the preliminary provisions of Book II., "Property," it is needless to say that there are no comparisons to make. If Japanese scholars had been less gentlemen and more men of the people, if they had not stunted their minds with the dry nourishment of the Chinese annalists, and had not acquired a scholarly snobbery which unfitted them for true science, they would doubtless have created a legal literature, as Europe did. They would have formulated general legal conceptions and differentiated rights and obligations. But, as it is, there is not a law text-book to be found (if we except the tedious commentaries on the antiquated Codes of the last millennium,—commentaries which rival the Glossaries of the European Middle Ages in long-drawn-out pedantry); and a legal definition is something that is turned up only by the greatest chance, like a gem under a wayside stone. There was never any scientific, scarcely even any

literary, treatment of the law; and hence we have nothing to compare to the preliminary propositions of the new Code. But one thing at least is worth noticing. Art. 30 of Book II. declares the right of property to be a natural right to use, enjoy, and dispose of a thing within the limits of the law. Now this right of property may never have been given a definition in Old Japan, but at least it *existed*. This is worth while insisting upon, for it is an idea not uncommon among foreigners that Old Japan was a feudalism in which no rights of the common people were recognized and respected. This is not true,—no truer than it was of England under the TUDORS. Many an English farmer in those days saw his corn ruthlessly ruined by the noble hunters who followed the fox; and, seeing, bore it in impotent anger. Many a poor wretch writhed under the arbitrary dealing, mis-called justice, of judges like SCROGGS and JEFFREYS. Many a rich Jew saw his money disappear forever into the hands of the prince who wanted what he pleasantly chose to call a loan. Many a man spent years in Newgate dens at the false suit of some oppressive aristocrat whom he had offended. But the farmer was none the less an owner of property; English justice was no less a national fact; and the action of debt was no less a foundation stone of civil procedure. Whatever may have been in Japan the chicanery of this or that *daikwan*, or the insolence of a drunken *samurai*, law reigned and right existed under the TOKUGAWA Shoguns. The merchant could and did sue the *samurai* when he pleased,—a privilege which did not exist in Sweden, for instance, until the reforms of STRUENSEE in the last century. The feudal lord could not and did not take away the farmer's land as he pleased. It is RÉMUSAT, if we are not mistaken, who says that custom is in Oriental countries a greater tyrant than the so-called despot himself. People forget that in feudal Japan, as in mediæval England, the constitution was set deep in a strong foundation of custom; and the force of tradition and opinion was the sufficient sanction of property rights. Take for proof the statements of the Collection of Customs on this power of the lord to deprive the farmer of his land. There was no fief in which the administration was more strict or the tax burdens more heavy than that of Sendai (Rikuzen *kuni*). Yet there we find it recorded:—"The owner of realty can do as he pleases with it, except that he may not sell it in perpetuity. His ownership is inviolable, unless it is confiscated for crime or taken for public purposes,"—both being recognized processes of English law. Furthermore, "the latter occurs when the feudal officer needs the land for a special purpose or when a reservoir or storage for public use has to be constructed on the land. An order is issued for the taking, and other land is given by way of recompense; but if there

is no other land that can be so given, the owner of the plot taken must suffer the loss, and cannot even claim the price." This right of compensation was thus an incomplete one in this fief. But it may be worth remembering that even to-day the constitutions of at least three of the United States permit the taking of land for public purposes without compensation, and that this has been done by the Legislature of at least one State. In Uzen *kuni*, again, "the person so entered [in the register] as owner has a perfect title, and may sell, pledge, or otherwise dispose of the property. His ownership is inviolable, except in case of confiscation for crime by order of the feudal lord. * * * When saltpetre is discovered in a lot of residence-land, the feudal lord has the exclusive right of mining it; but compensation will be paid to the owner for any injury inflicted thereby." In Idzumo *kuni*, it is related, "[land] may be sold, mortgaged, or otherwise disposed of at pleasure, provided taxes are not in arrear. No one can under any circumstances be deprived of his property against his will." These statements are no less than could be made in any European country. If these extracts were not enough to indicate the general conception of land-proprietorship, the almost universal prevalence of the land-registry system would point unmistakably to the regularity and security of proprietary rights, and the constant employment of the terms *ji-nushi* (land-owner) and *iye-nushi* (house-owner) would indicate the nature of the popular conception.

There is but one respect in which any question may be made as to the propriety of predicating vested property rights in the persons known as *ji-nushi* (land-owners) and *uji-nushi* (house-owners). It is that in most of the *kuni* the transfer of titles in perpetuity was forbidden or was allowed only by consent of the feudal lord. This would be a question to consider in detail, if we were here attempting to make a general defence of TOKUGAWA institutions. But our object is merely to demonstrate that the Japanese people have been, as a whole, thoroughly familiar with the notion of a vested property right, and it does not seem to us that the privilege of sales in perpetuity is a necessary part of such a notion. If it were, then the thousands of Englishmen who have enjoyed the ownership of entailed estates have never known the blessing of property in land. But at any rate three points must be noted. First, this provision was by no means an arbitrary exercise of the lord's will directed merely at the restriction of the people's rights, but an effort to prevent the accumulation of large properties in single hands. Next, the prohibition was merely of sales in perpetuity; the owner might still sell for a term of years, or until he chose to buy back (the German *vorkaufsrecht*), or

might mortgage and especially might give away the land. Finally, these permissible modes of transfer were everywhere used to evade the restriction, and the latter became practically a dead letter. This is amply shown in the records of customs. In 7 *kuni* there is said to have been no restriction; in 15, sales are alluded to, but no reference is made either way to the restriction; in 32, the restriction is mentioned, but in 26 it is said to have been merely nominal. For example, in Shima *kuni*, "the law nominally forbids a perpetual sale, but if in an instrument entitled 'sale of land' there is no express stipulation for buying back, the transaction becomes in fact a perpetual sale, and upon the oral request of buyer and seller the headman changes the name of the proprietor in the land register, and the transfer is complete. Again, in Idzumo, "the transfer is therefore accomplished by making a sale for 10 years, the price mentioned being so high that redemption in that time is impossible. The headman assumes that redemption will be impossible, and, as soon as the transaction is finished, changes the name of the owner in the register of sales." In short, no one who will read through the chapter on Sales can help perceiving the spirit of a real, substantial, independent proprietorship on every page.

These proofs are worth noticing because Mr. GUBBINS, in the Appendix to his able and lucid report on "Taxation in Japan," made in 1883, lent the authority of his name to the statement that "though land-lords in name, the people may therefore properly be regarded as tenants; * * * they possessed only a modified tenant-right against the real owners [*i.e.* the *daimyo*, etc.]" The error doubtless rests at bottom upon the confusion between a feudal lord owning a share of the national sovereign powers, and a mere landlord; but it is none the less a misleading one in investigating legal (we do not say economic) relations. The learned writer seems after all to have been persuading himself against his will, for he afterwards feels obliged to admit that "we are startled to perceive that the holders of land were in some respects on a footing nearly approaching that of owner of an estate in fee-simple in our own country." If this statement had read "in some respects on a footing *above* that of our own country," it would have been nearer the truth, for in some districts of Japan was found the precursor of the American homestead law, that a man has a right even against his creditors to a home for his family (see pp. 35, 123, 125, 126, in Part II. of the Collection of Customs).

We have devoted some space to elucidating this topic, because we think it opens up the whole question of Japan's fitness for the new laws. The question is whether we are pouring new wine into old and worn-out bottles or into bottles reasonably fit to receive it. Are the fundamental legal ideas of the Japanese people alien or

kindred to the continental principles taken as models? We are persuaded, by the evidence before us that here, on the threshold at any rate, the idea of proprietary right is not a new one for Japan. The Code simply expands and phrases a notion firmly-rooted in Japanese society. Just as far as the Japanese can show, on other fundamental points as well, that the Code only takes up, develops, and carries out legal ideas perfectly familiar to the whole Japanese people, just so far they have made a sufficient answer to the objection that the Codes are artificial products and that they neither suit the habits of the people nor can receive an intelligent application. Our subsequent points of comparison will relate to this topic.

III.

THE question of proprietary right leads us naturally (though out of the Code's order) to that of title-registration. We think complacently in some of our Western countries (unfortunately England is here able to show anything but complacency) of the advance that has been made in the present century in the registration of proprietary and hypothecary titles to realty, especially in Continental Europe. Perhaps it would not be safe to say that Japan has preceded all Europe in the establishment of a registry system; for we do not yet know whether before the time of IVEYASU (1600) the Japanese registry system was well organized. But certainly there is no civilized state in which the system has been more thoroughly enforced in all dealings with land for a longer time than in Japan. In England the Saxon shire-register disappeared under the Norman régime, and the Domesday Book was a passing effort at publicity which was not persisted in. Germany, since the early middle ages, had no registry system (except in a few commercial towns like Hamburg, Lubeck, and Bremen) until the Prussian hypothecary-registration law of 1783, and the general registration of land-titles is a matter of the present century. In France, transfers of ownership were not registered (since the feudal system of the Middle Ages) till the Revolution; the spirit of the Roman law having everywhere been unfavourable to this expedient. There is no nation among whose people the idea of land-registration has become so deeply instilled as one of the elements of rights in land as in Japan. The absence of a registry is simply unthinkable to the ordinary Japanese, and his mind turns to the registry as the proper accompaniment of all land-transfers as naturally as the devout Catholic turns to the holy-water font on entering the sanctuary of his religion. The Japanese student smiles when he hears that England has no registry system, and it is practically impossible to get him to consider seriously the many complications arising under Anglo-American law for lack of it. For

him it is a matter of pure speculation, a reasoning about the unreal.

The volumes now before us testify to the almost universal employment of registration throughout feudal Japan for all land transactions. The article of the Code (Book II., Art. 348) prescribing registration is a very fair summary of the old Japanese practice:—"Registration is required in the following cases at the tribunal of the district where the property is situated:

1. Every transfer of realty and of every other right relating to realty;
2. Every modification or abandonment of such rights;
3. Every execution against realty;
4. Every judgment or administrative decree appropriating [realty] for public purposes."

There were of course numerous exceptions and irregularities which cannot be made to fit the above clear and careful enumeration. But it is just these irregularities and infinite small variations (as the above volumes amply show) that more than anything else demonstrate the *raison d'être* of the new Code. Under the feudal system each fief outside of TOKUGAWA control had its own way in its internal administration, and the divergences of custom were naturally and inevitably numerous and conflicting. In one fief one form of book was used, in another a different form. In most regions the register was the only evidence of title; in a few, an official ticket (*tefuda*, *sage-fuda*), something like the *chi-kenfo* or land-certificate of the first 20 years of the *Meiji* period, was relied upon as the muniment of title, usually in connection with a register. In some provinces hypothecs were registered, in others not. In Sendai and a few other places even horses and cattle were registered and tagged. Throughout the country the variations of custom played havoc with legal nomenclature, and the names for the register were legion. *Mizu-cho*, *taka-cho*, *taka-tsuke-cho*, *taka-yose-cho*, *na-yose-cho*, *yeau-cho*, *eye-cho*, *eye-nami-cho*, *ko-ken-cho*,—these are the names appearing in the first half alone of the chapter on "Ownership and Title." This variation is interesting, to be sure, as showing that the use of the register probably grew out of a deep-seated national instinct and was not the result of any command or series of commands by the Central Government prior to the TOKUGAWA Shogunate; for at no time since the tenth century was there any central power capable of enforcing generally an administrative system of this sort. But if it has this interest, it certainly is the reverse of profitable to the nation in this day of administrative unification; and no one can quarrel with the Legislature for co-ordinating these various customs into a single system and applying to the register the new and uniform title of *toki-bo*.

Resuming the order of the titles in the Code, we come next to "Usufruct," with its

sub-varieties of "Use" and "Habitation." The idea of a usufruct (or, in the nearest English law phrase, life estate) was quite familiar in Japan. The commonest example, perhaps, was the estate possessed by the head of a family on retirement,—*inkyō-chi*. This custom of retirement in what we would consider middle age is, as one needly hardly say, nearly universal in Japan, and in the country it often happens that a special plot is set aside for the use and enjoyment of the retiring head. These plots will be found in many land-registers, labeled *inkyō-chi*. As in the Continental usufruct and the English life estate, the holder has no power to dispose absolutely of the land, but may nevertheless rent the property and appropriate the income; and this was the commonest method in Japan. Other than this there do not appear to have been any settled forms of usufruct,—if we may except the titles of the priests to temple-lands in villages, the exact status of which is now a matter of difficulty and remains to be determined. But the circumstances of modern Japanese life furnish many opportunities for the employment of this form of ownership. The elaborate provisions of the Code for the rights and duties arising from this relation are especially indispensable in view of the indefiniteness of the customs on the subject—a state of things mentioned by the compilers of the Customs in the volumes before us. Use and Habitation are merely minor forms of usufruct, involving more limited rights on the part of the occupant, and will be found, if we are not mistaken, to fit very well that practice in Japanese family life of allowing gratuitously the occupation of portions of premises by dependents and relatives.

Superficie (to omit for a moment two other titles), or the right of occupying the surface of another's land with buildings or plantations owned by oneself, is an estate which not merely corresponds to one of the commonest usages of Japanese life, but shows how much more satisfactory has been the resort to French inspiration instead of English. In the English legal system the building is customarily inseparable in ownership from the land. Separate ownership is legally possible, but it is rare; there is no distinct legal conception of such an estate, and there has been too little judicial experience of it to define the customary privileges appropriate to it. In Continental law, on the contrary, a special form of ownership exists for this very purpose,—*superficies* is the Latin term. No one needs to be told how common it is here (in cities at least) for the house-owner to be a different person from the land-owner. In Tokyo, for example, one or two men may own a whole *cho* or *machi*, but the owners of the houses in that block will be still other persons, each one owning one, two, or perhaps more. We happen to think of a young man who is intending to buy a 500 *yen* house situated

within the *yashiki* of a nobleman, and he will rent the ground at 1 or 2 *sen* a *tsubo* per month. In Tosa there seems to be a form of occupation which would come under the head of *superficies*. But the records of customary law unfortunately make no other mention of the rules prevailing with reference to this right of surface-construction, and detailed comparisons are thus impossible. But that this institution of the Code is eminently in harmony with the ways of the country admits of no doubt.

CORRESPONDENCE.

MR. ISHII'S ORPHANAGE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I enclose Mr. Ishii's receipt for the \$30, sent from your office, to me, for the Orphanage. Please accept Mr. Ishii's and my own thanks for your part in the matter. You may be pleased to know that before your "Weekly" containing my letter on the Asylum reached Okayama, \$110, had come in response to the appeal. Your \$30, now swells the amount to \$140.

The first \$15 of the sum was sent by telegraph from Tokyo, and reached Mr. Ishii just as the last rice had been eaten, and they were debating selling some old clothes and other things, so as to buy food for supper.

Such a prompt response makes one believe anew in the willingness of many to aid generously a worthy and definite object in case of real need. There is abundant occasion for more help, however, especially as thieves entered the Asylum a few nights ago, and stole 60 laundered suits of winter clothing. A more despicable deed it would be hard to conceive.

The temptation was a keen one to use your valuable columns for such statements. I will endeavour not to abuse the privilege, and to speak only when there seems to be an absolute and dire necessity.

Yours with gratitude,

JAMES H. PETTEE.

Okayama, October 19th, 1892.

THE LATE MR. AND MRS. CHAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—This morning I read in your issue of yesterday the following sentence, quoted from the *Shanghai Mercury*, concerning the lost passengers on the ill-fated *Bokhara*:—"Mr. and Mrs. Chain were American missionaries travelling for the purpose of writing a book."

Allow me to correct the above statement, inasmuch as these late lamented friends were neither missionaries nor travelling for the purpose above named. Having known them before their marriage, from my boyhood, reaching back more than twenty-five years, and having also been associated with Mr. Chain and his partners in business, in the same church, young people's society and social circles, more or less for the past quarter of a century, it may not be out of place to state a few facts concerning these two esteemed friends, whose sad and untimely end we now so deeply mourn. Mr. J. Albert Chain stood at the head of one of the largest business houses, west of Chicago, in the United States: viz., Chain and Hardy, Book Publishing, Stationery, and Art Company, of Denver, Colorado. As two young men, with a few thousand dollars, Messrs. Chain and S. B. Hardy went to Denver over twenty years ago and opened a small book store. In less than ten years their success was so great that they established a wholesale house in connection with their retail department in the same city. Two years ago they organized the large Stock Company mentioned above, composed of several of Denver's best citizens. Mrs. Chain as an artist was well known, East and West, for her paintings of Rocky Mountain scenery. Before her marriage she had been an efficient teacher of art in a large Seminary for young ladies. Both Mr. and Mrs. Chain, during their summer outing last year near Denver, came near losing their lives by a serious runaway accident, while diving down a mountain road. They sustained serious injuries, especially to their nervous system. After several months treatment by skillful physicians they were ordered to travel, particularly on account of Mrs. Chain's nervous condition. They started last March on a two years' tour around

the world to regain their health and obtain information to make them more efficient workers in the Church and various organizations with which they were connected. He was a Ruling Elder in the oldest Presbyterian Church in Denver, and had been several years President of the Young Men's Christian Association of that city, and Mrs. Chain had been a successful teacher of the Primary class in the Sunday School. Some eight months ago we had the pleasure of personally welcoming them to Japan, where they spent nearly five months most delightfully. They formed many pleasant acquaintances here in both missionary and business circles. Mr. Chain having been President of the famous Jackson Photographic Company of Colorado, both he and his wife had taken up the study of photography some years ago as a recreation. He became quite successful as an amateur photographer, and during their two or three journeys through Europe had gathered a large number of valuable views. Aided by these he gave lectures frequently in his home city to aid young churches and charitable organizations. While here they were very diligently engaged in taking photographs of places, people and customs in their travels, to add to their usefulness as Christian lay workers on their return home. The last of July they left for Korea and Northern China, parting with many newly made friends in various parts of Japan, whose sincere sympathy now, in this most sad and sorrowful death in the far-off Orient, may be some consolation to the wide circle of deeply bereaved relatives and friends at home in this hour of poignant grief.

Thanking you in advance for the courtesy extended in the use of your columns,

I remain, Sir, yours sincerely,

FREDERICK J. STANLEY.

Tokyo, October 25th, 1892.

LETTER FROM CHINA.

(FROM OUR OWN CORRESPONDENT.)

Shanghai, October 11th.

The latest excitement in this place has been the visit of the Hongkong cricketers. They were received with the usual Eastern hospitality, the Tander Club drove them about, a smoking concert and a dinner were given in their honour, they were generally fêted,—and our first eleven gave them a good beating at the noble game. There is no doubt that Shanghai possesses a strong eleven just now, but the most sanguine never for one moment anticipated that the Hongkong team would be so easily disposed of. They cannot fairly be styled a *Hongkong* team, as more correctly speaking they were a Garrison team, their being few amongst them belonging to the mercantile body. Their leader was the redoubtable Captain Dunn, whose prowess Shanghai cricketers have experienced in a very marked manner, and it was certainly expected that he would make a large score and tire out many a Shanghai bowler. But the great uncertainty of cricket was never more forcibly demonstrated than in Captain Dunn's case, as he only made 16 in the first innings and was bowled out in the second innings by the very first ball he received. Shanghai went first to the wickets and relied for a large score on W. H. Moule, so it looked very bad for the home team when their champion bat was bowled out after only scoring two runs; and when the innings closed for 112, it was considered certain that Hongkong would achieve a certain and decisive victory. However, Carruthers and Barff, as bowlers for Shanghai, were grand, and to the surprise of everyone Hongkong was dismissed for 78, Carruthers having taken 5 wickets and Barff 4, and Capt. Dunn's score of 16 being the highest made by Hongkong. The game was resumed next day, and at first it appeared as if Shanghai was in a bad way, for the first few wickets fell for very little, and W. H. Moule only scored 9, but his brother, A. I. H. Moule, and Barff made a good stand, and assisted by some smart batting on the part of Carruthers, the score was carried up to 202 before the second innings of Shanghai was finished. Thus Hongkong had to make 231 to tie, and knowing how many good bats were in the team, such an event was not looked upon as impossible, but the bowling of Carruthers was more deadly than ever, and eight wickets fell before him, including that of the Captain for a duck's egg, and the whole side only made 79, or one more run than in the first innings, thus leaving Shanghai the victor by 157 runs. Carruthers undoubtedly proved himself the champion of the match, as he scored 30 in each innings and took 13 wickets for 70 runs. The match was remarkable for one or two other circumstances. In Sergeant Mumford, Hongkong possessed a bowler who put every one in mind of

cricket in his school days, as he bowled under-hand grubbers which looked absurd but proved very deadly, as many of our batsmen had not the patience to play them properly or did not know how to do so, and the result was that Mumford took one wicket in the first innings and no less than six in the second. When his daisy cutters scattered the batsmen who failed to stop them felt very mean. Another extraordinary event was that A. J. H. Moule drove the ball right over the pavilion. This has been done three times before in the history of Shanghai cricket, but it is a hit to be proud of.

There is no doubt that Shanghai was much stronger than Hongkong in bowling and fielding, and Captain Dunn went so far as to say that the former was all round the stronger team, and he ought to know what he is talking about. It had been expected that the match would take three days, and consequently the Banks closed at noon on Monday, Tuesday and Wednesday, but the whole was completed early on Tuesday, and consequently a friendly game was arranged for on Wednesday in which the Hongkong men were divided. This gave Captain Dunn and Q. M. Sergeant Jeffkins an opportunity of showing how much they could do with the bat.

The dinner at the Club was largely attended and was of a very jovial character, as harmony began early in the evening and dullness was not permitted to exist. On Friday night the Literary and Debating Society gave a smoking concert in the Lyceum Theatre in honour of the Hongkong team, which was very successful; the comic and topical songs were excellent and enthusiastically received. The next morning the Hongkong team bade farewell to Shanghai, leaving their flag in the possession of the victors, and so closed a week of good sport and jollity.

Training for the races is now in active progress, and notwithstanding the hard times there seems every probability of a good meeting this autumn. The Race Club have had their Grand Stand enlarged and altered at very considerable cost, and these alterations do not give universal satisfaction, as some stupid blunders were made as regards staircases, etc., which the stewards ought to have guarded against, while some blunder was made about ordering the iron pillars, etc., required, so that the Stand is still unfinished though it ought to have been ready before the training began. The result is that an unsightly mat shed has had to be erected on the lawn for the accommodation of trainers and jockeys.

There is still trouble in Hunan. The celebrated Chou Han has come to the fore again more rabid than ever against foreigners, and fulminating threats against all natives of whatever rank who deal or associate with them. The man is not mad, except in his blind hatred of foreigners, and by his public appearance again fully proves the weakness of the Peking Government in not daring to arrest and punish him, or their downright falsity in pretending to the Foreign Ministers that this miscreant could not be captured. A new Governor, Wu Ta-Cheng, has been appointed to Hunan, and as he is a man of strong will and of good feeling to foreigners, his advent in Chang-sha will be looked forward to with interest. Wu married the daughter of Chang Chih-tung, the viceroy, and may therefore be supposed to be working together with him for the suppression of the turbulent braggarts of Hunan, of whom Chou Han is the recognized head. The latter called upon the people to oppose the new Governor, but as H.E. Wu is a man of courage and determination, we shall probably see a conflict between the two before long and there is very little chance that Wu Ta-cheng will be worsted. The new Governor had a long interview with Mr. Chris. Gardener, H.B.M.'s Consul at Hankow, and it is certain that the latter will shortly visit Chang-sha, but it may unfortunately happen that he is unable to do so in a British gunboat, owing to difficulties of navigation in shallow water, and this is a great pity, as a show of force would no doubt effectually silence the Hunan bragging cowards.

All persecution of foreign missions has not ceased. We have recently heard of outrages in Shensi and Szechuan, but it must be borne in mind that the people of those districts are in danger of famine through drought, and their blind superstition may lead them into acts of violence which they would not think about in more prosperous times. While there is drought in the north-west there are floods in Shantung, for the Yellow River has broken its banks again, entailing loss of life and untold misery on the wretched inhabitants of that part of the country. And so it goes on year after year—a glorious country ruined by an effete and despotic Government.

Shêng Taotai, the Director of Chinese Telegraphs, has been at his little games again, and has signed a Telegraphic Convention with the Russian

Minister pledging China to maintain massive rates for messages. But luckily this Convention will have to be ratified before it ever becomes law, and our Chambers of Commerce are aroused, and we have reason to believe that the British Government will not accept all that the monopolists desire.

This same Sheng Taotai has recently been appointed Custom's Taotai at Tientsin, and it was not long before he endeavoured to make some illegal regulations for the transport of grain which were framed to benefit the China Merchants S. N. Co.'s steamers, in which Company Sheng is directly interested. But he will not be able to carry out his own sweet will undisturbed.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, October 1st.

Rev. W. E. Griffith, D.D., has recently returned from his vacation, of which he spent three weeks in Holland and five weeks in London. It is probable that his trip was devoted to recreation, but partly to study and investigation, and that the results may be expected in pamphlet or book. Dr. Griffith's last work, just published by Houghton, Mifflin and Co., is included in the "Riverside Library for Young People," and is entitled "Japan: In History, Folk-Lore and Art." It is a 16 mo., with a map, and costs only 75 cents; so that it is quite an inexpensive and convenient book with which to introduce Japan to American young people. With its compact account of Japanese history, its stories from Japanese folk-lore, and its descriptions of unique Japanese customs, it is an interesting and instructive book.

Dr. Griffith has also furnished an "Introductory Note" to Dr. M. L. Gordon's "An American Missionary in Japan" which is likewise an interesting and valuable book on missionary life and labours in the Japanese Empire.

The Rev. George Allchin, also, is instructing the American people concerning Japan and the Japanese,—by means of illustrated lectures with a lime-light lantern. He is now in Massachusetts.

Messrs. T. Uchida and Y. Yambe, Commissioners; Mr. M. Kuru, architect; and Mr. K. Ito, of the Central Tea Company, have all reached this city, and are busily engaged in making the necessary preparations for the various exhibits at the Columbian Exposition.

In the *Japan Weekly Mail* for September 3rd is an account clipped from the New York *Sun*, of the suicide of a Dr. Scudder. It may be well to explain, that this man should not be identified with the veteran missionary's son who recently committed suicide in this city, but belongs to another family, which, however, may possibly be related.

Mrs. Harrison is gaining strength slowly and improving in appetite, and there is now hope of her ultimate recovery.

Major-General John Pope, who served in the Mexican War, and was prominent in the Civil War, died September 23rd in Sandusky, Ohio. He was the commander who had trouble with Gen. Fitz-John Porter concerning the blame for the defeat of the Federal troops at Manassas Junction in 1862.

Colonel A. G. Weissert, of Milwaukee, is the new Commander-in-Chief of the Grand Army of the Republic.

The great Pan-Presbyterian Council yesterday closed a week's session at Toronto, Ontario, where it has been discussing various theological, social and moral questions of both special and general interest.

The Presbytery of Cincinnati is about to try for heresy Prof. Henry P. Smith, of Lane Theological Seminary.

The Homestead troubles are by no means settled, but have been transferred to the courts. About a week ago, a number of the officials of the Carnegie Steel Company and some Pinkerton officers were placed under arrest for riot and conspiracy. Yesterday the counter-move was made by the steel company, when warrants were issued for the arrest, on the charge of treason against the commonwealth of Pennsylvania, of more than 30 of the strikers, those who were members of the famous advisory committee. Really, it will be quite gratifying if this struggle can be confined to the courts and fought out on legal lines. All the militia, except 150 guardsmen, have left Homestead.

The war against the Philadelphia and Reading Coal Combine has begun in earnest. States Attorney Longmecker, of this city, has filed a long and strong petition, requesting an injunction to restrain the corporation from raising the prices of anthracite coal, and to stop them from doing business here. It has also been discovered that there is a national law ample and sufficient to cover this case. It was known as the "Sherman Act," and was passed by the unanimous vote of

both Houses. With United States and various State laws so explicit, it looks as if the "combine" might be shattered.

The political cauldron is boiling, bubbling and seething from the heat of the politicians; but the men of the people are quietly thinking and calmly waiting for election day. There is a tremendous lack of excitement, of parades, and processions; but there is deep and careful consideration. It is true that Senator Hill has spoken at a "monster meeting" at Buffalo; and that ex-Senator T. C. Platt, ex-Senator Warner Miller, and others, spoke at a mass-meeting of "enthusiastic thousands" at Cooper Union in New York City; and that both these events prove that the factions of both parties are once more united and working harmoniously! It is also true that General Weaver and Mrs. Lean were so impolitely and rudely treated by some audiences in Georgia, that they had to abandon the canvass in behalf of the Populists; and issued an address, asking for Federal supervisors of election, in order that there may be "a free ballot and a fair count." It is true that the Democrats of Wisconsin are discouraged, because their second gerrymander bill has also been declared unconstitutional. It is true that the indictment of Labour Commissioner Peck is likely to be quashed. Finally, it is true that Cleveland has at last published his letter of acceptance, which is much briefer than was President Harrison's; and that he has laid out the Democratic campaign along the line of gradual, rather than precipitate, reductions of the excessively high protective tariff of the present until a tariff for revenue only is secured. It is a matter of the sincerest congratulation on the part of thinking men that the tariff issue is prominent and clearly and squarely defined; and also that the campaign will consist less of the glitter of torchlight processions, and more of a calm and dispassionate consideration of that important question.

Two "records" have recently been smashed,—one a bicycle, and the other in trotting. In the former case, Mr. John S. Johnson, Minneapolis, knocked off 8½ seconds, and brought the mile record below the two-minute barrier to 1:58 at Independence, Iowa. In the second case, Nancy Hanks at Terre Haute, Indiana, trotted a mile in 2:04, and won the \$5,000 prize offered by Robert Bonner to the first horse that should make 2:05 on the regulation track.

This is the day on which books of subscription will be opened for the \$4,000,000 World's Columbian Exposition debenture bonds. The subscription books will close on the 15th inst. the bonds will be dated November 1st, and will be "payable on or before January 1st, 1894."

It is now probable that the Liberal Arts Department, now assigned a limited and insufficient space in the immense Manufactures Building, will have an edifice of its own. This will contain at least 100,000 square feet of ground floor, and even more up to 300,000 square feet, if space can be made on the ground, as such a building is greatly needed for a satisfactory and complete exhibit in educational and ethnological lines.

It is likely that, in spite of Chinese antagonising influences, Korea will have at least a small exhibit. Chargé d'Affaires H. N. Allen is exerting his power and influence in that direction.

From China will come a novel exhibit of models of Chinese junks and vessels of various types, ancient and modern.

The design for the souvenir coin is the Lotto head of Columbus for obverse, and the caravel and two globes for reverse.

The weekly review of trade by R. G. Dun and Co. appeared in this morning's papers, and contained the pleasing information that business is large and healthy; money is in ample supply; crop reports are favourable; "the commercial sky is without a cloud;" and the outlook is very encouraging.

The University of Chicago began the regular work of its first session this morning. This institution, in regard to its inception, its rapid and phenomenal growth, its new educational ideas, its brilliant prospects, may reasonably be called one of the great and wonderful things of the nineteenth century in the United States. It stands to-day as the unique institution of learning in this country, and in many respects is without a peer or rival. It has opened with an endowment fund of about \$3,000,000, with total costs of about \$5,000,000. It started out with officers and faculty numbering considerably more than 100, besides more than 60 "fellows." It had on the first day of school more than 500 students and would have had a much larger number, if the entrance examination had been less severe! What other institution of learning can balance these points?

I have just returned from a visit to the University, where I hoped to obtain the exact figures concerning enrollment, etc.; but I found the offi-

cers too busy, and learned that they themselves had not yet taken a careful count or collected accurate statistics. A banner of old gold (the College colour) was flying with a U. S. flag from a turret. The grounds were *yakamashi* with workmen, and the building lively with students. I chanced to run across two Japanese, Mr. Asada and Dr. Watase; and I slipped into the chapel, where a large number of students, under the direction of the famous Christian athlete, Stagg, were trying to decide on a college yell! I left before they had come to a decision.

LETTER FROM GERMANY.

(FROM OUR OWN CORRESPONDENT.)

Berlin, September 15th.

The two great problems which European statesmen, and more particularly the German Government, have in vain attempted to solve, are repression of the ultramontane tendencies of the Roman Catholics and the socialist movement of the working classes. Heterogeneous as these are in their causes and aims, they still show a similarity in being equally based on the ignorance of half educated masses who blindly follow their leaders. Thus the two parties have been able to form a compact phalanx both in the country and in Parliament, which Government in past years has entirely failed to overcome. Subsequent to the anti-Socialist stringent laws of the Bismarck era, now repealed, and contrary to the Falk system with its famous "May" Laws, the two parties, acting each by itself, have step by step gained their ground, and have by desperate determination and severe discipline, at last been able to turn the tables on their former persecutors. The German socialists, since they have been left unmolested to their own resources, have lost somewhat in unity and assumed a form less dangerous to society at large. The ultramontane or Centre party, as they are called from their seats in Parliament, are more vigorous than ever, their demands are becoming more exigent and their position as necessary supporters of the government is becoming more and more recognized.

The growth of these parties is to a great extent, also, the direct consequence of the real or assumed martyrdom which they claim to have undergone under the former system of repression. Had the Government, at the beginning of the struggle which soon commenced after the Franco-German war, adopted the same foresight and moderation as now prevail in the Councils of the Nation, neither of the two parties would have ever risen to the importance they have now assumed. When we compare the essence of the May Laws with the situation of to-day, one can scarcely believe that in so few years so great a retrogression could have been effected by a Government. Only a few months ago, the new school law of Count Zedlitz was on the point of surrendering the schools to the mercy of clerical influences, a concession which was only prevented by the unanimous protest of all Liberals, for once united for this purpose. If we examine again the costly and painstaking care for the welfare of the workman, the provisions for his benefit in almost all the vicissitudes of life, we cannot fail to find a change amounting almost to a revolution in ideas, if compared to those of a score of years ago. But humane and politic as these efforts are to free the workman from the occult influences which play on his misery for the sake of political power, it has generally been admitted that the time has come to close these bounties and not give away to further insatiable desires which would lead to State socialism of the most dangerous kind.

The possibility of further concessions to the Centre are, however, though equally fraught with dangers, not the less admitted as more probable and less objectionable, being essentially of a spiritual and immaterial kind. Only lately the party at a meeting at Mayence showed how high its aims in regard to their influence on religion and public instruction are now raised. Not content with this under the guidance of their leaders Count Balletrom, Dr. Sieber, and Persch, they passed resolutions for the restoration of the secular Power of the Pope by the intercession of Germany, and for the return of the Jesuits who are still lingering under the ban of exclusion from the Empire.

Then a strange fact occurred: the official organ of the Chancellor, Count Caprivi, the *Nord-Deutsche Allgemeine Zeitung*, published a leader in which the Centre Party were, for their unanimity and courage, held up as an example to the other parties; and the admission was made that on account of these virtues they had a fall claim to be recognized as an important element in the arena of German politics. This strange homage of the Government to the

Ultramontane principles raised quite a storm in the Liberal Press. On the Government side it was soon declared that the article in question had not been inspired, that it had been the work of an altogether irresponsible person, but the impression remained that Government had made up its mind to bow to the exigencies of the Centre in order to carry through its great scheme of military reform. This reform is based on the principle that the recruits in the infantry should be discharged after two years instead of three, and it therefore admits of a greater number of men being drilled and made ready for an emergency. In other words, the German army strength would by this manoeuvre be increased to a very considerable extent. So far this plan recommends itself, and equally so by making the service less onerous for the mass of the people. But unfortunately it requires a very large increase of the Budget. The sum is estimated at from 80 to 150,000,000 marks per annum—which no one knows how to raise. It will be, therefore, prove for the Government almost impossible to pass this law, as the Liberals will oppose it to the utmost and the National Liberals are doubtful. There remain the Conservatives to fall back upon, who, after a little whining and moaning, will come to terms, but they are too weak to carry the measure without the cooperation of the powerful Centre party. All depends now on the price these will ask and obtain for their support; and here is the dilemma for the Government. No government can run the risk of interfere with the Italians in their management of the Italian See; it is an entirely domestic affair, and any ill-judged attempt of Germany to exercise pressure would simply cause Italy to leave the Triple Alliance, perhaps to join France with whom a certain *approchement* was effected lately at the Genoa festivities. This is therefore out of the question. As to the return of the Jesuits, Caprivi has declared himself against it, and can scarcely now eat his own words. There remains the school law which would again raise a storm. Thus the Government can in reality give nothing but fair words in exchange for solid money votes. Will this satisfy the Centre? Again, the necessity of an increase in the armed forces of Germany may surely be doubted and disputed with some show of reason. As far as the statistical numbers of the completely drilled men that would be called out in case of war can show, the German forces are at least equal, if not superior, to the French, and the necessity of fighting on two fronts, that is, meeting the combined French and Russian armies, has been under consideration long ago. This eventuality is, besides, fully prepared for by the overpowering masses which the Triple Alliance would bring together whenever the "*cassez fédérés*" arises.

But will the Triple Alliance last to all eternity? It has been reported somewhere that Bismarck only initiated his famous treaty of alliance with Austria as a combination arising from a temporary necessity, and its continuance was at the time not contemplated. We know also that as a rule political constellations last only as long as their primary causes of coming into existence continue. May not Germany feel the necessity of protecting itself against all eventualities or emergencies of the future? This may be an additional motive without in the slightest degree doubting the good faith and intentions of our allies; for one or other of them might at a given time be unable from incidental causes, for instance, financial difficulties, be prevented from giving full expression to his friendly sentiments and conventional obligations.

These motives cannot of course be brought before the public and still less be alluded to in Parliamentary debates. But there must be some real by good causes on the part of the Government to account for their desire to provide for future safety by additional preparation. They are not easily discovered in face of the peaceable aspect prevailing all round. Russia from necessity keeps tranquil. France will be probably soon engrossed by the "close of the century" exhibition, and the Eastern question seems for the moment to be removed to spheres out of sight of the European horizon.

It will be of great interest to see how General Count Caprivi will bring forward and support this large military reform. His success will depend to a great extent on the attitude the Centre party will take, and their action will probably be decided by the appreciation of what reward the Government has in store for them. It is no enviable position for a Government to have to trust the success of a great measure to the hazards and avidity of party tactics, but unfortunately there will be no other course left open in the present highly unsatisfactory state of German parliamentary parties.

THE INTERPORT CRICKET MATCH.

YOKOHAMA V. KOBE.

Rain, rain, rain, either in passing showers or a persistent down-pour, has been the tale of the last few weeks. Friday broke out warm and fine, but on Saturday the drizzle set in again, "to be continued" on Sunday with occasional heavy showers. During the early hours of Monday morning much rain fell, but as the day wore on the heavens showed signs of clearing, and acting on the slight hope held out, the executive of the Yokohama Cricket Club determined upon commencing play in the interport match—the most stirring event in our local cricket world's year—at one o'clock. Every precaution had been taken to secure a good wicket—the ground for some days before was covered with mats ten deep, and every available means of draining the pitch adopted. The result was highly creditable to the committee. It was only to be expected that the play would be heavy going and in the bowler's favour, but that was not man's fault. The light from a grey, overcast sky over which rain-clouds occasionally scudded, was not of a first class description, but then batsmen's and fielders were spared the glare which accompanies bright sunshine. The sun certainly put in an appearance for five minutes, but as the hour was late—four fifteen—he retired very quickly. Yokohama went in first and fared disastrously on the wet wicket, White and Crawford being both caught out before scoring a point. W. D. S. Edwards was also bowled by Pakenham when his total stood at a modest 4. Duff made the first stand, knocking up 11 by careful play; but the champion of the team was Burn who assisted by Watson, 18, stemmed the tide and carried out his bat for 41. The fielding of the visitors was very creditable, not a chance being missed, while Pakenham was a tower of strength both with the ball and in the field, sending four good men back to the Pavilion. Kobe went in on a drying pitch, but they could make little stand against Edwards, W. D. S., and Burn, although playing warily. Towards the end of the game the ground grew very slippery, but they gave few unnecessary chances to the fielders. At the call of time E. B. S. Edwards was still in with a score of 29, but his companions had been content, or rather had to be content, with much smaller results, none getting into double figures. Kobe left the field with three more men to play, Edwards and Braess (not out) and Gibbens to bat.

It was half-past one o'clock before all the preliminaries were settled and then the home team went on to the ground, as the result of the toss, sending out White and Crawford (captain) to defend the wicket against the bowling of Stephens and Pakenham. Stephens was the first to trundle the leather and bowled it to White. The latter skied it and, as a result, was neatly caught by Pakenham—the first ball in the match—one for 0. Tate took the willow and snicked the second ball of the over to leg for 2. At the change of over Pakenham took up the trundling. His third ball glanced off Crawford's glove and was caught by Gibbens—two for 2. The greasy state of the ball, perhaps, had something to do with this; at any rate the residents consoled themselves at the second disappointment by sagely remarking so. W. D. S. Edwards was Yokohama's next man, and great things were naturally expected of him, but as it will be shown later, the glorious uncertainties of the field were heavily against him. Tate having scored a single and the over expiring, Edwards first chance came along. He took it at once, driving Stephens to the boundary for 4; a square leg hit. Tate followed with a hit to long-field for 2, and then, Pakenham managed to depose Edwards, his last ball of the over breaking right across the wicket—three for 10. Matters were assuming a very black aspect for Yokohama when Duff joined Tate. He opened with a boundary hit to the off, 4, and immediately afterwards drove the leather to the long-field on for 3. Tate then managed to secure a long-on for 4 and Duff a 4 by a hit to the Pavilion. A maiden intervened, and in the last ball of the next over Duff was caught by Braess, at long-stop—four for 26. E. R. Morris took the vacant place and broke his duck; a few balls were sent down to him but he merely snicked them to point without scoring. At the change of ends Tate followed suit, but at last sent one down into slips where it was caught by Pakenham—five for 27. Mair joined Morris, and for a few overs nothing was added to the score, both men playing steadily. Mair then cut Braess to point and a single was placed to his credit. Some quiet blocking ensued till Mair, finding a chance, cut Pakenham to the off for 3. Three runs had been made in three

overs, and two more maidens followed ere Mair was just missed in the slips. More maidens followed this brief excitement,—seven in all since the last effective hit. Then Mair drove Pakenham to the slips, but his partner's career—Morris—was stopped by Edwards, E. B. S., who scattered his balls by a splendid throw in—the cleanest piece of fielding so far—six for 31. Watson took the waiting bat, but lost Mair by the first ball of the following over, the leather breaking in across the wicket, as in the elder Edwards' case—seven for 31. Layard came next and knocked up two, both singles, before being caught by Lias off Pakenham—eight for 35. Everything now pointed to an easy victory for Kobe as the wicket played dead and only two more men had to be disposed of to put the home eleven out. Burn, however, joined Watson at this point of the game and soon a very different aspect was given to the telegraph board. For the first few overs both played carefully, feeling their way along, as it were, and getting familiar with the bowlers' tactics. A boundary wide from Stephens added 3 to the score, and then Burn managed to secure 1, sending the ball into slips. Watson next hit a 2 to leg and Burn followed suit, a bye followed and Watson hit up a single—43. A change of bowlers took place here Braess relieving Stephens, but his first ball to Burn resulted in 2. At the change of over Watson cut a 2 to cover-point, and Burn again followed suit with a 2 off Braess. Several singles and pairs intervened before Burn drove Pakenham to the long-on for 4 in the last ball of the over. The ground by this time was getting very slippery around the wickets, but Burn managed to get another 2, thus raising the score to 60, amid cheers. A leg-bye was the only result of the next five balls, but the over following saw Burn drive Braess to the boundary for 4 twice. The feat was loudly applauded. Just before Lias took the ball from Pakenham Burn sent Braess to the long for 3, while his first ball off Lias secured a single. Edwards soon after took over the bowling from Braess, but his first over was a maiden. For a few minutes twos and singles were placed to Burn's credit, and then he broke away again with a boundary hit—4. Watson endangered his position by a skyer soon afterwards, but Yokohama cheered again at a 4 from Burn. Gradually the two batsmen carried the score upwards, till finally Watson with a 3 raised it to the century. He followed this with a 4, but soon afterwards was caught out by Kenyon from a ball off Pakenham—nine for 105. He deserved the cheers that greeted him, for his play all through had been remarkably steady. Dickinson was the last man in, and he managed to send Kobe hunting for leather at the off boundary—4—before being caught by Melhuish off Edwards—ten for 112. The clock marked 3.25 p.m. as he retired. Burn received a richly deserved ovation as he carried his bat in.

Kobe went in at the half hour, and scored their first ball by a leg-bye. Marshall and Mackintosh were at the wickets, with Edwards, W. D. S., and Burn bowling, Duff being at his old place keeping wicket. Marshall was soon given out l.b.w. off Edwards—one for 2. Stephens took his place and scored his first off Edwards. He then cut Burn to off for 2 but was finished by the same bowler's next ball. Edwards, E. B. S., followed on and quickly made a boundary cut, 3. This he repeated, and then hit one to the Pavilion for 4, and another to leg for 2. Mackintosh was the next to score off Burn, but was soon given out l.b.w. off Edwards, W. D. S.,—three for 19. Melhuish, the next man was bowled by Edwards' second ball—four for 19. Pakenham took his place and drove Edwards to the long-off for 2 with the last ball of the over. It was now 4.15 o'clock, and for a brief five minutes the sun graced the proceedings and had the opportunity of witnessing Edwards drive Burn to the long off for 3. White, who tried to stop the ball, fell, but nothing further was attempted. A boundary by Edwards, off his brother, was the only excitement of the next over. His next venture was a skyer off Burn, which Morris tried hard to catch. Pakenham, who had scored two at the outset of his innings, was smartly caught by Watson off Burn, when he attempted to repeat the performance—five for 30. Kenyon, was next man in and almost directly afterwards Edwards secured a Pavilion hit, only to lose his partner next over,—caught Crawford, bowled Burn—six for 39. At half past four Lias joined Edwards, and Tate relieved Burn at bowling. Lias at the change of bowlers was smartly caught and bowled by Edwards—seven for 41. Daylight was fast waning when Head went in and his career was short, being caught and bowled by Edwards before scoring a point—eight for 41. Braess was ninth man in, but after one over time was called and stumps drawn for the day. Scores:—

YOKOHAMA V. KOBE.—SECOND DAY.

Yokohama has gained a rather hollow victory over its sister treaty-port upon the cricket field, but it may take some credit to itself notwithstanding. Tuesday was a delightful change to the opening day in the matter of weather, brilliant sunshine prevailing throughout the whole period of play, albeit a cold wind blew during the morning, while in the afternoon the temperature was crisp and autumnal. Many ladies graced the proceedings during the afternoon, and the tedium of a slow match was relieved by the strains of the Town Band, which had also been in attendance on the preceding day. The pavilion was festooned with flags kindly lent from H.M.'s stores and the Club colours floated over the ladies' tent.

Play commenced at 10.15, Kobe following on from Monday evening's score. They had made 41 on the previous day, and had three wickets to play. The ground was considerably dryer, but it was soon evident that the wicket would be slow. Edwards and Braess went in but were quickly separated, Edwards going first. Gibbons had been in a minute when Braess was given out, and the innings closed for 43, only two having been added to the score. With yesterday's experience to urge them on, Yokohama started steadily in the follow on, Crawford remaining in till nearly tiffin time. He compiled 72—the best score of the match—before being caught by Head. Another good total was Duff's 33, a carefully played innings throughout. White and Edwards knocked up 17 apiece, but by the time the seventh man was reached—six wickets down—Yokohama decided to declare their innings closed, the score standing at 170, and thus give Kobe a chance of completing the match. Kobe had to make 239 to tie, 240 to win, and, as the sequel showed, the task was beyond them. Stephens was their best man, 33, but the others, with the exception of Kenyon who made a bold stand, were again nowhere, and the match closed at 4.35, ten wickets down, 162 runs behind the victors' total. The bowling and fielding on both days was above the average of recent years, and a glance at the analysis will show that only 3 wide balls were bowled. Several smart bits of fielding must be put down to Braess and Watson, while Duff well maintained his reputation behind the wicket. The light on Tuesday was steady, although at times a little unpleasant at the lower end; the pitch wore well, but was inclined to kick at intervals. On the whole the play may be considered very creditable on both sides, and we wish with the conquerors that Kobe may be enabled to put a stronger team into the field next year. One swallow does not make a summer, neither do one or two good bats and a like number of bowlers form a strong, all-round cricketing team, though they go a long way towards it.

It was fifteen minutes past the advertised time when Edwards and Braess went in to continue their over-night's play. Edwards was 29 runs to the good, but Braess had yet to break his duck. The first ball of the day from Edwards registered a bye, but the third one of the over found his brother's stumps—nine for 42. Gibbons joined Braess and hit one to leg. Then Braess had the misfortune to put himself out, the ball glancing off his bat on to the stumps—ten for 43. Five minutes play had thus closed the visitors' first innings. Their score stood ten for 43.

Tate and Crawford went out first in Yokohama's second innings, to face the bowling of Stephens and Pakenham. After two wides had been bowled Tate hit Stephens to long on for 3, and then to on again for 2. His next big hit was to the on boundary for 4. After this the left-handed batsman scored another 2 and then steadied down to blocking, following the tactics of Crawford who was scoring quietly. Seeing his opportunity, the captain cut Pakenham to the boundary for 4 in the last ball of the over. After a couple of maidens

Gibbons missed Tate at point—a difficult ball, however—and then Crawford notched 2 by a long-on cut off Stephens. Tate, whose score stood, 3, 2, 4, 2, made another attempt at a big stroke, but Stephens scattered his balls by a cleanly delivered ball—one for 26. The clock marked 11.10 as White went in. White scored one by his first ball, after which one or two maidens ensued, then Crawford drove Stephens to the boundary, 4. A quiet snicking and cutting to leg was the play for the next few minutes, and ones and twos were registered. White skied a ball from Stephens but was let off, and when the cheering ceased it was found that Crawford had sent the ball to the Pavilion for 4. E. D. S. Edwards relieved Pakenham at the 12th over in order, it was afterwards seen, to allow the latter to take the lower end, and Crawford immediately sent a ball from Stephens to the boundary, 4, and Edwards retired, Pakenham taking the leather in hand again. White cut him to the off for 3, and after a few overs another change in bowling ensued, Edwards and Lias going on, the latter at the lower end. Crawford managed to cut the first ball to the on boundary, 3, and White pulled the next round to leg. The first ball in the ensuing over from Lias, however, found his wickets—two for 67, to which the retiring batsmen had contributed a well played 17. W. D. S. Edwards went in at the Pavilion wicket and secured a single from Lias to open with. His next hit sent the fielders' to the boundary in search of the flying leather, 4; Crawford scored next with a prettily cut ball to point, 3, and then Edwards drove Lias to the lower boundary for 4. Some steady play followed, but the last-named batsman was once missed by long-stop. He was finally caught by his brother, bowled Braess, when he had reached 17—three for 97. Duff succeeded him, and was missed by Marshall at long-stop after compiling a few runs. Crawford had thus far made 61 runs and had not given a single chance. Mackintosh at this point took Edwards' place at bowling and at the next over Marshall relieved Braess. Duff's first big hit was to the on boundary, driving Mackintosh for 4. Soon afterwards he lost the help of Crawford who was caught by Head off Mackintosh. The telegraph board notified that 72 had been placed to Crawford's credit, and he was greeted with prolonged cheering on his return. The tiffin bell rang soon afterward and the game stood adjourned—four for 147. Upon resuming at 2.10 p.m., Duff was joined by Morris, with Marshall and Mackintosh as bowlers. Duff started with a single to slips, but the next ball from Mackintosh bowled Morris clean—five for 149. Mair took the bat then, and nothing worthy of detailed notice occurred until Duff was caught by Braess at long-on—a pretty catch. Duff had played very good cricket, and his 33 was the result of patience and judgment—six for 166. Watson went in and Pakenham took Marshall's place. Mair in the last ball of the over drove Pakenham to long-on but the ball was splendidly fielded by Braess. Ten runs having been added to the total, Yokohama declared their innings closed at 2.40 p.m.—six for 170, with two men in and three to bat.

Kobe was 239 runs to the bad when Marshall and Mackintosh took the field against Edwards and Burn, and their first score was a leg bye off Edwards. The first big break was by Mackintosh, who drove Burn to the Pavilion for 4; Marshall was caught in the slips by White almost directly afterward—one for 10; Edwards, E. B. S., took his place, and after making 4 was thrown out by Tate in the first ball of an over—two for 10. Pakenham then joined Mackintosh and immediately drove Burn to the longfield on for 2. Play was very slow for a little while until Mackintosh was caught by Burn off Edwards, at the fourth ball of an over—three for 15. Stephens went in next, but Pakenham's stumps were demolished by a Yorker from Burn, the last ball of that over—four for 15. Melhuish opened his score with a 2, touching Edwards just over his wicket; he repeated the performance with the next ball, but the third he sent to long-on. At the change of over, however, Burn disturbed his wickets—five for 21. There was every appearance of a short innings when Kenyon entered the list, but this player by dogged resistance interspersed by some spirited striking kept up the hopes of Kobe for some time—of course they did not expect a win, but a drawn game was quite on the cards for a long while. It was merely a tale of careful play now to the end, Kobe's batsmen giving no chances and being content with a run now and again. Slowly they worked their way up to the half century, though changes of bowlers took place. Stephens made one or two 3's and a capital 4 to the ladies' tent. Ten minutes afterwards he drove another ball to the on boundary, and then another. He followed these with two threes, and Kenyon's substitute—Kenyon was lame—had a narrow squeak to get home for one of them. Stephens was finally caught by Dickinson in long slip—six for 69—and received an ovation as he returned. Lias, the next man, was caught by Crawford off the first ball—seven for 69—and Braess was caught and bowled at the fourth ball of his first over—eight for 69. Twenty minutes of play still remained when Head took his place. Kenyon was very soon afterwards caught by Morris in the slips—nine for 69, and Kobe began to get ready for receiving a crushing defeat. Gibbons was their last man. Head opened with a 4 to the off boundary and repeated with 4 to the on; then Gibbons was bowled by Edwards and all was over; except the cheering, which was lustily given by both teams, Yokohama leading off. Stumps were drawn at 4.35 p.m. Scores and analysis:—

COLUMBUS COMMEMORATION.

By a happy coincidence in dates the Yokohama Literary Society were enabled to celebrate the 400th anniversary of the landing of Columbus in America, and hold their first evening of the present session, at one and the same time. Van Schaick Hall has seldom seen a larger assembly of the Society than that which gathered on Friday evening, and the zest which characterized the whole proceedings should be a happy augury of a bright and successful winter. The popular president, Mr. J. Griffin, was the informal chairman, and in his able hands everything was kept going with pleasing rapidity. The opening overture was a piano duet, Figaro's "Hochzeit" by Mr. and Miss Griffin. Dr. Thwing, the orator of the evening, who followed, received an ovation at the close of the president's introduction, and his address was evidently anticipated with great interest. After a few prefatory sentences:—

Professor Thwing said:—The progress of human civilization is marked by a steady convergence of historic forces. Its advance is dependent upon a confluence of diverse elements mingling into a common life. On the divine side, of course, there is but one, distinct, undivided energy, but on the human, these formative influences are varied and multitudinous. It would be easy to demonstrate this by a review of the race from the

start, but we need not go beyond the period of modern history. The dim allusions of Roman and Hellenic scholars to some unknown continent, the exploration of Icelanders and Norsemen in the 11th century and of discoveries early in the 15th, all illustrate the steady evolution of germinal forces, the gradual approach and unification of ideas that had received their primitive impulse from ages before. For instance, Columbus was an Italian although afterward naturalized in Portugal and later still the agent of the Castilian court. Toscanelli, also, was an Italian, the learned Florentine cosmographer who fanned the flame in the adventurous breast of Columbus as they talked over together the mystery of the Western seas. Here we stand at a point above the confluence of the Latin and Germanic races. We see, do we not? in Columbus and other Italians of his day something of the old bold, spirit of Roman thought and culture, such as not only dominated the earth in the days of her imperial sway when mistress of the earth, but which shone with lustre in Italian universities like Padua and Bologna two centuries and more before Columbus lived. Was he not an inheritor, were not Toscanelli and others of that race inheritors of some part of the fecundity, breadth and power that were embodied in the art, philosophy and jurisprudence of Italy in her palmy days? Before Oxford and Cambridge were founded 10,000 students gathered at the University of Bologna where wise men and gifted women taught as professors in mathematics, astronomy, theology, the highest departments of thought. Her artists and sculptors wrought, not only with grace, but with holy enthusiasm and vigorous purpose. Angelo has been called the Columbus of architecture. His fearless originality and independence inspired men. He dared to change in art, what Columbus did in commerce, and blot out the first word of the old legend "*ne plus ultra*." There was more beyond and he meant to find it. It was not the traditional history of medieval navigators, alone, that gave Columbus his confidence, nor the theories of other men, but his own conviction of the fact of a physical equilibrium. The rejection of his application to the Genoese Senate and that of the conference of astronomers at Salamanca did not overthrow his faith and courage. Migratory birds, it is said, keep high in air, and require a wind that blows against them, to make progress. It both raises and sustains them. So with obstacles to a soaring soul. *Quantum sumus agimus*. Columbus was an inheritor, and to some extent a representative, of those ethnological elements which inhere in the Latin races. But God did not intend that the civilisation of America should be shaped by them alone. Trivial circumstances turn a stream when it has gathered momentum. The flight of parrots, we are told, convinced Alonzo Pizarro that a southwest course was the wiser one for the little fleet to take, in that autumnal voyage of 1492. He finally persuaded Columbus to follow his idea, instead of a course that would have brought them to a point midway on the Atlantic coast. The settlement of the Latin race at this point would probably have given the American continent to the permanent domination of the Papal Church. But the historic forces represented in the Germanic races were soon to make themselves felt. In the onward march of empire, in the populating of a continent which was to double the people of the globe, other germinal influences were to be marshalled. It is needless to review at this time, the characteristics, natural and acquired, of that people—"the sifted wheat of three kingdoms,"—whose noble life gave colour and direction to American colonisation and has to this day made the land we call our own what it is. Lord Macaulay once remarked that the men of the 17th century had little cause to deride the Puritans they encountered, either in the hall of debate, or on the field of battle. They were, he said, "Wise, honest useful, brave; the most remarkable body of men the world ever produced." The influence of the Anglo Saxon race is now the dominant factor in the world's history. The most instructive, the most amazing fact in that history, Mr. Stead has well observed, is "the Englishing of the world" to-day. Whether you turn to philology or finance, law or commerce, to secular or religious activities, this ethnographical fact must stand unchallenged. If you wish to see its possible bearings on the civilisation of the Orient for the 20th century, my last work, *Ex Oriente* may prove a suggestive aid to your study. A recent work by Professor Ono of Doshisha University on the "Industrial Transition of Japan" is also valuable, not only for what it says but for what it hints, as to the results of the sudden impact of Western thought on Oriental stagnation and traditional routine. The Columbus of these shores was Commodore Perry. When he sailed into these waters, a generation ago, Japan sailed into modern history. This nation has been born

again, as it were, in a day. It has before it, I believe, an illustrious future. With a civilisation, distinctively Japanese, as well as Oriental, it will avail itself of what is excellent in Western nations. It has passed from the period of feudalism to that of democracy, and it must see, for example, the absolute interdependence of agriculture and manufacture, and the ennobling of both in popular esteem, now that the domination of privileged classes has ceased. To maintain the enlarged functions of modern government, with its increasing pecuniary demands, it must introduce progressive reforms in tariff, taxation, rural economy and in the legal relationship of tenant and land owner. As new relationships of capital and labour are growing up there will be industrial classes and there must be a revision of the code of industrial ethics. Japan is dropping off her insular life and will, without divesting herself of her national individuality, keep step with the other political powers of the world. All this is but saying that modern civilization reveals a confluence of historic forces and therefore a tendency to a harmonious social organism the world over. As the opening of the New World and its colonisation revealed this ethnographic fact, so the re-opening of the East, the Renaissance of the Orient, will repeat the same. We are one. The old phrase "as far as the East is from the West" has lost its physical significance in this age of steam and of telegraphy, when Yokohama and New York are brought within fifteen days of each other. It will soon lose its moral meaning as expressive of irreconcilable and antagonistic national differences. In the parliament of nations represented at the Columbian Exposition, these coming months, the friendly intercourse of peoples of all latitudes and longitudes and languages, of every colour, creed and clan—as never before, on such a scale—is a vivid picture of the unity of the race in its essential and ineradicable features. The prospect I present may appear utopian to many. So did that before the vision of Columbus. For twenty years he tried to convince an unbelieving world of the reality of what seemed to it to be visionary. But wisdom is justified of her children. *Exitus acta probat*. This prophetic aphorism, worthy of a sybil, Washington took as the motto of his heraldic insignia, a raven with stars and stripes, probably the origin of our national emblems, the eagle and the flag. The results, both in the case of Washington and Columbus triumphantly vindicated their wisdom. So will the movements of history in coming years reveal the gradual unification of the race through the regenerative influences already in active development. One more fact is noticeable, these historic forces we have considered often embody themselves in individual lives. Institutions themselves are but the shadows of individual men, as Emerson says. The world waited for Columbus whose life was a pivotal period. As Mahomet gave the world Mahometanism, so Luther founded Lutheranism and Calvin, Calvinism. So with a score of others who are representative of great ideas, centres of confluent streams, flowing down the centuries of time. The practical lesson, then, in closing, is the exaltation of our ideal of true manhood and citizenship. The world has passed out of the patriarchal period where the family was the unit, out of the days of feudalism when the will of some haughty baron or mighty daimyo was law to the people; it is not friendly to the notion of a paternal government, the head of which says "I alone am the State, my will is law," nor will it accept as an ideal condition that of Oriental communism, where the individual man counts for naught. As Oriental thought centres in self abasement, Occidental life exalts man and teaches self respect, intensifies personal obligation to one's own conscience, to his country and to his Creator; where the son of a wool comber may aspire to the most commanding position among the thinkers of his age. Dr. Thwing admitted the peril of a too intense individualism. But he said, while there is a delusive optimism that ignores the evil, there may be a petulant pessimism which ignores that God is at the helm of State. He who guided the little fleet across the sea 400 years ago, and that other fleet to Plymouth and Jamestown, will guard our country.

"Till the waves of the bay where the Mayflower lay,
Shall foam and frettle no more."

—Meanwhile, let us consecrate ourselves anew to the noblest interests of a country which has had a history of such romantic interest and has a future of such inspiring promise.

The speaker resumed his seat amid loud applause. The best thanks of the Society were heartily accorded him, on the motion of the president, and he suitably replied. The third number was a song, with violin obligato, "Eldorado, Mrs. Borthwick; violin, Miss Moss; piano, Miss Moulton. It was sweetly given and warmly applauded. The Rev.

E. S. Booth gave a short poetical reading and Miss Moulton closed the first part of the programme with a pianoforte solo, "Promenade à Châtelard" (Franz Bendal). The interval was spent in social intercourse. Dr. Russell (organ) and Mr. Griffin (piano) led off the second part with an intermezzo from "la Cavallera Rusticana," a piece, we think, quite new to Yokohama audiences. It proved a splendid success; we hope to hear it again soon, and, if possible, with violin obligato, without which half its exquisite beauty is lost. The reading by Mrs. Rice was in that accomplished elocutionist's best style; scarcely less taking was an aria from "La Favourite" (Donizetti). At the request of the president, Mr. W. D. Tillotson, U.S. Consul-General, then addressed a few words to the gathering. He had come totally unprepared with a speech, he said, [but his brief address was a model of what such things should be. He explained why he had not taken a prominent or any leading part in organizing a Columbus celebration. Columbus's discovery of America was an event in which the whole world, and not the United States alone, participated. The benefits which accrued by the opening up of the New World were shared by nearly every nationality in Europe and Asia, therefore the whole of the foreign community of Yokohama should have celebrated the four hundredth anniversary of the old sea captain's famous exploit. He then went on to describe the reinvigorating influence which the New World had had upon the Old and the mighty future which lay before it. Mr. Tillotson's remarks were received with acclamation, especially by the Canadians present. The President well voiced the feeling of the society when, in thanking the U.S. Consul-General, he said he hoped that it would not be long before that gentleman again appeared among them and gave another address. Dr. Meacham in introducing his reading, a paper of Mr. Balch's upon the proper day on which the anniversary should be celebrated, put an original conundrum before his hearers: Who had been the Irishman's best friend? The inference was obvious, and the roar of appreciative laughter which followed, drowned the voice of the gentleman who, looking at the question politically, called out the name of a prominent statesman of England; at which the Canadians broke out afresh, in order perhaps, to drive home the proper answer, Tennyson's, "Break, break, break," which has a peculiarly mournful significance just now, was sung by Dr. Russell in the style which he has made peculiarly his own—its deep pathos receiving delicate expression. The closing chorus was "Hail Columbia," taken by the whole audience, a party of American ladies leading the solo parts.

NOTES ON THE POETS OF THE VICTORIAN ERA,

WITH ESPECIAL REFERENCE TO ALFRED TENNYSON.

BY MAURICE EDEN PAUL.

A PAPER READ BEFORE THE ENGLISH LITERARY ASSOCIATION OF THE SECOND HIGHER MIDDLE SCHOOL, SENDAI.

GENTLEMEN,—I must begin by thanking you for the honour you have conferred on me by asking me to deliver this address to your society, and by explaining to you on what grounds I have selected the above subject. Last Sunday we received the news of the death of Alfred Tennyson, one of the great poets of the Victorian era. It seemed to me that the meeting so soon to be held would be a fitting occasion on which to offer you a few reflections on the life and works of this poet, and to make some passing references to the work of his chief contemporaries. The hope that among my audience in this country, so far removed both in space and customs from the land of Tennyson, there may yet be many who read and appreciate his work, encourages me to make this humble tribute to the memory of a man whose poems I greatly admire. I will first give you a few particulars of his life; shortly, for it is with his work that we are chiefly concerned. Alfred Tennyson was born in 1809, and studied at the University of Cambridge. Since his first publication of importance was in 1830, the correctness of speaking of him as a poet of the Victorian era might be called in question; but it was not until several years after the accession of our present Queen that his work became at all widely known, and his tenure of the laureateship for forty-two years during her reign fully justifies us in speaking of him as a Victorian poet. Tennyson's predecessor in the office of poet laureate was Wordsworth, and the fame of these two great poets has raised the public valuation of the office which they held, so that it is with regret that, on looking for a possible successor to Tennyson among our poets, we see no one likely to sustain the now high traditions of the office. Here a digression may be pardoned, to explain the

meaning of the term "laureate." *Laureatus* is a Latin word, signifying "crowned with laurel." The laurel crown was given by the Romans as a mark of great distinction. In the early days of the republic it was given only to conquerors or other great heroes, but in later times it came to be given as a reward of literary excellence, so that, it is said, the poets Virgil and Horace were crowned with laurel wreaths in the Roman Capitol. The dignity of poet laureate was granted in the fourteenth century to the Italian poet Petrarch, and subsequently the custom arose in England, in the fifteenth century, of distinguishing with the laurel crown a poet who was retained as an officer of the King's household, and wrote poems on the king's birthday and other suitable occasions. Now, of course, the distinction of poet laureate is supposed to be conferred on the greatest living English poet; but the gift remains in the hands of Royalty.

During the long time for which Tennyson was poet laureate he published many poems commemorating public events of importance, such as are expected of those who hold this office; but beautiful as some of these poems are, they have an ineffaceable stamp of being "written to order." It is less for the work he has done as poet laureate that Tennyson will be remembered, than for the spontaneous productions of his music which, in melody, in purity of diction, and in tenderness of thought are hardly to be surpassed. There is an invidious desire among imperfectly educated persons to classify artists in order of precedence. One maintains that Browning is the greatest poet of the century, another insists on the claims of Wordsworth, another on those of Tennyson. Now accurate classification, which is the foundation of exact thought, is sometimes out of place when it intrudes itself into the realm of art. Why should we arrange our poets in order of merit, as we do school-boys in a class? In one poet we find intensely dramatic representations of human aspiration and human suffering, in another melody and tenderness are predominant; the poems of another are wild yet entrancing expressions of the revolutionary spirit of the age. But if in all alike we find that power which lifts us out of the weary commonplace which makes up so much of our daily life into higher regions of thought and feeling—it is enough, we are moving in a sphere in which we have lost standards of measurement, and we cannot tell, should not even enquire, who has lifted us highest. We know all that we need, that the man who has so lifted us is a great poet, and that our race owes him the reverence and affection which are his greatest reward. There is, however, none of this invidiousness in just literary criticism, in an endeavour to discover as far as may be the secret of any particular man's poetical power. Thoroughly to understand his secret is, indeed, beyond the range of our analysis; the very poet himself perhaps knows as little the secret of his higher work as do the lesser men who read it. When we ask what men of those who in the Victorian Era have published verses are entitled to be called poets, our test of a poet being the above described power of producing a peculiar spiritual elevation in his readers, we find that our list need not be a long one. Excluding those whose claim rests only on one or two poems far in advance of the rest of their work, the names that rise to our minds are those of Tennyson, Robert Browning, Elizabeth Barrett Browning, Clough, Swinburne, William Morris, Matthew Arnold, and Dante Gabriel Rossetti. Of these William Morris and Swinburne are alone left to us; both are revolutionary poets. Swinburne sings the glories of the mental revolt by which man has been freed from the dominion of traditional ideas. In one of his most magnificent bursts of enthusiasm he writes: "Glorious Man in the highest, for Man is the master of things." William Morris, who began by describing himself as—

Dreamer of dreams, born out of my due time,
Why should I strive to set the crooked straight?
The idle singer of an empty day

has now found his vocation in the van of those whose faith is in a new social synthesis, to bring relief to suffering man. Either of these two men would, as far as poetic power is concerned, worthily succeed to the laureateship; but theirs is not the part to run in golden chains, and it is hardly conceivable that either would accept the office, in the highly improbable event of its being offered. Clough and Matthew Arnold are both poets in whom we cannot but recognise the fruits of the old system of classical education, with its inbred reverence for the models of antiquity. Their work is sober and sweet. In the poems of Rossetti, the poet-painter, we find work modelled, not upon the classic authors, but upon the Italian poets of the Renaissance; work full of beauty to us who may almost call ourselves his contemporaries, but not, I fear, likely to live in future ages. Much of the work of Elizabeth Barrett Browning is marred by

its permeation with the ideas of a narrow, though sincere and tender, religious creed. Her best work is, however, free from this fault, and in particular her great poem "Aurora Leigh," of which we shall say a few words later. There remain for mention those poets whose fame has been widest, and whose memory is most likely to endure; the two men who wrote almost continuously through long lives, and died within a year or two of each other, Tennyson and Browning. The latter was in my mind when I spoke of "intensely dramatic representation of human aspiration and human suffering." Time will not allow me to dwell on the characteristics of his work, but I shall have occasion to allude to it here and there, to illustrate the peculiar differences between it and that of Tennyson, which we will now proceed to discuss. Let us first briefly examine, and as briefly dismiss, Tennyson's claims to reputation as a dramatist. He has published several plays, and we must therefore suppose that he wished to excel in this branch of literature. I have indeed heard it was said that the laureate regarded his plays as his finest works. If this were really so, it is I think a striking instance of how deficient in critical power as regards their own compositions great artists often are. Had Tennyson's publications been limited to these plays, he would have remained entirely unknown. As it was, however, his fame led to some of them being put on the stage, where they were almost universally condemned as failures; a condemnation only to be echoed by those who read them in their own libraries. In his dramatic incapacity Tennyson stands in striking contrast to Browning, whose plays are among the finest of his works. Browning indeed, like Tennyson, is not a successful dramatist in the sense that his works make good acting plays; but suitability for reproduction cannot be accepted as the sole test of dramatic merit; many plays which, on the stage, seem long-drawn-out and wanting in that active movement which fixes the interest of the audience, thrill with the truest dramatic force during intramental reproduction by a careful and sympathetic reader, or when read aloud to a sufficiently small audience. Judged by these standards we find that "The Blot on the Scutcheon" and "Pippa Passes" by Browning are among the great plays of all ages, whilst "The Cup" and "The Promise of May" by Tennyson are not worth the paper on which they are written. Let us now turn to examine the works on which the fame of Tennyson really rests, the "Poetical Works." He published several volumes of shorter poems at intervals during sixty years, and longer poems at the following dates: "The Princess" in 1847; "In Memoriam" (issued anonymously) in 1850; "Maud" in 1855; "The Idylls of the King" in 1858; "Enoch Arden" in 1869. Some will base their admiration of Tennyson on the shorter poems, some of the longer. I cannot agree that any such distinction need be made, for I think that his peculiar beauties are shown in poems of both these classes, whilst, on the other hand some both of his long and of his short poems are tedious and trivial. In "The Princess," the first of his longer poems, Tennyson describes the result of an attempt on the part of a king's daughter and her attendant maidens to bring into existence the Kingdom of Women. The attempt failed, as must, alas, all attempts, however grandly conceived, which follow man's method of revolution, not nature's of evolution. And yet such ignoble failures are often of more worth in the world than ignoble successes, for, as has been well written by one of the foremost of living psychologists, "The utopian ideas of one age become often the commonplace ideas of a succeeding age." Scattered through "The Princess" you will find some of the most exquisite of Tennyson's short poems, songs which have been set to music, and are sung all over the English-speaking world. Here I may fittingly say a few words about Elizabeth Barrett Browning's great poem "Aurora Leigh." Whereas Tennyson's "Princess" describes the revolt of a high-spirited woman against the laws of nature, "Aurora Leigh" is the picture of the life of a woman who revolts against the cramping conditions which, in the form of laws and social habits, confine the activities and hinder the development of her sex. Few men are able to understand the clear distinction between these two types of revolt. Most men, and for that matter most women too, regard all women who strive, in whatever fashion, after a fuller and nobler life, as "unsexed," as in revolt against the laws of nature, whereas they are in fact merely in conflict with the customs of man. In "Aurora Leigh" is recognized the great truth, that in the relations between men and women as they obtain at present, is infringed the first principle of social justice, that every human being is to be treated as an end in himself, never as a mere means to the ends of others. It was the recognition of this principle which led to the aboli-

tion of slavery, where the infringement of the principle was clear and unmistakable. Adhesion to the same principle is at the root of the earnest attempts now being made by many for the abolition of the individualistic system of capitalistic industry, which has created a proletariat class whose lot is in some respects worse than was that of the slave class, and whose members are too often regarded as mere means of producing wealth for others. The further application of this principle in social life will be one of the main factors in producing an entire change in the relations between men and women. When that change comes, or rather is completed, for it has already begun; when one half of the human race, which through the ages of human evolution has had the trammels of human contrivance added to the disabilities of sex imposed by nature, is allowed opportunities for complete moral, intellectual, and physical development; then there will probably come a greater change over the human race than the mind of man can as yet conceive. "In Memoriam" contains a series of elegies of Tennyson's grief at the death of his college friend, Arthur Hallam. These sweet, sad echoes of human sorrow and human hope have been to many a "help in time of trouble." Many, even who think "Tennyson's living faith in—

One far off divine event,
To which the whole creation moves
vain and unsubstantial, gladly share with him the sympathy of perfect sorrow in time of bereavement so beautifully expressed in this poem. Perhaps we best realise Tennyson's poetic power when we read "Maud; A Monodrama." A monodrama is a dramatic poem in which the story is told by the report of the thoughts and actions of the hero in his own words. "Maud" describes, in successive bursts of pure and liquid verse, the hero's rapid transition from indifference, through interest, to the most full and exulting love for Maud, when suddenly his hopes are shattered because, in duel which has been forced on him, he kills the brother of the woman he loves. Maud comes on the scene of the duel as her brother lies dying, killed by her lover. In his misery he becomes insane, but after a time recovers, and the closing stanzas describe his return to that eager activity in pursuit of high aims which is the best balm for sorrow. Time will not permit me to dwell on the story of Enoch Arden, who returns to his native village after an absence of many years, to find that his wife, believing him to be dead, had married his old friend and her old lover Philip Ray; and I pass to the consideration of Tennyson's longest work, the series of poems called "The Idylls of the King." Herein Tennyson retells the often told stories of the Court of King Arthur, the legendary king of the Celts during the time of the invasion of Britain by the Saxons, with whom Arthur is said to have fought twelve battles. The origin of the literature of this subject, which is as abundant as the underlying fact is scanty, was in the traditions of the Welsh and the Bretons, who sedulously preserved these memories of the period during which their forefathers were being driven out, exterminated, and absorbed by the Saxon invaders. These traditions have the same historic value, and share the rugged beauty, of the Homeric legends concerning the siege of Troy. The "Idylls" describe the various adventures of Arthur and the knights of his Round Table, who were banded together to right all wrongs. Arthur's ideal knight was one—

Who revered his conscience as his king;
Whose glory was redressing human wrong;
Who spoke no slander, no nor listened to it;

and Arthur himself, the blameless king, fulfilled in his life his own ideal, but naturally failed to find many followers in this high path. We are told of the great wizard, Merlin, whose power could be overcome by a spell known to himself alone. Vivien, a light woman of the Court, by ceaseless importunities, persuades him to tell her the charm, and at once uses it for the destruction of the great Merlin, who sleeps for ever in a hollow oak-tree. Those of you that are familiar with Hebrew mythology will not fail to recognize the resemblance of this story to that of Samson and Delilah. Here we have a good instance of the similar workings of the minds of nations in their infancy. You must read for yourselves the gradual failure of Arthur's plans for the regeneration of Britain; of the moral decay at his Court, and its chief cause, the love of his queen, Guinevere, for his friend and best knight, Lancelot, whom Guinevere had met and loved before she ever knew Arthur; of the flight of Guinevere to a convent, at which Arthur finds her, and makes her a farewell speech from which she learns to recognise, too late, that Arthur, whose

Pure severity of perfect light
had hitherto always seemed to chill and repel her, is Original when compared with Lancelot,
The highest and most human too.

The last of the "Idylls tells us of "The Passing of Arthur." In a battle against some of his own traitorous knights Arthur is sorely wounded, and is carried away from the sea-shore in a mysterious dusky barge to "The Island Valley of Avilion." According to tradition he is not dead, but will one day come back again "full twice as fair," to rule his people. This belief that certain great heroes will one day return from the shades is another of those fancies common in their infancy. I have left myself but little time speak of Tennyson's shorter poems. Those of his earlier years are full of the vigorous enthusiasm of youth, whilst the later ones often breathe the disillusionment of age; and to those who do not share his creed, seem often marred by his increasing intensity of religious conviction. But in considering this change of tone, we must remember that at the time when Tennyson's earlier poems were written there was an enthusiasm for progress pervading many minds; and in the work of many authors between 1830 and 1850 we find the half-expressed, or even the out-spoken, belief that the millennium is at hand. As the century has grown old, we have grown cold, and we no longer regard the future with such unmixed enthusiasm. This does not of course imply an abandonment of faith in progress. He is a blind man indeed who fails to recognize the general growth of the sentiment of brotherhood and the genuine desire felt by many to ameliorate the average human lot. And he is the true infidel, the man faithless to his followers, who fails to see that his supreme duty in life is strenuously to strive to leave the world better than he found it. I may fittingly close this paper by reading to you two poems, one by Browning, the other by Tennyson. Both are on the same subject, on the death which both these old poets felt must be near at hand. They admirably illustrate the different temperaments of the two men, both of whom had a profound faith in a future life. Notice the vigorous spirit, that of a warrior, in which Browning thinks of meeting death:—

EPILOGUE.

At the midnight in the silence of the sleep-time,

When you set your fancies free,
Will they pass to where by death, fools think, imprisoned
Low he lies who once so loved you, whom you loved so,
Pity me?

Oh to love so, be so loved, yet so mistake!

What had I on earth to do
With the slothful, with the mawkish, the unmanly?
Like the aimless, helpless, hopeless, did I drive
Being who?

One who never turned his back but marched breast forward,
Never doubted clouds would break,
Never dreamed, though right were worsted, wrong would
triumph,
Held we fall to rise, are baffled to fight better,
Sleep to wake.

No, at noonday in the bustle of man's work-time
Greet the unseen with a cheer!
Bid him forward, breast and back as either should be,
"Strive and thrive!" cry "Speed, right on, far ever
There as here!"

On the other hand, in the following poem, Tennyson, thinking of his approaching end with great calm, prays for a quiet crossing of the bar:—

CROSSING THE BAR.

Sunset and evening star,
And one clear call for me!
And may there be no moaning of the bar
When I put out to sea,
But such a tide as moving seems asleep,
Too full for sound and foam,
When that which drew from out the boundless deep
Turns again home.
Twilight and evening bell,
And after that the dark!
And may there be no sadness of farewell,
When I embark;
For tho' from out our bourne of time and place
The flood may bear me far,
I hope to see my Pilot face to face
When I have crossed the bar.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 40.

WHITE. BLACK.
1—Q to Q R 4 1—R x Kt
2—B to B 3 2—R x R
3—Q to R sq. (mate)
if 2—Any other move of R
3—Q mates at R 2 (or Kt 3)
1—R to Kt 8, K B 8,
K 8, Q 8, or Q B 8
2—B to Kt 7, B 6, K 5,
Q 4, or B 3 (accordingly),
and
3—Q mates as before.

Correct solutions received from Scacchi, Omicron, J.D., Omega, and W.H.S.

PROBLEM No. 42.
BY AURELIO ABELA.

White to play and mate in two moves.

It was suggested a short time ago that an effort might be made to form a Chess Club in Tokyo, but we fear the distances which separate the residences of foreigners there would prove an insurmountable obstacle to the formation, or, at any rate, the success of such an institution. In the late seventies a Chess Circle held meetings in what afterwards became the well-known restaurant, Bandai-kan, near Meganebashi, but beyond a few German players who assembled for other social purposes as well, the place was little patronised. There are, we believe, numerous players in the capital, who are not members of the Tokyo Club, and who might gladly join a Chess Club under favourable conditions. All experience, however, goes to show that it is hopeless to expect that a single object like chess can be sufficient to bring men together in that city of "magnificent distances." The effort is likely to be "made, however, for unless Tokyo has some organization to represent it, there is no possibility of its issuing and accepting interport challenges without disagreeable friction and misunderstanding.

A large number of members assembled to inaugurate the opening of the new Club Rooms on Monday, the 24th instant. Mr. James Marshall of Kobe was the guest of the evening, and, in a few encounters, fully maintained the high reputation he achieved in the West of Scotland. It is just possible Kobe might recover at chess the laurels she has lost at cricket!

The following fine game was played by correspondence between M. Norlin and Herr Berger. Both players are eminent problemists, and this probably accounts for White seeing through and evading Black's brilliant conception, given in note "a." We are indebted to the *Standard* for the notes.

RUY LOPEZ.

WHITE. BLACK.
1 M. Norlin. Herr Berger.
1—P to K 4 1—P to K 4
2—Kt to K B 3 2—Kt to Q B 3
3—B to Kt 5 3—Kt to B 3
4—Castles. 4—Kt x P
5—P to Q 4 5—P to Q R 3 (a)
6—B to Q 3 (b) 6—P to Q 4
7—P to B 4 (c) 7—B to Kt 5
8—B P x P 8—Q x P
9—R to K 9—P to B 4
10—B x Kt 10—P x B
11—Kt to B 3 11—Q to Q 2
12—R x P 12—Castles.
13—B to Kt 5 13—B x Kt
14—Q x B (d) 14—Kt x P
15—Q to K 3 15—R to K
16—R x P 16—B to Q 3
17—R x R ch (e) 17—R x R
18—Kt to K 4 (f) 18—K to Kt
19—R to K 19—K to R (g)
20—Q to Q 3 20—Kt to B 4
21—P to K Kt 3 (h) 21—Q to B 2
22—K to Kt 2 22—Q to Kt 3
23—P to B 3 23—R to K B
24—R to Q 24—P to K R 3
25—Kt x B 25—P x Kt
26—B to B 4 26—Q to B 3
27—B to B 27—P to K Kt 4
28—P to Q Kt 4 (i) 28—Q to K 3
29—P to Q R 3 29—Q to K
30—Q to K 4 30—Q to B
31—B to Q 31—Q to Q 2
32—Q to Q 5 32—Q to R 5
33—R to Q B (j) 33—Q x R P
34—R to B 7 34—Q x Kt P (k)
35—K to R 3 35—Q to Kt 8
36—K to Kt 4 36—Q to Kt 3
37—R to Q 7 37—Q to Q 5 ch

38—Q to K 4 38—Q to Kt 7
39—Q to Q 5 39—Q to Q 5 ch
40—Q to K 4 40—Q to R 4
41—B to R 5 (l) 41—P to Q 4!
42—Q to Kt 42—Q to Kt 4
43—Q to Kt 6 43—P to Q 5
44—R to R 3 44—Kt to K 6!
45—Q to B 5 (m) 45—R to B 4!
46—Q to K 7 (n) 46—R to K 4
47—Q to B 6 47—Q to Q 4
48—Q x R 48—Q x R ch
49—P to Kt 4 49—Q to Q 4
50—Q x Q 50—Kt x Q
51—K to Kt 3 51—P to Kt 4
52—K to B 2 52—P to Kt 5
53—K to K 2 53—Kt to Kt 2
54—K to Q 2 54—Kt to B 3
55—Resigns (o)

(a) Kt to Q 3 would be followed by 6—P x P, Kt x B; 7—P to Q R 4, P to Q 3; 8—P x Kt, Kt x P; 9—Kt x Kt, P x Kt; 10—Q to K 3, with a slight advantage for White.
(b) 6—B x Kt, Q P x B; 7—Q to K 2, B to K B 4, gives an even game.
(c) If 7—P x P, Black replies equally B to K Kt 6; 8—B x Kt, P x B; 9—Q x Q ch, R x Q; 10—Kt to Kt 6, Kt to Kt 5, in favour of Black.
(d) 14—P x B would be answered by B to Kt 6, leaving White with an inferior game.
(e) 17—R to K 4 seems preferable. Obviously Black could not reply Kt to B 7, because 18—Q to R 7, &c.
(f) It is quite obvious why White cannot capture the Knight.
(g) Had Black played Kt to B 7, the continuation would have been 20—Kt to B 5, Kt x Q; 21—Kt x Q ch, R to B; 22—Kt to Kt 6 ch, &c., emerging ultimately with the better game.
(h) Weakening. 21—B to B 4 should have been played.
(i) 28—P to Kt 4 seems more defensive. The Bishop might then have an outlet at Q 3.
(j) Too dangerous. The alternative would have been 33—B to B, Q to B 7 ch; 34—K to Kt (not Q) to Q 2, because of Kt to K 6 ch, R to Kt 3; 35—Q to Q 2, &c.
(k) The winning move, Black having now two passed pawns.
(l) White could have forced exchange of Rooks with 41—R to K B 7, R x R; 42—Q to K B ch, Q to Kt 4; 43—Q x R, which offered more chances.
(m) If 45—Q x P, Black would pin the Rook with Q to B, and so paralyse White's forces altogether. Evidently he could not move his B to Kt 6, because of K x P, mate.
(n) White does not fall into the deeply-hidden trap laid by Herr Berger in giving up the Queen's pawn. The combination is as pretty as a picture, &c. 46—K to R 4 (h) Kt to Kt 7 ch! 47—Q x P 48—Q to Q B! 49—K x P 50—K x P, R to Kt 4 mate.
(o) If 55—K to Q 3, then K to Kt 4; 56—B to Q 2, and then two Pawns win. White's Bishop is quite powerless.
Herr Berger played this difficult game with consummate skill.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL,"]

London, October 23.

The cholera has disappeared from Hamburg.
A Chinese Commission is expected at St. Petersburg to enter into negotiations for a treaty of commerce.

The Lambeth poisoner has been sentenced to death.

Ravenna, British steamer, 1,915, G. W. F. Browne, 29th October, —Hongkong via ports, Mails and General.—P. & O. S.S. Co.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Saikio Maru*, from Shanghai and ports:—Mr. and Mrs. S. Sakaki and child, Mrs. Graham and child, Mrs. J. M. Jensen, Mr. J. L. Jensen, and Mr. H. Shimamura in cabin; Mr. C. B. Clausen in second class, and 25 passengers in steerage.

Per British steamer *Ravenna*, from Hongkong, via ports:—Miss Lamb, Mr. C. H. Leaf, Surg. Major-General Thomson, Mrs. Thomson, Mr. O. Meyer, Mr. E. Littleton and servant, Miss A. J. Riley, Miss S. A. Brook, Mr. J. R. Crisp, Mr. L. D. Hilles, Mr. B. German, Mrs. de Beer, Mr. F. Rinkel, Mr. Frienstien, 4 Sisters and 2 nurses, Mr. and Mrs. A. Woolley, child and amah, Mr. F. J. Lias, and Mrs. Akai in cabin; and 1 Chinese passenger in steerage.

Per Japanese steamer *Yamashiro Maru*, from Otaru via ports:—Mr. J. E. Beale, Mr. Yokoyama Hikohe, and Mr. Azuma Yoichi, in cabin; 2 in second class, and 58 passengers in steerage.

Per Japanese steamer *Nagato Maru*, from Kobe:—Messrs. Consul J. J. Enslie, R. T. Heas, F. Marshall, E. O. Ringon, T. Unazawa, C. H. Melhuish, W. Drummond, and K. Shikara, in cabin; 32 passengers in steerage.

Per Japanese steamer *Sendai Maru*, from Kobe:—5 passengers in steerage.

Per British steamer *Belgie*, from San Francisco:—Mrs. Crozier, Miss Crozier, Miss Brown, Miss Dushill and 2 children, Miss Palmer, Rev. and Mrs. Miller, Mr. H. E. Simon, and Mr. Crosse in cabin. For Hongkong: Rev. and Mrs. McClintock in cabin.

Per Japanese steamer *Takago Maru*, from Kobe:—Mrs. Uchida, Miss Jun, and Mr. Watanabe, in second class, 5 passengers in steerage.

Per Japanese steamer *Sendai Maru*, from Kobe:—13 passengers in steerage.

Per American steamer *City of Peking*, from Hongkong:—Mr. and Mrs. C. M. Belshaw, Mr. E. Holloway, Mr. Lauterbach, Miss Lauterbach, and Mr. P. C. Poits in cabin. For San Francisco: Miss K. N. Fleeson in cabin.

Per Japanese steamer *Higo Maru*, from Hakodate via ports:—Mr. Y. Seki in second class and 23 passengers in steerage.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Mr. Graham's 3 children, Captain Deliron, Mr. J. Bartlett, Mr. and Mrs. Lincoln, Miss Lincoln, Miss Carr, Dr. Moore Graham, Mr. T. L. Marshall, Dr. James Harris, Captain W. H. Forbes, Mr. Hamilton, Mr. F. G. Sale, General Nozaki, Mr. Kobatake, General Nozo, Mr. S. Kishi, Rev. W. W. Curtis, Mr. M. Kuwamoto, and Mr. T. J. Cowie in cabin; Mrs. Lee, Mr. and Mrs. Quen Yunn and child, Messrs. Harriss, S. Chop Ching, P. W. Murray, Wm. Castellote, M. Yoshimura, and R. Jimjima in second class, and 97 passengers in steerage.

DEPARTED.

Per British steamer *Gaelic*, for San Francisco via Honolulu:—Captain Ashton, Mr. and Mrs. Atterbury and infant, Mr. P. Blumer, Professor Chartier, Mr. T. G. Denby, Mrs. Denby, Mrs. Douglas, Miss Emma Fife, Mr. Geo. Flood, Captain Furber, Mr. C. L. Goham, Dr. and Mrs. J. C. Hepburn, Mr. H. H. Hirsch, Captain and Mrs. R. D. Hitchcock, Miss Hitchcock, Mr. and Mrs. Alcaeus Hooper and three children, Messrs. H. M. Johnson, Conrad Jolas, John Logan, C. W. Mathews, J. Mendelson and son, John K. Mitchell, C. S. Nash, G. H. Ramsay, E. Reeps, Marquis Rudini, Mr. A. L. Rostow, Rev. I. A. Smith, and Mrs. Swain in cabin.

Per French steamer *Calidonten*, for Shanghai via Kobe:—Mr. C. F. Hooper, Mr. and Mrs. Piorkowski, Mr. T. E. Nesbitt, Lord Li and 5 servants, Mrs. H. G. Colby, Mr. and Miss Munster and servant, Mr. H. H. Sultzberger, Mr. Johnson, Miss E. Uyemura, Ms. and Mrs. Weinberger, Mr. Brugnot, Miss Ishii Matsu, Captain Gaynor, Mr. and Mrs. Simon, Mr. E. Shibuya, Miss Hamoto, Mr. Yonai, Mr. T. Shibuya, Mr. K. Saushimura, Mrs. Ch. Heltzel, Mr. Inoko Yoshito, Mr. M. Akiyama, Mr. S. Hijikata, and Mr. T. Hatano, in cabin.

REPORTS.

The Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 13th October at 3.40 p.m.; detained at Bar 3 days (no water). Left Woosung the 16th at 10 p.m. and arrived at Nagasaki the 18th at 1 p.m. Left the same day at 8.30 p.m. arriving at Shimoda the 19th at 10 a.m. Left the same day at 3.40 p.m. arriving at Kobe the 20th at 1.30. Left again the 21st at 5 a.m. and arrived at Yokohama the 22nd October at 10.30 a.m. Experienced fresh N.E. winds and fine weather throughout the passage.

The Japanese steamer *Yamashiro Maru*, Capt. Young, reports:—Left Otaru the 19th at 1 p.m.; dull and cloudy with heavy rain throughout the night. Arrived at Hakodate the 20th at 11 a.m. and left Hakodate the 21st at noon; light airs and dull cloudy weather to Oginohama. Arrived Oginohama the 22nd at 10.15 a.m. and left Oginohama the same day at 3 p.m.; similar weather to Yokohama. Arrived at Yokohama the 23rd at 4 p.m.

The Japanese steamer *Nagato Maru*, Capt. Ekstrand, reports:—Left Kobe the 22nd at 1 p.m.; with moderate winds and overcast sky. After passing Oshima Light moderate N.E. winds and overcast; remaining so till arrival at Yokohama the 23rd at 7 p.m.

The Japanese steamer *Sendai Maru*, Capt. Tiple, reports:—Left Kobe the 22nd at 4 a.m. and arrived at Shiotsu at 7.8 a.m.; left again 10 a.m.; passed Oshima the same day at 4.26 p.m.; Rock Island was passed the 23rd at 9.20 a.m. Arrived Yokohama the same day at 3.45 p.m.; had moderate northerly to N.E. wind, with fine and moderately clear weather throughout the passage.

The British steamer *Belgia*, Captain Walker, reports:—Left San Francisco the 6th October and arrived at Yokohama the 25th October at 4.33 p.m. Passage, 18 days, 7 hours, and 17 minutes. Had moderate wind and sea throughout the passage.

The Japanese steamer *Sagami Maru*, Capt. Pender, reports:—Left Otaru the 22nd October at 1 p.m.; with gentle breeze increasing to moderate and strong breezes towards midnight with squally weather; the 23rd at 12.45 a.m. passed Okushiri Light, thence to port gentle westerly breezes and fine weather. Arriving Hakodate at 9.45 a.m. and left the 24th at noon for Oginohama with gentle S.E. winds and fine weather at 4 p.m.; passed Shiriya-saki, thence to port gentle to moderate westerly winds and fine clear weather. Arriving the 25th at 11.25 a.m.; and left same day at 5 p.m., for Yokohama, with light variable airs increasing to moderate breeze from N.W. with fine clear weather; the 26th at 7.40 a.m. passed Inuboye similar weather at 2 p.m.; passed Nojima Light-house with fresh breeze from N.N.E. at 4.35 p.m.; passed Kanon-saki gentle breeze from N.E. and cloudy weather, arriving at Yokohama the 26th October at 6 p.m.

The Japanese steamer *Takasago Maru*, Capt. Nirei, reports:—Left Kobe the 25th Oct. at noon; passing Oshima at 9 p.m. and Rock Island the 26th at 1.35 p.m.; experienced fine clear weather with N. and N. westerly strong breeze with heavy sea to Omai-saki; thence to port moderate N.E. gale. Arrived at Yokohama the 26th October at 8.30 p.m.

The Japanese steamer *Sendai Maru*, Captain Tiple, reports:—Left Kobe the 26th October at 10 a.m. and arrived at Shiotsu at 1.25 p.m. Left again at 3.18 p.m. and passed Oshima at 9.35 p.m. the same day; Rock Island was passed at 2.25 p.m. on the 27th. Arrived at Yokohama at 8.45 p.m. the same day. Had moderate N.W. winds with clear weather to Oshima; thence to port fresh N.E. winds with high N.E. sea; weather continued fine and clear.

The American steamer *City of Peking*, Captain Searle, reports:—Left Hongkong the 22nd October; had light N.E. monsoon and fine clear weather throughout the passage.

The Japanese steamer *Higo Maru*, Captain M. Matsumoto, reports:—Left Hakodate the 26th October at noon; had gentle westerly breeze, and fine weather with sea; and arrived at Oginohama the 27th at 11 a.m. Left again the same day at 2.10 p.m.; had moderate to gentle north-westerly breeze and fine weather; after passing Nushima Lighthouse at 11.31 a.m. on the 28th, moderate northerly breeze and overcast weather. Arrived at Yokohama the 28th October at 4 p.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 22nd October at noon. Arrived at Nagasaki the 24th at 5 a.m. and left the same day. Arriving at Moji the following day at 6 a.m. leaving again for Kobe at 11 a.m. Arriving there on the 26th at 7 a.m. and left Kobe the 27th at noon. Arrived at Yokohama the 28th October at 4 p.m. Experienced moderate to strong northerly winds and fine, cloudy weather to Nagasaki; thence to Kobe had fresh N.E. winds and fine, clear weather, fresh head winds were met along the coast with fine, cloudy weather to Yokohama.

LATEST COMMERCIAL.

IMPORTS.

Demand for Yarns has fallen off to some extent and present quotations might be shaded. In Shirtings, 8½lb. have shown some improvement in prices, and, with gln., are held firm. More inquiry for Turkey Reds, Velvet, and T.-Cloths. Woollens are slow of sale at the moment, but a better feeling is looked for soon.

EXPORTS.

RAW SILK.

Our last issue was of the 21st instant. Since that date settlements by foreigners amount to 1,031 piculs divided thus:—Hanks 15, *Filatures* 561, *Re-reels* 401, *Kakeda* 38, *Oshu* 16. Additional there have been fairly large direct shipments making the total business of the week about 1,250 piculs.

Holders have continued fairly current for such silks as are on offer, but the prime summer reeling both in *Filatures* and *Re-reels* appear to have been all sold, and present arrivals from the interior show a great falling off in both colour and quality. Producers this year have had no need to accumulate stock, buyers have been only too eager to take everything as soon as reeler could put it on the market.

Exchange is gradually declining once more, and holders of silk are feeling in better spirits accordingly. They would feel still more joyous if buyers were more lively, but we look for more or less quiet market until the Presidential election of 4th proximo is well over.

Prices keep strong for good quality, while the common and inferior kinds of which we have a plethora can be bought at lower figures.

There have been two shipping opportunities since we last wrote:—The American mail steamer *Gaelic* (23rd inst.) had 1,250 bales for the New York trade, and the French mail steamer *Calcedonien*, which left port on the same day, carried 644 bales for Europe. These departures bring the present total export figures to 22,677 piculs against 18,063 piculs last year and 5,874 piculs to same date in 1890.

Hanks.—Small business to note, the only sale of any moment being one parcel *Foshu* (*Agatsuma*) at \$610.

Filatures.—Here a large amount of buying, about 600 piculs passing the scales: in fact a general clearing out of the prime summer-reeled silks full size suitable for the States. Good prices have been paid, *Taiyosha* \$890, *Kaimeisha* \$875, and other well known chops at like figures. In European sorts *Utsunomiya* \$870 is noted, while parcels second and third grade from southern provinces have brought prices in the neighbourhood of \$790.

Re-reels.—These have received much attention, good silk being sold at long figures, while common sorts are easy in price. As in *Filatures*, so here, prime summer-reeled silks are exhausted and would be worth more than quotations did they exist.

Kakeda.—Quiet market with small transactions' the only remarkable sale being a parcel *Fony* at \$660.

Oshu.—Nothing done beyond a few bales *Sendai* at \$645.

Export from 1st July	9,800	15,350	16,200
Stock, 28th October	34,700	34,900	22,500

WASTE SILK.

Settlements in this branch reach 1,500 piculs divided thus:—Noshi 600 piculs, Kibiso 900 piculs. No direct export to be chronicled this week.

Buying has become more general, and shippers appear to recognise the necessity of operating unless they wish to be left behind in the race, and may parcels good Noshi have been taken up at full rates for Swiss demand. Consumers continue to grumble at the prices they have to pay, but they apparently have to come in whether they like it or no.

The French mail steamer *Caledonia* takes both Waste and Cocoons for Europe. There has been no other chance (the *Argyll* still remaining in port) and the present export figures are 8,179 piculs against 6,170 last year and 6,243 at same date in 1890.

Pierced Cocoons.—No fresh business to record. Best grades are scarce and holders ask long figures.

Noshi.—Some large parcels of good fibre have found buyers. Fine *Bushu* \$130 to \$145; *Shinshu* \$105 to \$110; *Foshu* good \$92½.

Kibiso.—Best Filatures \$115, seconds \$105. Some big lots of *Hira* sorts have passed the scales on the basis of the following prices: \$37½ to \$47½ for mixed *Bushu* and *Foshu*.

Mawata and Neri.—No business at all.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribunes in Abyssinia," says:—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World. May 28th, 1890.

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
 2. First-class Workmanship.
 3. Moderate Prices.
 4. Greatest obtainable power for weight and space occupied.
 5. Quickness in raising steam.
 6. High rates of speed guaranteed.
 7. Absence of noise and vibration.
- We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE
Stock sizes, 1½ to 11 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers. Illustrated Catalogue in English, French, or Spanish. Send for Copy to

YARROW'S SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

"THE REAL CUP O' KINDNESS."

Perfect blendings of the Choicest Brands of the Highest Classes of Fine Old Whiskies in their Native Purity, as produced in Scotland, absolutely untampered with.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters BOS are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being marked by a small label on each bottle.

The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, NOV. 5TH, 1892.

MARRIAGE.

At Yokohama, October 31st, 1892, before Hon. W. D. Tillotson, U.S. Consul-General and afterwards by the Rev. G. M. Meacham, D.D., E. H. TUSKA, of Yokohama, to MAUD A. CROZIER of San Francisco.—No Cards.

SUMMARY OF NEWS.

H.I.H. THE PRINCE IMPERIAL paid his respects to the Emperor on the 28th inst.

VISCOUNT TOMINOKOJI, a Chamberlain to H.I.M. the Emperor, died in the capital on the 28th ult.

LIEUTENANT-COLONELS SATO TADASHI, Nakaoka, Sukeyasu, and Kono Michiyuki, of Infantry, and Ota Eokusaburo, of Artillery, have been promoted to be Colonels.

VISCOUNT NIIRE, Minister of State for the Navy inspected on the 28th inst. the *Matushima Kan*, the new Japanese war-vessel, which lately arrived at Shinagawa from France.

THE total revenue and expenditure of the Yokohama Godowns Company during the past year were yen 3,162.85 and yen 2,292.52 respectively, leaving a net profit of yen 769.82.

INTELLIGENCE from Fukuoka has been received stating that the section between Naokata and Ogishi on the Chiku Railway line was opened for traffic on the 28th inst.

THE Ministers of State visited the American Legation at Akasaka on the 29th ult. to express their condolence to the American Representative on the death of Mrs. Harrison.

THE Superintendent-General of the Metropolitan Police has issued a notification prohibiting the passage of oxen through a certain portion of Shiba, owing to an epidemic having broken out there.

A TELEGRAPHIC message from Fusan, Korea, received by the Authorities, reports that a destruc-

tive fire occurred on the 28th ult. at 8 a.m. in a house at Fusan, and about one hundred buildings were burnt.

On learning of the death of Mrs. Harrison H.I.M. the Emperor despatched a telegraphic message of condolence to the United States Government. Mr. Mutsu, Minister of State for Foreign Affairs, also sent a telegram of sympathy.

On the 27th inst. at 10 p.m. a fire occurred at Takaido-mura, Higashitama-gun, Tokyo. The flames were confined to the building where the fire broke out, but a man was burnt to death. Nine houses were burnt and two partly damaged at Senju on Friday afternoon.

A SPECIAL meeting of the Cabinet was held on Tuesday last, at which there present Counts Ito, Kuroda, Oyama, Goto, Inouye, and Yamagata, Viscount Niire, and Messrs. Kono, Mutsu, and Watanabe, by whom matters in connection with the Budget were discussed.

THE election of officers of the Japan Railway Company has resulted in the return of the former officials. The list is as follows:—President, Mr. Ono Yoshizane; Vice-President, Mr. Mori Jusuke; and Auditors, Messrs. Hayashi Katanori, Ota Korenobu, and Nihoshi Motonaga.

INTELLIGENCE from Nagoya reports that the 28th ult. being the anniversary of the occurrence of the great earthquake of last October, religious services were held in commemoration of the terrible calamity. During the past year 1,110 shocks have been recorded in Nagoya, while 2,626 earthquakes were experienced in Gifu.

THEIR Imperial Majesties the Emperor and Empress will give a garden party to members of the Imperial Family, the Ministers of State, the Foreign Representatives, officials of *chokunin* and *sonin* rank in various Departments, peers and their wives at the Akasaka Detached Palace about the 10th inst., when the chrysanthemums in the gardens will be in full bloom.

DURING a strong blow on the forenoon of the 20th ult. Saito Iwakichi and ten other fishermen belonging to Chiba Prefecture, who were at work in a boat off the shore of Umigami-gori, were caught in the gale, and are reported missing. On the 22nd inst. eleven men of Miyado-mura in the Idzumi District of the Prefecture met with a similar fate off Naniwa village, and all, with the exception of two, were drowned.

MR. KONDO MASAKI, *Chargé d'Affaires*, who had been suffering for some time from a dangerous illness, expired in the capital on the 1st inst. A day prior to his death the deceased was decorated by the Emperor with the Third Class Order of the Mirror, being raised from fifth class second to fifth class first grade. The interment will take place on the afternoon of the 4th inst. at the Tanaka Cemetery, Uyeno.

THEIR Imperial Highnesses Princes Arisugawa Taruhito and Komatsu Akihito, General Oyama, Minister of State for War; Viscount Hijikata, Minister for the Imperial Household; Marquis Tokudaiji, Grand Chamberlain; Lieutenant-General Miyoshi, Chief Army Inspector; and Commandants Yamaji, Kurokawa, Nodzu, Sakuma, Katsura, and Nozaki, of various Army Divisions, had the honour of dining with the Emperor on the 1st inst.

THE Usui Government Railroad which is expected to be completed before the end of the year, will meet the want at present supplied by the Usui Tramway, and the latter will natu-

ally be rendered useless. The Tramway Company have, therefore, determined to dissolve, and arrangements have been made to sell the rails to some residents of Takasaki for yen 16,400. The Takasaki people propose to construct with the material a line connecting Shibukawa with their town.

THE regular general meeting of shareholders of the Japan Railway Company was held in the capital on the 29th ult. The receipts during the past-half year were yen 1,319,809.243, to which yen 400,901.883, Government subsidy, and yen 4,700.160, the sum brought over from last account, were added, making a total of yen 1,725,411.243. Of the above, yen 630,473.312 was deducted for business expenses, yen 21,325.678 for expenses at the Head Office, yen 2,163,939 to defray expenses for floating the Company, yen 13,173.939 as remuneration to officers, yen 50,733.527 as a reserve, yen 35,000.000 as payment for debts incurred by the Company, yen 24,075.000 as payment of the interest on the debts, and yen 990,802.800 as a dividend for the half-year to be declared at the rate of 10 per cent. per annum, yen 9,549.318 being carried forward to the new account.

THE following is a statement of the number and value of money orders issued in September last as compared with the previous month, together with September, 1891:—Number of ordinary and small postal money orders, September (1892), 234,871; August (1892), 246,541; and September (1891), 196,186; telegraphic money orders: September (1892), 5,137; August (1892), 5,601; and September (1891), 3,055. The amount of small and ordinary money orders:—September (1892), yen 2,002,768; August (1892), yen 2,002,598; September (1891), yen 1,562,931; amount of telegraphic money orders, September (1892), yen 74,677; August (1892), yen 85,543; September (1891), 45,029. The returns of Postal Saving Banks for September last as compared with the previous month were as follow:—Number of deposits, 204,998 and 196,313 for the two months respectively; number of withdrawals, 34,851 and 37,021; amounts deposited, yen 1,080,601 and yen 1,003,510; amounts withdrawn, yen 854,890 and 942,551.

THE Import trade has not changed except that the moderate amount of business recently done may have been affected somewhat by the holidays of the week, which have been almost continuous on one score and another—races, regattas and the Emperor's birthday. Stocks of Manchester goods are known to have become depleted in the interior, and it is consequently expected that a sharp turn may shortly be taken by buyers in the direction of supplying immediate wants. There is only a small business at present in Metals, but holders are daily expecting some move to be made. The same may be said of Kerosene, though the owners of Oil are unbending in their attitude about values, notwithstanding there are now more than half a million cases of all brands in the Government godowns. Holders of Sugar also maintain a firm hold of the stock on hand and prophecy a rise in prices before any parcels of magnitude are handled. The Silk market continues brisk, and, including direct shipments, the record for the week is over 2,000 piculs. How much longer shipments can last on the scale of the past two months is a problem, for already available supplies—that is shipments and stock here—amount to 36,000 piculs. There is not a shadow of a sign of easier prices, and holders continue to obtain all they ask for anything decent in quality. There has been less doing generally in Waste, though some rather heavy parcels have been taken. Nothing to report in The Exchange has been fairly steady.

EDITORIAL NOTES.

THE AUTUMN MANŒUVRES.

AFTER a stubborn combat had been waged in the neighbourhood of the Kinu river, the Emperor summoned the Generals of both sides, and pronounced judgment in the following words:—"The attack of the Northern Army (invaders) was remarkably well delivered; but the sudden flank attack of the Southern Army (Imperial) was not properly managed." Thus the laurels rested with the invading force in the first day's fighting. After the combat had been renewed, the Imperial Army again suffered defeat, and was driven from Utsunomiya, the invaders taking possession of that town. The Southern forces, however, did not retreat far, but re-inrenched themselves in masked positions at Susumenomiya, Hikida, and other villages. Their programme was to surprise the invading army on the march, but as the latter did not continue its advance beyond Utsunomiya, the defenders remained fruitlessly in the field throughout the night of the 24th ultimo. Meanwhile, being re-enforced by a fresh division, on the following morning they assumed the offensive and marched towards Utsunomiya, coming into collision with the enemy at Takinohara. Here a fierce battle was waged for over two hours, the Imperial Army now proving the more powerful and compelling the invaders to beat a retreat. Being hotly pursued by the victors, the Northern Army was finally driven out of Utsunomiya, and at 8.10 a.m. the town was re-occupied by the Imperial forces. This ended the fighting. His Imperial Highness Prince Arisugawa, Field Marshal, criticised the operations at Takinohara, in the presence of all the generals, the Emperor having previously made a speech.

The following is a translation of the short speech made by the Emperor to the General Officers who were present at the manœuvres:—

"We have commanded Taruhito to judge the issue of the manœuvres just terminated. It has pleased us to observe that, on the whole, great progress has been made. But our Army must not be content with its present condition: it must strive to attain a still higher degree of excellence. Upon you, therefore, devolves the duty of serving zealously, leaving no point, however trivial, unconsidered, and sparing no effort to carry your military studies to completion."

H.I.H. Prince Arisugawa's Judgment was delivered as follows:—

In obedience to the Imperial command, I, Taruhito, proceed to pronounce judgment on the issue of the Manœuvres:—The strategy adopted in the battle fought on the 23rd of October was good on both sides, viewed as a whole. I consider that the Southern Army acted rightly in occupying the old and new Rikuu routes and posting a strong force on the old road. It was also skilful strategy on the part of the Northern Army to divide its force into three divisions, so as to enable each division to take a different route by which they might advance without delay through mountainous districts. Since, however, these divisions were intended to combine at Ujiya, it was essential that their routes should be subsequently changed. But although the plan of action had been previously determined, no order was given in the above sense until the troops had actually reached Ujiya, the inevitable consequence being loss of time and opportunity. All necessary instructions as to routes should have been issued previously, the more so that no encounter had yet taken place with the forces of the enemy. Again, from the point of view of strict obedience to orders, it was right for the First Division of the Northern Army to remain at Kanasu Hill, after they taken possession of it. But when they heard the sound of continuous firing in the direction of the Second and Third Divisions, they ought to have advanced to the assistance of those Divisions without waiting for a change of instructions. Their failure to do so must be considered a loss of opportunity owing to over-strict adherence to orders. On the other hand, the position, to the north of Ujiya, taken by the artillery of the Southern Army, can hardly be considered well chosen, as the left wing of the enemy was then in the act of delivering a flank attack, so that no possibility of holding the position could be anticipated. As for the right wing

of the Southern Army, they did well to change direction to the left on hearing the sound of firing in that quarter, despite the fact that their orders were to advance towards the Kitsure River. At the same time, it was merely by chance, and not by premeditation, that a part of this wing found itself in a position to deliver an attack on the rear of the Third division of the Northern Army, and the defeat of the latter was caused by want of proper precautions on the part of its left.

The measures adopted by the Northern Army in the first battle fought on the 24th cannot be considered correct. Their prime object being to advance, they ought to have attacked the repulsed troops in their front at once, before the latter could be reinforced. Even though the enemy has destroyed the bridges over the Kinu River on the previous day, measures should have been concerted for renewing the battle on the following day. From this point of view it is much to be regretted that the commander of the Northern Army failed to appreciate the original plan, and did not take steps to carry it out. Though, however, this want of appreciation involved a loss of opportunity, the plan of attack, so far as concerns the distribution of forces, and the method of onset, was well considered. Further, the choice of Hirade-hara by the Southern Army as a place to make a stand, was very appropriate, and I endorse all the other measures adopted by them, such as the disposal of forces and so forth. I observed that, previously to the commencement of the action, the Southern Army often changed the position of its reserves in obedience to false reports. To obtain sure intelligence is the only way of directing an army's movements properly: this branch of service cannot be too carefully conducted. Again, when retreating, the Southern Army showed much carelessness, though the enemy were pressing forward with their full force. Doubtless this mistake may be attributed to a tendency to regard the Manœuvres in a different light from actual war, but it is not necessary for me to declare that such a distinction ought never to be made. The battle fought on the 25th was altogether well conducted by both parties, but the attack made by the Fourth Division of the Northern Army along the Rikuu Road cannot be considered in accordance with proper strategy. I approve everything else that happened on that day. Such is my judgment on the various incidents of the three days. Viewing the manœuvres as a whole, though I was pleased to see so much progress, there were many points with regard to which I cannot express entire approval. Some of the principal of these are, first, that owing to the failure of commanding officers to attach sufficient importance to the duty of preserving communications, the forces did not co-operate effectively. In point of fact, the larger the body of forces in the field, the more important is the question of communications, for unless the greatest care be exercised in this matter, each division has to fight on its own account, and the end is disaster for the whole. I urge the expediency of greater attention hereafter to this vital detail. Secondly, I was disappointed to observe a marked failure to appreciate the true value of both artillery and infantry fire in delivering an attack. It is scarcely necessary to say that the utility of fire-arms depends greatly on time and circumstances in each case; but arms of offence are daily undergoing such improvements that victory must rest with those who understand how best to utilize them. I trust that general officers will pay profound attention to this point.

THE CHINESE REPRESENTATIVE.

LORD LI, Representative of China in Japan, has taken his departure from this country without any public demonstrations of the exceptionally high esteem in which he was held. Being in mourning for the very recent death of his mother by adoption, the wife of the celebrated Viceroy, it was impossible for him to accept any invitations, and both Japanese and foreigners were thus compelled to see him depart without any of the marks of respect and friendship that would otherwise have distinguished the exit of an official who leaves behind him a record without precedent. Of the men hitherto sent by China to represent her at the Court of Japan, it must be admitted that they stood on a distinctly high plane of ability and culture. But Lord Li, in addition to intellectual qualities which none could fail to recognise, possessed graces of manner and kindness of heart that won friends everywhere. We do not go too far when we say that his diplomatic and social methods alike produced a lasting impression on the people of Tokyo, and that the days when he presided at the Legation in Nagasaki will be always remembered with

pleasure and admiration. He spoke both Japanese and English fluently, and he mixed with the foreign and Japanese residents of the capital on terms of more than common intimacy and friendship. From a man of views so liberal, tact so excellent, and ability so rare, his country ought to be entitled to expect great things. Let us hope that he possesses his father, the Viceroy's gift of biding his time, and that, like too many other liberal and brilliant Chinese, he may not wreck his career by premature collision with the rock of Celestial Conservatism.

LECTURE AT THE IMPERIAL HOTEL.

THE lecture announced to be given by Mr. A. B. de Guerville at the Imperial Hotel in the interests of certain Tokyo charities, came off Friday week, and was numerously attended. Indeed the chief salon of the Hotel was filled to overflowing, and as the room is supposed to accommodate six hundred people, an idea of the size of the audience may be at once formed. The Minister President of State and Countess Ito, the Vice-Minister of State for Foreign Affairs and Mrs. Hayashi, the entire Foreign Corps Diplomatique, many distinguished Japanese and almost the whole of the foreign community of Tokyo were present. The Rev. C. S. Eby kindly presided at the lantern, which was placed at the entrance of the salon, the stereopticon views being projected on a large screen at the other end. At the outset things did not work quite smoothly, but the apparatus was soon under complete control, and a very beautiful and remarkable series of views was displayed. Some of the grand natural scenery of the States delighted the audience not less than the classical and often noble edifices of the chief cities. Interest centered, of course, on the buildings of the World's Fair. These were shown as they will appear when completed, and since the lecturer added details of size and cost, an admirable conception could be formed of the immensity of the undertaking. The one defective feature of the whole affair was the interpreting. Only a very small fraction of Mr. de Guerville's explanations and statistics was translated for the benefit of the Japanese present, although they constituted the great majority of the audience. The lecture will be repeated at the Public Hall this evening.

M. DE LANNESSAN ON INDO-CHINA.

M. DE LANNESSAN, says the *London and China Express*, seems to be keeping the French Press well supplied with his views on the state of affairs in Indo-China, Tonkin especially. We have already noted one or two of the effusions. The last example is a letter to the Deputy, M. Francisco Deloncle, which is obviously intended for publication. He points out in this that the revenue is increasing, a fact which is sure to tell in his favour, and if there are still pirates he deplores the frequency with which they make attacks. He thinks his critics are too impatient and too ill-informed, and they forget that many years will be needed before the land is pacified. He is for the establishment of numerous outposts, knit together by well-opened well-guarded ways. His ideas were clearly derived from the study of English methods. Money is, however, needed to carry on the great public works that he suggests, and M. Jamais, the Under-Secretary for the Colonies, would rather do almost anything than go to the Chamber to ask for an appropriation. But the conclusion of the whole matter is thus expressed by the *Liberté*, "We must either make up our minds not to haggle about money or we must abandon the country."

THE HONG KONG HOTEL.

A PETITION came before the Chief Justice on the 17th ult., in the Hongkong Supreme Court, at the instance of Th. de Benigny, for the compulsory winding-up of this company. After a short discussion between the Court and the Counsel engaged in the case, his Lordship made an order in the following terms:—"That the voluntary winding up be continued subject to the supervision of the Court; the liquidators not to commence legal proceedings without the sanction of the Court; the costs of the petitioner,

the Hongkong and Shanghai Bank, and of the Company be paid out of the assets of the Company." This order was made subject to a formal affidavit being put in to the effect that there was no other company in Kobe with a similar title, owing to a mistake (which Mr. Leach pointed out) having occurred in the local advertisement wherein the notice of voluntary winding up was headed "Hiogo Hotel Company, Limited" instead of "Hiogo Hotel, Limited." His Lordship said, however, that on this affidavit being filed it would be unnecessary to re-advertise the winding up.

THE BARRISTERS' EXAMINATION SCANDAL.

THE Tokyo News Agency reports that the Authorities have already determined to declare the last barristers' examination invalid, and to order that another examination be conducted *de novo*. From the same source we learn that though certain people contend that the examiners must be dismissed, and new ones appointed, the opinion of the officials concerned is somewhat different. They point out that as yet the culprit has not been discovered, and that as the examiners are all upright and able men, they cannot have committed such a disgraceful act as to divulge the papers. On the other hand, were they dismissed without any sufficient evidence, their honour would be unjustly, or at least precipitately, impugned, and neither they nor the public would accept such a situation quietly. Assuredly, therefore, the Authorities will never entertain the notion of dismissing the examiners unless they are clearly proved to be guilty.

MILNER'S SAFES.

In several recent fires at home, Milner's safes are reported to have passed through the ordeal to which they were subject with great credit to the makers, the contents being recovered in a state of perfect preservation. Thus we read:—"At a fire in Mitchell-street, Glasgow, besides being subject to intense heat, the safe fell from a height of four stories, and on being dug out after a lapse of 12 days the books and papers were found to be all preserved." In another case, at 23, Jewin-crescent, London, "the safe was in a part of the building that was subject to the full force of the fire, and bore unmistakable evidences of having undergone a most severe trial in fact it was clear that it had been red-hot for some time. Notwithstanding this, the whole of the contents were in a perfect state."

SERVICES AT UNION CHURCH.

A DISCOURSE suggested by the anniversary of the earthquake of Oct. 28, 1891, was preached by Professor Thwing on Sunday, at Union Church. Dr. Meacham in introducing the preacher remarked that this was the sixth Sunday he had had the pleasure of introducing his American friend to this pulpit, Dr. Thwing had just been visiting the district devastated and had participated in the memorial service at Nagoya on Friday last, and was to leave on the *Peru* for Hongkong, sailing probably to-morrow. He remarked that there are supreme moments in life when thought and emotion seem to focus themselves on one conspicuous idea. The object before us wears a distinctness and brilliancy rising above the ordinary level of consciousness, just as I have seen a tongue of fire leap from Vesuvius at midnight and with ghastly splendour paint its outline on the inky sky. The theme of the hour deserves a better handling than I can give it, with so brief preparation. But if God himself is heard, the speaker can afford to be himself forgotten. Taking as a text Heb. 12: 26-29, "Whose voice then shook the earth." Dr. Thwing first defined fear as a physical instinct and fear as a moral principle, each a valuable factor; the former vitalizing the law of self preservation, and the latter inhering in every well balanced character. The danger of our age is not from superstitious credulity, but from materialistic capathy. Hence the need of the catastrophic element in the education of mankind. As this planet passed through convulsions before becoming the abode of the race, so individuals and nations have had a tragic discipline and will need the same in the future. Having illustrated his argument from his-

tory and experience, Professor Thwing urged the cultivation of sobriety of thought, the recognition of the immense superiority of the unseen over the visible and temporal, and a responsiveness to the imperative call of God who speaks from heaven in these startling providences. Suitable reference was made to the tragedy of the *Bokhara* and to the death of Mrs. Harrison, the service closing with the hymn "God moves in a mysterious way."

THE BOKHARA'S DEAD.

THE *Hongkong Daily Press* gives the following record of the men who lost their lives in the *Bokhara*:—

Major J. T. Turner, Army Pay Department.
Captain Dawson, Hongkong Regiment.
Captain J. Dunn, Commanding Army Service Corps.
Lieut. F. A. Burnett, Shropshire Light Infantry.
Lieut. G. G. Boyle, Royal Artillery.
Quartermaster-Sergeant F. G. Jeffkins, Royal Engineers.
Sergeant Mumford, Shropshire Light Infantry.
Sergeant Donegan, Shropshire Light Infantry.
Mr. G. E. Taverner, Audit Office.
Mr. G. S. Purvis, Hongkong and Shanghai Bank.
Mr. Charles Wallace, Clerk, Messrs. Jardine, Matheson & Co.

Major Turner received his first commission on April 13th, 1858, was made paymaster on April 10th, 1881 and received the rank of hon. major in the Black Watch on April 10th, 1886. He was one of the best of men in his private life, the most popular of officers, and his loss has occasioned the most poignant grief, which is increased by the knowledge that he leaves a widow and nine children. He was about 55 years of age and has seen a large amount of service.

Capt. J. Dunn, Commanding the Transport Division of the Army Service Corps here, received his first commission on May 10th, 1882, and attained his present rank on April 2nd, 1889. He was at one time connected with the Liverpool Regiment, and was unmarried. As a cricketer he was perhaps the best that ever seen in Hongkong; he was indeed called the W. G. Grace of the East and his genial, generous disposition made him very popular.

Capt. R. H. Dawson was one of the officers of the new Hongkong Regiment, being in command of the left wing. He was previously in the Worcester Regiment and subsequently served in India as wing officer of the Meywar Bheel Corps. He had seen 12 years service. Although comparatively a stranger here, during his brief residence he had made a host of friends and his loss will be deeply regretted, especially in the ranks of the Regiment of which he was an able and popular officer.

Lieut. Geo. G. Boyle, R.A., has been claimed by death at the early age of 23. He only joined the service in 1889, but was a very promising young officer.

Lieut. F. A. Burnett, of the Shropshire Light Infantry, was 24 years of age. He joined the Regiment at Malta on March 19th, 1890, and was a favourite among the men.

Quartermaster Sergeant Jeffkins was one of the ablest draughtsmen in the Royal Engineers, and one of the best all round cricketers in the colony. He has not been in the colony very long, but he had done good service for the Hongkong Cricket Club and ingratiated himself with all with whom he came in contact. He leaves a widow but no family.

Sergeant Mumford, of the band of the Shropshire Light Infantry, was 30 years of age and had seen considerable service, having been with the regiment through the Sudan and Egyptian campaigns. He was unmarried.

Sergeant Donegan was also in the band of the Shropshire Regiment. He was only 23 years of age. Mr. G. S. Purvis was a clerk in the Hongkong and Shanghai Bank, exceedingly popular among his fellows and a good all-round athlete.

Mr. C. Wallace was a clerk in the firm of Messrs. Jardine, Matheson & Co. His mother and sister reside here, and his brother is in Swatow.

Mr. G. E. Taverner was in the Audit Office. He was a son of the late Acting Colonial Chaplain, and was well known as a promising young cricketer, whose personal qualities made him popular among those who were acquainted with him.

A NICK BUTTON-HOLE.

In Mindinao, the farthest south-eastern island in the Philippine group, upon one of its mountains, the volcanic Apo, a party of botanical and ethnographical explorers found recently at a

height of 2,500 feet above the sea level a colossal flower. The discoverer, Dr. Alexander Schadenberg, could scarcely believe his eyes when he saw amid the low-growing bushes the immense buds of this flower growing like gigantic cabbage-heads. But he was still more astonished when he found a specimen in full bloom, a five-petaled flower nearly a yard in diameter, as large as a carriage wheel, in fact. The enormous blossom was borne on a sort of vine creeping on the ground. The native who accompanied Dr. Schadenberg called it "bolo." The party had no scale by which the weight of the flower could be ascertained, but they improvised a swinging scale, using their boxes and specimens as weights. Weighing these when opportunity served, it was found that a single flower weighed over twenty-one pounds. It was impossible to transport the fresh flower, so the travellers photographed it and dried a number of its leaves by the heat of a fire.

KUMAMOTO DOINGS.

THE election of members of the Kumamoto Prefectural Assembly continues to be distinguished by acts of violence. According to the accounts published in the Radical organ of the locality, the Conservatives have been conducting themselves in a most disorderly manner. The *soshi* of Yamaga District, having found themselves in a company of *Yahan-tai*, which may be taken as the Japanese equivalent of "Moonlighters," broke into the house of Shimada Kiichi, a Radical, smashed the doors, hacked the posts, and vented their political excitement in other forcible fashions. Another band of the same partizans seized three Radicals, bound them hand and foot sent them off by boat. They were subsequently rescued by their comrades. Nobody, however, seems to have met with any serious hurt except a man called Nakajima Yasutaro, who received a disabling wound and was left for dead by the way-side. Probably these stories require to be discounted, but under any circumstances Kumamoto's political fever evidently runs very high.

THE LASCARS OF THE "BOKHARA."

A MOST unhappy incident connected with the survivors of the *Bokhara* disaster is the charge brought against the Lascars by Dr. Lowson. What Dr. Lowson really said about these men it is difficult to make out. Here are two versions, the first taken from the *Hongkong Daily Press*, the other from the *Hongkong Telegraph*:—

In further conversation Dr. Lowson expressed his high admiration for the conduct of the captain and officers of the *Bokhara*, who acted like heroes all through. The Lascars also worked splendidly under their leadership, but after the wreck Dr. Lowson could not admire their apathetic indifference to orders and beliefs and had nothing but contempt for their behaviour on Sand Island.

As for the Lascar members of the crew they behaved in a fiendish manner after getting on shore, and I trust that should I ever be placed in a similar situation with their countrymen, that I shall have my six shooter in my hip-pocket and a stout stick in my hand. From the moment they reached the shore they behaved more like rabid hogs than human beings. They attempted to monopolise the little fresh water found in a shallow well, and gorged all the food they could lay hands. They never attempted to assist us, but did rather the reverse. They are a disgusting, unmanly, cowardly, brutal gang of contemptible ruffians. The fiendish yells and overbearing attitude of those black brutes (I can call them nothing else) would be inconceivable had I not witnessed it. They took no heed of their officers' commands, and more than once I had to make some of them feel my knuckles in sheer self-defence and to bring them to reason. I don't think it would be possible to use language too harsh in describing the conduct of those coloured men, and I regret I am not well enough to describe it to you more in detail, for it ought to be thoroughly exposed.

After due allowance is made for the exaggerated language habitually employed in the columns of the *Hongkong Telegraph*, we are nevertheless compelled to conclude that Dr. Lowson did actually condemn, in terms more or less strong, the conduct of the Lascars on Sand Island. The

Original from

filteen Lascars have accordingly written the following letter to the *Daily Press*:—

SIR,—We, the undersigned surviving crew of the steamer *Bokhara* having heard of a report about our alleged misconduct made by one of the surviving passengers, Dr. Lowson, in the *Hongkong Telegraph* of the 18th instant, beg hereby to make the following statement, and trust, in justice to us, you will kindly publish it, as without such a vindication of our conduct as can be made by our statement, we poor people, who worked on board the ill-fated steamer regardless of all danger, will not only be deprived of our certificates, of our donations, and of our services by the P. & O., but also of the prestige of our sea-faring nation as one of the best type of crew under any emergencies that one can ever come across. We need hardly say here anything about our conduct as crew on board the steamer during the exceptionally disastrous period of our voyage. Dr. Lowson has himself spoken about it, but above all, when due investigations are made in proper quarters, it will, we feel confident, come out satisfactorily that the Gogo crew which the P. and O. employ, and of which we form a part, behaved themselves in the case of the *Bokhara* in such a manner as to leave nothing further to desire, and that in such a terrific sea and gale that were raging during our last voyage we hesitated not the least to implicitly obey and carry out as far as practicable the orders and behests of our officers, however perilous the situations in which we were ordered to work. After our getting on land what we did for the surviving European passengers and for our officers we narrate below, and we trust the latter when called upon will fully confirm the truth of our statement. That for more than 24 hours during the disastrous period, owing to the exigencies of the terrific occasion we had had hardly any food on board, we scarcely need refer to here; we do think we should refer to the terrible strain and stress that we had had to undergo as crew. Our officers themselves have experienced the same, and let them speak for us. What we did after we were ashore was this:

Early at daybreak after the night we were washed ashore, the Chief Officer and Quartermaster took six out of us remaining fifteen round about the island we were thrown on, as well in search of food as in that of any stray persons who may have been washed ashore like us. We picked up from the floating débris three tins of biscuits, and fell in with a fireman who was lying with his leg broken and crying. The three tins of biscuits were handed over to the Chief Officer, and we lifted and helped up the lame fireman to the spot where the survivors had congregated. During the absence of us six, the remainder of us picked up bundles of Shanghai straw which were floating about, and spread up as mattresses for the European passengers and officers. Some of us were then sent in search of blankets, and on our finding two we dried them up and gave them to Dr. Lowson. We also picked up four mattresses which had floated up from the vessel and handed them to the Europeans; we also dried up their clothes as they were given to us to dry in turns. We did not appropriate any of the things we picked up for our own use. Almost naked we kept ourselves shivering. We were only supplied with handfuls of biscuits saturated with salt water by the Chief Officer. Under cold and pain we waited outside the fishermen's hut where the Europeans stayed, and during the night of the next day by turns of two kept watch there. We also supplied them with fuel, and made fires for them. We never monopolized the little fresh water that was found in a well as Dr. Lowson alleges. On the contrary, we picked up a bucket and gave it full of water from the well every time that they wanted it during day as well as during night. For ourselves we had a half top-broken bottle and we in turn drank thereby. We never gorged any food. There was nothing beyond the biscuits which were in charge of the officers, and we only ate what they gave us of them. What else could we gorge we leave the doctor to say. On the morning of the second day we saw a goat sitting upon an elevated spot on the hillside; we caught it of our own accord and handed it to the Europeans for their use for food. We were all more or less hurt, we were lame, hungry, and half dead, but, nevertheless, we helped up Dr. Lowson, who seemed to have a sore leg, to walk over to Makung, a distance of five miles which took nearly half a day. As regards the supply of fresh water in the well possibly the Doctor might have imagined that might be exhausted if we had had to stay long at the island, but the flow in the well was evidently continuous, and the supply was quite abundant even when we left the island. We were asked to pick up cans of oil, which as found we brought them. If for all these services rendered in cold and rain and in every

other respect under the most trying circumstances, rendered when we ourselves, as we said, were lame, hungry, and half-dead, we get such a certificate as Dr. Lowson has given us, we simply say our reward will come from God, and that as between man and man let the righteous judge us.—We are, sir, your obedient servants,

Hongkong, 20th October, 1892.

There is something at once dramatic and pathetic about this narrative. The trivial details described by the Lascars—their search for food to supply the wants of the Europeans; their picking up of straw and mattresses; their drinking of water from a half broken bottle; their finding of fuel and kindling fire, always for the Europeans; their own food, handfuls of biscuits saturated with salt water; their cold and exhausted vigil outside the hut in which the Europeans were sheltered; the hardships they had endured previously to this time of privation; their injuries and lameness, and finally their helping of Dr. Lowson to walk to Makung—all these things make up a picture singularly incongruous with the wild words attributed to Dr. Lowson by the *Telegraph*, and even with the much more moderate accusation ascribed to him by the *Daily Press*. We cannot but think that if the Lascars really did show "apathetic indifference to orders" while on Sand Island, their mood is fully accounted for by the terrible and protracted hardships that had preceded their last struggle for life in a boiling sea, and that it is amply compensated by the fortitude and endurance which all observers concur in attributing to them during the long battle on board the *Bokhara*.

THE "AJIYA" ON CURRENT TOPICS.

The *Ajiya* (Asia) occupies the pleasant position of a free lance among the periodical publications of Tokyo. It elevates itself on a lofty pinnacle of independent criticism, and looking down upon the low levels of current politics, finds everything unsatisfactory. Discontented with the Government no less than with the various political parties, it is equally disgusted with almost everything beneath it. As to the Government, its strictures are short and vague. It declares itself confirmed in its original opinion that the present Cabinet is after all a collection of wooden idols. As to the Diet, the *Ajiya* considers it is as unworthy as the Government. These brief denunciations are exchanged for more expansive methods when the various political parties pass under the caustic periodical's review. The *Yiyu-to* (Radical Party) is described as "a big tree of which the trunk is already dead." The Radicals may justly boast of unwieldy dimensions, but they must acknowledge that their energies are now entirely devoted to the preservation of their failing vitality. Required, on the one hand, to defend themselves against the National Unionists, they must on the other, be on their guard against the encroachments of their allies the Progressionists. Even the most incapable among them already regard themselves as embryo Ministers of State, and in putting on lofty airs and keeping up appearances they have the credit, or discredit, of surpassing even the representatives of officialdom.

The *Kaishin-to* (Progressionist party) is stated to have regained something of its former power. But its members are accused of merely acting parts in their new career of desperate conflict. They may deceive themselves, but they can not deceive others. Their leader, Count Okuma, is recognized as a statesman of great resource, fit to preside over the party.

But his remarkable natural gifts are, in the *Ajiya's* opinion, prostituted to serve the dark passion of revenge. He is angry with the Government, and he deceives the Radical party with insinuating words.

The *Rokumin Kyokai* (National Union) is characterized as being profoundly foolish. Excepting its two leaders, Count Saigo and Viscount Shinagawa, its members are declared to be nothing less than greedy political adventurers. They extort money from the simple and honest inhabitants of the North-east for the sake of replenishing the empty pockets of the professional politicians of the South-west. The life of such a party must be extremely precarious, and such of its members as have any self-respect are recommended to shape their conduct according to the real prospects of their association.

The *Toyo Yiyu-to* (Oriental Radical party) hardly deserves the name of a party. It is a pity, says the *Ajiya*, that the interests of the poor labouring classes have been taken under the wing of such politicians. Association unworthy will have the result of forcing sober men to turn their attention from the important question of ameliorating the condition of the poor. Mr. Oi Kentaro is rebuked for his audacity in appropriating such an important question to form a plank in his political platform.

The Independent Popular Party, of which leading members like Messrs. Masataka, Kawashima Jun, and Nakamura Yaro, are very active, is still an insignificant factor in politics. It is of course extravagant to build any big hopes on a young sprout just emerging from the ground.

Even the *Ajiya* recognizes the absurdity of condemning everything, and observes that it is not perhaps just to withhold all praise from existing parties. They have done some good things. To them belongs the credit of having hastened the grant of the Constitution and the opening of the Diet. What is most astonishing is the fact that the Tokyo periodical accuses independent and self sufficient critics, like itself, of being a standing menace to the healthy growth of politics in Japan.

BEGGARS WANTED.

LATELY advertisements were placarded on telegraph posts in Yokohama to the effect that all the beggars in the town were requested to call at the branch office of the Seiri Club, 43, Hasakicho, Sancho, Yokohama. At first sight such an announcement looks somewhat strange, but further inquiry shows that an excellent project is on foot. Messrs. Nagaoka Keizaburo, Yebihara Boku, and Yamaguchi Yukimitsu have established a club at Hachioji for the purpose of collecting all the indigent persons in the empire, and providing for them some appropriate occupations. The promoters intend to separate the applicants into three lots. The first, over 60 years of age; the second, under 15 years of age; and the third, deformed. The young persons belonging to the second category are to be sent to Hokkaido, where they will settle, while houses will be provided for the others, and occupations found at which they may be able to work. A branch office has been established in Yokohama, and already a sum of over a thousand yen is available. It is stated that there are over 500 beggars in Yokohama alone.

After the posting of advertisements as described above, the police authorities of Yokohama took steps to investigate the matter, and finding that the details of the scheme were not satisfactory, the projectors were ordered to suspend further proceedings until their system could be placed on a sounder footing. They are said to be very indignant about this interference. Their object being to succour the unfortunate, and to put an end, as far as possible, to the public scandal of begging, they do not see why any official obstacles should be placed in their path, and they have accordingly sent a deputa-

Original from

tion to wait upon the Governor of Kanagawa and submit to him a statement of their grievance. Doubtless their purpose is excellent, but when private associations undertake to assume charge of the lives of their fellow-nationals, it is the unquestionable duty of the Authorities to see that satisfactory and trustworthy measures are adopted.

JAPANESE SETTLEMENT AT JENSAN.

SOME days ago the Foreign Department received a communication from the Japanese Consul at Jensan in Korea to the effect that the negotiation relating to the reclamation of land for a Japanese settlement had been at last concluded. The *Nichi Nichi* has now received further particulars of the matter. It appears that the negotiation was commenced by Mr. Kondo when he represented Japan at the Korean Court. In the 1st Article of the Convention relating to a Japanese settlement at that port, it was expressly provided that the Korean Government should grant the Japanese Government an area of over 3,900 *tsubo* of land then under the sea, to be reclaimed for the purposes of a Japanese settlement. In view of such a provision there should apparently have been no difficulty in obtaining the practical fulfilment of the engagement, but in Korea things are not so easily managed. The negotiation commenced in 1890, but under various pretexts the grant was deferred till quite recently. At last, however, an understanding was arrived at, and the Korean Government nominated officials to superintend the work of reclamation, the Japanese Consul, on his side, appointing Mr. Takao Kenzo to compile an estimate for purposes of comparison, while Messrs. Otani Masanobu, President, and Nishiwaki Chotaro, Vice-President, of the Settlement Assembly, and Mr. Sato Ikkei, representative of the settlers, were chosen to form a Committee of Management. As soon as the estimate prepared by the Korean officials is submitted, the Committee will hold a conference. It is stated that the works will probably be contracted for by Japanese, but the *Nichi Nichi* dwells on the importance of choosing an honest contractor, since otherwise all sorts of troubles will assuredly crop up in the course of the undertaking. As the cold weather will set in soon, the works cannot be commenced before next spring.

THE FOES OF THE CABINET.

Who are the real foes of the present Cabinet? The *Fuyu*, which is the Radical organ, propounds this question and undertakes to answer it. Most persons who have watched the course of events during the past two years will be disposed to think that the answer presents no difficulty: the *Kaishin-to* at all times, they will say, and the *Fuyu-to* generally. But our Radical contemporary entertains a very different view, and the fact is significant. It avers that although the Radicals are certainly not among the friends of the Cabinet, and although they are prepared to take over the reins of Administration whenever the present Ministers forfeit the confidence of the nation, they are by no means like a cat watching a mouse, ready to spring on it at the first opportunity. On the contrary, so far as the *Fuyu-to* are concerned, the Cabinet may remain in peace so long as it does not misgovern the country. The foes against whom careful watch must be really kept are the Military Party (*Budan-ha*), who for a moment swayed the Matsukata Administration and are now in retirement. Looking back to the events of the past few months, the *Fuyu* finds that the leaders of this dangerous association are Viscounts Takashima, Shinagawa, and Kabayama, and Mr. Shirane. Viscount Takashima is credited by the *Fuyu* with some measure of ability, and with having exercised far more influence in the Matsukata Cabinet than the Premier himself. Since he went out of office he has maintained sullen silence, apparently inactive, but in reality watching with eagle eyes for an opportunity to re-establish military sway, and holding constant communication with Count Matsukata. Viscount Kabayama, though not in complete agreement with these leaders, is practically on their side, and from his suburban retreat in the capital,

he observes and communicates to his colleagues in the provinces the course of events. Among the police officials, too, there are many followers of the *Budan-ha*, who, when occasion presents itself, will not be wanting in zeal. The Military Politicians recognise that the present Cabinet consists of statesmen of the first ability, but they rely on the chances of dissension among its members, and they stand by waiting while the assaults of the Popular Party gradually sap its strength. Meanwhile, the Government assumes an attitude of defence towards the Popular Party alone, failing to discern the true source of grave danger. Such are the Radical organ's views. We regard them as a remarkable declaration. When the Radicals openly recognise that they are not the Cabinet's chief enemies, and that the enemies of the Cabinet are also enemies of the Popular Party, it becomes really a matter of uncertainty how far the *Fuyu-to* may be reckoned as active foes of the Government in the next session of the Diet.

"YOKOHAMA BALLADS."

Two of our local artists, taking a new departure, one with pencil and the other with pen, have published a volume entitled "Yokohama Ballads." Judging from the frontispiece, the book is intended to be a "pot-boiler," for the singer of the verses stands thrumming his lyre under the shadow of Fujiyama "by the sad sea waves," while his better half cooks an *al-fresco* soup, both figures being lightly clad and presenting an altogether impoverished appearance. The poetical repertoire opens with the lay of the "Over educated," the hero being a Japanese "rickshaw-man" who, failing to obtain "six times his legal fare" from an English salt, called the latter a "ruddy-tinted fool." This appropriation of our own particular swear-words causes much distress and anxiety to Fiasco da Yama, a naturalized Britisher, who after describing the incident in forcible rhymes, comes to the following conclusion:—

"We've teacht them folks various kinds o' stuff;
"We've given 'em trains an' telegraphs an' rice,
"An' dynamite an' warships quantum suff;
"Eot-hata an' lamps an' other sich-like trifles.
"But let us keep our sweet words,—they are our very own
"Of our civilized nation they're the very flower an' crown;
"Should the 'eathen get to play wid' em, Hold Hingland
all go down
"Like dirt into the dust-bin of a mornin'!"

The second lay is the "Ballad of a Company"—the Printing and Publishing Company of course:—

"Half a hundred gentlemen sobered down and sane.
"Half a hundred gentlemen in sore financial pain;
"Half a hundred gentlemen all ruling sore the day
"They tinkered up the old *Gassie* to pipe their bloomin' lay!"

There is much that is racy and pointed in this ballad, as may be divined from the opening lay, but we discover nothing unkind. The lady that consented to fill a vacant editorial chair, and has filled it for so many months with such courage, industry, and ability, is spoken of thus:—

"Plucky little woman that, got a level head;
"Fought a mighty plucky fight for her daily bread,
"Writing on with aching wrist and with a fagged-out brain
"Whirling like a racing screw, thudding like a train."

"Them Companies," "Ebenezer Emmanuel Broadbottom, from the State of Ohio, on the Matter of Tariff," "The Japan Ead," and "Lemon Geranium, Forsooth!" constitute the remaining items in the book of ballads. We have quoted enough to give our readers a rudimentary idea which they had better develop by procuring the volume from either Mr. A. Culy in Yokohama, or Messrs. Z. P. Maruya & Co. in Tokyo. Verses and pictures alike will furnish food for a hearty laugh.

A CHINESE "PUNCH AND JUDY" SHOW.

"O." writes to *The Times*.—A few years ago I witnessed at a garden party given by the General then commanding the troops in Hongkong, the exhibition of a Chinese "Punch and Judy," which had been brought down from Canton. The general arrangements were precisely the same as those of an English "Punch and Judy." The costumes were Chinese, and the piece varied in some respects from that which we see in England, but all the characteristic features were the same. May I venture to ask Professor Max Müller and the Congress of Orientalists whether they can give any explanation of the curious resemblance between the two perform-

ances? Did the European Punch originate in Tartary or did the Chinese Punch migrate from Europe, or do they both descend from a common ancestor in the cradle land of the Aryan races? In reply to this, Professor Douglas writes:—"If your correspondent 'O.' will consult a work entitled "Notes and Queries on China and Japan" he will find that puppet shows in China are, like everything else that is Chinese, of great antiquity. It is there stated by Professor Schlegel that in the reign of King Mul (1001-947 B.C.) a certain man named Yen made puppets which certainly danced and which appeared to sing. The modern representatives of these puppets are of two kinds—viz., wooden puppets which are moved by silken threads, and leather puppets, the real prototypes of our "Punch and Judy" shows, whose movements are directed by the hands of the showman. The performances of these last figures are called "Linen-bag Plays," from the fact that the showman covers, or is supposed to cover, his head with a linen bag to conceal himself from the spectators.—*London and China Express.*

FOREIGN TOURISTS.

THE question of foreign tourists is becoming yearly more interesting and more important for Japan. Millions of dollars are left in the country by these visitors, and as there is every appearance of their number increasing, so there is every reason for Japan to consider more carefully the treatment she accords to them. The *Yomiuri Shimbun* notes that a disposition is growing to cheat these good people unmercifully. Very likely it is true, though we fail to appreciate the illustration furnished by our contemporary, namely, that when tourists want to rent houses outside the Settlements, they have to pay a hundred *yen* where fifty would suffice under ordinary circumstances. Do tourists want to rent houses outside the Settlements? There may be cases of such a desire, but surely they are too rare to serve the purposes of the *Yomiuri's* argument. Much more important is the attitude of the bric-à-brac dealers, some of whom devote themselves wholly to devising schemes to cheat the tourist. We could name men in Tokyo and Kyoto whose proceedings must ultimately have the effect of disgusting buyers, and altogether deterring the visitor from spending his money on objects of art. The strange part of the thing, too, is that these particular men are such clever rascals and spread their toils with so much skill that tourist after tourist falls a prey to them. For a period the ill-effects of their chicanery will not be felt, but in the end tourists will learn not to expose themselves to being expensively duped, and since the most effective plan of safety is to eschew buying, the whole of the art artisan class of Japan will suffer.

There exists now in Tokyo an association of bric-à-brac dealers founded on excellent principles, namely, to sell nothing that is not what the dealer represents it to be—within reasonable limits of error—and never to ask a second price. There is no reason whatever why a Japanese merchant should invariably be expected to reduce the price asked by him. The whole business is utterly senseless, for since the dealer knows that his foreign customers have contracted the habit of beating him down, he takes care to name at the outset a figure which leaves him plenty of room to satisfy the buyer's idiosyncrasy without detriment to himself. Indeed, it may be confidently asserted that no one who cuts prices ever obtains an object of art in Japan for the lowest figure that would have contented the seller. Then, too, there is the uncertainty of the whole thing. The buyer has no guide. He does not know what to offer, and when he has made his bargain, the unpleasant feeling remains that perhaps he might have done still better. On the other hand, the tourist is obviously precluded from taking the initiative in effecting a reform. If he adopts the heroic course of paying what he is asked without any question, he simply loses his money and fattens the dealer's purse. An old resident who has learned the true value of things, may

adopt and adhere to the rule of never cutting a price, either taking or leaving a specimen at its seller's figure. Such a man will be the most successful and the happiest buyer of all. But the occasional visitor is fairly caught in the toils of the old vicious system and cannot possibly break through them. The only hope lies in a reform on the part of the dealers themselves, and to accomplish such a reform an association embracing all the respectable dealers is essential. Some of the good men of Tokyo and Kyoto, appreciating this, formed the combination spoken of above, but their whole scheme is marred by the fact that they have admitted the black sheep into their ranks. They know it themselves perfectly well: they have been remonstrated with very strongly. But they declare themselves bound by that mystic sentiment *giri*, the gospel of every Japanese in transactions with his fellow. It would be a case of *giri ga tattanai* if they declined to inaugurate the in new departure in the company of men who will no more stick to the principles of the Association than attempt to walk upon the sea. Many of the most laudable programmes in Japan are wrecked by this invertebrate habit of sacrificing everything to altruistic conventionalities. The knaves have joined the Association with solemn faces and brave promises; but their knavery will not be a whit embarrassed by any dread of discrediting their honest comrades.

Among the foreign tourists now in Japan two have attracted the special attention of the vernacular press. They are Messrs. Vanderbilt and Parsons. The former, as the son of the great millionaire, would be sufficiently remarked under any circumstances, but he becomes in Japanese eyes quite a picturesque figure when it is observed that he knows the value of a *sen* and even of a *rin* as well as the poorest toiler in the land; and that no one drives a keener bargain. Riches have not at all marred his sense of proportion. Mr. Parsons is equally interesting on account of his generosity and liberality. He has rented the celebrated Satake-yashi near Mukojima, a place which, twenty years ago, could boast one of the finest gardens in Tokyo, though since then use as a public pleasure ground has greatly impaired its beauties. Mr. Parsons, intending to see Japan as the Japanese see it, has restored this charming place to serve as his residence for a few months, and the *Yomiuri Shimbun* relates that on the day of moving thither he caused a *yen* to be given to every *jinrikisha* that crossed Azuma Bridge, which pretty fancy cost something over three hundred *yen*.

THE Gifu EARTHQUAKE.

WE have received the following letter from the President of the *Shimpo* Club:—

SIR,—Last autumn our Prefecture of Gifu was visited by an unparalleled calamity of earthquake. Countless thousands of our fellows were thrown into direst distress and the most indescribable alarm. With deaths on every side, hardly one escaped alive, and we were without resource save to cry aloud to heaven and to earth. At such a time you gentlemen of the press, out of your great benevolence, spared no pains to rouse public sympathy in our behalf, and succeeded in collecting large sums of money which you transmitted to succour us, so that by your kindly aid our misfortunes were relieved, and our lives preserved. Your charity will remain always engraved on our hearts. Never shall it be forgotten. It was our desire to express our gratitude immediately, but the pressing need of food, of shelter and of clothes held us from everything but the toil of living, and thus, to our infinite regret and shame, to-day finds our thanks still unspoken. Our Association some time ago held a meeting, and despatched members to the various localities to consult about our wish to insert a notice of thanks in the newspaper press. Everywhere we found the people bowing their heads in gratitude as grass bends before the wind, but in truth their condition is still very far from what it once was, and with difficulty could they subscribe a sum of 36 *yen* to carry out our purpose. Such an amount divided among the 120 journals of the empire, gives only thirty *sen* each; a sum, we grieve to say, altogether too small to carry out our project of advertising. Nevertheless, our failure does not lessen but rather enhances the earnest wish of our townspeople and ourselves to express our deep gratitude to the editors of newspapers and to all

charitable persons who have succoured distress. It pains us to think that we must wait until the days when our ability to show our thankfulness may be in some measure equal to our wish. In the meanwhile, may we venture so far to trespass on your kindness as to ask you to insert in several issues of your journal the accompanying statement of our heartfelt gratitude to yourself and to the many charitable persons who through you sent us aid, and may we further beg of you to complete the kindness by sending us a copy of the issue containing the notice.

(Signed)

OKUDA SEIHACHI,
President of the *Shimpo* Club.

Asakamachi, Mino, Gifu Prefecture.

The expression of thanks referred to in the above will be found in our advertising columns. The desire of our correspondents was to have the notice appear on the anniversary of the great earthquake, namely, October 28th, but the document did not reach us in time to comply with that part of the request.

THE BARRISTERS OF TOKYO.

THE Tokyo New Barristers' Association held its autumnal meeting on the 28th ultimo in the Bankers' Assembly Hall, about 40 members attending, and Mr. Takahashi Sutezo being in the chair. The nominal roll of the Association showed that it comprises at present 237 members; 22 resignations and 12 admissions having occurred since last April. After the routine business was concluded, the meeting organized itself for purposes of debate under the presidency of Mr. Moriya Konosuke. Three propositions were presented:—

1. That a Barristers Law be submitted to the Diet next session, and that 15 members be elected to compile a draft for the consideration of the Association.
2. That in lieu of the *Official Gazette*, which has hitherto been placed in the Barristers Waiting Room, at least three different newspapers be obtained.
3. That the Association shall elect a number of Barristers to serve as counsel when required by Government.

The first proposition led to considerable discussion. It was contended that the Association should not act collectively in such a matter, but that the preparation and presentation of a Bill should be left to the initiative of individual members, if they pleased to take the matter up. Another view was that the better plan would be to present a petition; and yet another that the Bill should be presented, not by the Barristers themselves, but by their friends in the Diet. Finally, however, the proposition was carried, and the following were elected to form a drafting committee:—

Messrs. Miyagi Kozo, Nakajima Matagoro, Takahashi Suteroku, Okamura Teruhiko, Maruyama Namasa, Hatoyama Kazuo, Hiramatsu Fukusaburo, Suzuki Jiubi, Okayama Kanekichi, Oya Sori, Asakura Tomotetsu, Tsunoda Shimpei, Takanashi Tetsushiro, Ooka Ikuzo and Isobe Shiro.

All the above not being present, it was uncertain whether they would consent to serve. By way of substitutes, therefore, in the event of any refusals, the following were chosen:—

Messrs. Shiraiishi Go, Moriya Konosuke, Saito Koji, Yamaguchi Ken, Ogasawa Hisakichi, Watanabe Yoshio and Seki Naohiko.

The other two propositions were rejected and the meeting closed at 9 p.m.

THE TERRIBLE FOREIGNER!

ANOTHER item, headed with the familiar *Gatjin no Burai*, is furnished by the Tokyo News Agency. At about 5 o'clock on the afternoon of the 23rd ultimo, says the tale, three Americans, accompanied by a Secretary of the Yokohama Local Court, were returning from Kamakura, and purposed taking the train at Zushi station. It suited their convenience to cross the line somewhere in the vicinity of the station, and they proceeded to do so without the least regard for the fact that they were violating the Railway Regulations. The station master, unwilling to permit such irregularity, sent the Ticket Clerk to stop them. The latter spoke to them several times in Japanese, but as they paid no attention, he ran to the place where they were about to emerge from the road, and stretched out his arms to bar their passage. Thereupon they lost their temper, knocked him down, and began to beat him. The Clerk, growing irate in turn, was about to attack them

with his ticket-cutter, when the station master hastened to the place and succeeded in restoring order. This is the News Agency's account. It probably needs modifying, though as to the central fact of an attempt to cross the line in despite of the Regulations, we must assume accuracy. There ought to have been established by this time a pretty general understanding that the days are past when a system of one law for the stranger and another for the native was tolerable. The Japanese are not disposed to endure such discrimination any longer, and it is a senseless proceeding to put them to the test. Peaceful and orderly foreigners who constitute 99 out of every hundred, are ultimately the chief sufferers by the roughness and arbitrariness of the minority.

RESULTS OF PROVINCIAL CAMPAIGNS.

THE Japanese, having from the outset shown much imitative ability in falling into line with Western political methods, have now advanced a step beyond their originals. For not only do they organize and conduct provincial campaigns during the Diet's recess, but they also compile and publish statistics of the results attained by the campaigners. Mr. Kono Hironaka, leader of the Radical Party in the House of Representatives, having just returned from a sixty-two days tour in the Tokai, Kinkai, Sanyo, and Sanin districts, where he visited 18 provinces in all, now reports that he attended 47 political lectures during that period, and addressed audiences aggregating approximately 46,458 persons, as well as 50 friendly *reunions* (*Konshin-kai*), at which about 9,325 persons were present. These gratifying figures are supplemented by the solid statement that one member of the Diet and 343 members of Prefectural Assemblies, editors, bankers, large landed proprietors, and Divisional Headmen enrolled themselves as Radicals, while persons of lesser importance entered their names at the average rate of 20 per diem.

There is a story told of a stage coach driver in California who, being asked the age of a giant tree, replied confidently, "three thousand and six years." "Why do you add the six?" inquired his questioner. "Well Sir," said the other, "a scientific gem came along here six years ago and put her age at three thousand, so I guess she'll be three thousand and six now." Japanese estimates sometimes remind us of this narrative. We find the term "*gaisan*" (approximate) prefixed to a statement of the number of an audience, whereas the number itself, judged by mere figures, claims absolute accuracy. "Meetings aggregating approximately 46,458 persons, and *reunions* attended by about 9,325." It would seem that the compiler of these figures must have obtained, in the first place, an approximate statement of the seating capacity of each place of meeting or *reunion*, and then, counting the exact number of persons who stood outside or were apparently *de trop* inside, arrived at hard and fast totals. That is a quaint method of compiling statistics. It corresponds with the propensity of a Japanese contractor to carry his tender down to fractions of a *sen*, and with the mood of the Japanese engineer who stated the thickness of aqueduct pipes to three places of decimals of an inch.

CHRISTMAS CARDS.

EACH year seems to add beauty and variety to the Christmas Cards offered by Messrs. Kelly and Walsh to the public of the Far East. It was an admirable idea to enlist the services of Japanese painters for this purpose, and they have once more asserted the adaptability of their talent by conceiving designs which leave little to be desired. Yamamichi who appears to do a great part of the work, shows remarkable delicacy of motive, and softness combined with directness of touch. His landscapes are tender and charming, though occasionally marred by trifling lapses from the strict rules of perspective. Some of these artists, notably Mine—if that be his name, for there is no little difficulty in discovering the real appellations from the signatures—have learned and are now applying a lesson still unappreciated by their

Original from

more ambitious *confères* of the capital, namely, that Nature never draws outlines, but deals only in masses. Two attractive features appear to be novel in this year's collection of cards, namely, the use of strong monochromatic grounds, and recourse to the *Kakeji*, or scroll, style. The latter departure is very happy. Miniature scrolls, daintily mounted and enclosed in neat boxes, are just the things to give one's friends at home a good idea of Japanese pictorial art, without exposing them to the embarrassment of finding a suitable place for pictures which were never intended for European or American surroundings.

COUNT ITO AND AN INTERVIEWER.

THE *Kokkai* alleges that a certain person interviewed Count Ito recently, and made inquiries as to the policy to be followed towards the Diet next session. The Count replied that the present Cabinet desires to promote the welfare of the people in accordance with the Imperial commands; and he believed that the Popular Party had been organized for the same purpose. Under such circumstances there need not be much conflict between them. The public often criticized the present Cabinet, and alleged that it was adopting a negative policy, so as to tide over the next session peacefully. But the statesmen now in power adopted as their motto the reply made by Tokugawa Iyemitsu to a question put to him by Iyeyasu, namely, "Never rest when the State is at peace. On the contrary, consider a season of tranquillity as fraught with troublesome contingencies for the nation." Negligence at such a time is sure to bring about complications. The interviewer then asked the Count's opinion about the appointment of the Codes Committee. The reply was that although the public had attacked the measure adopted by the Government, the simple fact was that the Cabinet had appointed a committee consisting of officials, experts, and others who held various and divergent opinions on the question, the object being to obtain a collective statement of these experts' views for purposes of reference. Hence the Count failed to perceive that there is any ground existing for hostile criticism.

TROUBLES IN HAWAII.

REVOLUTION appears to still be seething in Hawaii, and the New York *Herald* publishes a dispatch from Washington which says:—"According to late advices received at the State Department from Minister Stevens, affairs on the Hawaiian Islands are growing from bad to worse. Serious political troubles, which may develop into a revolution, are feared. That the State Department views the situation with some concern is shown by a request from Secretary Foster that the orders for the cruiser *Boston* to leave Honolulu for Acapulco, where she was to join Rear Admiral Gherardi's special fleet, be countermanded, and that the *Alliance* be kept at Honolulu until after things become more tranquil. The Navy Department promptly acquiesced, and telegraphic instructions to this effect were sent to San Francisco and are in the mail which left by steamer for Honolulu. The orders for the *Boston* to sail were sent by the *Alliance*, which left San Francisco early last week, and it may happen that the *Boston* will get off before the mail steamer arrives with the countermanding orders. In that event another vessel will be sent from San Francisco to join the *Alliance* in looking after American interests in the Hawaiian Islands. The chief concern felt by the State and naval officers at the situation in Honolulu grows out of the possibility of something happening to destroy our chances of securing control of Pearl Harbour as a coaling station."

THE TRIAL OF CARSTENS.

THE man Jacob Carstens, who, on the 7th of July last, killed a person called Beatty, and subsequently wounded three constables as well as himself, was brought up for public trial before the Yokohama Local Court on the 2nd instant. Judge Maruyama Seizo presided, and Mr. Ozaki Chujo appeared as Public Prosecutor, the barristers engaged being Mr. Matsuoaka Tsunekichi and Minagawa Hiroaki. Carstens

raised an objection on the score of jurisdiction, claiming to be a Dutch subject, and offering proofs of the statement. The *Nichi Nichi Shimbun*, reporting the case, says that the trial was suspended in order that steps might be taken to communicate with the Dutch Representative, and to obtain evidence as to Carsten's allegation. But we shall be surprised if it turns out that this is an accurate account of the Court's procedure. Carstens has been in the hands of the Japanese police for nearly four months. The question of his nationality was discussed at the outset, and his Minister declined to acknowledge him. When he had sufficiently recovered from his self-inflicted wound, he was brought before the Magistrates for preliminary examination, and ample evidence of his guilt being forthcoming, he was remanded for trial. Thus the Yokohama Local Court must have presumed itself competent to take jurisdiction, and instead of staying proceedings and referring to the Dutch Representative before going on with the trial, it seems to us that the proper course for the Court would have been to require Carstens to produce proof of his Dutch nationality, and then to determine whether such proofs be admitted. However, the *Nichi Nichi Shimbun's* account is too meagre to furnish ground for decisive comment.

COUNT ITO AND COUNT OKUMA.

A GREAT sensation seems to have been produced among politicians by accounts of interviews which a writer on the staff of the *Nippon* is said to have had with Count Ito and Count Okuma. We are not told when and under what circumstances these interviews took place; but on the whole there is apparent reason to think that the statements published by the *Nippon* are substantially correct. By way of preface, our contemporary observes that only a great man can understand a great man, but that two great men have ever been found incapable of working harmoniously together. Reference is then made to the life-long struggles between Soso and Ryubi Uyesugi Kenshin and Takeda Shingen. The two greatest statesmen of the present day, continues the *Nippon*, are Count Ito and Count Okuma, and they are no exceptions to the historical rule of mutual antipathy. The contest between them has on several occasions been the cause of stirring events; and if their animosity has sometimes produced evils, it has as often inured to the interests of the country.

Count Ito begins by remarking, in his usual frank and open manner, that he is generally regarded as having no policy to pursue. He confesses himself to be without any subtle machinations or crafty tactics, and alleges that in this respect those who criticise his want of policy may not perhaps be very wide of the mark. Referring to Count Okuma, the Premier tells his visitor that he had the pleasure of holding office in the same Cabinets with the present leader of the *Kaishin-to* (Progressionist Party) for more than ten years. He acknowledges that his political opinions are very often at variance with those of Count Okuma; but considers that such a circumstance ought not to occasion any surprise. For do not even intimate school-mates very often find themselves unable to agree when they come to discuss political topics? As to the allegation that the Premier possesses a political organ or organs, he emphatically denies the truth of the charge. Should he desire to employ a newspaper for political purposes, he would adopt the manly course of putting his name to it; he would never commit the folly of depending upon others for the ventilation of his opinions. He refers to the case of Lord Salisbury who once wrote for the press himself, and states that he would follow the example of the ex-Premier of England, should he ever think it advisable to start a newspaper. In speaking of the press, the Minister President reminds the interviewer of the importance of utilizing foreign journals, as is constantly done by European statesmen. Turning then to the subject of political parties, the Count gives it as his firm be-

lief that their number will considerably increase. Existing parties, he says, owe their origin to artificial causes, and have already outgrown the aims for which they were originally created. With the progress of civilization, society becomes more and more complex; and the number of interests demanding public representation increase correspondingly. This circumstance, together with the peculiar character of the nation, leads the Count to believe that it is impossible to look for the division of the political world of this empire into two great camps as is the case in England. In this respect Japan rather resembles France, Germany, and other countries of the European continent. With regard to the attitude of the Cabinet towards the Diet, Count Ito observes that since, as already stated, he is not given to machination, his Ministry is not provided with any "tactics against the Diet" (蜀議會策 *tai-Gikwai saku*). There is indeed no necessity for anything of the kind, seeing that both the Government and the Diet are working for the same objects. "Both are agreed on the desirability of increasing the military and naval forces of the country; both are agreed on the necessity of expanding the carrying facilities and extending the general foreign trade of the country. In short, no difference of opinion is observable between the Government and the people, so far as concerns the importance of raising the prestige of the country *vis-à-vis* foreign Powers. If there be any divergence of views between them, it is only in regard to minor questions of domestic economy." Under such circumstance, the Ministry is under no necessity to resort to "tactics" against the Diet. Lastly, with reference to the questions of railways, the opening of Hokkaido, the improvement of river courses and other subjects of a similar nature, the Minister President dwells upon the importance of making thorough and extensive investigations before deciding upon any plan of action. Consequently he will never, he declares, be guilty of inaugurating any work without fully considering the matter from all possible points of view. In conclusion he is made to say that he has no other idea than that of shaping his administrative policy in conformity with the wishes and the national character of the people.

Count Okuma commences by telling his visitor that whereas statesmen in power ought not to regard the Diet with hostile sentiments, Count Ito is as much afraid of it as though it were a tiger. Nevertheless it is true that Count Ito and Count Inouye are the only statesmen in power who know what they are about. Count Ito understands very well that it will not do to thwart the wishes of the people. He also understands very well that it is unwise to rely upon the support of such a party as the *Kokumin Kyokai*. Thoroughly perceiving these things, he is still unable to carry out his ideas according to his own wish, and consequently he is afraid of the Diet. But Count Okuma acknowledges that Count Ito is a constitutional statesman, and that his method of administration is nearly perfect. What at present prevents him from putting his opinions into practice is the pressure of various personal influences around him. In Count Okuma's opinion, however, these personal influences are no longer formidable. It is generally believed that Count Yamagata and his followers represent the influences restraining the constitutional movements of Count Ito and Count Inouye. That, says the leader of the Progressionist party, may be so; but Count Yamagata is no longer the Yamagata of former years, as is amply proved by his compliance with the sweeping reductions of the Estimates in the first session of the Diet, notwithstanding his original declaration that he would never consent to retreat a step. So the *Kaishin-to* leader believes that Count Ito has little to fear so far as Count Yamagata is concerned. Whatever semblance of restraint the Minister of Justice still exercises over his chief, is, in Count Okuma's opinion, owing to the fact that Count Yamagata is as yet unable to sever, as he desires, his connection with his followers. Count Okuma evidently included among the Minister of Justice's follow-

ers the statesmen generally regarded as being in favour of a strong and militant policy towards the Diet. Passing to the subject of Party Cabinets, Count Okuma observes that government by party is one of his ardent desires; but he distinctly states that the country has not yet reached the stage of political progress in which alone it is possible to introduce such a system with safety. All that can be done at the present juncture is "to turn our feet in the direction of constitutional Government in so far as the existing conditions of the country admit." The first step to be taken is to boldly sweep away the personal influences which now impede the progress of the Government in the right direction. And inasmuch as the Government is hesitating to adopt that bold course, there is necessity to force its hand. Hence the importance of demanding economy of public expenditure, removal of superfluous officials, reduction of the land tax, punishment and dismissal of local functionaries, and so forth. These reforms must be carried out, not in a half-hearted, but in a thorough and decisive manner. It was, says the Count, on condition that these or corresponding reforms should be achieved, that he joined the Government a few years ago. Among measures of importance, he dwells specially upon the question of local functionaries, and remarks that Count Ito can never elude the responsibility of punishing the Governors who interfered in the last general elections and dismissing those who are incapable of discharging their duties. Until these questions are properly solved by the Government, the Popular party will not slacken its zeal in attacking those in power. "It is not, however," says the Count in conclusion, "matter for congratulation that the Government and the Popular party should for any long period of time continue to fight over questions like those just mentioned. I am sincerely desirous of shortening, as far as possible, this period of fighting between the Government and the Popular party."

It is needless to say that the general public is some what surprised to hear from Count Okuma that the country is still unfit for party Government, and that he is so desirous of shortening the fruitless contest between the Government and the Popular party. Well informed persons have been aware that he admits the impossibility of introducing government by party at this stage of the country's progress, but apparently the leader of the Progressionist Party has been misunderstood by the majority of his countrymen in this as well as in other respects. The difference of opinion between him and his former colleagues, as Count Ito and Count Inouye, has never been so great as men are prone to suppose. It is not, therefore, at all unlikely that the time will come when he may again see his way to co-operating with the men now in power. Meanwhile, the enunciation of these moderate views by the *Kaishin-to* leader is evoking more or less unfavourable criticism from the Opposition press, not even excepting the organs of his own Party.

THE BUDDHIST PRIESTS AND GRAVEYARDS.

ANOTHER severe blow has been struck at Buddhism by a recent decision of the Tokyo City Council (*Shisanjikai*). Hitherto the cemeteries of the capital have been under the control of the various temples, but the City Council has ruled that they shall hereafter be controlled by Urban District Officials, and the Governor of Tokyo is about to give effect to this ruling within the course of the next few weeks. It will easily be understood that the change means much to the Priests. They will no longer be in a position to sell ground for graves, and a great part, if not the whole, of the fees which now come to them regularly from the friends and relatives of the dead, will either be diverted to other channels or cease to be paid at all. Probably the citizens of Tokyo will benefit correspondingly, for under official management the disbursement on account of the graveyards cannot fail to be considerably less than it is under the present system. The priests, however, are determined not to submit tamely to this injurious reform. They are advised, so report says, that

the decision of the City Council is illegal, and they have resolved to test the matter by a lawsuit against the Governor. The costs of the action are calculated at about seven thousand yen, and this money the priests are now engaged in collecting. We cannot wonder that the Council's action has caused great uneasiness in Buddhist circles. The Government's resumption of all the lands attached to the temples at the time of the Restoration was a step of the gravest moment to Japanese Buddhism. It amounted virtually to disestablishment. Next to it in importance is this measure about the Cemeteries. True, the reform is thus far confined to Tokyo, but that other places will follow the example of the capital, should the latter's action be endorsed by the law courts, there can be very little doubt.

THE BIRTHDAY BALL.

THE Ball given by His Excellency the Minister of Foreign Affairs and Mrs. Mutsu in honour of the Emperor's birthday was one of the largest that has ever taken place in the capital. In view of the great number of invitations issued, it was decided that the ball should be at the Imperial Hotel, the principal salon of which is supposed to be capable of accommodating six hundred persons. In order, however, not to interfere with the convenience of the numerous guests at present staying in the hotel, the main entrance was not utilized for the purposes of the ball, a side entrance being arranged with great taste, and in such a manner as to debouch directly upon cloak rooms for ladies and gentlemen. Passing through these rooms, the central corridor of the building was reached, at the easterly end of which the host and hostess supported by the Vice-Minister of State for Foreign Affairs and Mrs. Hayashi, stood to receive their guests. The whole front of the hotel and the space with its enclosure were brilliantly illuminated. This was a novel feature of the arrangements, for instead of the usual festoons of coloured paper lanterns, which, though very picturesque, are hopeless on a wet or windy night, an immense number of red and white glass globes had been made for the occasion, and these, fitted with a device which secured a bright light for eight hours, were studded in rows and bunches over the entire building and along the approaches, producing a brilliant and beautiful effect. The principal salon was completely draped in bunting and evergreens, relieved by richly and tastefully disposed wreaths and borders of chrysanthemum blossoms. One disadvantage inevitable under the circumstances was that no recess or inner chamber could be arranged for the reception of the Imperial Princes and Princesses, so that they were obliged to sit at the head of the room almost in contact with the dancers. Along the whole of one side of the salon at a distance of about ten feet from the wall, seats were ranged for non-dancing ladies, and in the space between these seats and the wall, the gentlemen who had come merely to talk or look on, very soon congregated. Some relief was thus afforded from the pressure in the body of the salon, but it nevertheless seemed at one time that dancing would be out of the question so great was the crowd. At a little before 10 o'clock T.I.H. Prince and Princess Arisugawa arrived, and passing up the centre of the salon, escorted by the Ministers of State for War, Home Affairs, Foreign Affairs, and Agriculture and Commerce, took their seats at the head of the room, the first quadrille being formed immediately afterwards. Dancing was thenceforth kept up with considerable spirit until a little before two o'clock. The Japanese, ladies, however—many of whom, we are happy to say, wore their national costume—took no part in the round dances, and indeed did not seem particularly keen about the square ones either. It would appear that this particular foreign custom is not likely to establish itself firmly in the national taste, though the mood of two or three generations hence is hard to foretell. Supper was served at midnight, and an hour later the Yokohama guests, of whom there were a good many, took their departure

by special train. On the whole the ball was certainly one of the most brilliant ever seen in the capital.

Yokohama was gaily dressed with bunting during Thursday, and the whole town held holiday. At noon an Imperial Salute was fired by the naval ships in harbour. In the evening a dinner was given by Governor Utsumi to various members of the foreign community and leading Japanese merchants.

THE BARRISTERS' EXAMINATION SCANDAL.

THE preliminary examination of the persons suspected of complicity in the recent Barristers' Examination scandal has been concluded in the Tokyo Local Court, but certain offenders who are supposed to have obtained money by false pretences have still to be arraigned. It is stated, for example, that Yuruka Sanenobu, clerk of the Tokyo Local Court, was guilty of this crime by selling false examination papers for candidates. He was arrested on the 31st ultimo, and brought before Judge Yamaguchi. Some five others, who are said to be connected with the affair, were summoned on Tuesday last.

The Yokohama Local Court has been engaged examining Yamakoshi Sukesaburo, who obtained possession of examination-papers. The following judgment was delivered on the conclusion of the Preliminary Examination:—

DECISION AFTER PRELIMINARY EXAMINATION.

Yamakoshi Sukesaburo, accused.

The facts of the case against the above named person have been investigated in the Court of First Instance with the following result:—While Sukesaburo, the accused, was employed in the Yokohama Local Court, performing night-duty, he received a despatch addressed to Kuzaka Komataro, Chief Public Procurator of the Yokohama Local Court, from the Department of Justice, on the night of the 27th September, 1892, the despatch being sent through the post as a registered letter. Suspecting that the letter contained examination-papers, he opened the seal of the envelope by wetting it, and having extracted the papers, secretly copied them. The above facts are proved by his own confession, and by the existence of the copy. As the act of the accused is considered to be a violation of Art. 234 of the Postal Regulations, the case is sent forward for trial by the Criminal Division of the Yokohama Local Court, according to Art. 167 of the Code of Criminal Procedure.

(Dated) October 31st, 1892.

(Signed) ISHII TSUNEKIDE,
Judge of the Preliminary Court.

THE NEXT SESSION OF THE DIET.

THERE are many questions, says the *Jiji Shimpō*, to be presented to the Diet next session, but the principal will probably be:—(1) The Question of the Codes Committee; (2) the question of the Game Law; (3) the question of official interference; (4) the question of the punishment of officials implicated in Interference; (5) the question of works of restoration in the earthquake districts; and (6) the question of the Budget. Though every one seems to disapprove of the appointment of the Codes Committee, yet if the Government resolves to postpone the operation of the Codes as desired by the Diet, and to present a Bill for enforcing portions of them immediately, there will not be much discussion. The second subject will be the most difficult to deal with. The constitutional aspect of the case will be debated in the Diet, but as the members of the Wakayama Club, who are known to be among the Government's supporters, have decided, according to rumour, to vote against the Cabinet in this matter, there is little chance of the Administration's escaping a defeat. The third and the fourth questions will probably not create much sensation, but the fifth will give rise to noisy debates, as all sorts of abuses have been discovered since the last session. With regard, finally, to the Budget, since it constitutes the real battle-field between the Extremists and the Moderates there is no predicting how it will end. But since the Radicals have declared their willingness to vote for the appropriation on account of the construction of men-of-war so soon as the organization of the Naval Depart-

Original from

ment is improved, and since Mr. Sugita presented an Address to the Throne on the subject, there is no reason to doubt that if the Government Delegates' explanation be satisfactory, the expenditure will be sanctioned. In short, nearly sixty per cent. of the whole House are in favour of the Government's Budget. But if the Popular Party intends to rally its supporters to defeat other Bills, and then to insist upon agreement with regard to the Budget, the issue of the contest must be left for the future to determine.

THE "TIMES" ON JAPANESE AFFAIRS.

A CORRESPONDENT of *The Times* has been betraying the great journal into a very harsh blunder against which the *Nichi Nichi Shinbun* enters a just protest. After writing in a complimentary strain about the new Cabinet, and falling into curious confusion between Mr. Mutsu and Count Goto, the correspondent refers to the recent reduction of the Japan Mail Steamship Company's foreign staff. He attributes that sweeping measure entirely to the influence of Count Goto, whom he describes as an inveterate hater of foreigners. Evidently he thinks that the Count, in his capacity of Minister of State for Communications—which post he held at the time—brought pressure to bear upon the Directors of the Steamship Company, and induced them to get rid of a large fraction of their foreign staff. It is difficult to conceive the original source of such an extraordinary misconception. Count Goto has had many things said of him, some complimentary, others the reverse, since the day when he earned a lasting title to foreign gratitude by saving the life of Sir Harry Parkes in the streets of Kyoto. But now for the first time do we hear him called a hater of foreigners. The accusation is so grossly unjust as to be comical. Count Goto could afford to laugh at it were the readers of *The Times* in a position to discriminate between truth and falsehood where the personal character of a Japanese statesman is concerned.

NEW CHIEF OF THE POLICE BUREAU.

A SOMEWHAT remarkable promotion has been made in the Department of Home Affairs. Mr. Tanaka Chikaaki has been named Chief of the Police Bureau in that Department. The position of Chief of the Police Bureau has always been considered of much importance, and the habit has hitherto been to give the post to one of the prominent Governors of Prefectures. It was last held by Mr. Komatsubara, who had been Governor of Saitama Prefecture. Mr. Komatsubara served under Viscount Shinagawa, and whether the new Cabinet was dissatisfied with the conduct of the police as controlled by him during the elections, or whether some other reason operated, he was transferred to the Governorship of Shizuoka after the change of Ministry. His successor's appointment is emphatically a new departure in respect of the official standing of the nominee. For Mr. Takasaki has never held a Governorship. Up to the present he has been serving in the capacity of Manager of the Police Bureau, his previous post having been the Secretaryship of the Osaka Government. The action of the Minister of State for Home Affairs in this instance will doubtless be invested with considerable significance by the public.

HONGKONG POST OFFICE.

HONGKONG newspapers frequently complain about the conduct of the business of the post-office of the Colony, but we very much question if they have more real cause than we have in Japan. Take the latest instance. The French mail per *Oxus*, instead of being sent on by the *City of Peking*, coming direct, was carried round by Shanghai. The *Peking* arrived here on Friday morning, and the French mail matter on Saturday morning, notwithstanding that it had travelled from Kobe by rail. But a more extraordinary freak of the Hongkong Post Office in this instance is that our Hongkong exchanges came partly by the *Oxus* and partly by the *Peking*—that is, the latter vessel brought the papers of the beginning and end of the week, and the former those of the

middle of the week. This of course broke the continuity of our information from the Crown Colony. The papers in each case were franked separately, so that there can be no excuse for their being despatched in twos and threes.

THE "NO" DANCE.

At the *No* Theatre in Shiba Park a *No* dance was performed on Sunday last. The programme consisted of six pieces, and among the dancers were Umewaka, Kanze, Hojo, Matsumoto and other well-known experts. But probably owing to a bad selection of subjects, the audience was rather scanty. The performance commenced at 8 a.m. and continued till past 9 p.m., a tolerably protracted affair. Among the six pieces promised, the first, entitled "Kuni-Su," was very badly received, as Umewaka did not dance according to engagement, and his substitute was of greatly inferior skill. The best and the most difficult piece in the programme was the scene in which the Soga Brothers enter the residence of Kudo, the murderer of their father, to kill him. The parts of the two Soga were taken by the Kwanze brothers, Goro being acted to perfection, but Juro being a decided failure. A piece called "Bamboos in Snow" followed. It was decidedly impressive and weird, but the singing was even worse than usual, the performers being all masked. The "Black Tomb" also was well done by Matsumoto, but the *Kyogen* (comic dances) in the intervals were all extremely poor and pointless. On the whole the affair cannot be called a success, but we are promised a grand programme next month.

MILITARY REVIEW IN THE AOYAMA PARADE GROUND.

HIS MAJESTY THE EMPEROR and Her Majesty the Empress left the Imperial Palace on Monday last at 9 a.m., and drove to the Aoyama Parade Ground, arriving there at 9.40 a.m., and taking their places in a Throne-room specially prepared. His Majesty subsequently mounted his favourite charger Kinkwazan, and with Her Majesty the Empress who drove in a carriage, inspected the troops in garrison. Various manoeuvres were performed, from 10 a.m. till 12.30 p.m., when the Imperial Party drove back to the Palace. The object of the parade was to afford His Majesty an opportunity of inspecting men whose term of service had expired, and who were about to return to their homes. The Emperor issued a general order expressing satisfaction with the zeal and proficiency shown by the troops. There were altogether about 1,300 of these time-expired soldiers, and to each of them a sum of yen 2.50 was presented to buy food and wine.

GARDEN PARTY AT MR. SHIBUSAWA'S COUNTRY RESIDENCE.

On the afternoon of the 2nd instant, Mr. Shibusawa, President of the Tokyo Chamber of Commerce, and the leading members of that institution, entertained Mr. Charles S. Smith, President of the New York Chamber of Commerce, at Mr. Shibusawa's suburban residence. Many foreigners have been privileged to visit this beautiful villa, the extensive grounds of which lie just within the brow of the Asukayama slope, and overlook the grand sweep of the Oji valley with the Tsuba mountains in the distance. The autumnal tints for which Oji is famous are not yet in season, but such a park as that which surrounds Mr. Shibusawa's residence is independent of everything save sunshine, and that was vouchsafed in abundance on Wednesday. The Foreign guests consisted of the party of distinguished Americans now sojourning in Tokyo, among them being Mr. Vanderbilt, Mr. F. S. Winston, Mr. F. Bartlett, and Mr. A. A. de Guerville. The Japanese guests included H.E. Count Goto, Minister of State for Agriculture and Commerce; H.E. Mr. Mutsu, Minister of State for Foreign Affairs; H.E. Mr. Kuki, Director of the Imperial Museum; Mr. Hayashi, Vice-Minister of State for Foreign Affairs; Mr. Sonoda, President of the Specie Bank; Mr. Yano, President of the Commercial School; Mr. Saito Shuichiro, Director of the Board of Industries in the Department of Agriculture and Commerce; Mr.

Katsu Inouye, of the Foreign Office; Mr. Iwasaki, and many other well known residents of Tokyo. The party having assembled in the central pavilion of the garden at a little after 3 o'clock, Mr. Smith, who had been invited to speak, made the following address:—

I am sure, Mr. President, Ladies and Gentlemen, that my countrymen will agree with me in saying that when we leave Japan we shall all leave here a large part of our hearts. We shall carry away with us most charming recollections, not only of your beautiful country, but also of the kind consideration and graceful hospitality of your people.

It is one of the chief diplomatic glories of the United States that our country was instrumental in opening Japan, that pearl of the Orient, to the world's commerce. The peaceful transformation, in such an incredibly short space of time, of your system of Government from the feudal régime to a free constitutional monarchy, in fact government by the people, is one of the miracles of History.

I have not the vanity to imagine that this exceedingly kind reception has anything of a personal character. It is because I represent the oldest commercial institution in the United States, older than the Republic itself. When the Chamber of Commerce of New York was founded, New York, now a city of about 2 millions, had but 20,000 inhabitants. I bring to you, Mr. President, the congratulations and best wishes of 1,000 of our members who represent all that is best in the commercial and industrial institute of the great city and State of New York.

I am charged by my friends to say that it is their desire to enlarge as rapidly as possible all our relations with Japan both personal and commercial.

May I ask permission, Mr. President, to propose the health of the President of the Chamber of Commerce of Tokyo and prosperity to all the members.

This speech, which was received with much applause, having been admirably rendered into Japanese by Mr. Sato, of the Commercial College, Mr. Shibusawa replied as follows:—

Distinguished Guests—We, members of the Tokyo Chamber of Commerce, have invited to this friendly reunion Mr. Charles S. Smith, Chairman of the New York Chamber of Commerce, with the hope of making this a beginning of more intimate relations between the people here and we respectively represent. I happen now to have the honour of representing the Tokyo Chamber of Commerce, and it is my pleasant duty to address a few words to Mr. Smith, whom we delight to honour on his first visit to this country, and to whom all my countrymen assembled here extend a cordial welcome. Our intercourse with the United States began 40 years ago, when Commodore Perry first came to these shores. The honour of having guided us to our present state of civilization is due to that nation. What the people of the United States of America have been to us since then requires no comment of mine, for the constant growth of friendly and intimate relations between America and Japan more than proves the excellent feeling of brotherhood existing between the two countries. We Japanese always hold the people of the United States in grateful remembrance. The honour of having brought about such friendly relations between the two nations is of course due in the first place to the good offices of diplomats. But diplomacy cannot dispense with the assistance of commerce, an auxiliary which stands second to none in influence and efficacy. The full development of commercial exchanges will mark the attainment of perfect concord and complete intercourse among the nations of the earth. It is satisfactory to be able to say that trade between the United States and Japan is growing year by year. According to the returns of 1891, our business with the United States ranks first in both the exports and the imports of the year. If there is anything to be regretted it is the comparatively small proportion of goods imported to us from that country. To discover the explanation of this circumstance, there can be no better opportunity than the present visit of our distinguished guest. Let us avail ourselves of the occasion and make our thoughts and feelings known to the members of the New York Chamber of Commerce through our honoured guest. Let us strive to make his visit fully productive of mutual benefit from a commercial point of view. That accomplished, we shall undoubtedly see stronger friendship and a better understanding developed between the two nations represented at this social gathering. I have no doubt that Mr. Smith will cooperate with us, and render valuable services for the purpose in view. Have I not therefore warrant for hoping that this visit of our honoured guest will be the beginning of still closer relations between the United States and Japan? The great Colombian Exposition to take place next year has already attracted keen attention from both our Government and our people. We are busily preparing our exhibits for the occasion, and we do not doubt that the great enterprise will materially advance the commercial interchanges of the two nations. We are glad that among our guests here there are gentlemen specially entrusted with business relating to the great Exposition. To them also we venture to prefer the request that they will lend their aid to forward the cause of national traffic between two countries which occupy towards each other a position of genuine

friendship. In conclusion, let me, on behalf of my countrymen and myself, wish to Mr. Smith and our other honoured guests, long life and every success.

Mr. Sato's efficient services were again enlisted to translate this speech into English. The party then walked about the garden for a while, and at a little after four o'clock a cold collation was served in the eastern pavilion. This was followed by dancing and music in the pretty theatre attached to the main building, the best artists of the capital having been engaged for the visitors' delectation. At half-past six a most delightful afternoon was brought to a conclusion.

THE BARRISTERS' EXAMINATION SCANDAL.

THE preliminary trial of the above case has been concluded. The accused persons are found guilty of tampering with the examination papers, but owing to the absence of any provision of law dealing with such an offence, the case is dismissed, and the culprits have been released. The following is a translation of the judgment:—

JUDGMENT.

Nagashima Shikashichi, Probationer of the Judicial Department.

Yonekawa Keishi, Law-student.

Yuki Michio, Law-student.

Maruyama Yoshio, Law-student.

Takei Kumakichi, Law-student.

Nakagawa Ryochi, Law-student.

Nagaya Seizo, Law-student.

Yoshiike Shigenosuke, Law-student.

With regard to the charge of theft preferred against Nagashima Shikashichi, and the charge of receiving stolen goods preferred against Yonekawa Keishi and six others, as examined in the Preliminary Court, the following are the facts elicited:—Nagashima Shikashichi, a Probationer of the Judicial Department, while serving under the Committee of Examination for Barristers, discharged the duty of transcribing the examination questions fixed by the Examiners on the 23rd of September 1892, and was ordered to despatch printed copies to all the Law Courts. Having read the questions several times, Nagashima was able to remember them. Yonekawa Keishi, a candidate for the Barristers' Examination, is a relative of the said Nagashima Shikashichi, and being desirous of obtaining the questions from the latter secretly, he called on the said Nagashima several times subsequently to the 23rd September, 1892, and implored him to divulge the questions. At first Nagashima refused to comply with this request, but finally yielding to the importunity of his friend and relative Yonekawa, he was persuaded to betray the secret. On the 27th of the same month, the said Nagashima, having extracted from the said Yonekawa a pledge not to divulge the secret to any one, informed him of the gist of all the questions, except the first, which he had forgotten. Previous to this Yuki Michio, Maruyama Toshio, Takei Kumakichi, Nakagawa Ryochi, Nagaya Seizo, Yoshiike Shigenosuke, Nagata Tokusuke, Hotta Tomiji, Hirose Takisaburo, Nakahara Kiyoshi, Iriye Tamemori, and other candidates for the Examination, had either co-operatively or severally been engaged in attempts to obtain the examination questions. Among them Maruyama Toshio, knowing that the said Yonekawa had a great number of friends, and inferring from a declaration of his as to his certainty of passing the examination that he must have obtained the papers, called, on or about the 28th of September, on the said Yonekawa at the Meiji Law College several times, and urged him to reveal some means of obtaining the papers. Yonekawa thereupon forgot his pledge to Nagashima, and promised to sell all the questions to Maruyama for 300 yen. On or about the 3rd of October Yonekawa received a sum of 150 yen from the said Maruyama; but as it was only half of the price agreed upon, he did not give the papers to him. Ultimately Yonekawa divulged to Yuki Michio all the questions on or about the 6th of the same month, and Yuki told them in turn to Takei Kumakichi and Iriye Tamemori. Takei gave the information to Nakagawa Ryochi and Maruyama Toshio; then Nakagawa gave it to Nagaya Seizo; Maruyama to Nagata Tokusuke, Nakahara Kiyoshi, and Hayashi Kurataro; Nagaya to Hotta Tomiji, Yoshiike Shigenosuke, and Hirose Takisaburo; and Nakahara Kiyoshi to Nisamatsu Isuyo. For the above transaction Maruyama obtained a sum of 75 yen from Nagata; the said Takei 200 yen from Nakagawa; Nakagawa 65 yen from Nagaya; and Nagaya 91 yen from Yoshiike and Hirose. Further, Yuki borrowed a sum of 100 yen from Iriye and handed it to Takei, but as Yuki subsequently obtained the questions from Yonekawa before the completion of the transaction on account of which the 100 yen had been paid he (Yuki) demanded the return of the money, and gave it back to Iriye, its original lender. The above facts are proved by the confession of the defendants and by the evidence of others connected with the case. Nagashima divulged matters which he ought to have kept secret in accordance with his official duty, but there is no evidence of theft against him. Consequently, Yonekawa Keishi and the six others cannot be charged with receiving stolen goods. The Court does not consider that the act of the defendants constitutes a crime in the eye of the law, and therefore, in accordance with Art. 165 of the Code of Criminal Procedure, the case is dismissed.

Nagashima, Yonekawa, Takei, and Maruyama who are now under arrest, shall be released.

The above judgment was delivered in the Tokyo Local Court on the 2nd November, 1892.
(Signed) YAMAGUCHI JUN,
Judge for Preliminary Trial.

Thus the culprits escape all punishment by law. Nagashima, however, has been summarily dismissed from the service, and it may be assumed that the rest will never again be permitted to go

up for a public examination: their careers are practically ruined. As for the newspapers which clamoured so loudly against the supposed dishonesty or laxity of the examiners, and even went so far as to charge the Chief Judge of the land with dishonourable procedure, we should like to know how they feel at present.

ISE.

THE letter which we publish elsewhere from a Japanese correspondent in the town of Tsu, Miye Prefecture, illustrates the extremely difficult character of the problems with which the Minister of State for Home Affairs is now required to deal. Mr. Tanaka, who served in the capacity of Chief of Police in Saga Prefecture during the general elections last spring, was subsequently transferred to Ise. Saga acquired a most unenviable reputation at the time of the elections. Loud complaints were preferred against the local officials and the police, who were charged with interfering in the most flagrant manner and with abusing their authority to promote the cause of pro-government candidates. How much of these accusations was true, how much false, the public seems to be still uncertain. But the Government, in deference, doubtless, to local sentiment, transferred the Chief of Police to Ise. The reception accorded to him in the latter Prefecture forms the subject of our correspondent's letter. The politicians of the Prefecture are determined not to have him. They do not deny that he is an officer of ability and capacity, but they appear to think that an Inspector discredited on account of his actions in another locality is being pawed off upon them, and they decline to be treated as an asylum for failures. On the other hand, the Central Government must have made the transfer on the strength of a well assured conviction that Mr. Tanaka, while serving in Saga, did not exceed his instructions or otherwise merit censure. They are bound, therefore, to support their nominee, since his removal in deference to agitation based on purely vicarious pretexts would amount to a surrender of all authority. There are ways, doubtless, of settling these troubles, but it must be admitted that Count Inouye, as Minister of State for Home Affairs, finds himself confronted by many problems of great delicacy and perplexity.

THE LITERARY SOCIETY.

THERE was rather a small attendance last night at the Van Schaick Hall. The paper of the evening was read by Mrs. Dearing—"A sketch of the Poet Whittier." Readings from the works of this poet were afterwards given by Mr. F. Sale and others. The following in the Programme:—

1ST PART.

Solo.....La Sonnambula.....Miss Moulton.
Reading.....Original sketch of the Poet.....Mrs. Dearing.
Whittier.....Miss Deyo.
Song.....Cherry Ripe.....Miss G. Vincent.
Reading.....Yankee Gypsies.....Mr. F. C. Sale.
Song.....The Moonlight Serenade.....Mr. J. Crane.

2ND PART.

Piano Solo.....Study from Carl Mayer.....Miss Griffin.
Reading.....Among the hills.....Miss Deyo.
Recitation.....The Slaves of Martinique.....Mr. C. Griffin.
Song.....Barbara Freitchie.....Mr. Webb.
Reading.....In Shadowland.....Mr. E. A. Sargent.
Song..........Mr. Pollard.

FEES FOR SHOOTING LICENSES.

WITH regard to the method of paying fees for Shooting Licenses and Permits to Preserve game, the following Ordinance has been issued:—

Fees for Licenses to pursue or preserve game shall be paid to the Local Officials concerned in the form of Internal Revenue Stamps.

The stamps here referred to are not ordinary Bill Stamps (*Shoken-inshi*) but Registration Stamps (*Toki-inshi*.)

A NEW VOLCANO.

A LETTER to the U.S. Navy Department from Oonalaska, on September 24, from Commander Evans of the United States steamer *Yorktown*, states that a new and very violent volcano is in eruption on the Alaskan peninsula, about latitude 56 deg. north, longitude 156 deg. 20 min. west. The noise of the eruption, which took place during the last week of August, was heard ninety miles. The clouds of ashes and cinders

was so dense that at a distance of 150 miles sea the steamer *St. Paul* was compelled to light lights at 10 o'clock in the morning. The decks were covered with ashes to such an extent that many bucketfuls were swept up and thrown overboard. There was no loss to life or property from the explosion heard of at the date of Evans' letter.

CHINESE WILLS.

MR. THOMAS WATTERS, H.B.M.'s Acting Consul-General at Canton, writes in the *Perak Government Gazette*, as quoted by the *Hong-kong Daily Press*, the following interesting statement about the use of wills in China:—

The Chinese Statue Book does not take any notice of wills. There is no law as to the formalities of making a will or the extent to which a man may deal with his property by a will.

Nevertheless, the owners of property among the Chinese constantly resort to this mode of distributing their property. The Courts also take notice of all testamentary dispositions in cases of disputed succession or division of property.

A will may be either oral or written. For the former a man has only to state in the presence of a witness how his property is to be dealt with after his death. A written will may have witnesses, but their presence is not necessary. As a matter of fact, the testator generally writes out his will privately, and then entrusts it to his wife, or hides it away in some safe place. As a rule, the contents of a will are not known to more than one or two until after the testator's death.

In theory, a man in China may dispose of his property as he pleases, but this theory is based on the assumption that he will not do anything contrary to the dictates of reason and natural affection. Thus a man may will away his property from his sons, but the Court may set the will aside, unless sufficient reason is shown. The most common reason given is unfilial conduct. But as to this the unsupported statement of the father, or even of both parents, is not proof. If, however, a brother of the mother testifies to the unfilial conduct of a son or sons, the testator's action in disinheriting them is sanctioned.

A man may also name in his will the male relative who is to represent him at the ancestral worship and other great family affairs. This is a very important power, as the representative generally gets a double share of the inheritance, and has very great influence in family matters. If a man has no sons, he must appoint as his representative a son of a brother, and if there are no nephews, then some more remote descendant of the ancestor. If there is no one of the family, he may elect a stranger, one with a different surname. If this person is properly adopted into the family, he shares the property with the others, and he must dispose of it according to the father's or testator's expressed commands.

Chinese wills, so far as we know, do not know anything of executors or administrators. If there are several sons, each with certain funds, or shares, or lands assigned to him, a copy of the will is made for each if desired. But the original, which is retained by the legal representative, is often sufficient. He with the assistance of senior relatives and the elders of the district, carries out the provisions of the will. In the interpretation of a will and in the carrying out of the arrangements, when there is any doubt or difficulty it is the uniform custom, I understand, to consult with the elders of the place. The final appeal, however, is to the Hsien or other local authority. The Mandarin, as a rule, gives force to the desires of the testator, and orders the will to be obeyed, unless there is something in its provisions contrary to law or good morals.

THE ORIENTAL ASSOCIATION.

THE above Association held a meeting on Sunday last. Professor Inouye Tetsujiro delivered a speech on "The Position of Japanese judged from the points of Race, Language, and Religion." Hespoke for nearly two hours and a half. The gist of his long and interesting address was that the Japanese are a mixed race of Southern Islanders, Koreans, and Chinese, but that the first named predominate. Their language, he declared, is much more developed than Chinese, but has not yet reached to the highest standard; and as for Japanese script, the letters are so much disliked by Europeans that they call them the invention of some demon. Language being one of the most important factors in intellectual development, it is a pity to use such a clumsy script. The profound doctrine of Buddha seems far superior to Christianity, but as the

former inculcates pessimistic views, and is therefore an enemy of progress, it is perhaps, said Mr. Inouye, better to adopt the latter. The question, however, must be well considered. He then dwelt upon the art, music, and literature of the country, and in conclusion declared that though there is much to be proud of *vis-à-vis* Europeans, Japan's position is still far below the general European standard. To compete successfully with the nations of the West, development in every branch is essential.

DEATH OF MR. C. H. HALIBURTON.

Information was received in Singapore yesterday, says the *Press* of the 14th ult., of the death of Mr. C. H. Haliburton, the Manager of the Sourabaya Branch of the Chartered Bank of India, China, and Australia at Sourabaya. Deceased, who was well known in Singapore, was at one time accountant to the Bank here, being transferred some eight or nine years ago to Yokohama, and afterwards to Sourabaya, where he has since remained. Deceased appears, so far as can be learnt, to have been enjoying his usual health until a few days before his death the cause of which is not yet known here, although cholera is now said to be raging amongst the natives in Sourabaya. Deceased, who about 40 years of age, leaves a widow, but no family, to mourn his loss.

MR. ARTHUR BARNARD.

One of the oldest residents of Yokohama, Mr. Arthur Barnard, died suddenly of heart disease on the 29th ult. It is some time, we believe, since the contingency of his demise from such a cause was first anticipated, but his death nevertheless comes as a painful shock to his many friends. His time in Japan dates from twenty-nine years back, for he arrived here in 1863 at the age of nineteen. During quite a long period he occupied the post of agent for Messrs. Sassoon and Company, and enjoyed the reputation of being a sound and careful man of business. The death of one so well known and so generally liked cannot fail to appeal to many hearts among the foreign communities in Japan.

YOKOHAMA SILK MERCHANTS' GUILD.

We have already described how the Yokohama silk merchants broke up into two factions and could not find a *modus vivendi* until, by the exertions of Messrs. Hara and Otani, they were induced to co-operate harmoniously. They then began to revise the Organization of the Guild, and after much discussion the amendments were completed, and having been presented to the Kanagawa Kencho for approval, were duly sanctioned on the 1st instant. As Mr. Hara Zenzaburo is absent from town the election of officers of the Guild cannot take place, but he is expected in a day or two, and as soon as he arrives a meeting will be held, and the President and Vice-President of the Guild will be elected. Thus the protracted disagreement has at last been settled.

THE CABINET AND ITS SECRECY.

The *Fiji* complains of the secret policy adopted by the Cabinet, and says that since the new Cabinet was formed every thing is kept from the public. This criticism applies to meetings of the Cabinet, of Local Governors, of the Codes Committee, of the Mining Investigation Council, of the Chief Public Prosecutors of the Harbour Regulations Committee, and so on. They have all been held with closed doors. The *Fiji* fails to understand what necessity there is for keeping every thing secret. Such a practice is permissible under an absolute monarchy, but not under a constitutional government. Can the *Fiji* indicate any country where the proceedings of Cabinet meetings, for example, are published?

FIRE.

At about half-past two o'clock Saturday morning a fire broke out under the kitchen floor of No. 44, Tsukiji, Tokyo, in the house of Rev. F. W. Fischer and Mr. G. E. Dieust, and threatened to burn the entire building. The occupants, being awakened by the servants, at once set to

work to extinguish the flames, and with the timely assistance of the police and the kindness of the neighbours, the flames were put out before much damage was done. The cause is, without question, incendiarism.

CAPTAIN INGLES, R.N.

H.I.M. the Emperor has been graciously pleased to confer the Order of the Sacred Treasure, Second Class, on Captain J. Ingles, R.N., Naval Adviser to the Japanese Government. Doubtless there will be no difficulty in obtaining Her Majesty's permission for Captain Ingles to wear the Order. The Government evidently appreciates the services which this distinguished officer has rendered to Japan, for the honor now bestowed on him is a very exceptional mark of the Sovereign's favour.

PICKED UP AT SEA.

The Nippon Yusen Kaisha has received the following telegram from Saigon:—"The *Sakata Maru* arrived on the 20th ult., with the Captain and part of the crew of the *Greina*, bound to Hongkong from Cardiff, which was wrecked on Rifleman Shoal on the 25th October."

THE "ROUMANIA."

We regret to have to record another shipping disaster which includes great loss of life. The steamer *Roumania*, referred to in our telegram this morning, was an iron screw three-masted vessel of 3,387 tons gross, 364.6 feet in length, 28 ft. in breadth, and 28.6 ft. in depth, with engines of 480 horse-power, built and engined by Messrs. D. and W. Henderson, of Glasgow, in 1880. The *Roumania* was commanded by W.S. Young, and owned by Henderson Brothers.

DUELING IN HAIPHONG.

Two duels were fought at Haiphong on the morning of the 7th ult., one between M. Mezières and M. Spicq and the other between M. Mason and M. de Cuers. The first resulted in M. Mezières being wounded in the lower part of the arm, and the second in M. de Cuers being slightly wounded in the right arm.

THE LATEST TRUST.

A company has been incorporated under the laws of New Jersey to be called the American Type Foundry Company. Its object is to control all the type foundries in the country. The capital will be \$9,000,000. Nearly all the foundries in the country are in the company.

THE HONMOKU MURDER.

We learn from the *Pomouri* that the preliminary examination of the woman Pettei, who has been under arrest on suspicion of being an accomplice to or instigator of the Honmoku murder, has concluded, and the woman was acquitted on the 2nd inst.

SNOW.

A CORRESPONDENT, writing from Hokkaido, says:—"Raus-yama and the adjacent peaks were covered with their first snow this season on Sunday, October 16th. Raus-yama is about 100 miles north of Nemuro, and is 5,400 feet high."

EARTHQUAKE.

A CORRESPONDENT at Fukui, in Echizen, says:—"A shock of earthquake lasting several seconds, and strong enough to set the windows and shoji rattling, was experienced here this morning (October 31st) about nine o'clock."

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The air is full of strange rumours. One of these is that an understanding is being, or has been, arranged between the Military and the Radical Party (the *Fiji-to*). It has, indeed, been apparent from the beginning that the Radicals are more or less well disposed to the Ito Cabinet, but with the exception of the section of the public which depends upon rumour for information, probably very few believe that any definite understanding has yet been effected between the Cabinet and the Radicals. A note-worthy circumstance, nevertheless, is that even an independent journal of the *Fiji*

Shimpo's standing is disposed to credit the story now circulating. The *Fiji* has been for the past few years assiduously advising both the Government and the Opposition to be reconciled to each other. It believes that the Cabinet, keenly feeling the untrustworthiness of the National Unionists, has in contemplation a plan of coalition with the Radicals. Should an approach be made by the Cabinet, the Radicals, in our contemporary's opinion, would be glad to give the Ministry their hearty support. We observe that while, on the one hand, the general public seems inclined to accept the rumour, the Radical organ, on the other, has apparently taken no step to seriously controvert it. Rather does the *Fiji's* diligence in exposing an alleged conspiracy on the part of the Military Party, furnish an indirect confirmation of the truth of the allegation that the Cabinet and the Radicals are drawing together. As to the *Fiji's* exposé, we do not venture to say how much reliance may be placed on it. But there may be interest in reproducing the principal points of our contemporary's story. It will be remembered that the so-called Military Party had a short period of ascendancy in the Government during the last days of the Matsukata Cabinet. The *Fiji* now states that the leaders of the party, Viscount Takashima and Viscount Shinagawa, are secretly devising a plot for overthrowing the Ito Cabinet. They are said to be discontented with "the liberal and constitutional policy" of the present Ministry, their own object being the maintenance of Clan Government even at the point of the bayonet. Their plan of operation, according to the *Fiji*, is to instigate the Popular party to attack the Cabinet, uniting their own forces with those of the Radicals and the Progressionists until the Government is forced to resign, whereupon they will turn upon their allies and take steps to form a Military Cabinet, with either Count Yamagata or Count Saigo at its head. This is assuredly a strange allegation, seeing that Count Yamagata is a member of the Ito Cabinet. But the Radical organ tells its readers that between the Minister President and the Minister of Justice there exists a difference which is daily becoming more serious. Such, in brief, the *Fiji* has taken much pains to impress upon its readers. Many people see in all this a transparent design to persuade Count Ito to sever all connection with Count Yamagata and his followers and to form a coalition with the Radicals.

Another rumour is to the effect that the so-called extreme section of the Peers, led by Viscounts Tani and Miura, will support the Ministry. It is stated, on apparently good authority, that Viscounts Tani and Miura have recently held several conferences with Count Ito. It is also stated that Viscount Tani, always friendly to Count Ito, is now loud in his praise of the Minister President as a constitutional statesman. Be that as it may, some significance certainly attaches to the fact that the tone of the *Nippon*, Viscount Tani's supposed organ, has considerably changed with regard to Count Ito. That journal has published during the present week several references to Count Ito, describing him as an enlightened and constitutional statesman.

While the *Fiji-to's* friendly attitude to the Ministry is a general topic of conversation, rumours are beginning to be circulated about a possible reconciliation between Count Okuma and Count Ito. This notion owes its origin to accounts of remarkable interviews with the two statesmen, published by the *Nippon*. Some people think that the *Kaishin-to* leader, alarmed by rumours of a contemplated union between the Government and the Radicals, is trying to steal the latter's thunder. At all events, Count Okuma's avowal of belief that the country is still unfit for party cabinets seems to have been a surprise even to his own followers; and indications may be seen that the desperate politicians of the *Kaishin-to* are discontented with their leader's moderate views. The organs of that party have not said a word about the *Nippon's* accounts of interviews, but continue to be as bitterly hostile to

the Cabinet as before. They also speak contemptuously of those who "have deserted their original standard and are beginning to support the Clan Government." If there be any foundation in the report that the Progressionist leader is disposed to be reconciled with his former colleagues, it must be inferred that in this respect he acts on his own responsibility without consulting his followers, with the exception, perhaps, of a few.

The *Yiji Shimpō* is indefatigable in urging upon the Ministers of State the importance of putting an end to the conflict between the Government and the Opposition. This conflict dates, in our contemporary's opinion, from the year 1881, when the Government changed its policy. Upon the Ministers of State devolves the responsibility of saving the country from this distracting contest between officialdom and the so-called "Popular Party," since they are to blame for the maladministration which has brought about such a state of affairs. In order to restore harmony, it will not do—continues the *Yiji*—to resort to any time-serving and petty reforms. The Ministers of State must return to the simple and unostentatious method of administration which characterized the early years of the *Meiji* Government.

The labour problem occupies considerable space in the metropolitan press. As already stated, this question has been taken up by Mr. Oi Kentaro and his followers to form one of the principal planks in their new platform as the Oriental Radicals. Their example was recently followed by the members of the Western section of the Radical Party, who held a general meeting at Osaka and passed a resolution that a bill concerning the protection of the labouring class be introduced in the approaching session of the Diet. This action is evidently approved by the rest of the Radical Party; for the latter's organ, the *Yiyu*, endorses the views expressed at the Osaka meeting. The *Yiyu* believes, with most of its contemporaries, that as yet there are few grievances to be redressed in the field of labour; but nevertheless thinks it important to take steps in order to avert, as far as possible, difficulties such as are now disturbing the relations between the capitalist and the labourer in the Occident. The time, we read, is not far distant when similar troubles will present themselves in Japan. To mention some of the measures recommended by the Radical organ, it is proposed that free schools should be established for the education of the poor; that the scale of income tax should be so modified as to increase the public contributions of the rich; that the burden borne by the poor should be lightened by revising indirect taxation; that the tenant regulations should be framed in a spirit favourable to tenants; that the interest of labourers should be protected by enacting Factory Regulations, and so forth. The *Yiyu* observes that, so far as the political sphere is concerned, freedom has been carried to a considerable extent; but regrets to notice that from social points of view custom is still strong enough to thwart the principles of liberty and equality. Consequently the Radical organ thinks it time for its party to pay attention to the solution of social questions.

The *Kokumin Shimbun* thinks that it is necessary above all other things to instruct working men how to help themselves. The custom of despising money, which originated among the *Samurai*, has extended even to the labouring classes, so much so that genuine sons of Tokyo still regard it almost as a point of honour never to let money remain in their hands over night. They work like slaves, but they spend like princes; so says the *Kokumin*. Our contemporary thinks that it will be useless to talk of bettering the condition of the working class unless this common spirit of unthrift be reformed.

The *Choya Shimbun* is afraid that, in the hands of demagogues, the labour question may

be productive of more harm than good. Generally speaking, the working class is composed of ignorant men little accustomed to think for themselves. It is a very dangerous experiment to infuse the spirit of discontent among men of this description. Our contemporary can point to an example of the injurious result of inflaming labourers with enmity against the wealthy class. Just before the general elections of February last, a certain Radical politician harangued at Sakata, in the Province of Uzen, on the oppression of the poor by the rich, and the audience were so pleased with this new doctrine that some of these burnt down the house of Mr. Homma, the wealthiest man in the locality, during disturbances connected with the elections. Before advising labourers to revolt against capitalists, they must be taught to become more frugal in their habits and more regular in their mode of work. In short, our contemporary insists that education should precede extension of rights.

The report that the Authorities have decided to select Kyoto as the site for the Domestic Exhibition of 1895, has evoked unfavourable criticism from the press of Tokyo and Osaka. The Osaka people had been enthusiastically advocating the selection of their city for the site, and the preference shown to Kyoto has naturally disappointed them very much. But they are not without consolation, for it is stated that the Authorities have decided to hold the Domestic Exhibitions, alternately in the three cities of Tokyo, Kyoto, and Osaka. Thus the next Exhibition after that of 1895 will be in the last mentioned place. The people of Tokyo are very indignant that Kyoto and Osaka should be allowed to participate in profits which they have hitherto regarded as a sort of monopoly. The selection of Kyoto for 1895 is based on the circumstance that that year happens to be the 1100th anniversary of the first choice of Kyoto as the capital of the Empire. But Tokyo folks contend that the selection of site for a national exhibition should be guided, not by historical, but by economical and commercial considerations. Tokyo is the centre of the country and the focus of trade facilities, as well as the largest city in the empire. On these grounds the Tokyo press condemns the selection of any other place for such a purpose as a national exhibition. The *Mainichi Shimbun* even threatens that the Diet will not give its consent to appropriations for the exhibition unless adequate reasons are set forth for the selection of Kyoto for its site.

The *Yomiuri Shimbun* alone thinks otherwise. It recommends the Tokyo people to show their proverbial spirit of chivalry and allow Kyoto and Osaka to share in turn the profits derived from national exhibitions.

The *Choya Shimbun* advocates the opening of a special national exhibition in Tokyo next year. The idea is to attract hither European visitors to the Columbian Exposition of Chicago. Our contemporary calculates from past experience that a national exhibition does not require more than 450,000 yen in all, and that more than 80,000 yen would be realized by the sale of tickets and of the temporary buildings, so that the net outlay would not exceed 370,000 yen.

The *Kokkai* discusses the question of the degeneration of Buddhist priests. It does not hesitate to denounce the whole order of priesthood as being sunk in the depths of immoralities. There have not been wanting pretended reformers of Buddhism in recent years. Kitabatake Dōryū, for instance, caused a certain amount of excitement in religious circles by preaching new doctrines which he had brought home from a tour in Europe. But he soon sank out of notice. His example was followed by a priest called Mizutani Jinkai, who declared himself a *Bosatsu* (Bodhisattava) and drove about in a peculiar carriage. After him appeared Tonaka Chikaku, who attempted to revive a belief in the miracles

wrought by Nichiren. At present a young scholar named Inouye Enryō is doing some useful work by rousing interest in the study of Buddhism as a system of philosophy. But his efforts have not the slightest influence in reviving the vitality of the religion. Is there not, asks our contemporary, a single true follower of Buddha among the 200,000 priests in Japan?

A movement is on foot for the abolition of the legal prohibition of gambling. The agitation is confined to professional gamblers and to a certain section of the *soshi* class. It is now rumoured that the *Kokumin Kyokai* has consented to bring the matter up for discussion in the coming session of the Diet. For our own part we do not believe in the accuracy of this rumour; but the *Yomiuri Shimbun* is evidently disposed to think otherwise. At all events, it seriously discusses the undesirability of a responsible party taking up such a question. The abolition of the legal prohibition might, we are told, be a wise thing in the abstract, but it would be decidedly unwise to countenance an agitation started by professional gamblers, for such an act would inevitably be construed by the vulgar as an open sanction of gambling itself.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

It is perhaps difficult for a foreigner to realize the impression created upon the thoughtful Japanese by the uncertainty of moral standards that now prevails in this nation. It is not that the condition of the country in respect to transgressions or culpabilities is any worse (or shall we say, less satisfactory?) than it ever was. On the contrary, the self-accusation so noticeable now-a-days (and especially in the last month) in the religious journals is rather an evidence of increased strength of purpose and renewed aspiration. The condition of which such men are so sensible is a lack of standards to appeal to, an inability to find accepted axioms which command every one's assent. Their condition is like that of a man walking in a second storey who has dropped his candle and stands still in the darkness, paralyzed with fear of plunging headlong down the stairway, though in fact he is at a perfectly safe distance. Next to this in importance, and perhaps akin in its nethermost causes, is the condition of Buddhism. The outcries and lamentations of warning and of despair that appear in print from time to time must certainly portend something radical. A man may be afflicted with nervous prostration, may imagine himself, though really sound in body, to be a nest of diseases; but, unless Buddhism is merely passing through some such nervous affection, its condition must be serious. No one is so short-sighted as to suppose that the vast Buddhist organization will break up or pass away; but there may at least occur a thorough regeneration.

On the Christian side there has lately been more or less talk about the methods of propaganda. There seems to be a measure of dissatisfaction with present methods, and suggestions are made in abundance. But no one seems quite ready as yet to take the lead in demanding changes. Perhaps something definite will be done at the General Conference of next year. As to the Conference, it may be noted that Mr. Kanamori has been made one of the Committee of five to prepare for it—the others being Messrs. Yokoi, Ibuka, Miyagawa, and Hiraiwa. This is certainly a weighty body; but we confess that we do not understand Mr. Kanamori's re-appearance on that scene. Our last recollection of him in religious circles is his formal leave-taking of his associates at Osaka last spring, his conscience not permitting him to remain longer under their banner. A more questionable matter seems to be the appointment of Mr. Kato Satori (or Samuel) as one of the Secretaries of the Committee. Is it possible that one who has proved himself doubly an apostate, whose conduct known to all has received the disapproval of a general conference

of his church, is to be quietly given a post of honour and responsibility without question?

The Kumamoto Bible-reading affair has of course found its way into the columns of the Christian press. Much less has been said than might have been; and as a rule the temperateness of the Christian press on such occasions is a model of propriety and good sense, and compares favourably with the violent denunciation sometimes uttered by Buddhists—men, for instance, like Professor Naito, of whom better things might be expected. But at all times, it must be remembered, the temper of the besiegers is one thing, of the besieged another; and it is recorded in history that, after the Germans had entered upon French soil, the French prisoners in Germany fared better at the hands of their captors than the German prisoners in France.

Mr. Yokoi this month transfers his favours to the *Kirisutokyo Shimbu* (Congregationalist).—two articles, pithy and timely as usual. The first deals with "Japanese Christians and Pagan Customs." Joshua, in his zeal for the one God, destroyed the other nations who were worshippers of other gods, and only saved them for slavery on their renunciation of their deities. Men now doubt whether such deeds were just in the eyes of God. Joshua acted according to his light; but we of to-day know that such cannot be the true methods of Christianity. When we see about us forms and ceremonies hallowed by tradition, let us not denounce them narrowly and indiscriminately as the worship of false gods. Let us be tolerant; let us be liberal. Mr. Yokoi's second theme is "What is Religion?" It is couched in more vehement style than he is accustomed to employ, and is a warning against making formalities the essence of religion and exalting trifles into indispensable. Jesus rebuked the Pharisees for insisting on the double daily fast, and denounced them as "hypocrites" and "generation of vipers;" so also would he denounce many to-day, should he re-visit earth. Love for God and our neighbour,—this is the be-all and end-all of religion. The same attitude is taken by this journal editorially in writing of "Christian Union." It is singular that people acknowledging the same Lord, the same God, and the same Bible should not be able to agree among themselves. The *Ichi-kyokuwai* and the *Kumiai-kyokuwai* have tried to form a basis of union, but in vain. Universalists and Unitarians, much though they resemble each other, prefer to keep apart. The difficulty lies in placing too much importance on small things. One set insists on Baptism; another on certain things about the Holy Spirit; and so it goes. The Conference of next year will encourage efforts to bring about union, and should be utilized for that purpose.

The symposium offered by the *Kirisutokyo Shimbu* on the subject of "The Decline of Christian Schools," has come to an end. The subject is indeed a serious one, and the depth of the causes for the decline is indicated by the fact that scarcely any two of the writers agree on the same diagnosis. Here are some of the reasons last offered:—1. Graduates of these schools are not given the Government license to teach in Government schools; 2. The Christian principles there taught are too lofty for the general run of men; 3. Able leaders are lacking; 4. The methods are theoretical, not practical; it is all head and no body; 5. The spirit of the times has changed and is no longer favourable to them; 6. They are mismanaged. Here are some equally comprehensive, equally various, and, we may add, equally strong suggestions for reform: 1. More sincerity of purpose; greater harmony between authorities and students; 2. The establishment of a Christian University; 3. The concentration of strength on the theological departments; 4. A resort to the Government system for a model on certain (unmentioned) points; 5. Less use of money from abroad for secular education; more attention to morality.

In the *Rikugo Zasshi* (Congregationalist) we find an increasing proportion of secular topics,

as witness the table of contents: 1. The Achievements of Columbus; 2. The Commercial Relations between Japan and the United States; 3. Women and Economy; 4. Schleiermacher; 5. Yokoi Shonan; 6. Some Reasons for the Revision of the Japanese Translation of the Bible; 7. Some additional Remarks on the Romanization of Chinese Characters. This would do very well for a monthly review of culture and civilization—if that is what the *Rikugo* desires to be considered. One thing is noticeable, however, that every article without exception is by a Japanese writer,—a showing that scarcely any other monthly Christian journal can make. The article on Bible Revision is by Mr. Asada, and reasons given for revision are four. 1. The verse-division is antiquated and improper. 2. There is no distinction in the Japanese translation between the prose and the poetical portions. 3. The Japanese translation is too removed from the original, having passed through the English and the Chinese, and hence there is naturally more or less inaccuracy. 4. The translation is too free; errors have resulted from the work having been in the hands of several independent translators. Reckoning minute errors, the translation may be said to have the following percentage of correctness: Old Testament, one-third, New Testament, one-fifth.

The *Shinko-no-Tomo* (Episcopalian) believes in more private and less public work as the best means of propagandism. The usual plan in starting a church is to hold a meeting, start a society, begin to preach, and finally undertake to work upon individuals. The process should be reversed. Let the preacher begin with individuals, make fast his converts, and then start his church. The *Fukuin Shimpo* (Presbyterian) thinks that the work of the church just now is too much of a merely negative character. The preacher is not much more than a moral policeman. What we want is not merely preventing evil but establishing good. There should be more of the positive element in the work of the church. In another article dealing with methods, the same journal complains that the new churches are being manned by preachers who are not at all able men. The authorities take the first man that can be got, regardless of quality. The root of the trouble lies with the Christian schools, which do not turn out the proper men. The *Seikyo Shimpo* (Greek), commenting on the query "Why does not the *Seikyo kwai* progress satisfactorily?" notes as one reason the fact that the preachers are all Japanese, and there are no foreigners, whereas the people are pleased to hear the words of foreigners, and like to have them as preachers. Another reason is that educational efforts are spent entirely on theological schools, and ought in part at least to be given to the establishment of academic institutions. A third is that there are no certain dogmas to preach; the doctrine differs according to the place and man. It may be noted that the first two of these reasons are diametrically opposite to some advanced by Protestant Christians, and that the third flatly contradicts the ideas usually entertained as to the doctrines of the Greek Church.

In the *Jiyu Kiristokyo Zasshi* (Universalist) a certain Sekitesusei writes on "Religion and Morality." There is to-day, he thinks, a lack of moral standards. Buddhism and Shintoism do not agree. Their moral code is negative, not positive. The fear of hell is their only sanction. The manners of the times may seem outwardly praiseworthy but within there is only degeneration. Under the title "Liberal Christianity and the Japanese People," Mr. Amagura advances two propositions. First, Christians themselves check the progress of Christianity. (1) Religions are always more or less disunited, and so are Christians. (2) As the Japanese saying has it, "See, the physician is sick," so Christians injure their own cause by looking down on non-Christians and shunning association with them. (3) They have no sure faith; they merely accept on trust what the preacher says. (5) They are too strict and censorious in such

matters as smoking and drinking. The second proposition is after all capable of furnishing the true religion for the Japanese people. (1) It is not a religion of superstition or of empty ceremonies. (2) It is the religion of sincerity and disinterestedness. (3) It is tolerant religion, and will allow the people of this country to preserve their own customs and habits. In the *Shukyo* (Unitarian) Mr. Akashi writes on "Revivals." This term is usually applied to occasions of moaning and weeping which are in no sense real revivals. The true revival is a regeneration and a new growth; it cannot come suddenly; it is going on all the time. An essay on the thesis "Ceremonies indicate the stage of a Society" treats interestingly the significance of forms and ceremonies from Confucius till now.

The *Bukkyo* (Tendai) offers a strong number, the names at least of Inouye Tetsujiro, Otani, and Sugiura Jugo being enough to attract multitudes. Mr. Inouye's article, on "The Philosophy of To-day," is an outline of modern philosophy from Kant down. Mr. Otani takes for his subject "Ethics." He defines it as the science of human conduct, and paves the way for future articles by positing good of the individual as the basis of ethical duty. Mr. Sugiura's article is on "Mystery," and is well named. He asserts that the mysteries of the world are innumerable, and we think that his article ought to be placed among them. For pointless and ineffective scribbling Mr. Sugiura excels. An article on "Contemplation at Rest" expounds the doctrine of the Ten (Contemplative) Sect, that to control our passions is the attainment of life's one object. Heaven and hell, as material things, are imaginary only. The 17 Heavens are merely stages of spiritual progress. Everyone who by contemplation schools himself may become Buddha and needs no external help. The Universe is the Soul, and the Soul is Buddha. Other articles in this journal deal with "Sao-Tse," the Chinese philosopher, and "A New View of Buddhist History."

It is a singular commentary on the similarity of problems in all religions that no less than three of the important topics already noted in the Christian press are paralleled in Buddhist magazines. We find, of course, an article on the decay of Japanese morality, this time in the *Dento* (Shingon). The writer admits that the decline of Buddhism has led to a decline of morality in the people, and claims now for Buddhism the right as well as the power to reform this degeneration. Next is an article in *Hana no Sono* advising a change in the methods of preaching to suit the changes of the times. Finally, an interesting article on "Religion" prophesies in hopeful terms a general union of religions. Disunion and internal division have always marked the councils of religious bodies. But there are signs of a nearer approach among the sects of Christianity. Buddhism, Shintoism, and Confucianism in Japan have shown how three systems may ultimately come to be more or less fused in the life of a people. The history of religion passes through three stages—first, mere worship without form; second, religion developed into fixed forms and ceremonies; and last, religion divested of its accidents and outward symbols and sought in and for itself alone. Towards this last goal of general harmony and co-operation we seem to be approaching. The same advocacy of unity is found in the *Dento*, which strongly urges the members of the Shingon sect to drop all differences and party affiliations and work together for the union of all Buddhists.

There is for Buddhists a *Fujin Zasshi* (Lady's Magazine) in which we find an article on "Buddhist Schools for Girls." The writer asserts the importance of woman's influence in society, and, in advocating the encouragement of girls' schools, he points to the successful results reached in America, where, he declares, Christian principles prevail, every woman has an education, and the Christian principle pervades everything. We suspect that this enthusiastic writer has never been to America.

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

THE LAND TAX IN JAPAN.

MR. DROPPERS is not satisfied with the conclusions reached by us in reply to his recent communication on the subject of the Land Tax. He renews the controversy and re-asserts his original proposition, namely, that the tax on rice lands is at least 25 per cent. of the net produce. Considering this assertion, we showed, in a previous article, that Mr. DROPPERS' hypothesis would make the tax paid by rice land alone some forty-eight million *yen*; a sum exceeding by ten million *yen* the total Land Tax actually levied. Mr. DROPPERS now takes exception to data by which we reached this result. He affirms that we exceeded the mark when we assumed 38 million *koku* as the annual crop of rice, and 6 *yen* per *koku* as the market value. We are quite willing to accept the amendments of Mr. DROPPERS for the purposes of this particular argument. But we may be permitted to explain that we chose the figure of 38 million *koku* because Mr. DROPPERS himself, in his original letter, took 39,999,000 *koku* as a basis of calculation, and declared that there was "nothing abnormal about such a crop." In point of fact the average annual yield of rice is difficult to estimate with any certainty. Mr. DROPPERS, taking the ten years from 1880 to 1889, inclusive, obtains an average of 33.2 *koku*. Had he taken the ten years from 1881 to 1890, he would have found an average of 34.37 *koku*. But, as we have said, it is immaterial for the purposes of our argument whether we take the figure originally taken by Mr. DROPPERS himself or that selected by him now. As to price, again, he chooses the six years from 1884 to 1889, and obtains an average of 5.2 *yen* per *koku*. With this also we shall not quarrel, though had the three years ending 1892 been included, a very different price would have resulted. Thus then, accepting the figures of Mr. DROPPERS himself, we have this result:—

Gross Yield of Rice	32 million <i>koku</i> .
Net Yield	27.2 million <i>koku</i> .
Twenty-five per cent. of Net	
Yield	6.8 million <i>koku</i> .
Value of 6.8 million <i>koku</i> at 5.2	
<i>yen</i> per <i>koku</i>	35,360,000 <i>yen</i> .
Actual Land Tax levied on Rice	
Fields	27,894,500 <i>yen</i> .
Error of Mr. Droppers' calculation	7,465,500 <i>yen</i> .

Hence, even taking the figures chosen by Mr. DROPPERS himself, it results that he over-estimates the tax on rice fields by no less an amount than fully one-fourth. The total sum actually paid to the State by rice-planters, even though calculated on the extreme bases assumed by Mr. DROPPERS, is only 20 per cent. of the net crop, whereas he declares that it is at least 25 per cent. It is scarcely necessary, we presume, to pursue this part of the subject any farther. Arithmetic cannot be disputed. Perhaps, however, we ought to explain that we have apparently been labouring under a false impression. Our belief was that Mr. DROPPERS sought to give to the

public a fair idea of the state of the agricultural classes in Japan at present. It seems that such is not his notion. He has been confining himself to the problem of the rice-growers' fiscal situation. We believe such a partial method of treatment to be not only unsatisfactory, but also, in Japan's case, extremely misleading, since it leaves out of account many factors that have an important bearing on the general problem. However, if it be the purpose of Mr. DROPPERS to show that the incidence of taxation is unfair, as regards rice lands, and that uplands and urban lands should be more heavily taxed, we agree with him. He repudiates the notion that his previous writings have been devoted too exclusively to the question of rice fields, but he is nevertheless of the opinion that this branch of agriculture obscures all others, and he writes:—"As a matter of fact, rice land has paid on the average 30,000,000 *yen* out of the total annual revenue of 40,000,000 *yen* received from the Land Tax." Now we cannot but note that Mr. DROPPERS is very particular as to the figures employed by his opponents. He restricts us to decimals of a *yen* in assessing the market price of rice per *koku*, and he draws very sharp limits as to the exact average of the yearly yield. What, then, does he mean by speaking of "an annual revenue of 40 million *yen* received from the Land Tax," when the actual revenue is less than 39 millions; and what does he mean by saying that rice fields pay 30 million *yen*, when they actually pay less than 28 millions? We presume that the object in such a discussion as this is to arrive at the truth, not to win a controversial victory by enforcing the use of minima on an opponent and exercising on one's own side latitude considerably in excess of the reality. Further, what Mr. DROPPERS intends to convey when he speaks of rice land having paid "on the average" thirty million *yen*, we cannot pretend to understand. To strike an average some *data* must be taken, but Mr. DROPPERS omits these essentials. He might as well speak of the yield of rice being a function, without telling us anything of the variables to which the function is to be referred. However, we desire to avoid drifting into controversial methods. Let it suffice to say that we cannot reconcile the figures given by Mr. DROPPERS himself with his own conclusions, and still less can we regard the latter as a true representation of the Japanese-farmers' fiscal burdens.

With regard to the nature of the impost levied on agricultural lands, we are prepared to admit very frankly that the arguments advanced by Mr. DROPPERS possess much force. In point of fact, we have never intended to insist that the Japanese land tax should be literally described as "rent," in the Occidental sense of the term. Our contention has simply been that when considering the

burden of agricultural taxation in this country, attention must be paid to the fact that the only liability imposed on land-owners in return for the possession of their land is the so-called land tax. Under the Japanese feudal system, as under all feudal systems for the matter of that, the possession of land involved the discharge of certain obligations to the State, usually in the shape of military service. The lords of fiefs obtained means to discharge these services by levying certain annual sums from the cultivators of the land, the land itself being, in the last resort, the property of the State. It is quite true that in Japan the cultivators were scarcely ever disturbed, and that, out of long continued and benevolent usage, a virtual privilege of ownership grew up. But if anyone imagines that a land-holder before the Restoration possessed an absolute right of property in his holding, let him think how it would have fared with an attempt to sell the land to a vassal of another fief. Such a contingency was out of the question. The *Daimyos* remained, in effect, owners of the territory granted to them originally by the EMPEROR, or more directly by the *Shogun*, while the latter was entitled to resume possession of the land under certain contingencies. If the term "rent" was not applied to the holder's annual payments to the treasury of the fief, it is at all events pretty certain that failure to make those payments would have involved eviction and transfer of the land to other hands. At the Restoration the *Daimyo* restored their fiefs to the EMPEROR, and thereupon the latter gave title-deeds to land-holders throughout the empire, thus for the first time in Japanese history vesting the fee-simple of the land in the hands of the people. Every man who happened to be then holding land, not as a mere *Kosaku-nin*, or cultivator, but as a recognised occupier, became absolute owner of the estate without any immediate disbursement, and without any liability over and above an annual payment representing 3 per cent. of the assessed value of the land. Whether we agree to call that payment a "tax," or whatever term we adopt, it is plain that the above facts must be taken into account in any statement of the fiscal conditions of land tenure in Japan. For the rest, that the Government stood in the position of legal owner of the land, seems to us to be clearly demonstrated by the fact that the title-deeds, by which alone the right of property was acquired, were issued by the Government. Finally, with regard to the Government's right of revising the land tax every five years, we fail to grasp Mr. DROPPERS' argument. Quoting the provision of the Regulations—"Even if the market price of the land increases or diminishes after the completion of the revision, yet the appraised value shall remain unchanged for at least five years after the Reform,"—he says: "From this article it

is easy to see that the Government reserved no right of revising the value of the land every five years. Such revision was contemplated only if the landowner complained of over-valuation." On what conceivable principle does Mr. DROP-PERS adopt such a one-sided reading? Does he seriously mean to assert that the presence or absence of the word "increases" has no effect on the significance of the Article, and that it was drafted solely with reference to possible future "decreases" of market value? We cannot follow such arguments. For us the article can mean only what it plainly says, namely, that the Government guarantees fixity of rate of tax for a period of five years, and that while, on the one hand, no increase shall be made during that period on account of appreciation of the land, neither shall any decrease be made on account of depreciation. If Mr. DROP-PERS reconsiders the article, he will see that no other construction is possible, except by deliberately ignoring a part of its text.

THE "KOKUMIN SHIMBUN."

THE *Kokumin Shimbun* is good enough to renew its attack upon us with reference to the question of domestic politics. There have been two points at issue between the *Kokumin* and ourselves; one is the vital problem of party cabinets; the other, a vehement crusade undertaken by the *Kokumin* against Mr. NAKASHIMA NOBUYUKI, formerly President of the House of Representatives, who is virtually denounced as a traitor by the *Kokumin* because, having hitherto been a distinguished member of the Radical Party, he has ventured to accept the post of Japanese Representative in Rome. Our courteous contemporary appears to think that these matters occupy the same niche in our mind, and that we chose the latter as a new basis of attack for the purpose of re-establishing our position towards the former. Moreover, the *Kokumin* makes much capital out of the circumstance that we left the NAKASHIMA episode unnoticed for several days. But with regard to celerity or deliberation of comment, it is only necessary to observe that experience has taught us the wisdom of allowing a mature period to intervene before referring seriously to the utterances of certain Japanese journals where personal questions are concerned. Complete or partial retraction, not to speak of other consequences calculated to greatly influence criticism, must be looked for so often in the sequel of such utterances, that judgment has generally to be suspended, if only for the sake of avoiding waste of time and brain tissue. For the rest, we do not clearly discern what Mr. NAKASHIMA's appointment has to do with party cabinets. The administrative custom of countries generally called civilized is to draw a hard and fast line between domestic politics and diplo-

macy. The British Foreign Secretary, for example, asks no questions about, and pays no heed to, the political colour of the men nominated by him to represent the QUEEN. On the other hand, the diplomatic agents of the country serve their Sovereign and the interests of the empire with absolutely unaltered zeal and devotion whatever political party may for the moment hold the Royal mandate to administer the nation's affairs. That wholesome practice has grown out of recognised exigencies and practically demonstrated expediency. We should like to see it adopted in Japan. When, therefore, the *Kokumin Shimbun* calls Mr. NAKASHIMA NOBUYUKI a great many ugly names because, being a Radical, he accepts the post of Japanese Minister Plenipotentiary in a European State, we cannot fail to perceive that a most dangerous postulate is introduced in to the science of statesmanship. Mr. NAKASHIMA, the *Kokumin* notwithstanding, goes to Rome to serve his country, not to serve the ITO Cabinet, or any other coterie of Ministers. If our polite contemporary intends to assert the dogma that no Japanese subject can accept a diplomatic position from his opponents in domestic politics without being called a renegade, then we can only say, heaven save Japan from the administrative control of the *Kokumin's* fellow thinkers. If it does not intend to lay down such a mad proposition, then why has it made Mr. NAKASHIMA'S mission to Rome the occasion for an attack upon that gentleman which in scurrility rivals JUNIUS and in ferocity BOMBASTES himself? Passing from this topic to the other ground of discussion, party cabinets, there are just two points concerning which we should like to elicit a frank expression of views from the *Kokumin Shimbun* or any other Radical Japanese organ. The first is whether our contemporary is prepared frankly and unequivocally to agitate for the system of party cabinets. We do not mean to suggest that intelligent people can be in any doubt as to the inevitable bourne of Radical agitation in Japan to-day. Concerning that it is easy to speak confidently. But never yet, in journalistic columns or platform utterances, have we found a plain, straightforward statement that the object of the Opposition is to render the Ministers of the Crown subservient to the will of the Diet: in other words, that the principle of party cabinets constitutes an unambiguous plank of the Radical platform. Why has no one the courage to declare clearly that to that end, and to that end only, the *Kaishin-to* and the *Jiyu-to* seek to push the nation? We say nothing as to whether it is a desirable end or an undesirable end. The simple query is whether the *Kokumin Shimbun*, as a Radical organ, is prepared frankly to admit that it desires to make the Cabinet's tenure of office depend on the will of the Diet. Secondly, we wish to ask our contemporary

whether it can find in the Constitution any warrant for depriving the EMPEROR of the absolute power of appointing and dismissing his own Ministers. The SOVEREIGN being the original source of all rights in Japan, it follows necessarily that every right of which he has not explicitly divested himself by the terms of the Constitution remains vested in him. Can it be shown that any clause of the Constitution directly or indirectly warrants the substitution of the Diet's voice for the Imperial will in the appointment or removal of the heads of the Administration? "The EMPEROR appoints and dismisses all civil and military officers," and "the respective Ministers of State shall give their advice to the EMPEROR, and be responsible for it;"—these are the only two provisions bearing on the subject, and it behoves the Opposition to demonstrate that the terms of one or other of these provisions can be reconciled with the principle of holding the Ministers of State responsible to the Diet, and making their dismissal and appointment practically dependent on the latter's will. Unless this can be demonstrated, we return to the proposition originally advanced by us, namely, that the platform of the Opposition is in direct contravention of the penultimate paragraph of the Constitution's preamble:—"When in future it may become necessary to amend any of the provisions of the present Constitution, WE or OUR successors shall assume the initiative, and submit a project for the same to the Imperial Diet. The Imperial Diet shall pass its vote upon it, according to the conditions imposed by the present Constitution, and in no otherwise shall OUR descendants or OUR subjects be permitted to attempt any alteration thereof."

CORRESPONDENCE.

THE LAND TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your editorial of October 7th on Land Taxation in Japan you have an evident advantage is not replying specifically to the evidence I submit. You take a few statistics, which are fair enough in a way, and from these you make some very telling conclusions. If it were so easy a matter to determine the burden of the land tax as you seem to make it, I do not think I or anyone else could ever have made a mistake about it.

It was a remark of an old statistician, I believe, that there are three degrees of comparison in lies: ordinary lies, outrageous lies, and statistics. If there is any truth in these words—I think the author tried to demonstrate it by statistics—it shows that we are to be careful in basing too sweeping conclusions upon simple figures.

For instance, you make the assumption that the rice crop of Japan is on an average 38,000,000 *koku*. It is particularly stated in the Imperial Decree of July 1873 that the basis of the land tax shall be the average crop and consequently the tax shall not be less in bad years or more in good ones. Now the rice crop returns for the ten years ending 1889 are as follows:—

KOKU.		KOKU.	
1880	31,359,000	1885	34,158,000
1881	29,971,000	1886	37,191,000
1882	30,692,000	1887	39,999,000
1883	30,671,000	1888	38,645,000
1884	26,346,000	1889	33,007,000

This average, out of which taxes had to be paid is 33.2 million *koku*, or nearly 5 millions less than you assume. From this average, however, ought to be subtracted a certain amount, as for instance, the rice grown on newly cultivated land, on which

taxes for a term of years, are little or nothing. If we assume 32 million *koku* as a fair average for the regularly appraised land, it is not likely to be too low an estimate; 85 per cent. of this would leave us 27.2 million *koku*, as net produce, on which taxes must be calculated.

Again, you assume 6 *yen* per *koku* as an average price. The actual average in all the Rice Exchanges of the Empire from 1884 to 1889 (I omit the earlier years on account of the depreciated paper currency) was as follows (per *koku*):—

1884 = <i>yen</i> 4.71	1887 = <i>yen</i> 4.71
1885 = <i>yen</i> 5.86	1888 = <i>yen</i> 4.37
1886 = <i>yen</i> 5.14	1889 = <i>yen</i> 5.56 or an

average price of 5.2 *yen* per *koku*. This is the average price of rice delivered in the 16 places where rice exchanges are established. What price the farmers got is hard to state, but it is certainly less than this, as deduction must be made for freight charges. All these modifications must be made before your calculations can be used as premises for reasonable conclusions. It takes no great insight to see that if these deductions be made the tax on rice land is easily 25 per cent. of the net crop.

You say, "the authorities he quotes speak as though the rice crop alone was to be considered in comparing the amount of the land tax with the produce of the land." My authorities are no doubt able to defend themselves, but in my own article rice land alone was mentioned. I said "it (the land tax) requires at least 25 per cent. of his (the farmer's) net crop of rice." As a matter of fact, rice land has paid on the average 30,000,000 *yen* out of the total annual revenue of 40,000,000 *yen* received from the land tax. Rice is by all odds the most important agricultural product of Japan, and as the land on which it is cultivated pays on the average three-fourths of the national land taxes—tea, barley, wheat, building land, etc., only contributing one-fourth, one is justified in considering rice land by itself. I am aware that the dry land pays relatively a much smaller proportion of taxes. The cultivation of the mulberry has yielded very good profits to the farmer during the last ten years, and those farmers who cultivate rice on new land likewise have very low taxes to pay. What I stated in my article applied particularly to the rice land brought under the reform of 1877. I may add that my article was not specially on land taxation, but on general taxation in Japan; it was merely a descriptive account of the taxes, and the statement about rice land was but a sentence or two incidentally thrown in.

That the land tax of Japan is rent, I still believe to be loose writing. You say no landholder in Japan even possessed a title-deed until such documents were granted by the Meiji Government. "A title deed is merely a modern legal evidence of ownership, but real ownership of land has in past time existed in nearly every country of the world without a title-deed. In old Japan ownership of land as much else was determined largely by custom. In the Tokugawa period there were restrictions placed on the sale or transfer of land, but these were made for a political purpose mainly, viz., to carry out the great Tokugawa policy, the balance of power among the different classes. By a law passed in the 20th year of Kwanel (1643) it was enacted that land must be held under a mortgage ten years before ownership could be transferred. Various other restrictions were introduced, all tending to prevent the farmer from changing his occupation or alienating his land, not, however, on the theory that he was not owner, but that agriculture must be stable.

That as lord of the province the Bakufu government theoretically claimed a sort of ownership of all the land is probably true. But in this respect Japan was not alone; on the contrary, the theory was known in Europe at late as the 18th century. De Tocqueville in his *France before the Revolution* (p. 163) says:—"Louis XIV. publicly broached in his edicts the theory that all the land throughout the kingdom had originally been granted conditionally by the State, which was thus declared to be the only true landowner, and that all others were possessors whose rights were imperfect. This doctrine had arisen out of the feudal system of legislation; but it was not proclaimed in France until feudalism was dying out, and was never adopted by the Courts of Justice." A similarly vague theory may have been, and probably was, held in Japan, but neither in Japan nor in France were the contributions of the landowner to the State ever known as rent, but as taxes, but in both countries rents were dues paid to the landowner by the tenant.

All this, however, is not pertinent to the inquiry. The real question is whether, when the Bakufu Government was overthrown and the reformed land-tax introduced, the Government granted title-

deeds to the possessors of land and claimed a tax from them on the ground that these were substituted for the old rents paid to the State. This is the claim made in your editorial of October 6th, or otherwise the whole issue is irrelevant. There could be no greater misconception.

In 1873 the Government abolished all restrictions on the conveyance or transfer of land, but mentions not a word about State ownership; on the contrary, it states that a legal deed of sale should be evidence of ownership. In the general Imperial Proclamation of July 28, 1873, the following words are used:—"Taxation is one of the most important affairs of State upon which the welfare and happiness of the people depend. The old system of taxation lacked unity, as it bore too heavily upon one and too lightly upon another. The reformed system is established and is hereby promulgated." In this proclamation not a word is said of the old system of rent, but throughout it refers only to the old system of taxation. In the decree that follows, mention is made of the difficulties in the way of a fair system of taxation and the 6th Article runs thus:—"According to the old land tax the dues upon commodities and upon buildings were confused. But according to the reformed law there is a clear line of demarcation between the two, and the land tax is really to be one per cent. of the value of the land. But as the tax on commodities is not yet introduced, the land tax is temporarily imposed at the rate of 3 per cent. on the value of the land." In this Decree of the Prime Minister Sanjo the old land impost is frequently called a tax, but never rent, and it is compared, as may be noticed above, with other taxes on buildings, etc., but we hear not a word of theory of State ownership or rent.

Again, in 1879 when tile deeds were granted to the landowners, it was specifically stated on the back of the document that the people of Japan who were owners of soil should have this deed in evidence of ownership. Now, is it not clear that if ownership in land was not recognized until after the Restoration some mention should be made of it in these important decrees that imposed heavy taxes on the land owners? If such a theory had been acknowledged even tacitly by the land-holders it would have been an immense source of power to the new government. In this decree the government admits the rate of 3 per cent. to be high, inasmuch as it promises, as soon as possible, to lower the rate from 3 per cent. to 1 per cent., but this would have unnecessary had the government possessed the fee-simple of the land. Not once in any official document after the Restoration have I ever met with a hint of the theory that the State was owner of the land and the actual occupiers merely tenants; on the contrary, in those documents the occupiers are always described as owners.

At the close of your editorial you remark, "the condition under which the land came into the possession of its occupiers was that the annual sum payable by them should by subject to re-assessment every five years." Now if this were true that the Government had strictly reserved such a right in its own interest the theory that the Government holds the fee-simple of the land might have a leg—though a lame one—to stand on. But even this right was not reserved to the Government in the sense in which you understand it. The Imperial Decree of July 28, 1873, to which I have referred, followed the complete abolition of all previous restrictions on the land and established the rate of taxation at 3 per cent. on the value of the land. This Decree, consisting of seven articles was found to be defective in one important point: it left the door open to complaints from the farmers that their land had been appraised too highly, or if correctly appraised at the time of the revision, the market price of the land had since declined. The Government in order to provide for this class of complaints laid down a definite rule in an eighth article, promulgated May 12, 1874 or more than eight months after the original Decree. It was as follows:—"Even if the market price of the land increases or diminishes after the completion of the revision, yet the appraised value shall remain unchanged for at least five years after the Reform. If the landowner, however, should sell his land in the meantime at a lower price than the appraised value the proper official must write this price on the back of the title deed in red ink." From this article it is easy to see that the Government reserved no right of revising the value of the land every five years. Such revision was contemplated only if the landowner complained of over-valuation. Had the Government granted titles only, on condition of a five years' revision, surely the condition would have been clearly stated in the original Decree of July 28th, 1873.

Turning now to Mr. Zumoto's letter of October 12th, I find that he for the most part corroborates my view of the burden of the land tax. In the year 1885 he expressly declares that "land tax in

that year represented 28 $\frac{1}{2}$ per cent. of the net produce of the field." So far then I have not exaggerated the weight of the land tax resting on the farmers. But Mr. Zumoto considers that I am labouring under a delusion in thinking that this burden still rests upon the farmers. Clearly Mr. Zumoto is "no witch at a riddle." I particularly stated in my letter to the Mail that the Japanese land tax was a fixed amount and did not vary with the price or size of the crop and was comparatively light in periods of high prices and good harvests, —two conditions which have on the whole prevailed in the last two or possibly three years. I wrote my article for the *Quarterly Journal* over a year and a half ago, early in the year 1891. It was not published until June, 1892, because the Editor mislaid the manuscript. Of the distinguished German scholars whom Mr. Zumoto mentions, two published their works in the year 1890 and Dr. Ruthgen in the year 1891. The latter work was not even in print when I finished writing my article. So much for the great interval of time which Mr. Zumoto thinks must have elapsed between my study and that of the German scholars.

I fear that Mr. Zumoto is unfamiliar with economic investigations. In describing the Japanese land tax it would have been grossly unfair to select one or two years for comparing the burden of the tax with the net crop. The only method of giving a correct idea of such a peculiar tax is to take an average of many years. When I wrote my article my last statistics extended to the beginning of the year 1890. I am well aware that at present when the price of rice is high and crops are good the farmer's burden is not very heavy. But the average burden has been very heavy, as Mr. Zumoto himself confesses compared with land taxes in other countries. What has happened in the past may readily happen again. It does not now seem likely that low prices will again prevail in Japan especially with the rapid growth of an urban and manufacturing population. But if for instance the bimetallic league should be established and the silver *yen* rise, say to par with the gold *yen* it is not improbable that the price of rice will again fall and the tax would be much heavier than at present.

Mr. Zumoto tells you much if you know nothing. I mentioned Gumma *Ken* and Nagano *Ken* as examples of districts where the land-tax required a large proportion of the crop. This I know to be a fact from my own observation and from unquestionable Japanese authorities. Mr. Zumoto implies that these districts have profited most by the extension of sericulture. One must be very ignorant not to know so much. These two *Ken* are among the most progressive districts in Japan, especially because of the energy of the inhabitants in cultivating silk for foreign markets. Nevertheless, at the time of the Land Reform the land of these *Ken* was appraised relatively higher than the average of other districts in Japan, or at least, this is the opinion of competent Japanese who live there.

Mr. Zumoto evidently scents politics in my article, and he cannot let the occasion go by without expressing his dissent from certain politicians. His official zeal is, however, unnecessary. I had no political bias when I wrote my article, and expressed no opinion as to whether the Japanese land tax was a good or bad impost. It is natural for the land holders to urge a diminution of the rate of taxation, since this was vaguely promised as early as 1873, and besides the tax is high compared with the land taxes of western nations. But a land tax, especially in countries where land is rising in value, is not a bad form of taxation, and in some points it might be well perhaps for foreign countries to imitate Japan. It is true, however, that many Japanese farmers have been and are in a wretched economic condition and work year in year out to pay first, taxes, and second, interest on mortgages. These peasants seldom eat the rice which they spend their lives in producing, but they sell it to discharge the various national and local burdens resting on the land, and sympathy with their lot is not confined to any one party but is widespread among all who have actually seen their struggle for existence.

Yours respectfully,

GARRETT DROPPERS.

October 24th, 1892.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—I am glad to know that Professor Dropers is aware of the steady improvement of the farmer's condition in recent years. But he does not seem to have any faith in the stability of the improving state of affairs, and suggests that "what has happened in the past may readily happen again." Nobody is foolish enough to think that famine will never again visit the land or that under certain abnormal circumstances the price of rice will not fall again. But under normal circumstances, the yield of rice as well as of every other

Original from

variety of agricultural product, will continue to increase for many years to come; for, as I stated in my previous letter, the farmers are beginning to use chemical manures and are making improvements in the method of cultivation and in the selection of seeds. As to the price of rice, everything points to the strong probability that it will not, under normal conditions, fall again much below 7 yen per koku. Its rise in recent years is attributable principally to two causes; first, the comparatively rapid development of the non-agricultural portion of the population; and secondly, the increased exportation of the cereal to foreign countries. These two causes being likely to continue to operate with increasing force, no candid observer will deny that rice will in ordinary circumstances at least maintain the present price. Professor Droppers refers to the possibility of the establishment of a bi-metallic league, but as yet it seems rather early to take that contingency into consideration in discussing the practical question of taxation. Moreover, even supposing that a bimetallic league be established, say, five years hence, it is a very complicated problem to ascertain to what degree the event would affect the weight of the Japanese farmer's burden. If it lowered the price of rice, it would also enable the farmer to procure his necessities at correspondingly low figures. At all events, the depreciation in the price of rice that would follow the establishment of the bimetallic league, could not be large enough to consume the wide margin reserved by the extremely moderate basis which I adopted in my calculations.

Professor Droppers charges me with limiting my calculations only to a space of a few years. He says:—"In describing the Japanese land tax it would have been grossly unfair to select one or two years for comparing the burden of the tax with the net crop." I would only ask Professor Droppers to read my previous letter once more and find out for himself if he is justified in preferring such a sweeping charge against me. I endeavoured to show in my former letter that the original observations of the Professor only applied to an abnormal state of affairs which prevailed in the years 1884-1889. As he, however, seems to insist in maintaining that his estimate of the farmer's burden represents the average for the past many years, I invite him to study the following statistics relating to the average price of rice for the 17 years 1875-1891 and the average yield of rice per tan for the 14 years 1878-1891:—

Years.	Average price of rice per koku.	Average yield of rice per tan.
1875.....	4.95	—
1876.....	4.26	—
1877.....	4.22	—
1878.....	5.17	1.02
1879.....	7.00	1.28
1880.....	9.28	1.22
1881.....	9.09	1.17
1882.....	7.64	1.19
1883.....	5.49	1.19
1884.....	4.71	1.01
1885.....	5.86	1.31
1886.....	5.08	1.42
1887.....	4.71	1.52
1888.....	4.37	1.44
1889.....	5.56	1.21
1890.....	8.15	1.57
1891.....	6.86	1.38
General Average.	6.02	1.28

Seeing that this table covers more years than have been employed by Professor Droppers in any of his calculations, he will not refuse to agree that it gives more reliable results than his own statistics. We have then 6 yen 2 sen for the average price of rice for 17 years ending 1891, and 1.28 koku for the average yield of rice for 14 years ending 1891. We will adopt the moderate figure of 5 yen for the basis of calculation. Thus the gross receipt of the farmer from a tan of his rice field will be found to be 6 yen 40 sen, and his net receipt 5 yen 44 sen. I stated in my previous letter that the average amount of the land tax per tan of rice field is 1 yen and some odd rin. So it will be easy to see that the farmer paid, on the basis of the above calculation, about 18 per cent. of his net rice crop in the form of land tax. Now it must be borne in mind that the average of 1.28 koku adopted in the above calculation is very much below the actual average. For, first, as I stated in my previous letter, the returns of farm products reported to the Government always err on the side of underestimation; and secondly, the above mentioned average yield includes the variety of rice known as *okabo* (陸稻), which is cultivated on upland farm *hata* (畑), and the yield of which is less than one half that of the ordinary varieties of rice planted in the *ta* (田). As we are considering the rice field, properly so called, we ought to exclude the *okabo* variety of rice, and then the average yield will be found to

rise a little higher. Taking these circumstances into consideration, we may safely conclude that the farmer's burden has been on the average very much less than 18 per cent. of his net rice crop.

It is an interesting circumstance that, in calculating an average for the price of rice, Professor Droppers refers only to the six years from 1884 to 1889. By referring to the table I have shown above, it will be found that Professor Droppers has been very sagacious in shutting his eyes to the years immediately before and after the particular period of time selected by him. Perhaps such a method is proper for those who are not "unfamiliar with economic investigation."

Professor Droppers places himself in an unfortunate situation in regard to his observations about the Prefectures of Nagano and Gumma. He stated in his first letter to you "that in Gumma Ken Nagano Ken, and Tokyo Fu, the tax is, as a rule, higher than in the southern part of Japan." It is obvious that he simply means that the tax presses more heavily upon the farmers of these localities than upon those of southern parts. When I show him that the farmers of these localities are paying their tax very easily, he takes refuge in the assertion that "at the time of the Land Reform the land of these Ken was appraised relatively higher than the average of other districts in Japan." Now this was not the position originally assumed by him, for the assessed value of land and the actual weight of taxation as bearing upon the farmer are two different things. But even in this new position Professor Droppers is not quite secure. The average assessed value of rice fields for the whole country in 1880 was 46 yen 58 sen per tan. The average for Nagano was 40 yen 34 sen, and that for Gumma 57 yen 62 sen. These figures apply, with little modifications, to the time of the Land Reform. We thus see that Professor Droppers is anything but accurate in his method of "economic investigations."

I have no political purpose in view in the discussion of the present subject. I sincerely sympathize with the hard lot of many of the smaller farmers, who are groaning under the yoke, not of heavy taxation, but of debts at high interest. The rate of interest has in recent years somewhat decreased, but it is still high in most localities, the farmer paying not infrequently as much as 25 per cent. per annum. What the farmer wants most is cheap money; his salvation lies in some credit system enabling him to convert his debts on favourable terms.

I remain, yours respectfully,

M. ZUMOTO.

Tokyo, November 1st, 1891.

AFFAIRS IN ISE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—When Count Itagaki came here this spring on the occasion of the general election, to canvass for his favourite Secretary, Mr. Kiriwara, Governor Narukawa sent him a dozen bottles of wine, saying, that as his official position did not permit him to hold free intercourse with the Liberal leader he must confine himself to presenting a humble token of esteem. That was the only prominent event which furnished material for public gossip at a time when other parts of the Empire were plunged in a fierce struggle of electioneering rivalry. But now the tables are turned; it is this Ken which is quiet while the rest of the empire is, on the whole, enjoying peace, and the recollection of the general election is gradually fading away. The cause of the trouble is the transfer of the Chief of Police of Saga, a place specially notorious for the vehemence of the election campaign last spring, to this Prefecture.

The people of Miye, as is well known, are not less lukewarm in matters of politics than tractable in disposition. This estimate of their character must have been the chief ground, it is imagined, for appointing Mr. Tanaka, the ex-police chief of Saga, to this province. The Miye folks, or rather some dozen politicians said to represent them, thinking that to submit tamely to such an arrangement would be an act of pusillanimity, took steps before the arrival of Mr. Tanaka to have him removed elsewhere. They did not succeed, however, and so soon as it was announced that he had arrived here some of the malcontents called on him to have an interview. Being admitted, they at once began to pour forth streams of eloquence, advising him as friends to resign his position and avowing that the people of Miye could not consent to have a Chief of Police who had conducted himself in such a manner in Saga. Needless to say, the so called "friendly advice" was at once positively declined, or to add that a representation in the same sense to the Governor and lastly to the Home Minister met the same result. In every instance the answer was that to

judge an official unfit for a new post because he had acted in such and such a manner elsewhere, in accordance with instructions from his superiors, was not less precipitate than illogical. What were they then to do? They were not agitators of the *Soshi* type. On the contrary, they were all men holding the most influential positions in the locality, each of them being a member of the Provincial Assembly if not of the Diet. They found themselves placed in a very painful dilemma. To retreat from the position assumed by them would have been to cover themselves with disgrace in the eyes of the public; while to maintain it was to become involved in dangerous difficulties. It is much to be lamented that they were ultimately driven by stress of circumstances to choose the latter alternative. Within a week after the arrival of Mr. Tanaka, political meetings were held on two successive nights to harangue against him. And here be it said in justice to Mr. Tanaka, as also, to some extent, of the agitators themselves, that he is a man of high ability and great energy, and that the fact was openly acknowledged in the speeches and letters of the agitators.

The representatives of the sixteen District Assemblies of the Prefecture again held a special meeting a few days ago, and the resolutions they passed indicate that they have pushed the matter to extremities which do not redound to their credit. The resolutions are certainly many-sided, to say nothing of the absurdity of some of them; as witness the following:—

Resolved,—To stop voting the local secret service fund; to hold a political meeting twice a month to philippize against Mr. Tanaka; to cut down the expenditure for the local police to the lowest limit; to establish a special office to deal with matters relating to Mr. Tanaka; to prevent the re-election of any members of the Local Assembly who does not co-operate in the present campaign, should the Assembly be dissolved; to take measures to prevent Mr. Tanaka from having a residence; to station a watch in a house opposite to that of Mr. Tanaka in order to observe his movements.

In view of all these strange doings, the Local Assembly which meets next month promises to be of a stormy character, quite unusual in this comparatively pacific land of Ise. It is a disquieting state of affairs. The prominent agitators being mostly men of means and leisure, may indulge their proclivities as they please without much inconvenience to the public, but when their action becomes likely to disturb good order, as these present proceedings undoubtedly are, their fellow-provincials have a right to look for greater caution on their part. Already there are indications that the village politicians are only too eager to imitate, if not to outdo, the central movement. The Yokkaichi folks, for instance, have decided to hold no friendly meeting with a local official until they get their complaint heard. Thus, when Mr. Tanaka arrived in Yokkaichi in the course of his official tour, he was refused quarters in a well-known hotel, and had to put up for the night in an obscure inn. Such childish action is fortunately restricted, thus far, to the sea-port town of Yokkaichi. Our town of Tsu happily appears to lack sympathetic enthusiasm for the cause of the agitators. October is a month of Shinto fêtes. They follow one after another in quick succession, there being altogether seven or eight *matsuri* in this little community of about 25,000 souls. The most popular and gay is that of Hachiman, the ceremony in honour of the Emperor Ojin. This has just been held in as spirited a manner as has ever been witnessed. Were I not fearful of occupying too much of your valuable space, I should willingly enter into details about the ornamented cars drawn from street to street, the bands of music and dancing by girls and young men all in bright costumes; the mountains of red lanterns carried about in the evening, and so forth. Suffice it is to say that the celebration of Hachiman-gu may be said to be the only red-letter day throughout the whole year to most of the citizens of Tsu, and that we sincerely hope that the political clouds described above will not invade our peaceful horizon.

Yours, &c.

Y. T.

Tsu, Ise, October 28th, 1892.

LORD TENNYSON.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The interesting article upon the late Post Laureate you have recently extracted from the *San Francisco Call* contains two errors. The writer says that Lord Tennyson's "wealth of raven locks" had of late become "plentifully besprinkled with grey." This statement, made by Mr. William Watson (I think) a few months ago in a poem in which he spoke of the Laureate's

"wintry hair," was denied by Tennyson himself in a letter to Watson, in which he said that he had not a single grey hair on his head. The writer in the *Call* further speaks of Lionel Tennyson as being still alive. Lionel Tennyson died abroad on Easter Sunday, 1886. I happened to spend the first anniversary of his death at Farringford House, in company with a Japanese friend.

Yours faithfully,
October 27th, 1892.

TEIKOKU DAIGAKU SPORTS.

These sports which had been postponed a day on account of wet weather, came off on Sunday afternoon under most pleasant auspices. There was a large gathering of members of the university and their friends, while the Koto Chugakko showed up well in point of numbers. H.I.H. Prince Haru, Heir-Apparent, visited the grounds during part of the proceedings and was received most heartily. In several instances last year's records were not reached but in the Pole Jump Izawa raised it to 9 feet 8 in, five inches above the previous mark. Imamura also beat last year's record in throwing the cricket ball by eight feet. The obstacle race was the most amusing event, and at its conclusion Prince Haru retired, amid many signs of loyal good-will. The Guards' Band was in attendance. Details:—

100 YARDS RACE, (FINAL).

Emura	1

Imamura	2
T. Ikeda	3

The winner threw the ball 77 yards 1 ft. 11 in., but his handicap reduced his total to 76 yds. 6 ft. 7 in. Imamura's throw was 72 yds. 2 ft. 6 in. Eight entries. Last year Emura threw 83 yards 2 ft. with a handicap of 6 yds.

LONG JUMP.

Ikeda	1
Esachi	2
Emura	3
Noguchi	3

Ikeda jumped 15 ft. 9, Esachi 14 ft. 10 in., Emura 15 ft. 3 in., and Noguchi 14 ft. 8 in.; Emura's handicap reduced his jump to 14 ft. 8 in. and he thus tied with Noguchi who sprang from scratch. The jumping was very creditable. Twelve entries. Last year's record was 15 feet, 6 inches.

FLAG RACE.

T. Ikeda	1
Tomita	2
K. Ikeda	3

A close finish, the leading men getting home almost together. Twelve entries.

THROWING THE HAMMER.

Imamura	1
Kubota	2
Osawa	3

Imamura threw 96 feet 2 in.; Kubota, 90 feet 2 in.; Osawa 90 feet 11 in., but was handicapped 5 feet, reducing his throw to 85 feet 1 in. Twelve entries. Last year's record was 88 feet.

220 YARDS RACE, (FINAL).

K. Tomita	1
Edakuni	2
T. Tomita	3

Won by a yard; second and third separated by a foot; the rest in a bunch; two gave up. Ten ran.

HIGH JUMP.

Seki	1
Tanaka	2
Esaki	3

Seki noticed 4 ft. 10; Tanaka 4 ft. 9 in.; Esaki 4 ft. 8 in. Ten competitors.

TUG OF WAR.

A very stubborn contest, and after two trials the judge gave it as a drawn battle; the oranges were consequently scrambled between both sides.

KOTO CHUGAKKO RACE.

The little boys ran very spiritedly in both heats and finished very close to one another.

ONE LEGGED RACE (50 YARDS).

Makita	1
Mizushima	2
Ikeda	3

Makita won easily. Mizushima started from scratch.

scratch, Ikeda being conceded 4 yards. Time 11 $\frac{3}{10}$ secs. Ten started.

440 YARDS RACE.

Takata	1
Hoga	2
Yoshino	3

A good start, but the race soon developed into a procession. Takata won easily, three yards ahead of second and third, who were separated by only a foot or so. Time 51 $\frac{3}{10}$ secs.

440 YARDS RACE (FINAL HEAT).

Tanaka	1
Tomita	2
Kawada	3

The first three started with 16 yards in hand, Edakuni the scratch man finished fourth. Time 1m. 4 secs. Twelve started.

POLE JUMP.

Izawa	1
T. Ikeda	2
Mizumo	3

Izawa cleared 9 feet 8 inches, but allowed 8 inches to the others; T. Ikeda 8 ft. 9 in. Mizumo 8 ft. 9 in., with a handicap of 9 points. Last year Izawa and Mizumo tied at 9 ft. 3 in.

OBSTACLE RACE.

T. Ikeda	1
K. Ikeda	2
Tomita	3

Nine started and all but three came in. T. Ikeda, who started from scratch, was well to the front when the last obstacle, a 85lb. bale of iron, was reached. He was only a few feet ahead of second man at the finish. Time 1m. 27 $\frac{3}{10}$ secs.

THREE LEGGED RACE.

Nagano and Mizumo	1
Okamasu and Emura	2
Oshima and Kato	3

Eight couples started. Time 9 $\frac{3}{10}$ secs.

GAKUSHI RACE (440 YARDS).

Yamada	1
Mizushima	2
Kato	3

Four started. Yamada quickly secured a lead and led the procession home. Time 5 $\frac{3}{10}$ secs.

SPECIAL MEMBERS RACE.

Professor Sakurai	1
Professor Tamba	2
Professor Nakayama	3

Five started. Professor Sakurai came in alone, second and third man falling a few feet before reaching the post. Others gave up. Time, 58 $\frac{3}{10}$ secs.

880 YARDS RACE (FINAL HEAT).

Suda	1
Kono	2
Edakuni	3

Won easily. Time 2m. 31 $\frac{3}{10}$ secs.

CONSOLATION RACE (440 YARDS).

Yamashita	1
Shimosuka	2
Kuroda	3

Six started. A close finish, Yamashita coming just at the end. Time 57 secs.

LETTER FROM LONDON.

(FROM OUR OWN CORRESPONDENT.)

London, September 20th.

One of the biggest Bank runs on record took place last week, when the Birkbeck Bank was besieged from early in the morning until late at night by its panic-stricken depositors. After the suspensions of the London and General Bank, the Liberator Building Society, and the House and Land Investment Trust, it was expected that a run would be made on the Birkbeck, and consequently arrangements were made to meet with a bold front the first signs of panic exhibited by the Bank's patrons. No obstacles were thrown in the way of withdrawal, and demand forms were freely distributed among the eager customers, who increased in number so rapidly that the police had to be summoned and regulations made to admit of the clients going into the Bank in appropriate batches. At one time the crowd of waiting depositors, guarded by a strong cordon of police, could only be counted by hundreds and the street in which the Birkbeck is situated was crowded from end to end. A more striking example of people losing their heads was perhaps never witnessed, for, as was shown by the last balance-sheet, which was freely circulated among the excited depositors, the Bank was never in a more satisfactory condition. After the usual Banking hours had been

for two days considerably extended to meet the convenience of the withdrawers, and it was known that the Union Bank had announced its intention of standing by the Birkbeck in the crisis, as well as that the Bank of England had advanced half a million on securities, the panic began to subside, and on the fourth day from the commencement of the run, the few straggling depositors who awaited with withdrawal forms were hooted and jeered by the crowd of onlookers gathered round. And thus the panic died a natural death. It has been a splendid advertisement for the Birkbeck and probably in future greater confidence than ever will be reposed in this enterprising Banking institution.

This month's *Strand Magazine* includes an article on the Queen's Dolls written by Miss Low, with foot-notes by Her Majesty. The Queen it seems in her juvenile days had an exceptional partiality for dolls, which she used to dress after characters in current dramatic productions. The collection has been stored away since Her Majesty attained more mature years, and had it not have been for the present description the Queen Empress's subjects might have remained in blissful ignorance of her penchant for puppets.

An exhibition of Postage Stamps is to be opened in Paris on the 6th of next month, at which, from an amateur's stand-point, the North American collection will perhaps be of the most interest. It will comprise the Secession stamps with the 13 stars, the stamps struck previous to the Civil War and since, and those issued in 1869 and 1875 in which there are the heads of Washington, Franklin and Lincoln finely executed, a spread eagle, a Kentucky horse, a steamer, the landing of Columbus, the reading by the Fathers of the Republic of the Declaration of Independence, and the whole series of 24 stamps of from one to ten cents. The native states of India will be well represented and the inter-tropical States in Africa and South America that have a preference for landscapes as well as the States of Central America which affect volcanoes on their adhesives. Japan is represented by the chrysanthemum, Persia by the lion, and the centenary stamp of New South Wales has the head of Captain Cook. Altogether it is expected there will be over six thousand varieties at the coming exhibition.

About twelve years since Volapuk, a new tongue, was promulgated to the world with the avowed object of uniting all nations and peoples in the bond of a common universal language. From a conference of the Volapukists which has recently been held in Belgium, we learn that much enthusiasm is still being displayed for Pastor Schleyer and his system, and that since its inception the movement has made considerable progress. It was stated that already by the means of Volapuk three millions of people—English, French, German, Russian, Italian, and Belgium—are able to converse with each other on common ground. We are moreover told that thirty newspapers are published in Volapuk in different parts of the world, that courses of lectures on the new language are held at the Universities of Munich and Turin, and that in order to qualify themselves for their functions the Russian Press censors are bound to be acquainted with it.

A tale of illicit love having a tragic denouement came to light yesterday. For some weeks a lady and gentleman lived in apartments in West Brompton, as a married couple. The gentleman was Dr. Alexander Woodburn-Heron, an army surgeon, who had lately returned to England from the West Coast of Africa on a six months' leave of absence. The name of the lady who lived with him as his wife was Miriam Sharpe, who is said to have been young and beautiful, but of an impetuous disposition. Impatience of the humdrum of ordinary existence had led her to quit her home and go on the stage where she appeared as Miss Ruby Russell. It was at this period of her career that Dr. Woodburn-Heron was first attracted to her and he eventually took her off the stage. On Tuesday of this week the two were alone in their apartments, no one else being in the house, when suddenly Dr. Heron appeared at the front door and raised cries for help. When the police arrived, and subsequently a doctor, the lady was found in a state of semi-nudity quite unconscious and breathing with difficulty. The practitioner being puzzled as to the symptoms, further medical assistance was called in, and the work of artificial respiration was kept up from 10 o'clock at night until 5 the next morning, but without success, for at the latter hour the unhappy woman breathed her last. Until after a post-mortem is made it is not possible to state the cause of death, but the opinion that seems to find most favour is that death resulted from nasal hemorrhage.

Several cycling records were broken last Saturday at Herne Hill grounds. The most notable of these was that of J. Wass and C. Leslie Newland, who, on a tandem safety, succeeded in

well beating the record of 22 miles 1,070 yards for an hour's ride, made by them a short time previously, covering no less a distance than 23 miles 1,725 yards, thus beating all cycling records of every description. They also made world's records from 22 to 25 miles, their time for the last mentioned distance being 62 min. 29.15 sec. The one mile safety record was also beaten by A. W. Harris by 3 2.5 sec., his time being 2 min. 12 3.5 sec. A new record was likewise made in the flying quarter of a mile for tricycles, L. Strond doing the distance in 33 sec., and the same rider beat previous records for tricycling the half-mile, which he accomplished in 1 min. 15 3.5 sec. The successes concluded with the two miles professional safety record being beaten by E. Oxborrow, who covered the distance in 4 min. 56 3.5 sec. as against 5 min. 11 sec. which had been recorded in America.

An attempt was made in Paris last Sunday (18th September) to lower the one-mile bicycle record; with poor success, however, the time being 2 min. 15 seconds.

A lady riding astride a safety bicycle is now no uncommon sight in the streets of London, but the news that our present records have been beaten by members of the fair sex has yet to come. However, a very good performance has just been accomplished by Miss Dudley, a well-known rider, who rode from Hitchin to Lincoln, a distance of 100 miles, in little more than seven hours, or at an average speed of nearly 14 miles an hour.

With the close of the Cricket Season have been published the batting and bowling averages of the leading players. Shrewsbury, as last year, heads the batting list, while Mr. W. P. Patterson, who, however, only played in fourteen matches, comes second. To Mr. Stanley Scott belongs the honour of having made the highest individual score of the season, namely 224. Mr. H. T. Hewett and Mr. W. W. Read come next on the list, the latter making the highest score of the season (106) in a not-out innings. Below are given the first twelve batting averages:—

	No. of Times Inns. not out.	Total Runs.	Moist in Innings.	Aver. Age.
Shrewsbury	34	1060	312	31.00
Mr. W. H. Patterson	14	511	114	36.30
Mr. S. W. Scott	31	505	214	30.01
Mr. H. T. Hewett	14	407	201	35.71
Mr. W. W. Read	27	388	169	34.00
Mr. L. C. H. Palairet	46	343	146	37.01
Mr. A. E. Stoddart	47	340	130	37.47
Dr. W. G. Grace	31	335	90	31.02
Gunn	35	320	103	30.27
Mr. W. L. Murdoch	27	313	95	29.53
Henderson	45	294	71	28.91
Mr. P. H. Latham	10	254	69	28.21

The * indicates a not-out innings:—

In regard to the bowling averages, which follow, it will be noticed that, unlike the batting list, which contains nine amateurs out of the first dozen, the chief bowlers are, without any exception, professional players:—

	Overs.	Maidens.	Runs.	Wickets.	Aver. Age.
Lockwood	890.4	302	305	151	13.63
Mold	766.4	253	265	180	13.81
Briggs	704.5	438	2706	324	13.75
Abel	370.3	40	429	31	13.83
Attewell	743.3	700	2027	244	14.00
Watson	596.3	293	801	61	14.27
Pouther	466.3	124	396	26	15.23
Tyler	658.1	107	1548	202	15.33
Lohmann	1213.4	451	3376	154	15.33
J. T. Hearne	1360.5	527	2510	163	15.39
Flowers	585.4	227	1098	71	15.45
Captain Hedley	391.2	52	769	45	15.75
Nichols	466.3	124	396	26	15.95
Wainwright	822.4	289	1695	104	16.29
Peel	1302.3	552	3034	122	20.80
Mr. S. M. J. Woods	3055.4	379	5726	153	16.81
J. Hild	2939.1	72	500	30	16.86

In this list it will be seen two amateurs only appear, of whom Mr. Woods is undoubtedly the better. In comparing his performance with Lockwood's the contrast shows the difference between the best professional and the best amateur bowling. Mr. Woods has secured two more wickets than the professional, but at an average cost of 3½ more runs per wicket.

MARINE COURT OF INQUIRY.

THE LOSS OF THE "NAUTILUS."

A Marine Court of Inquiry was held in the British Court on Wednesday to investigate the circumstances attending the loss of the steam schooner *Nautilus*, late belonging to the fleet of the Eastern Whaling Company, Limited, Yokohama. The Court was constituted as follows:—

James Troup Esq., H.B.M.'s Consul and Assistant-Judge, President.

Lieut. Sadler, R.N. (*Leander*).

Archibald Murchie, Esq., master of the British ship *Middlesex*.

Mr. Davies, R.N., Clerk of the Court.

Mr. Alfred Auger, R.N., Master-at-arms.

The Clerk read the summons calling the Court, and the letters relating thereto.

Ernest Schenkel, master of the *Nautilus*, sworn

said—The signature in the official log-book is mine. I made the last entry myself.

The President read the entry.

Witness resuming—I made this entry after I arrived at Yokohama. The date, 29th September, is the date of the occurrence. The latitude would be between 53° and 54°, but I could tell exactly by referring to the chart—the chart of the Sea of Okhotsk.

To Lieut. Sadler—At six o'clock that morning (the 29th September) we were on the West side of Shantar Bay, close in shore. At first the wind was not strong, but it afterwards increased and we had to carry small closed-reefed sails. We did not leave the Bay, but remained there all the time. When we dropped anchor I considered we were so close to shore that I could have thrown a stone on the rocks. I could not say what the exact distance was, but it might have been a hundred or sixty yards away. We were right between two rocks—in the middle of the bight. The length of the schooner was 95 feet. I could not say how much swinging room it gave her, but there was room enough to swing in any way. There was room enough to swing clear of the rocks. I had had 100 fathoms of chain out. After it came on to blow I did not put a lead line over the side to see whether she dragged. I dropped the first anchor while it was perfectly calm, and afterwards dropped a second for safety—in case she dragged. We kept watch at sea from 7 to 11, 11 to 3, 3 to 7—four hour watches. But when on the whaling-ground we kept six hour watches. On Sept. 29th we were keeping six hour watches in the day time—two watches in the day, and four 3 hour watches at night. The second mate relieved the third mate at half-past five o'clock in the evening. He was supposed to stop on deck till ten—his watch being from 6 to 10. Just before daylight we commenced to try to get the ship off. I was in my bunk when I heard it blowing hard, and I went upon deck directly and found no one about. I called out three times and the foremast hand came aft.

Lieut. Sadler—But how did you know the ship was on shore?

Witness—The second mate came and told me that the ship was close on shore. This was between eight or nine. I asked the foremast man who's watch it was, and he said the second mate's; the foremast man, Kikugoro Jiro, said it was also his watch. I then went below and saw the second mate's boat-steerer getting up. He is not here, having shipped by the American whaler. When the ship is at anchor the second mate is responsible for anything that goes wrong in his watch; he may divide the watch with his boat-steerer. I asked the boat-steerer whether it was his watch or the second mate's? He said it was the second mate's. Then I went into the second mate's room; he was sitting on his chest, and seemed as if suddenly awakened. I told him to go forward and drop the second anchor. The second mate put his clothes and went on deck; I went to my room to put on my oil skins, as it was raining heavily. I heard no noise of the anchor, so I went on deck again. I told the second mate that the chain was overboard and that he should drop the anchor as quickly as he could; then he started to let go. As soon as I heard it go I went below and saw the mate. He asked me what was going wrong. The mate had all day on and all night off. I told him that I had dropped the second anchor because it was blowing.

The second mate came down after a while for a lamp in order to find out the length of chain paid out. He brought the lamp back and I asked if the anchors were holding, he answered, yes. By this time I was ready to go on deck. The second mate then came down again and said that the ship was close in shore. I went on deck myself at once. I saw forward, that the anchors were holding. I ordered the men to come aft. There was then 3 fathoms of water. The tide was running out, the water getting less gradually. The ship was too close in shore to get her under weigh, even if we had slipped both anchors. The barometer was rising, and I thought it best to wait till daylight. It was raining. About that time all boats were in. The schooner touched the bottom at one o'clock,—her stern-post kicked the rock at midnight. The water was troubled, the sea being rough. I spoke to the chief mate about several ways of getting the schooner out, but we discovered that none were practicable. The mate spoke continually about lowering the boats and thus made the men desperate. I negatived this proposition. Up to this time the schooner was right up to the wind, but now she paid off and the wind came on her port bow. When she touched the bottom the first time I ordered the engineer to blow the boiler off. I had got up steam ever since 9 o'clock the previous evening, my intention then was to get out and fetch the Bay again. I had a man at the

wheel to steer her clear but she would not steer. At two o'clock the wind came on her port bow, and the ship paid off broadside on the rocks. I ordered the second mate's boat to be lowered, and allowed the men to put some provisions and clothes in her, in case anything should happen. This was the starboard boat. I told the second mate to go astern and stop close to the ship. Instead of doing that he went half a mile up the bight, away from the port beam of the ship. I fired four or five rockets as he did not return, and lowered the third mate's boat. Still the second mate's boat did not return. The third mate had provisions in his boat. I told the third to go to the second mate and order him back. About four o'clock the boats returned. I ordered the men to come on board. Then I rove the port anchor, fastening the cat on. The starboard anchor was a long scoop out from the port anchor. The starboard anchor was making to windward. I hoisted the jib and foresail and ordered them to get up steam again. I hove up the starboard anchor and the ship paid off. A heavy squall came up; the ship was right before the wind and the other port anchor was dragging. (Matters still requiring further elucidation, witness went back a little in his examination.) The port anchor I ought to have said had been put out to windward. It was a long way further to windward than the starboard anchor, and I hauled the ship up to them. This was before she paid off. I hauled at both anchors until we had hove the starboard anchor up. (Witness then returned again to the time when he hoisted sail.) After the squall the ship came to again and the wind came on the starboard bow. Steam was now up. The time was between five and six o'clock. I hove away on the anchor, the sails were hauled down and the engines were put astern—the engines went ahead first, but as she would not go up to the wind I had them reversed. She couldn't keep the wind on her port bow. I walked forward and told the chief mate to get the starboard anchor-buoy up. I had told him to do this twice before, but he paid no attention to my order. I then went aft, and asked why the engines were stopped. The fireman told me that the engines were stopped. I had the starboard boat lowered then; I hoisted the jib and foresail, as we couldn't clear the propeller. The ship did not pay off quick enough to get clear, and we got right between the rocks. I brought a port anchor out and hove the anchor home, but there was no strain on it. I then brought it on to the port quarter. I lowered the second mate's boat and brought the port anchor to the starboard quarter. At this time the ship was pounding on the rocks very heavily. The tide was running out. This was about eight o'clock in the morning. After this the ship was running heavily with her broadside on to the rocks. I ordered the fireman to blow the boiler off—to open everything and come on deck. I saw the water rise in the engine-room. I ordered everybody to go to his place in the mate's boat. We all put off for the shore. I stopped on the beach for two or three hours and then returned to the ship. The American whaling ship *Hidalgo* came in for shelter at this time, and the captain offered me assistance, and said that if I could not get my ship off, he would wreck her for me. I went ashore to see the second and third mates, who were camped on the beach, and told them to come back to the ship at ten o'clock, so that we could get the ship off. I told them that if in any case we could not get the ship down to Yokohama we should sail her up the Bight as far as we could get her. I asked the second and third mates first to go back. They refused to go back to the ship. After that I asked the men and they refused also. They looked at the officers as if it was made up between them. Then I asked the captain of the *Hidalgo* to go out and let the other ship of the company know that we were wrecked. The schooner *Narwhal* came in on October 2nd, and I told the captain that my crew were mutinous. They (the *Narwhal*) took the things out of the ship.

The Court then adjourned for tiffin.

On resuming, Captain Schenkel drew a rough sketch of the bay of Shantar and his position at the time of the wreck, with the direction of the wind, etc.

The President (to the 2nd and 3rd mates)—Dick Richards, you have been charged with disobedience to lawful commands and with combining with others to disobey lawful commands, and with neglecting your duty, which charges are set out in the official log, what have you to say in answer—are you guilty or not guilty?

Richards—Not guilty.

The President—What have you to say to the charges, Harris—guilty or not guilty?

Harris—Not guilty.

The President—Have you any questions to put to the Court, either of you?

Richards and Harris having no questions to ask the captain's examination closed.

Jacob Lui, a boat steerer, was the first witness called by the captain. Being sworn he said—I heard the captain ask Antoine, the boat steerer, whose watch it was. Antoine said that it was Richard's (the second mate) watch on deck. Richard's was in his room at the time.

To Richards—It was not my watch on deck.

Peter Groves, 1st mate on board the *Nautilus*, sworn, said—I recollect the night of the 29th September—the night before we were wrecked. It was the second mate's watch on deck that night between 6 and 10 o'clock. I only know that it was the second mate's and the boat steerer's watch, and they divided time together. I could not hear the conversation that passed between the captain and the two mates on the shore, as I remained in the boat. I knew what the captain's object was in going ashore.

Kuge Shigetaro, having made affirmation deposited—I am an A.B. I was too far away to hear what the captain said to the second and third mates on shore. I heard the captain call to them, but I could not understand what he said.

James Garcia, boat steerer, sworn, said—It was the second mate's watch at 9 o'clock on the evening of the 29th September.

Matsuo Kanichi, engineer, deposed—I did not hear the captain tell the second and third mate to go back to the ship.

Cesar Barros, alias Antonio, ship-keeper, sworn, said—I heard the captain call for the second mate on the night that the ship went down. I stopped in the captain's boat, but I did not hear him tell the mates to go back on board.

Richards said that it was his watch below at 9 o'clock on the evening of the 29th September. He went on board the ship again the next day.

Harris said that Richard's watch was between half-past five and eleven. In answer to all questions why he refused to go back on board ship, witness steadily evaded making a relevant answer. This closed the case for the charges.

Groves, recalled, deposed—I considered that at four o'clock on the afternoon of Sept. 29th the ship was safely anchored. She was I think about 300 yards from the shore. There was about 3 fathoms of water beneath us; and about 17 fathoms of chain out, to laying in the water. It was a very dark night, raining, and no mark could be taken from the shore. The Captain called me about 9 o'clock; it was then beginning to blow. No further length of cable had been paid out since we anchored. The officer on deck, the second mate, should have reported that the ship was dragging. I do not exactly consider that everything was done to get the ship off.

To Lieut. Sadler—The Captain was justified in waiting till daylight.

To Captain Murchie—When she first went ashore everything was done that could have been done, and she ought to have been saved.

To Lieut. Sadler—When she set her sails she could have got off had the port anchor been slipped. The Captain took no notice of my advice, as he said he wanted to save his anchor. We were holding on head to windward—holding on to his anchor made the vessel sheer in shore again, and this caused the loss of the vessel.

To Captain Murchie—We were holding on to the kedge which was on the starboard side.

To Lieut. Sadler—The strongest rope on board was about a $3\frac{1}{2}$ to 4 inch.

Barros, recalled, said—I think it was the right thing to do to wait until daylight before attempting to get the ship off. There was one chance in the morning for the ship to get away; if we had hoisted the jib and fore sails and the towline or the kedge had held—I mean on the starboard side. This opportunity occurred before she was hauled off to the port anchors.

Schenkel, recalled, said—There was an opportunity to get away, but the propeller had got foul of a buoy rope and the engines stopped. Had the sails been set back quickly I might have got clear, but we were too close to the shore and I had not sufficient control over the men as I should have had she been further off shore. Then the chief mate lowered the boat and began talking; he made the men disperse—as himself. I ordered the mate to hoist the sails, but the work was not done quick enough. There were too many officers on board the ship; if I had had fewer I should have had more control over the men. It was the chief mate's fault that we fouled. I had told him twice to haul the buoy line off. I wanted the wind to come on the starboard quarter; I wanted her to come to the southward when we hoisted the sails. We could not steam through the wind—when I sang out no one answered. I had been

there before in a storm and found it a good holding ground. The wind that night, at the commencement, was from the northeastward.

Groves, re-examined—I could not get up the starboard anchor buoy when the captain told me to. I tried with a hook, but the current prevented. This was about eight o'clock in the morning. I was only told to get it up once. I did not report to the captain that I had failed to get the buoy up.

To Lieut. Sadler—There was twenty fathoms of rope on the buoy. The captain is responsible for the length of the rope. I did know that the buoy rope was foul of the propeller until the vessel was ashore.

To the President—The current had carried the rope beneath the ship.

To Lieut. Sadler—I was on the fo'c'se when the starboard anchor was weighed. I did not try to get the buoy in before the captain spoke to me. I was too busy. The ship was still at the time, the kedge anchor holding her on the starboard bow; there was a steady heave on the port anchor. I did not try to clear the buoy rope by cutting it.

The President—The decision of the Court will be given on Friday at three o'clock.

The Court then rose.

Friday, 4th November, 1892.

FINDING.

On the Court re-assembling yesterday, the President, addressing Capt. Schinckel, said that before reading the decision of the Court, he had one question to ask.

The President—You have no British Master's certificate have you?—No, your Honour.

No British certificate of any kind?—No, your Honour.

And none of your mates?—No, your Honour.

The President then read the following:—

Finding and Order of a Naval Court held at Yokohama on the second and fourth days of November, 1892, to investigate the circumstances attending the loss of the British steamship *Nautilus*, of the port of Shanghai, official number 72,788.

The *Nautilus* was an auxiliary screw steam whaling vessel, schooner rigged, of 95.16 tons registered tonnage, official number 72,788, built at Tokyo in 1881-82 and belonging to the port of Shanghai. Being on a whaling cruise in the Sea of Okhotsk, the vessel on the 29th September last, was lying in Shantar Bay. Being on a lee shore the Master made for Long's harbour (Little Shantar) where he anchored at 4 p.m. in a safe billet in 3 fathoms of water with 15 fathoms of chain. Toward 9 p.m., finding that the wind was increasing, the Master roused the second mate up and told him to drop a second anchor. Shortly afterwards the second mate reported the ship was close in shore. The Master decided to wait for daylight. About 1 a.m. on the 30th September, she touched bottom, the stern post bumping against the rocks. Steam which had been up since 9 p.m. was now blown off. The ship paying off with her starboard broadside to the rocks, the starboard boat was lowered in case of accident. Towards daylight the port anchor was weighed and laid out to windward with a hawser, and the ship hove off to both anchors, until the starboard anchor was weighed. The Master then set sail and ordered steam. In a heavy squall the port anchor dragged, the ship being before the wind. After the squall, the ship came up the wind, the sails were hauled down, and the engine ordered ahead. On the Master finding the vessel would not steer, the engines were ordered astern, when they were discovered to be stopped, the starboard buoy rope being foul of the propeller. An effort to clear the propeller being found ineffectual, although sail was made, the ship dragged in between the rocks. At about 8 o'clock the ship was abandoned. In view of the above circumstances, the Court finds that the Master, Ernest Schinckel (no British certificate) did not on anchoring, allow sufficient cable or take sufficient precautions to ascertain if the ship dragged. The second mate Dick Richards (no certificate) whose watch it was failed to report to the Master the fact that the ship was dragging; but in view of the fact that the mates were allowed to divide their watches with their boat steerers, it is possible that the original fault on this point was that of the boat steerer. In all probability the ship would have been saved after daylight, had the buoy rope not caught foul of the propeller; and the Court finds that the chief mate Groves (no certificate) was in fault in not having the buoy rope hauled in when the starboard anchor was weighed. The Master has failed to substantiate specifically the charges made by him in the entry made in the official log against second and third mates, but the discipline of the ship generally appears to have been very lax. The expenses of this Court, fixed at £80s. 5d. = \$55.80 local currency, are approved.

Dated at Yokohama, this 4th day of November, 1892.

JAMES TROUP,
H.M.'s Consul at Yokohama,
President of Naval Court.

A. HAYES-SADLER,
Lieutenant H.M.S. *Leander*.

ARCHD. MURCHIE,
Master British ship *Peterborough*,
of Greenock.

THE CAPTAIN OF THE "MARY ROSE"

A TALE OF TO-MORROW.

By W. LAIRD CLOWES.

GOLD MEDALLIST, UNITED STATES NAVAL INSTITUTE,
(FROM "THE ENGINEER.")

VIII.—THE CHASE TO MALTA.

Before proceeding with the account of the *Mary Rose's* cruise, it may be well to insert here two newspaper extracts. One is from the *Gibraltar Guardian* of Wednesday, May 14th; the other is from the *Paris Moniteur de la Guerre* of two or three days later.

Said the *Gibraltar* paper: "Something mysterious occurred last night to disturb the enemy. At dusk he renewed the bombardment as usual, and with, if possible, more than his usual fury, and the batteries replied as they have replied every night since the 3rd inst. Soon after midnight it was reported from the top of the rock that rockets had been observed at the mouth of the Strait to the westward. A little later the entire French Fleet ceased firing, formed in two columns of line abreast, and steamed away in the direction in which the signals had been seen. Heavy firing followed, but though the flashes were distinctly visible, it was impossible to make out what was going on. The warships, which for some days have been lying in the Bay with banked fires, were ordered to get up steam for full speed, it being believed that our fleet had come down in force to raise the siege, and that the co-operation of the naval flotilla here might be desirable. In about an hour the French came back pell-mell, and apparently in no sort of order, firing furiously. They went away to the eastward, as if in flight or pursuit, but that they were not in flight became evident early this morning, when most of them were discovered in their ordinary position under the African shore. Speculation is rife as to exactly what occurred, but it is certain that the was enemy surprised and seriously disturbed. One opinion is that heavy reinforcements have run through in order to strengthen the squadron at Malta. No news bearing on the subject has come in from the Spanish side, and, all the cables being cut, it is only from that side that we can hope to get any definite explanation."

The *Moniteur de la Guerre* was more precise, but less accurate. It headed its dispatch, "One more Victory in the Mediterranean," and described the affair as follows:—"Early on the morning of the 14th, the cruiser *Tage*, which had been dispatched to the westward by the Admiral in command off Gibraltar to observe the mouth of the Strait, signalled the approach of the enemy in force, coming from the direction of the Atlantic. The enemy was soon afterwards observed by the cruisers *Cosmos* and *Collogon*, which had been lying under Cape Spartel. The three vessels, undismayed by the superior strength of the enemy, advanced to the attack, and taking position on the flanks of the English squadron, discharged a succession of terrible broadsides, which must have been very murderous, but the effect of which could not in the darkness be accurately measured. Certain vessels were, it is declared, sunk by our fire; but the enemy was too powerful to be destroyed by only three ships. It was therefore with a sense of relief that the brave captain of the *Tage* remarked that his signals had been observed, and that, in reply, the whole of our magnificent fleet, abandoning for the moment the bombardment of Gibraltar—which, we are assured, is already a heap of *débris*—was coming to complete the destruction which he had so nobly begun. It approached in two lines. In vain did the unfortunate English manoeuvre to evade it. The shock was tremendous. It is recounted that our splendid ironclads rammed several of the enemy, which sank without leaving a trace. The struggle was desperate. One could not suspect that our brave fleet could sustain so determined an attack without grievous loss. Alas! The beautiful cruiser *Davout*, struck by a torpedo near the bows, when she had already suffered severely from the gun-fire of at least three ships, sank in less than an hour. The ironclad *Terrible* was also struck by a torpedo, but, though cruelly injured, is capable of being repaired. As for the brave *Tage*, she has received

Original from

at least fifty balls, and has suffered horribly; but she remains with the Fleet. It is believed that but one vessel of the enemy escaped the disaster. She is an ironclad of the largest size and of immense speed; but, pursued by some of our fastest ships, she should be by this time captured. Thus gallantly has our immortal Fleet confounded the efforts of the enemy to put once more his squadrons into the Mediterranean. That sea, cleared for ever from the presence of the usurper by the glorious battle of Toulon, remains, and will remain, French. We offer the homage of our warm and enthusiastic congratulations to the brave admiral and the brave officers who have added this triumphant page to the brilliant history of our great country."

The *Moniteur de la Guerre* was not, it should be explained, an official print; but as the Parisians preferred its accounts to the official dispatches—which were by many degrees more modest—the paper deserves to be quoted as a representative of French views. Even the French admirals were not able to give the true story of the night's work:—but that was not their fault. Of nothing is it more difficult to obtain a correct impression than an unexpected night action at sea.

It was true that some of the fastest ships of the French fleet were engaged in, the pursuit of the *Mary Rose*. When the sun was well up Maintruck had little difficulty in making out that astern of him, at distances varying from two to six miles, were the *Cécille*, *Alger*, *Troude*, and *Cosmas*. The first, a new protected cruiser, of 5,766 tons displacement, headed the enemy; then came the *Alger*, of 4,122 tons, and, in order the remaining pair, craft of 1,877 tons. The two smaller vessels were nominally the fastest of the flotilla, having done at their trials about 19.5 knots, or half a knot more than the other two; but they were not big enough to do that speed in broken water, and, indeed, both chased and chasers were not actually doing much more than 17.5 knots, for all experienced some little difficulty in getting the coal out of the bunkers. Maintruck was assured, however, by Mr. Macpherson that, if things came to a pinch, the privateer had nearly a knot of speed in hand, but the trimmers and stokers, who had been working like niggers all night, were naturally very much exhausted, and the chief engineer deemed it wise to spare them as much as possible.

There was much to be done that morning. The ship was in an awful condition, blood, splinters, and wreckage being everywhere; but a liberal use of the hose, and the exertions of the carpenter's mate, Mr. Prism Brown, and Mr. Tiller soon reduced things to something like order, and cleared away the most repulsive traces of the fight. The dead men were reverently committed to the deep, Maintruck reading over them the appointed simple service; and the wounded were attended to more fully than had been possible during the heat of the action. The enthusiasm of all hands was now extraordinary. Even men who had been badly hurt, and who, of course, had not closed their eyes for more than twenty-four hours, men who had worked hard at coaling ship off Wadi Gloug, and who had worked harder at the guns all night, declined to return themselves as injured, stuck to their posts, and expressed themselves as quite ready for another brush with the enemy. And Bowling himself set the example. He could not walk, but he caused a splintered arm-chair to be taken from his cabin and set on the quarter deck, and then had himself carried up and placed in it in the warm sunshine, whence, as the good ship pitched slightly, he could see the foe in hot chase, with the spray flying white from their bows and the smoke rolling black from their funnels.

"Glad to see you on deck, sir," said Maintruck, "though I suspect that you would be better in your bunk."

"Nonsense," said Bowling. "This air does one good. Besides, it doesn't do to knock under. It shows a bad example to the men. It will be time enough to turn in when I get to Malta. But I'll have you, Mr. Binnacle and Mr. Tompion turn in at once. It won't do for you to break down. Mr. Echo and one of the midshipmen shall keep watch, and you shall be called if necessary. How are Mr. Day and Mr. Salthorse?"

"They are both on deck, sir, and won't go below."

"Then send for them, if you please, Mr. Maintruck."

The two officers quickly appeared, Day with his left arm in a sling and a bloody bandage, and Salthorse with his coat cut open, and his blood-stained shirt showing through the aperture. Both were pale but cheerful.

"Why don't you go below, Mr. Day?" asked the captain. "I'm sorry to see that you are badly hurt."

Day took his glasses from his nose and said: "Oh, it's not much, sir. If I stay on deck I can

carry on well enough, but if I turn in, you know, I may get stiff, and not be able to be up when they come on again."

"And what have you to say, Mr. Salthorse?" demanded Bowling.

"Say, sir?" returned Salthorse. "Well, you know how long I've been at sea, and you know that, until this cruise, the only fighting I have ever seen has been with niggers, Egyptians, Arabs, and that sort of village. Never had a chance, sir. Now there is a chance, sir, and with your permission I don't intend to lose it. I'll go below, but if I go, sir, you must put me under arrest." He said this almost angrily, as if he suspected Bowling of aiming in an unjustifiable manner at the liberty of the subject.

"I shan't order you below, then, at present," replied Bowling, with a painful smile. "But do take care of yourselves, please, gentlemen. There may be plenty for us to do yet. Get chairs on deck or on the bridge, and then, if you really think that we can keep watch among us, I'll order all the unwounded officers and as many of the men as can be spared, to turn in. That is, perhaps, the best economy. We are not good for much more fighting just now, but we can keep some sort of look-out."

And thus it happened that soon after breakfast, few beside the wounded remained on deck. Those who had only been bruised or scratched, or who had escaped unhurt, were all asleep or, at least, lying down. None took of their clothes, and hardly any enjoyed much more than broken snatches of slumber; but a sailor does not need sleep in large quantities at a time, and for him a rug on the bare deck or a ward-room sofa makes as pleasant a resting-place as any other in war time.

The *Cécille* occasionally fired her bow guns, and the machine guns in her tops; but the range was long, the motion was still considerable, and Salthorse, who had placed a chair for himself behind the wreck of the conning tower, was able to keep a good look-out without much exposing himself. Nevertheless before dinner-time one man had been killed and a second had received a further wound. The enemy's vessels gained little if anything on the *Mary Rose*; but by noon they were more together, and the *Alger* was nearly abreast of the *Cécille*, and had also begun to fire. Bowling had the chart brought down to him, and having caused an observation to be taken, and having looked at the log, made out that at eight bells the ship was still 600 miles from Malta, and that if all went at the best, she could not get into Valetta Harbour before five or six o'clock on Saturday, May 16th. She had still therefore, or might have, to run for about fifty-four hours before the enemy. He shook his head doubtfully, and having got a blue-jacket to bring him his pipe, considered the matter silently; until at half-past three Maintruck—who had had a bath and some tea—came on deck again, declaring that he felt quite refreshed and fit for anything.

"Look here, Mr. Maintruck," and Bowling, "we have before us a fifty hours' run to Malta. After what we have been doing, our boilers can't be as good as they were. A hundred slight accidents may occur to temporarily disable us. Tubes may burst or leak, the bearings may heat, a chance shot may damage our helm as the ship lifts; or we may sinash a shaft. Even if we have no accidents, how can we expect the engine-room staff to carry on for another fifty hours on end? Flesh and blood can't stand it. I wonder that I haven't had reports already of men knocking up. They are sticking to it like Britoos down there, but we mustn't forget that they are human beings. Now, what do you think?"

"Perhaps, sir, if the night is dark," said the first lieutenant, "and if for a few hours we can pile on that extra knot which Mr. Macpherson tells us he has in reserve, we might manage to give the enemy the slip, especially if we steam without lights."

"That's the point," soliloquised Bowling aloud. "First, can we give them the slip? I think not. If we pile on that extra knot, we shall have such a flame dancing from the tops of our funnels that we shall be visible all over the Mediterranean. Secondly, do we want to give them the slip? Again I think not. There are four ships there, it is true, but not one of them is armoured, while we, after our last night's work especially, may almost be classed as a battleship. The question then, is: shall we run, or shall we turn; shall we flee, or shall we fight?"

"I see what you mean, sir," said Maintruck. "Of course we are now very short-handed, and the men, particularly the stokers, are tired."

"They will be more tired if we carry on like this for long. No, Maintruck; I think that we will fight. That's what the people at home would like us to do. Here is what I intend to attempt. Just before it grows dusk I shall crack on that

extra knot of Mr. Macpherson's. This will induce the enemy, who now seem to think that if they can't catch us they can at least hold on, to crack on steam also. The result will be that in a few hours we shall spread them out in a long tail as they were the first thing this morning: We will carry no lights. Suddenly we will shut off steam, and let the enemy come down right on top of us. They will think that some accident has happened to us. One or two of them will perhaps be venture-some; and then, starting our engines again, we will let them have it. The swell is very much less than it was. We shall make far better shooting than we did last night. What do you think?"

Mr. Maintruck was not the officer to shrink from any action that promised the remotest chance of success; and this project, though a daring one, seemed, upon the whole, to be less risky than the alternative of keeping everybody and everything at the highest possible tension for another fifty hours. "If that is your plan, sir," he answered, "all I have to say is that I am sure your officers and men will try to carry it through."

"Then, if you please, send all hands aft that I may explain things to everyone."

No one who was able to move and who was not detained by duty failed to appear in answer to the call. It was a motley assemblage. Half the men were powder-stained and unkempt; but all were ready for anything; and there was not one who preferred fleeing to fighting when Bowling, from his arm-chair, told them how matters lay. Their general demeanour removed from the Captain's mind any traces of hesitation that may have lingered there. "My men," he said warmly, when he saw how they received his ideas, "I am proud to command you; and if you do your duty as I believe you will, you will be hereafter as proud as I shall to have sailed in the *Mary Rose*."

The events of the previous night had given everyone great confidence in the Captain, and after Bowling's brief address the men clustered together as if debating something which caused them considerable uneasiness. Suddenly a tough old quartermaster stepped forward. "We means no offence, sir, to any of the officers," said he bluntly; "and weel' do our best no matter who commands us, but we begs respectful to arst whether you feels yourself well enough, sir, for this 'ere bit of work, seein' as if you don't, and if you think as 'ow you might feel more inclined like to-morrow night, why, sir, we ain't got no objections to waiting for you. Only we do 'ope, sir, as you'll command the ship, sir, if so be as it's convenient."

Bowling laughed, and managed to rise. It hurt him to laugh, and it cost him a most painful effort to stand up, but it did him good to have this awkward but honest token of the confidence of the lower deck. "My men," he said, "I'm not much use, as you may see, but no bones are broken, and while I can stay on deck, I shall be the Captain of the *Mary Rose*. You needn't fear about that."

The chase continued without much incident all the afternoon, except that the *Cosmas*, having apparently broken down, abandoned the pursuit, and that shots were exchanged at intervals. The swell almost disappeared, and the shooting consequently became less wild. Indeed, some very fair practice was made with the *Mary Rose's* after guns, both the *Alger* and the *Cécille* being struck more than once. On the other hand, a shell from the *Alger* burst in the Captain's cabin of the *Mary Rose*, and would, had Bowling been present, have infallibly made an end of him.

The gun on the starboard sponson was, as has been noticed, disabled. Bowling determined, therefore, to fight his port side as much, and his starboard side as little as possible. Just before dusk, as he had intended, he increased speed to the utmost limit, and, as he had expected, this induced the *Cécille* to forge a little ahead of her consorts. The truth, no doubt, was that all day she had been adapting her speed to theirs, so as to avoid leaving them or being herself unsupported, and that now, with darkness coming on and the *Mary Rose* drawing away, she was afraid of losing sight of the privateer in the night. Mr. Binnacle, who gave the subject his very careful attention, was of opinion that when the *Mary Rose* quickened to 18.5 knots the *Cécille* did the same, and that thus she left her consorts each hour about a knot further behind her in her wake, for they appeared to be incapable of materially increasing speed.

Speed was raised at seven o'clock, and was admirably maintained by Mr. Macpherson and his people. The result was that at eleven o'clock, when about two miles still intervened between the *Mary Rose* and the *Cécille*, there was a gap of at least six miles between the *Cécille* and the *Alger*, and a further gap of over one mile between the *Alger* and the *Troude*.

Bowling, with a rug thrown over him, had since about eight o'clock been dozing in his arm-chair. On being left alone, he was leaving word that he was to be

roused at one bell. He was not, however, able to secure as much sorely needed rest as he had bargained for. At about ten minutes past eleven the enemy played a wholly unexpected card, which, but for the *Mary Rose's* admirable look-out and the coolness and discipline of the men at the guns, would have inevitably and very summarily decided the game.

The chasing squadron must either have been accompanied by, or have fallen in with and picked up, a division of torpedo boats. It is possible that the boats followed the chase all the way from Gibraltar, and that the "tailing off" of the French cruisers may, after all, have been deliberately devised in order to enable the torpedo boats to remain well out of sight in the rear without losing touch of the privateer. On the other hand, the boats may have been scouting independently, and have been accidentally sighted by the French senior officer and then taken under his orders. The point is immaterial, and in all probability it will now never be cleared up. All that is certain and material is that, at a few minutes past eleven, the look-out in the *Mary Rose's* mizen-top reported that three suspicious-looking objects were creeping up ahead of the *Cécille*, one being nearly under her bows, and the two others betraying a tendency to work round on the *Mary Rose's* quarters. Bowling was at once apprised of the discovery, and he caused himself and his chair to be carried up on to the after end of the superstructure at the foot of the mizen, whence he could not only see the enemy, but could direct the fire of all the after guns, i.e., of the 9.2 in. breech-loading and the four 4.7 in. guns on the poop, of two 6-pounder quick-firing and two Nordenfelts on the upper deck, of the Maxim R.C. machine gun in the mizen-top, and of two 6-pounder quick-firing guns mounted in his own cabin on the main deck. It was by no means very dark, and, bearing in mind the experience gained in the action off Toulon, Bowling, who speedily saw that a torpedo attack was pending, gave orders that though the search-lights were to be kept in readiness they were on no account to be used without special and definite instructions. He also ordered cordite ammunition to be got up for all the quick-firing and machine guns, and no other to be employed. On previous occasions he had used ordinary powder, except for rifle fire; but he realised that in the coming crisis smoke would seriously inconvenience him, and be of no possible counterbalancing advantage.

The boats, as has been said, were first noticed at 10° 10'. The *Mary Rose* was then doing about 18.3 knots, and the *Cécille*, though holding her own, was not coming up. After a few minutes of careful observation Binnacle came to the conclusion that the boats were doing about 20.3, or two knots more than the privateer. There was apparently a distance of about four cables between the centre boat and each of the two flank ones. The centre one kept a course immediately ahead of that of the *Cécille*. The outer ones were disposed on each of her bows about four points before her beam, and it was tolerably obvious that the tactics of the foe contemplated holding the centre boat in reserve under the dark bows of the *Cécille*, and utilising her to attack during the confusion which, it was anticipated, would be caused by the simultaneous onslaught of the two other boats, one on each quarter of the *Mary Rose*.

These tactics, though ingenious, were demonstrably faulty, for it is a cardinal rule that no torpedo attack upon an armed vessel under steam should—especially when the attacking force is weak—be attempted from astern, and the reason for this is simple and obvious.

For the sake of argument, let the armed vessel be steaming at a rate of 10 knots, or 17 ft. a second; and let the attacking boats be steaming at rate of 18 knots, or 30 ft. a second; and let the "dangerous zone" of fire from the armed vessel be taken to be 2,000 yards, and the effective range of the boats' torpedoes discharged at night at a moving mark at 150 yards. The great object of the attacking boats is of course to traverse the "helpless zone"—the zone, that is, in which, although they may be fired at, they cannot effectively discharge their torpedoes, in as brief a period as possible. This zone is 1,850 yards broad. If the boats enter it from directly ahead of the armed ship, they traverse it in 1' 58"; but if they enter it from directly astern, it takes them 7' 7" to cross it. Therefore, other things being equal, a boat attacking from ahead has much more than three times as good a chance of escaping unhurt as a boat attacking from astern has. But in addition to this, in the particular case in question, if the boats had passed unseen ahead of the *Mary Rose*, and had attacked her from ahead they would probably—even if they had not seriously damaged her—have forced her to turn, and would so have allowed their consorts the cruisers to come up with her. To pass from a position two miles astern of her

to one, say, two miles ahead of her without undergoing risk of being sighted by her would, it is true, have taken the torpedo boats in this instance a period of three or four hours at least; but, then, the result might easily have been success, instead of failure and disaster.

The non-employment of the search-lights by the *Mary Rose* left the French ignorant as to whether or not the progress of the attack was observed. Bowling, on the other hand, was able to keep his men perfectly cool and unfurried. He ordered that fire from everything, the 9.2 in. gun only excepted, that would bear, should be opened upon the enemy when he was at a distance of 400 yards, and not before. The port quarter guns were devoted to the boat on the port quarter; the starboard quarter guns to that on the starboard quarter. The Maxim gun was hidden to divide its attentions, and the riflemen were also divided; and, just upon the stroke of midnight, without having previously given forth the least warning of what was intended, the privateer opened fire. It was short, quick, terrible work. Harried by very little smoke, the men fired as fast as was consistent with the most careful aiming, and the boats, though most gallantly handled, really had no chance. A landsman might have experienced difficulty in seeing the low, dark, ill-defined masses upon the water; but to the trained eyes of men who had followed the sea, the scene was almost as clear as was to be desired; and even when the boats themselves occasionally showed doubtfully, their white bow-waves sufficiently betrayed them and guided the gunners. All was over in five minutes. Torpedoes may have been discharged; but if so, they did not reach the privateer, or run anywhere near her; and as for the boats, they sank under the awful storm of projectiles that rained upon them. The third one, coming up astern under a great head of steam in the thick of the fight, blew up. Whether her boilers had exploded, or she had been struck by a projectile, can never be known. No one in the *Mary Rose* received so much as a scratch.

At half-past twelve, determined, if the enemy should still give him a chance of doing so, to carry out his original plan, Bowling ordered Mr. Tompion to see that the poop and fore-castle heavy guns, and all the guns that would train over on to the port side, were loaded and once more ready for action. Then he caused himself to be moved to a partially sheltered position near the wreck of the conning tower, whence he could shout down his commands through one of the deck scuttles already mentioned. "When we stop the engines, Mr. Tompion," he said, "or rather, when we go dead slow—for perhaps it is not wise to have no way on the ship—I shall bring her very gently round to port, so that if the enemy keeps on his course we shall lie right across his bows. If he doesn't keep on his course, I shall still endeavour to put myself in that position, and to maintain it as long as I safely can. It will at least entice him to attempt to use his ram, though of course, I don't intend to let him go as far as that. Now I want you to have every gun, great and small, concentrated for five hundred yards, and fire at that distance only. You give the word. I know you won't estimate the distance very wrongly. I will confine myself to handling the ship, but I must have the first lieutenant close at hand, so that he may take command in an instant, should anything happen to me. Please, therefore, asked Mr. Maintruck to come here, and ask Mr. Tripper to stand by with the underwater torpedoes in case we want them."

Mr. Maintruck, who had been making the round of the ship, reported everything ready. The men, including many of the wounded, were at their quarters; Day and Salthorse had taken command of their own guns, almost as if they had never been hurt; and there was everywhere an orderly quietness that seemed marvellous in a vessel that had been fitted out and commissioned in so great a hurry. But by this time confidence reigned throughout, and there is nothing so conducive to discipline as well-placed confidence in a ship and in her officers. Both had been tried: neither had been found wanting.

The *Cécille*, two miles astern, was just visible—a blacker spot than the rest of the darkness. She showed no lights ahead, though doubtless, for the benefit of her consorts, she showed some astern. They were, of course, out of sight.

"Reduce speed to sixty revolution," cried Bowling, and added at intervals of a few seconds:—"Reduce to forty!" "Reduce to twenty!"

In a minute or so the growing blackness and distinctness of the *Cécille* indicated that she was rapidly coming up. To assist her, Bowling reversed his engines gently for a short time, and then went ahead again at twenty revolutions and put his helm over. The Frenchman was approaching at the rate of a mile in three minutes. There was

not, therefore, much delay. Yet to the men at the guns, and especially to the captains, who had their eyes along the luminous sights, the period seemed an eternity. Suddenly a rocket shot up from the *Cécille*, followed by another and another and another.

"That must be her signal that we have broken down, sir," said Maintruck. "She will slow up now, I suspect."

"Let her think what she likes," said Bowling, "so long as she doesn't think that we have surrendered," and he looked aloft, where three enormous blue ensigns were fluttering, one from each truck, and one from the forestay, these being in addition to be able to say that she thought that we had given up the game. Gad! she is coming straight down on us."

"But now she is swerving, sir. She is going to range up on our port hand."

"Hang it!" cried Bowling, staggering to his feet; "I can't sit here and fight the ship from an arm chair. Yes, by Jove! she is going round to port, but she is slowing! Pass the word, there, to go ahead at forty revolutions. I can still bring the ship nearly across her bows."

But the *Cécille* turned only slightly. Her captain seemed, on second thoughts, to conclude that he could not take up a more advantageous position than circumstances had prepared for him; and, firing a single shot, which whistled harmlessly between the *Mary Rose's* funnels, he held on as before, keeping his head straight for the privateer, but slowing considerably. When he was but eight hundred yards distant he fired again. This time the projectile struck the deck forward, scooped out a great hole, drove up a torrent of splinters, and ricocheted away to the eastward. The enemy was clearly beginning to think that he did not quite know what to make of the situation. Once more he swerved to port, but as he did so Bowling put the *Mary Rose's* helm over to starboard, and so kept his ship still more or less across the cruiser's bows. A minute later, Tompion, in a voice like the bellow of a bull, gave the word to fire; and three 9.4 in. and four 4.7 in. besides smaller guns, were discharged almost simultaneously, making the ship tremble from stem to stern.

What breeze there was from the west. The rush of smoke, therefore, floated gently across the privateer's deck, and for an instant, blinded everyone. But already Bowling had ordered full speed ahead, and put his helm still further over to starboard, so that the *Mary Rose* began to round the cruiser's bows, and to pass alongside of her, though in the contrary direction.

"It is ticklish work, Maintruck," said the Captain, "and I know it, but I must do it because we can only fight the port guns."

"We shall clear her easily," cried the first lieutenant as the smoke drifted off. "By heavens! What's the matter, Sir? They're hanging out lights."

The two vessels were still about five hundred yards distant one from the other, and no one in the *Mary Rose* could make out very clearly what was going forward in the *Cécille*, but there was great shouting on board, and lanterns were being waved, and the ship was not firing.

"Mr. Tompion wishes me to say, sir, that he believes the enemy has struck," said Echo, suddenly appearing and saluting Bowling.

The captain, with a great effort, dragged himself on to the bridge, and gazed for a moment, but not at the *Cécille*.

"Struck or not struck," he said to Maintruck, as he staggered down again, "I don't care. The others are coming up. We have not finished this business." And regaining his chair, into which he sank from sheer weakness, he cried through the scuttle, "That will do! Helm amidships! Full speed!"

The *Mary Rose*, now heading nearly west, passed the *Cécille*, on board of which the shouting and waving of lights continued, and quickly sighted the *Alger* approaching on the port bow, but at a considerable distance. This distance, however, rapidly decreased. "Concentrate your fire again, Mr. Tompion," shouted Bowling, "and let this one have it, like the other, at five hundred yards." And he held on, still keeping the enemy about four points on his port bow. The Frenchman evidently intended to do his best to ram, for he came up gallantly, not even firing until he was well within a thousand yards. In this position only two of the *Mary Rose's* 9.4 in. and two of her 4.7 in. guns would bear, but at the right distance they were fired, and at the next instant Bowling ported his helm, and so brought his after port guns to bear. They, too, were fired, but they did not stop the *Alger*, which pluckily began to follow the privateer's motions and to circle in pursuit of her, firing furiously at the same time. The work was getting warm. Men flung up their arms, and fell forward on their faces. Splinters

flew. Two shells, in rapid succession, burst below. Maintruck staggered sideways, and collapsed under the break of the poop.

"Stand by to fire the stern torpedo," should Bowling hoarsely. "Full speed astern starboard engine!"

This order and "Port helm!" brought the ship round so rapidly that the *Alger*, turning less quickly, passed under the privateer's stern. The distance was barely two cables, when Bowling, seeing the enemy's broadside fully exposed, gave the word. Fifteen seconds later the Whitehead struck its mark, and as Bowling heard the explosion he sank senseless on deck.

THE YOKOHAMA REGATTA.

FIRST DAY.

The "Coming of Age" Regatta of the Yokohama Amateur Rowing Club, which opened on Thursday, was scarcely treated by our old enemy the North-east wind with the respectful courtesy due to such an auspicious occasion. The sun was shining brightly enough and there was a large attendance of "fair women and brave men" in and around the verandah and precincts of the boat-house, but the air had a chilly sharpness and the rollers outside the breakwater were really more than an oarsman bargained for in a regatta race. The boat-house was decorated in a most ornate style with bunting and feathery bamboo, and in honour of the Emperor's Birthday the national flag of Japan floated proudly at the head of the club flagstaff. The fleet of the Sailing Club dressed ship, the *Daimyo* flew all her winning flags, a number which was beyond the range of computation—and the ships in Harbour being decked out in a similar fashion, (in their case in honour of the Emperor) the port wore a gay and festive appearance by the time the first race was about to start. The committee, who discharged their duties admirably, particularly the honorary secretary, the judge, starter, and time-keeper, were:—J. Rickett, Captain; C. K. Marshall Martin, Hon. Secretary; E. T. Nicholas, Hon. Treasurer; Henry C. Litchfield, Judge; James Dodds, Umpire; T. Brewer, Starter; J. F. Pinn, Time-keeper; W. W. Campbell, Duncan McNeill, Lieut. H. F. David, R.N.R., M. F. Bengen, W. W. Till, H. V. Henson, E. W. Tilden, Geo. Philip, W. J. Kenny, R. de B. Layard, V. Blad, Dr. Wheeler, Ensign A. Bainbridge Hoff, U.S.N.

The man-of-war boats' race was postponed, so the junior sculls led off, proving an easy win for Hood and Smith—a procession in fact. The interport fours, of course, centred the greatest interest of the day. Three crews had entered, Kobe, the winners last year, Hongkong, and Yokohama, Kobe were slightly the favourites from their first practice in Yokohama waters, but Hongkong ran them close right up to the time of starting. Both crews rowed well together, though each possessed weak points which it would be invidious to dwell upon now that the race has been lost and won. Kobe were decidedly the heavier crew, a fact which told greatly in their favour in the rough water, while Hongkong undoubtedly suffered from the too constant changing of men and places during their practices up here. In justice to Yokohama, who rowed a plucky race, it must be said that their crew was far too light for the heavy seas that had to be encountered—they deserved praise for venturing down in such vile water. The race itself was a procession from start to finish, Kobe obtaining the lead to begin with and sticking to it—but the best crew won undoubtedly. The time 9m. 20½ was creditable considering the weather. The junior fours was a spirited encounter, and here again the "best men"—the men who rowed in best style—won. In this race Blanchard took the place of Kingdon at very short notice. The interport double sculls was a triumph to the "Father of the Kobe oarsmen," Sims, who was stroking in Hongkong in the 60's. He pulled his boat through in splendid form, and his enthusiastic club chaired him from his boat to the dressing rooms amid frantic applause from all. The veteran stayed better, in fact, than the youngsters. The club pair oars, for the Japan Brewery Cup, was scratched owing to the increasing violence of the wind. The race set down before this, the single sculls, witnessed the only accident of the day. Hood and Shepherd started along side the breakwater owing to the choppy seas, but halfway down the straight a sampan cut Shepherd down and the oarsman found himself struggling in the water almost before any warning had been given. He fortunately disengaged his feet as he went under, and so was enabled to swim about till picked up by a passing launch. His boat was severely damaged. This race was for the Ladies' Purse, and Hood, on his return, was called up to the boat-house to receive the prize from the hands of Miss Rickett. The

last race of the day, Bluff v. Settlement, was rowed under the moonlight. The boats originally tried to start from the Pacific Mail wharf but were swamped before reaching the post. The course was accordingly altered to one straight down the harbour alongside the breakwater. One of the prettiest pieces of spurling of the day took place in this encounter, Nicholas, who certainly carries away the palm for neatness and grace of stroke of any oarsman in Japan, doing his best to land his crew home, but without success.

The Yokohama Town Band was in attendance and rendered pleasing aid in whiling away the tedium of some parts of the proceedings, the Ladies at such times taking advantage to start an impromptu dance.

Details:—

JUNIOR DOUBLE SCULLS, ½ MILE.

Geo. Hood, 135lb.	1
A. Brooke Smith, 145lb.	1
A. J. Watt, 121lb.	2
R. Abbey, 129lb.	2

Smith and Hood secured the best of the start and romped home easily, finishing ten lengths in front. Time, 7m. 45 sec.

INTERPORT-PORT FOURS, 1 NAUTICAL MILE.

KOBE. (MIDDLE STATION.)

W. Kerr, bow, 150lb.	1
G. W. Brockenhurst, 2, 174lb.	
G. W. Noel, 3, 180lb.	
E. B. Shepherd, stroke, 145lb.	
J. R. Gibson, cox., 125lb.	

HONGKONG. (INSIDE STATION.)

J. M. Manuk, bow, 150lb.	2
G. Meynell, 2, 162lb.	
H. W. Slade, 3, 150lb.	
J. A. Sampson, stroke, 160lb.	
A. B. Brown, cox., 119lb.	

YOKOHAMA. (OUTSIDE STATION.)

F. E. Freeze, bow, 155lb.	3
P. S. Bent, 2, 153lb.	
Duncan McNeill, 3, 158lb.	
E. T. Nicholas, stroke, 130lb.	
J. Rickett, cox., 130lb.	

The water was very rough at the starting buoys, and all the crews shipped seas in turning. A good start was effected, the boats lying dead level with each other. Kobe started at 32, a stroke which she maintained all through, Hongkong getting off at 30, and Yokohama 31 to the minute. Hongkong shipped three broadsides at starting, enabling Kobe to get ahead,—Yokohama meeting with an almost similar fate. The crews soon settled down to steady work, although the broadside rollers prevented any display of good oarsmanship. At the Pacific Mail Wharf Hongkong quickened to 32 and reduced Kobe's lead somewhat, but again fell off. By this time Yokohama was some lengths astern. Hongkong spurred again at the breakwater, and for a few seconds it looked as if Kobe would be caught, but the spurt died away, and Kobe who had had matters its own way the whole course, passed the post a length and a half to the good. Yokohama, who had rowed steadily throughout, finished a bad third. Time, 9 m. 20½ secs.

JUNIOR FOURS.—(Silk and Tea prizes) ¾ Mile.

RED BOAT.

H. R. Mair, bow, 130lb.	1
A. G. Watt, 2, 121lb.	
H. P. Blanchard, 3, 139lb.	
Geo. Hood, stroke, 135lb.	
J. Rickett, cox., 130lb.	

BLUE BOAT.

A. Rogers, bow, 120lb.	2
F. H. Abbey, 2, 129lb.	
G. A. Crouch, 3, 135lb.	
J. B. Gibbs, jun., stroke, 137lb.	
E. Mendelson, cox., 127lb.	

GREEN BOAT.

F. Favre Brandt, bow	131lb.
C. V. Schmidt, 2,	119lb.
C. Abenheim, 3,	120lb.
A. B. Smith, stroke	145lb.
W. W. Campbell, cox.	147lb.

BLACK BOAT.

L. Eytan, bow	140lb.
J. A. Gilgour, 2,	125lb.
E. J. Marshall, 3,	145lb.
J. Eytan, jun., stroke	152lb.
J. Carst, jun., cox	137lb.

Green caught the water first, but Red soon forged ahead and kept the lead to the finish. Green spurred at the breakwater, but Blue responded, and, Green's spurt dying away, took second place failing to catch Red, who got home 2 lengths ahead. Time 7m. 26½ secs.

INTERPORT DOUBLE SCULLS.—(First Heat) 1 Mile.

KOBE.

G. W. Brockenhurst.	174lb. } 1
A. C. Sim.	180lb. }

YOKOHAMA.

P. S. Bent,	130lb. } 2
E. T. Nicholas,	143lb. }

Kobe won an easy race, their weight telling in the rough water. Sim's, the grand old veteran, was "chaired" on his return amid enthusiastic plaudits. Time, 10 min. 59 secs.

SINGLE SCULLS.—(Ladies' Purse) ½ Mile.

Geo. Hood, 135lb.	1
F. H. Shepherd, 153lb.	upset.

Hood really had a walk over for this, the most coveted prize of the regatta, Shepherd having the misfortune to be run down by a sampan before half the race was finished. He fortunately managed to get clear of his straps and swam about in the icy rollers till picked up by a launch. The "sculler" was badly smashed in the bows. The course for this race was altered to inside the breakwater but both boats had to bale out ere starting for home. No time taken.

BLUFF V. SETTLEMENT. (Steamship Companies Prize) ¾ Mile.

BLUFF.

F. E. Freeze, bow, 150lb.	1
G. W. Barton, 2, 160lb.	
Duncan McNeill, 3, 158lb.	
Marshall Martin, stroke, 162lb.	
D. MacLaren, cox., 130lb.	

SETTLEMENT.

W. W. Campbell, bow, 147lb.	2
P. S. Bent, 2, 153lb.	
M. F. Bengen, 3, 185lb.	
E. T. Nicholas, stroke, 130lb.	
J. Rickett, cox., 130lb.	

Bluff led away at 40 to the minute, and established a substantial lead. Half way down the breakwater Nicholas spurred prettily. His crew responded with a will, but it was too late and their lightness also was against them. At the gun fire, Bluff was five lengths ahead. Time, 7m. 10s.

SECOND DAY.

Another brilliant sunny day was experienced on Friday, the concluding day of the "Coming of Age" Regatta of the Yokohama Amateur Rowing Club, but the wind was still in the north-east and the water outside the breakwater lumpy. Towards the latter part of the day the course improved somewhat, but there still remained too much sea to make rowing at all comfortable for the competitors. The ladies turned up in great force again and several little dances were indulged in between whiles to the strains of the Town Band.

The ball was set rolling with the Interport Double Sculls, Kobe the winner of the previous day, having to meet Hongkong who had drawn a bye. But it was a walk over for the Southern Settlement, Hongkong's stroke smashing his slide at the very commencement of the race. The man-of-war's boats made the usual desperate struggle round the harbour, and the U.S.N. came in first, although the Britishers made a game fight for their colours at the commencement. The Club Four Oars for the seniors—Bankers' Prize—was a well rowed out race, and witnessed an exciting finish for second place, Snow spurling almost on the post. The Interport Pairs was somewhat of a surprise to even Yokohama's best friends. The home crew jumped off at the beginning and led the procession home, Kobe and Hongkong having at no time any chance of catching them. The time was 10m. 39s. The Club Pair Oars, which had to be postponed on the first day on account of the rough water preceded these two latter races and provoked a spirited contest. Nicholas and Bent were, however, too light for the water that had to be encountered, nevertheless they came up at the finish with a characteristic spurt, thus reducing somewhat their rivals' lead. The Junior Pair Oars fell to Smith and Marshall, but the want of practice on their opponents' part prevented any serious opposition. In the Senior Double Sculls Nicholas' perseverance was at length rewarded, he and his partner, Bent, disposing of McNeill and Freeze somewhat easily. The Interport Sculls was taken by Kobe, the Hongkong man making a poor show of it, while the Yokohama representative was outpaced. The Scratch Fours as usual proved to be the most stubbornly contested race of the day, the finish being most exciting. The Oji-sans' race was rowed "neath the silvery rays of the mystic moon," and a very pretty picture was presented to on-lookers as the boats shot across the glimmering track of rippling wavelets. But although the oldsters made a plucky bid for it, their salad days were too far in the background

Original from

to even give them a ghost of a chance against the coming men.

Kobe is to be congratulated upon again carrying away the principal events in the interport matches, only one race going against them, and for a similar reason sympathy should be extended to Hongkong in its persistent run of ill-luck. Undoubtedly the best crews won on each occasion, still the ends of poetic justice seem rather evaded when a crew after coming 1,500 miles to row returns again home empty-handed and leaves its flags behind. We must wish them "better luck next time" they visit Japan, and we hope that the experience of the last few days will in no wise act as a deterrent.

Mrs. Till gracefully presented the prizes at the close. Details:—

INTERPORT DOUBLE SCULLS.—(FINAL)—ONE MILE.

KOBE. (OUTSIDE STATION.)

G. W. Brockhurst, 175lb. } 1
A. C. Sim, 180lb. }

HONGKONG. (INSIDE STATION.)

G. L. Duncan, 146lb. } 0
J. A. Sampson, 160lb. }

A virtual walk over for Kobe, Hongkong retiring early in the race having broken a slide.

MEN-OF-WAR BOATS.—TWO MILES.

Alert's six oared gig 1
Leander's five oared whaler 2
Alert's four oared dinghy 3

Alert's six-oared gig gave the dinghy 1 minute and the Leander's whaler 30 secs. The Leander's whaler allowed the dinghy 30 secs. A good start. The Leander's boat led round the breakwater with the Alert's gig next. As the boats passed the green lightship the Alert's gig was gradually closing up with the Leander's men; coming down the straight they passed and finally won by 17 secs.

CLUB PAIR OARS.—(CHAMPION).—Japan Brewery Cup. 1 MILE.

OUTSIDE STATION.

F. E. Freeze, 155lb. } 1
Duncan McNeill, 158lb. }

INSIDE STATION.

P. S. Bent, 153lb. } 2
E. T. Nicholas, 130lb. }

The water was very lumpy at the starting buoys, and several seas had to be partially taken aboard before passing on their way shoreward. A good start, but the heavier crew established a lead before a quarter of the course had been covered. At the breakwater Nicholas spurred, but the distance between the boats was not materially reduced when McNeill passed the post a length and a half to the good. Time, 8m. 33s.

CLUB FOURS.—(SENIOR)—Bankers' Prize: 1 MILE.

BLACK.

G. Hood, bow, 135lb. } 1
C. V. Schmidt, 2, 121lb. }
F. G. Hall, 3, 163lb. }
G. W. Barton, stroke, 160lb. }

GREEN.

A. B. Smith, bow, 145lb. } 2
W. Y. Showler, 2, 153lb. }
J. Eyton, jun., 3, 152lb. }
W. W. Campbell, stroke, 147lb. }

RED.

R. Lane, bow, 140lb. } 3
P. B. Blanchard, 2, 139lb. }
F. H. Shepherd, 3, 153lb. }
H. J. Snow, stroke, 184lb. }

BLUE.

A. J. Watt, bow, 121lb. } 0
J. Thompson, 2, 173lb. }
M. F. Bengen, 3, 185lb. }
J. B. Gibbs, jun., stroke, 137lb. }

Green took the lead and held it for a good quarter of a mile; bow's oar then slipped his rowlock and this occurring twice again put them back behind Black, who were pulling steadily. Black was a length ahead at the breakwater, and was never caught, passing the post 3 lengths ahead. A close race between Red and Green ensued for second place, but Snow spurred too late and Green got in by a bare half length. Time, 9m. 24s.

INTERPORT PAIR OARS.—1 MILE.

YOKOHAMA. (MIDDLE STATION.)

P. S. Bent, 153lb. } 1
Duncan McNeill, 158lb. }

A. L. Robinson, cox., 132lb. }

KOBE. (OUTSIDE STATION.)

W. Kerr, 150lb. } 2
J. W. Noel, 180lb. }
J. R. Gibson, cox., 125lb. }

HONGKONG. (INSIDE STATION.)

H. W. Slade, 150lb. } 3
J. A. Sampson, 160lb. }
A. B. Brown, cox., 119lb. }

The boats started level, but Yokohama soon broke away. Kobe followed suit next, and no alteration took place till the finish, when ten lengths separated each boat. Time, 10m. 39s.

JUNIOR PAIR OARS.—(FINAL)—Broker's Prize.

1 MILE.

E. J. Marshall, 145lb. } 1
A. Brooke Smith, 145lb. }
W. W. Campbell, cox., 147lb. }

The winners led from the beginning, getting in three lengths ahead. Time, 8m. 33s.

SENIOR DOUBLE SCULLS.—(Lawyers' Prize)

1 MILE.

P. S. Bent, 133lb. } 1
E. T. Nicholas, 130lb. }
F. E. Freeze, } 2
Duncan McNeill, }

Nicholas deserved his victory. He collared the lead at the beginning and gradually increased it. McNeill slowed down before reaching the post. Time, 11m. 23s.

(INTERPORT SINGLE SCULLS).—1 MILE.

KOBE.

E. B. Shepherd, 145lb. 1

YOKOHAMA.

Geo. Hood, 155lb. 2

HONGKONG.

J. M. Manuk, 150lb. 3

Shepherd soon took the lead and headed the procession home, getting in four lengths to the good, Manuk paddled in 11m. 34s.

SCRATCH FOURS.

WHITE.

Abbey, bow } 1
Manuk, 2 }
Showler, 3 }
Shepherd, stroke, }

BLACK.

Schmidt, bow } 2
Gibbs, 2 }
Brockhurst, 3 }
J. Eyton, stroke, }

WHITE.

R. Kirby, bow } 3
L. Eyton, 2 }
Slade, 3 }
Kerr, stroke, }

BLACK.

Kilgour, bow } 0
Rogers, 2 }
Nicholas, 3 }
Meynell, stroke, }

BLUE.

C. Abenheim, bow } 0
Duncan, 2 }
Noel, 3 }
Pearson, stroke, }

RED.

A. L. Robinson, cox. }

This was the most exciting race of the whole regatta. It was getting very dark when the boats started down the course. The starter got them off in a bunch and for a while they rowed together. Then Shepherd drew ahead, Black following hard after him. The two White boats spurred and again the boats drew together. Shepherd came again, however, and got in by a length, half a length between second and third, with fourth close behind. Time, 2m. 13s.

OVER 50 v. UNDER 22.

UNDER 22.

J. Eyton, bow, } 1
J. R. Gibbs, 2 }
F. A. Abbey, 3 }
R. Abenheim, stroke, }

OVER 50.

H. J. Snow, bow, } 0
J. Dodds, 2 }
H. C. Litchfield, 3 }
A. C. Sim, stroke, }

J. Rickett, cox. }

Sim set the Ojisans an excellent stroke, but half

way down the course the waist bands of his crew began to prove a serious inconvenience, and the youngsters romped home a length and a half to the good. Time, 2m. 20 secs.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 41.

WHITE. BLACK.
1—R to K Kt sq. 1—B x R
2—Kt to K sq. mate if 1—K x R
2—Q to K 3 mate if 1—K to Q B 2 or Kt moves
2—Q to K 4 mate if 1—Either P moves
2—R to K 3 mate

Correct solutions received from W.H.S., J.D., Omega, Omicron, J.W.E., O. Balk, and Digamma. J.W.E. also credited with correct solution of No. 34.

PROBLEM No. 43.

By A. SORENSON.

White to play and mate in two moves.

The following game, which has been called almost peerless for brilliancy and depth, was played in London in 1851, when Anderssen defeated Kieseritzki, Staunton, Szoen, and the other giants of those days, besides winning the first prize in the London Tournament of that year. Anderssen had then just completed his thirty-third year. Twenty years later, he gained the first prize at the Baden meeting, and although he was defeated by Steinitz in 1866, it was not until the great match at Vienna in 1871, that he succumbed hopelessly to the same champion, who tied with Blackburne on the occasion for first place. The notes are by Mr. Potter in the now defunct *Westminster Papers*:—

KING'S BISHOP'S GAMBIT.

WHITE. BLACK.
Anderssen. Kieseritzki.
1—P to K 4 1—P to K 4
2—P to K B 4 2—P x P
3—B to B 4 3—Q to R 5 ch
4—K to B sq 4—P to Q Kt 4 (a)
5—B x Kt P 5—Kt to K B 3
6—Kt to K B 3 6—Q to R 3
7—P to Q 3 7—Kt to R 4
8—Kt to R 4 8—Q to Kt 4
9—Kt to B 5 9—P to Q B 3
10—P to K Kt 4 10—Kt to B 3
11—R to Kt sq (b) 11—P x B
12—P to K R 4 12—Kt to Kt 3
13—P to R 5 13—Q to Kt 4
14—Q to B 3 14—Kt to Kt sq.
15—B x P 15—Q to B 3
16—Kt to B 3 16—B to B 4
17—Kt to Q 5 (c) 17—Q x Kt P
18—B to Q 6 (d) 18—Q x R ch
19—K to K 2 19—B x R (e)
20—P to K 5 20—Kt to Q R 3 (f)

White gives checkmate in three moves.

(a) This when made on the third move constitutes Kieseritzki's Counter Gambit.

(b) Brilliancy No. 1. He expects an equivalent from the confined position of the adversary's Queen.

(c) Submitting to both his Rooks being placed en prise.

(d) And now giving them both up after which he will be the two majors and a minor piece behind.

(e) Q to Kt 2 is apparently better. Anderssen's reply would have been Q to K 2, threatening to win the Queen by R to Q Kt sq.

(f) Preventing the mate in two, but overlooking the very fine win in three moves, that lay hidden in the position. The only Ray of prolonging the game so far as I can see was by 20 B to K 3, the response to which would be 21 Kt to B 7 ch, and 22 mt x B leaving White with a clear win, for Black will lose much more than he has gained, or else be mated.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 30th.
A letter published by the Marquis of Salisbury states that the late Government always contemplated retaining Uganda.

London, October 31st.
The steamship *Roumania*, from Liverpool bound to Bombay, has been totally wrecked some distance to the north of Lisbon. Nine persons have been saved, but 122 were drowned.

London, November 1st.
A great fire has occurred in Milwaukee, and the damage done is estimated at ten million dollars.

Mr. Gladstone, acting on medical advice, was compelled to absent himself from the Guildhall Banquet.

(FROM THE "SINGAPORE FREE PRESS.")

London, October 17th.
In consequence of the recent insubordination, the First Life Guards have been removed to Shorncliffe. The saddle and harness cutting mentioned in previous telegrams appears to have occurred among the Army Service Corps, and the men have been confined to barracks.

London, October 20th.
The Government have withdrawn the order forbidding public meetings being held in Trafalgar Square.

There has been continuous fighting for three days, between the French and the King of Dahomey's troops, the latter being defeated with heavy loss. The casualties on the French side were considerable.

(FROM THE "HONGKONG DAILY PRESS.")

Anping, Formosa, October 24th, 5 p.m.
The steamer *Formosa* brings second Engineer Nistad and Seaman Herness, sole survivors of the steamer *Normand*, which is a total loss off Pescadores.

No more survivors of the *Bokhara*.
The Superintendent of the P. & O. S. N. Co. received the following telegram from the Amoy Agents yesterday morning:—

"Amoy, October 25th, 10.24 a.m.
"No more survivors *Bokhara*. The two men reported are sole survivors steamer *Normand*, lost Pescadores 9th."

REPORTS.

The Japanese steamer *Sagami Maru*, Captain Pender, reports:—Left Kobe the 31st October at noon; had light southerly airs and calms to Hino-misaki; thence to Oshima gentle to moderate S.W. winds and fine, clear weather; at 9.20 p.m. passed Oshima Light, wind hauling to N.N.W. with moderate to fresh and strong breezes and very clear weather during the night; on the 1st November at 0.55 p.m., passed Rock Island; N.W. breeze and fine, clear weather to Observation Point, which was passed at 3.15 p.m., wind hauling to the N.E. with gentle to light breezes and fine weather; at 6.25 p.m. passed Kanon-saki; thence to port gentle north-easterly winds and very clear weather. Arriving at Yokohama the 1st November at 7.40 p.m.

The Japanese steamer *Higo Maru*, Captain J. J. Jones, reports:—Left Iloilo the 21st October; had light wind, cloudy, and fine weather; the 23rd met heavy southerly and S.W. swell; the 24th fresh to strong winds, cloudy weather, and heavy N.E. swell; the 25th similar weather at 8.30 p.m. observed Naushah (Formosa); the 26th moderate to fresh winds and heavy confused sea; the 27th same weather and sea with heavy rain at times; the 28th moderate wind and sea, cloudy, fine weather and passing rain; the 29th similar wind and weather with heavy N.E. swell; the 30th same wind and weather; at 8.25 a.m. passed Minato-saki, and arrived at Kobe at 7.38 p.m.; the 31st at 8.07 p.m. left Kobe with fresh N.W. winds; the 1st November fresh to strong winds which increased to a heavy sea and fresh gale from N.W.; off Owari Bay; weather cleared and continued so to Iro-saki, which was passed at 1.19 a.m. on the 2nd; the 2nd at 1.46 passed Rock Island with light to moderate N.E. winds to port, which was reached at 10 a.m.

The American steamer *Ferry*, Captain Ward, reports:—Left San Francisco the 15th October; a succession of strong north-west gales, heavy north-west swell, variable strong winds, rainy, and cloudy weather. Arrived at Yokohama the 3rd November.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 29th October at 2 p.m.; had fine, clear weather and N.N.E. winds to arrival in Nagasaki the 31st at 6 a.m. Left the same day at 8 p.m.; had light N.E. winds and fine, clear weather to Kobe, arriving the 2nd November at noon. Left Kobe the 3rd at 6 a.m.; experienced fresh breeze and fine, clear weather throughout the passage. Arriving at Yokohama the 4th November at 4 p.m.

The German steamer *Huernerberg*, Captain B. Blauke, reports:—Left Hongkong the 29th October at 9.30 a.m.; had throughout the voyage fine weather with strong north-easterly monsoon; rough sea the first part. Arrived at Yokohama the 5th November at 2.16 a.m.

LATEST COMMERCIAL.

IMPORTS.

Most of the period under review has been broken by holidays (cricket, regatta, the Emperor's Birthday, etc.) with the result that very little business has been done. Importers look for some revival

of trade from now on to the end of the year, as interior merchants must begin soon to stock up for the end of December demand from buyers.

EXPORTS.

RAW SILK.

Our last was dated 28th ultimo. Since then settlements on this market amount to 1,985 piculs, divided thus:—Hanks, 6 piculs; *Filatures*, 1,796 piculs; *Re-reels*, 160 piculs; *Kakeda*, 114 piculs. From these must be deducted rejections of *Oshu* 91 piculs. Japanese shipments have been 207 bales, so that the total export trade for the week amounts to 2,200 piculs.

This has been a week of holidays—races, regattas, and other festivities occupying the whole week, and yet we have seen a very respectable amount of business, as the above figures will show. The buying has been principally for America, and

has been chiefly in the hands of two hongs who have been competing with each other, more especially for full-sized *Filatures* suitable for the New York trade. Prices paid have been slightly higher and the quality of present reelings does not make the purchases look very cheap. Buying for Europe has not been large and the Lyons trade seems for the moment to be thrown into the shade by the large purchases for American use. Some dealers think that when the present elections in the States are over, we shall see a still more animated market for such silks as they require.

There have been two shipping opportunities since we last wrote, the English mail steamer *Ravenna* on the 29th October taking 242 bales for Europe. She was followed the next day by the *City of Peking*, which carried 1,057 bales for the United States. These departures bring the present export figures to 23,996 piculs, against 18,519 piculs last year and 7,271 piculs at the same date in 1890.

Hanks.—Nothing doing; stock small and well held. The only transaction noted is a small parcel Shimonita at \$670.

Filatures.—A large business—about 1,800 piculs, \$860 and \$870 being freely paid for *Shinshu* kinds of well-known marks. *Tokosha* and similar silks have brought \$850, with so-called Extras at \$880. *Koshu* have also been freely bought at prices ranging from \$800 to \$850, according to quality. Very little done for Europe, some few parcels *Ueno* and *Saku* bringing \$850.

Re-reels.—Nothing very much done. Prices unchanged, best *Foshu* marks being strongly held at late rates. Common grades, which constitute the bulk of our stock, could probably be bought on easier terms, but these are very mixed in colour and of poor quality.

Kakeda.—Some little revival, best No. 1 being done at \$790 for several well-known chops. In common grades, one parcel of *O'kame* noted at \$670.

Oshu.—Nothing done except rejections, the purchases noted in our last having all been cancelled.

QUOTATIONS.

Export Raw Silk Tables to 4th Nov., 1892:—

	1890-91	1891-92	1892-93
Europe	8,978	6,321	2,100
America	14,643	11,708	4,987
Total	23,621	18,029	7,087
Settlements and Direct	27,100	20,750	7,050
Export from 1st July	8,900	15,450	16,600
Available supplies to date	36,000	36,200	23,650

WASTE SILK.

These has been less doing in this branch, settlements reaching 862 piculs, divided thus:—*Cocoons*, 375 piculs; *Noshi*, 479 piculs; *Kibiso*, 308 piculs. Direct shipments have been 20 bales, making the total business for the week 922 piculs.

Prices are practically unchanged, but are certainly no higher, and it looks as though the heavy stock were pressing on sellers to some extent.

The English mail steamer *Ravenna* carried 162 bales Waste for Europe and the Canal steamer *Argyll* had several parcels of Pierced *Cocoons* on board for New York. These departures make the present export figures 8,886 piculs, against 7,068 piculs last year and 7,239 piculs in the previous year.

Pierced Cocoons.—Some further purchases for

the United States at prices ranging from \$82½ to \$97½, according to quality and yield. There are still about 1,000 piculs left on the market, but the cream has been skimmed off and what remains are not of the best quality.

Noshi.—Not a large business this week. Some good *Filatures* have been done at \$150 and \$140; *Hachoji*, \$137; *Shinshu*, \$107½. Nothing to note in *Foshu* beyond one small purchase at \$70.

Kibiso.—About 300 piculs have passed the scales; *Filatures*, \$110 and \$97½. In *Hira* sorts several have been taken; *Sendai*, \$90; *Foshu*, \$50 and \$55; *Oshu*, \$50; *Gunnai*, \$45 and \$50.

Mawata and Neri.—Nothing done.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out 1 quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undecidable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to look up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

ATKINSON'S WHITE ROSE

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 14 to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

Illustrated Catalogue in English, French, or Spanish. Send for Copy to

BOS

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique* and *unrivalled*.

BOS Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

BOS is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of BOS.

Correspondence invited from Firms who desire to handle our Whiskies.

YOKOHAMA: SATURDAY, NOV. 12TH, 1892.

DEATH.

On November 8th, at his residence No. 18, Suzukicho, Surugadai, Tokyo, GOTTFRIED WAGNER, Dr. Phil., in his sixty second year.

SUMMARY OF NEWS.

H.I.M. THE EMPRESS visited the Aoyama Palace on the 4th inst. at 2 p.m.

LIEUTENANT KAWAJI TOSHIYUKI, (Infantry), has been made Superintendent of Police in Migagi Prefecture.

THE Authorities have decided to hold the Barristers' Examination, on the 24th inst., at the Kinkikan, Kanda.

MR. SOYEJIMA TOSHITADA, father of Count Soyejima, died in the capital on the morning of the 4th inst., at the ripe age of 86.

H.I.H. THE CROWN PRINCE visited the Fine Art Exhibition at Ueno and also the Zoological Garden in Ueno Park on the 6th instant.

AN earthquake was felt in Tokyo on the 5th inst. at 1h. 48m. 53s. a.m. The tremor lasted for 40 seconds and was from east to west.

THE cost of the damage by soldiers to crops during the recent manœuvres, which was defrayed by the Government, amounted to yen 837.57.

DURING the night of the 29th ult., a fire occurred at Hinakuchō, Ihokugun, Kumamoto Prefecture, destroying 13 houses, and partly damaging 6.

THE number of passengers who left Shimbashi Railway Station during the month of October last was 95,301; the amount of their fares being yen 40,520.88.

THE total number of luggage trains which started from Ueno for the north-eastern provinces during the month of October last was

1,286, by which goods to the amount of 1,082 tons were carried, the freightage amounting to yen 791.39.

TELEGRAPHIC intelligence from Okayama Prefecture received by the Authorities on the 5th inst. states that eleven oxen have been attacked by the cattle epidemic.

MR. KANEKO KENTARO, Chief Secretary of the House of Peers, who was despatched to Europe to represent Japan at the International Law Convention, returned to Tokyo on Sunday last.

VISCOUNT ENOMOTO left Hakodate on the 3rd inst. in the *Chitose Maru* for Awamori, and Count Yamada, who had been staying in Yamaguchi for some time, started for the capital on the 5th inst.

THE special meeting of the Privy Council held on Friday last was attended by Counts Oki, Higashi-kuze, Katsu and Kawamura, Viscounts Kabayama, Kaiyeda, Tanaka, Fukuoka, and Messrs. Ozaki and Inouye.

H.I.M. THE EMPRESS honoured the members of the Tokyo Fujin Jizen-kai by visiting on the 11th inst. the bazaar to be opened under the auspices of the Society at the Rokumei-Kan during the 11th, 12th, and 13th inst.

EARLY on Sunday morning an outbreak of fire took place in a public bath-house in Nichome, Yurakucho, Kanda, Tokyo, and before the firemen could successfully grapple with it, 10 houses were burnt, and 15 were partly damaged.

A FIRE broke out on the 2nd inst. at 5 p.m. in a cottage in the kerosene well districts of Sugayama-mura, Tsuguhara-gun, Shizuoka Prefecture, and five workmen were severely injured, two of whom now lie in a dangerous condition.

A DESPATCH from Fukuoka says that during September last some seven or eight oxen were brought to Hakata from Korea. About that time cattle disease commenced to prevail among native cattle, and from four to eight animals are being attacked by the epidemic daily.

TELEGRAPHIC intelligence from Osaka reports that eleven cows were attacked by cattle disease in a dairy at Kitano-mura in Nishinari District on the 5th instant, of which eight succumbed. Two cases have been reported at Nakatsu-mura, Nishinari-gun, and Toyokawa-mura, Shimashimo-mura, respectively.

THE following is the number of animals captured by the crews of the *Daichi* and the *Daini Chishima Maru* of the Japan Marine Products Company, who have been engaged in hunting along the shore of Chishima from April up to October last:—41 seals, 208 sea-leopards, 3 otters, 1,550 sea-horses, and 2 whales.

THE Minister of State for War and Countess Oyama gave a dinner on the 7th inst. at the Korakuyen, Koishikawa, Tokyo, to Mr. and Mrs. Winston, Mr. and Mrs. Parsons, Mr. A. B. de Guerville, the Minister of State for Communications and Countess Kuroda, Count and Countess Saigo, Mr. Matsukata Kojiro, Miss Kagawa, Mrs. Yamakawa, and a few German employés of the War Department.

THE hearing of an appeal raised by the Public Procurator against a decision of the Tokyo Local Court, by which Mr. Tajima Haruo, an engineer of the Peru Mining Company, who has been under arrest for some time on a charge of having defrauded the company of yen 20,000, was acquitted on the ground that there existed no provisions of law applicable to his crime, con-

cluded in the Tokyo Court of Appeal on the 5th inst., and the judgment of the former Court was reversed, the prisoner being sentenced to major confinement for 3 years, a fine of 30 yen, and police supervision for 6 months.

MISS M. A. WEST, of the W. C. T. U., spoke at the assembly of the members of the Japan Red Cross Society, held on the 4th inst. in the buildings of the hospital attached to the Society. Amongst those present were Their Imperial Highnesses Princesses Komatsu Yoriko, Kitashirakawa Tomiko, Arisugawa Yasuko, and Kanin Chiyeiko, Marchioness Nabeshima, Viscountesses Kabayama, Niirei, and Sakurai. President Sano, of the Red Cross Society. President Hashimoto, of the Red Cross Hospital, Viscount Matsudaira, Baron Takasaki, and Marquis Nabeshima were also present.

H.I.M. THE EMPRESS-DOWAGER, attended by Madame Madenokoji, Viscount Sugi, Grand Master, and Mr. Hayashi, Vice-Grand Master of Services to Her Majesty; Dr. Iwase and Dr. Takenouchi, Imperial Court Physicians, and several Ladies in Waiting, left the capital on the 7th inst. for Hayama, Kanagawa Prefecture, starting from Shimbashi by the 1.45 a.m. special train. H.I.M. the Empress and Their Imperial Highnesses Princess Tsune and Kane accompanied Her Majesty to the Railway Station. Among those who assembled at the Station to bid farewell were H.I.H. Arisugawa Taruhito, Princess of the Imperial Blood, members of the Privy Council, attendants in the *Yakunomi* and *Kinkinomi*, officials of *chokunin* and *sonin* rank in the Imperial Household Department, and several high officers of the Imperial Body Guards.

THE Import market is steady, but the anticipated briskness in business has not yet commenced. This is doubtless partly due to the decline in exchange, which makes holders firmer in their demands. There has not been much done in Metals, as importers do not care about entering upon transactions merely for the sake of doing business, and the offers made since the close of the hot weather are not up to expectations in regard to prices. The Kerosene market is fairly well attended, and buyers have had to pay increased rates as stock diminishes, while higher values in the near future are more than probable. The expected rise in the price of Sugar did not come off, the demand that was imminent on depleted stocks having hung fire, and, fresh arrivals having come in, the hoped for increment of values has been turned into an actual decline, and there has been but small enquiry for any sorts, Browns now being carried into godown in large quantities. In the Silk trade, though over 1,000 piculs have been taken, business may be called quiet when compared with the transactions of many weeks for the past two months. It is in the natural order of things that—nearly all the fine Silk having been already exported, in so far as it has been placed on this market—buyers are now turning their attention to fibre of the second grade, which is receiving more attention, and the skimming process will proceed until there is nothing left worth exporting, which condition of affairs will probably be arrived at at an earlier period this season than for many years past. Less doing in Waste, though there have been small daily transactions at prices which show an easy tendency. For Tea of any quality high figures are demanded, but there are only a few piculs of fine leaf on offer, and requirements at the moment are neither pressing or extensive. Exchange has responded fully to the lower price of silver, and shows no sign of resuscitation.

EDITORIAL NOTES.

THE CHINESE AGAINST THE JAPAN MAIL STEAMSHIP COMPANY.

SOME time ago the Chinese in Vladivostok passed a resolution agreeing that in future no cargo should be shipped in any of the steamers belonging to the Japan Mail Steamship Company, and despatched communications to that effect to their friends, in Nagasaki, Shanghai, and Chefoo. The Japan Mail Steamship Company took steps to investigate the cause of such a suddenly hostile movement, and discovered that so long as the branch office of the Company had been represented by Mr. A. Dattan, of Messrs. Kunst and Albers, everything had gone very smoothly, but that when he left Vladivostok in May last and Mr. E. Cornells of the same firm was deputed to act during his absence, things assumed a different complexion. The majority of Chinese in the town are small merchants, who come from Shantung, and their usual occupation is the manufacture of shoes and sundry other goods of daily use, the materials for which are obtained from Chefoo. Sometimes, owing to careless packing, the goods are damaged on the voyage, but the Company naturally declines to admit any responsibility for the laches of shippers themselves. While Mr. Dattan was Manager, knowing the character of the Chinese well, he succeeded in keeping everything very smooth, but the Acting Manager who succeeded him, having had little experience in dealing with Chinese, the latter soon began to grumble against the Company. It happened that during September last the *Yokohama Maru* was advertised to sail for Vladivostok from Shanghai *via* Nagasaki, but as some difficulty was experienced in obtaining her cargo in Shanghai, and moreover on account of the exceptionally low tides which prevailed, the ship would have had to remain outside Woosung for two days in order to load, and the passengers for Nagasaki, Kobe, and Yokohama would have been correspondingly detained. Accordingly she left Shanghai without any cargo. When she reached Nagasaki, her passengers for Vladivostok were transhipped to the *Tokyo Maru*, which was bound for the latter port, but on the arrival of the *Tokyo Maru* in Vladivostok without any of the expected goods, the Chinese at once concluded that the Company had refused to ship any cargo for Chinese, and in their excitement they concluded a contract with Messrs. Sheveleff & Co. to send their goods by the latter's ships for three years. The agreement was signed by the Chairman of the Chinese Settlers' Assembly as well as by 89 principal merchants. The signatories pledged themselves that if any one shipped goods in vessels other than those belonging to Messrs. Sheveleff & Co., such shipper should pay a fine of \$12 per ton, and on the other hand the Company agreed to pay \$1,000 for any delay in the transmission of goods. The Company thereupon chartered a steamer, the *Phaton* for two months at \$4,000 per month. These facts are reported by the *Fiji Shimpō*, on the authority of Mr. Sakaki, who was commissioned by the Japan Mail Steamship Company to inquire into the case and who, having proceeded to Vladivostok for the purpose, returned to Tokyo a few days ago. It is stated that there can be only three more trips this year, the trouble cannot be settled soon. But the Company hopes to discover a peaceful solution next spring.

The *Kokkai* writes on the same subject. It says that the Company has been engaged considering the policy to be pursued with regard to the Chinese in Vladivostok, who have bound themselves to stop sending goods by the company's ships. As the conference is secret, no outsider can ascertain the exact facts, but a certain amount of information has leaked out. There are some 25 thousand Chinese settlers in Vladivostok. They are more numerous than the settlers of any other nationality, and since the Company established a line of steamers to that place, about 80 per cent. of the freight earned by the ships is derived from the Chinese. Hence, when its best customer leaves the Com-

pany the latter can no longer maintain its establishment in Vladivostok. Moreover, the Chinese settlers have already concluded a contract with Messrs. Sheveleff & Co.; in which it is expressly provided that if the firm fail to despatch steamers, a fine of \$1,000 shall be paid by it; and, on the other hand, if any Chinaman sends his goods by a steamer other than those of the Company, a fine of \$12 per ton shall be imposed on him. With this contract in their pocket, although communication is usually suspended from the end of November to April of the following year owing to the freezing up of the port, Messrs. Sheveleff & Co. will use machines to break the ice, so as to continue despatching ships. It is therefore essential to devise some plan for breaking up this combination as soon as possible. Messrs. Sheveleff & Co. possess only inferior vessels, and consequently if active competition were started, the Chinese would probably annul their agreement and give their custom once more to the Japanese Company. It is stated that though the agreement was signed only a few weeks ago, there are already signs of dissension among the parties to it. The Japan Mail Steamship Company is now anxiously awaiting the return of Shih Ching-tsai, a Chinaman in the employ of its branch office in Nagasaki, who was sent to Vladivostok to appease his indignant nationals there. He has been directed to come to Tokyo as soon as he can get back, and when he arrives a conference of Directors will be again held, the idea being to commence competition at once with Messrs. Sheveleff and Co. through the winter by using ice-crushers.

KYOTO ANNIVERSARY ASSOCIATION.

THE people of Kyoto intend to celebrate, in 1895, the eleven-hundredth year of the choice of that city as capital of the empire by the Emperor Kammu. The idea has been approved by Princes Konoye, Nijo, and Iwakura; Marquises Tokudaiji, and Saionji; Counts Madenokoji, Higashikuse, Hirohashi, and Ohara; Viscounts Fujinami, Sano, and Itsutsuji; as well as Mr. Uyemura, Chief Judge of the Administrative Court, Mr. Kuki, President of the Imperial Museum, Admiral Ito, Vice-Minister of the Navy, Messrs. Itami, Ozaki, and Komuro, members of the House of Peers, and many others distinguished persons. These supporters lately held several conferences, finally meeting in the Charyo on Sanno Hill, when they formed an association, with the following statement of motives:—

The 28th year of *Meiji* (1895) the 2,555th year from the establishment of the empire by the Emperor Jimmu, will be the 1,000th year of the elevation of Kyoto into the country's capital by the Emperor Kammu. The unbroken lineal succession of the Imperial Family has continued for two thousand five hundred years, up to the time of our present August and Enlightened Emperor, whose virtue and power are everywhere felt. Kyoto was the capital of all these Emperors. Not only the politics and religion, but also the civilization of the nation have grown from that capital. We who were born in it, and those who have any interest in the place, should do something to celebrate the eleven hundredth anniversary of its existence as the capital. The people of Kyoto have decided to commemorate the year, and thus express their gratitude for the great benefits bestowed on them by the Emperor Kammu, while at the same time offering their congratulations to the reigning Sovereign. We cannot choose but support such a worthy undertaking, and therefore we have organized an association. Every subject of the Empire must reverence the memory of the Emperor Kammu who accomplished great national works. The proposed celebration is principally for the purpose of renewing the nation's memory of that most illustrious Sovereign. The scenery of Kyoto is magnificent, and moreover that city is the repository of our arts and industries. It is in short a most perfect capital. We trust, therefore, that the public will support our undertaking and join our Association.

THE TRIAL OF CARSTENS.

THE Yokohama Local Court has been engaged for two days considering whether Jacob Carstens, who stands charged with murder, is a German subject—not a Dutch subject, as we erroneously stated in a previous issue. Carstens himself raises no question. He seems at least indifferent whether a Japanese or a German tribunal tries him. But the Public Procurator

has taken exception to the Court's jurisdiction on the point of nationality, and the Court is examining the matter. It seems to us somewhat anomalous that such a question should come up for judicial decision at all, belonging, as it does, essentially to the sphere of diplomacy. If Carstens himself offered any tangible proofs of his nationality, the Court might, perhaps, pronounce judgment upon them. But in the great majority of these cases, and apparently in this particular case, the only ground for action is a despatch from the prisoner's Consular or Diplomatic Representative, asserting the man's nationality, and it is difficult to see how a Court of Law can pronounce a decision with respect to the validity of such a document. Whatever shape the decision may take, the mere fact of delivering it implies competence to adjudicate in the opposite sense. That is to say, if the Yokohama Local Court undertakes to deliver a ruling in the sense claimed by the Consul's or Minister's despatch, it practically asserts its right to deliver a ruling in the opposite sense, and to exercise jurisdiction in the teeth of a Consular or Diplomatic protest. That can scarcely be a defensible position. If the German Representative claims Carstens as a German subject, then, according to the Treaty, the man's trial must be conducted before a German Court. There is no alternative, neither does the question fall within the scope of a judicial decision. So soon as Carstens comes before the Yokohama Local Court, having been duly remanded for trial by a magisterial tribunal, the Court becomes seized of jurisdiction, and though it may listen to any proofs advanced by the prisoner himself, it cannot logically or properly take notice of a Consular or Diplomatic despatch simply claiming the man as of this or that nationality. A judgment pronounced by the Court on such a point immediately establishes a right of appeal, and thus we might see, Court after Court asked to determine whether the German Consul's or Representative's claim to exercise jurisdiction in the case of an alleged German subject—assuming such a claim to have been advanced—is valid. The whole business appears out of order. If Carstens was to be taken under German protection, it might have been done with much greater propriety before he came publicly into a Japanese Law Court to stand his trial.

SNIPE SHOOTING IN INDIA.

HEMMED in by treaty limits, the sportsman in Japan has but little opportunity now-a-days to make a bag of snipe, and his chances are yearly growing smaller. The editor of the *Empress*, who is said to be one of the best snipe shots in Calcutta, in writing of the "Tal Bereilah" in Mozufferpore, says:—It is the favourite snipe ground of the district and has some "warm corners." Some of these corners hold the snipe by dozens, and bags of fifty and sixty couple to one gun have several times been made. There is no record "bag," as it appears the men of the district as so sceptical that when a man makes an extra big bag (one out of the common) he keeps it quiet! Calcutta men are not so diffident, and it is now the fashion to always beat the previous year's record! Up to the last three or four years it was the aim of the best men to make the coveted 50 couple, now, nothing less than 80 couple is any good, and we expect to hear of 100 couple this season, although up to the present, 52½ couple for two guns is, we believe, the best.

MR. INOUE KAKUGORO.

LITTLE has been heard lately of the remarkably eloquent politician Mr. Inoue Kakugoro. We now read, however, in the *Fiji* that he has been collecting materials to load a big gun which he intends to fire at the heads of the Ministry next session. Foreign relations constitute the subject of his attack, and having got his facts together, he announced his intention of delivering a speech in the Koseikan, on the 6th instant. We judge that much interest must have been excited by the heads of the oration as announced; for example, the facts of the country's foreign relations; the objects that ought to guide

Original from

the Government's action towards Foreign States; the foreign policy of Counts Ito and Inouye; the past and the future foreign relations of the empire, and the results actually produced by the former. If Mr. Inouye puts his heart into this subject, he will probably succeed in bringing it very vividly into the field of public attention.

THE CATTLE DISEASE.

CORRESPONDENCE from Korea, published in these columns from time to time, has given some idea of the heavy losses sustained in that country by the cattle pest of last winter. Unhappily the disease seems to have made its way to Japan, and the only hope of avoiding a catastrophe comparable with that which overtook Korea, lies in the promptitude and competence of the Japanese Authorities to deal with such emergencies. The *Fiji Shimpō* says that the number of oxen in Tokyo is 23,648. These, of course, are not cattle intended for slaughtering. The vast majority of them are draught oxen, and their decimation, apart from mere pecuniary loss, would entail immense inconvenience on the people. It is stated that the police are organizing a system which ought to result in stamping out the epidemic.

Rigorous measures, says the Tokyo News Agency, have been adopted by the authorities of the capital in view of the disease now prevailing among cattle in the capital. Additional inspectors have been appointed, and it is arranged that every beast slaughtered shall be examined beforehand by at least two competent experts. Moreover, to secure thorough efficiency of inspection, slaughtering is restricted to Sengokumura in the Asakusa suburb. About 150 oxen are killed there daily for supplying the various meat shops. Under the circumstances it might be expected that the price of beef would appreciate considerably, but such is not the case, for the possibility of being supplied with diseased flesh has produced a deterrent effect on numbers of consumers, and if sound cattle are becoming difficult to procure, the situation is saved by a sensible diminution in the number of beef-eaters.

A telegram from Kobe, dated at 1 p.m. on the 5th instant, reports that, in consequence of the prevalence of cattle disease, the Governor has interdicted all export or import of slaughtered beef. On the same day the chief of Police in Tokyo issued an order forbidding the import of beef or cattle from Kobe, and inasmuch as the chief part of the capital's supplies have hitherto been drawn from Hyogo, there can be no doubt that the effects of this order will soon be felt very seriously.

YOKOHAMA ST. ANDREW'S SOCIETY.

The fourth annual general meeting of the Yokohama St. Andrew's Society, was held in the Chamber of Commerce, Yokohama, on Monday evening. There were present Messrs. J. A. Fraser (Chairman), J. Troup, J. Dodds, D. Fraser, W. G. Cameron, C. W. Ure (Honorary Sec.), R. W. Borthwick, D. McNeill, G. Philip, W. Steele, Buchanan Dunlop, J. Mackenzie, A. Patterson, and J. Johnstone. The Committee, in submitting their Annual Report for 1891-1892, drew the attention of members to the Statement of Accounts. Though the balance at the credit of the Society is \$278.32, nearly the whole of this sum, amounting to \$276.32, was on deposit in Current Account with the New O. B. C., Limited, when that institution closed its doors in June last, and the Committee regret that the loss to the Society will be heavy, as the liquidation is not likely to yield more than about one-half of the deposits. The balance of the funds, viz., \$2.00, is in the hands of the Hon. Treasurer, and there are the subscriptions for next year to be collected. The accounts having been passed, the following office holders were elected: President, J. D. Hutchison; Vice-President, Buchanan Dunlop; Committee, R. W. Borthwick, H. Steele, J. Troup, D. McNeill, and J. Johnstone; Hon. Treas., G. Philip; Hon. Sec., C. W.

Ure. It was decided to take the opinion of the members by circular as to the proper mode in which to celebrate the festival of Scotia's patron saint, the preponderating feeling at the meeting being that it should take the form of a ball. The following new members were elected: Messrs. R. M. Holme-Cook, A. S. Bremner, N. Gordon Munro, M.B., A. Barron, and J. P. McIntyre. The meeting closed with a vote of thanks to the Chairman.

NATIONAL EDUCATION UNION.

The promoters of the above association held a meeting in the Kounji, in Koishikawa, on the 29th ultimo. Mr. Izawa Shuji took the chair. The rules of the association, were discussed, the following draft being finally passed:—

RULES OF THE UNION.

Art. 1.—The term National Education means to furnish for the people all necessary education at public cost.

Art. 2.—The first measure adopted by the Union shall be to present a petition to the Diet praying for the enactment of a law granting an appropriation from the Treasury by way of subsidy for Elementary Schools throughout the Empire.

Art. 3.—Any person who approves the policy of the Union, and desires to become a member, may do so if introduced by a member.

Each member shall pay 10 sen per annum as his subscription. If any branch office be established in a local district, the expenditure must be defrayed by the local members.

Art. 4.—The Union shall appoint a President, and members of committee. The members of Committee shall be selected from the various localities throughout the empire, and the President shall be elected from among them.

Art. 5.—The by-laws of the Union and the draft of any petitions to be presented in its name shall be determined by the President with the advice of the Committee.

Art. 6.—The Union shall be established when its members reach the number of 100, and shall be dissolved so soon as its object is attained.

Provided that those who notified their intention of becoming members prior to the 29th of October, 1892, shall be considered Promoters of the Union.

It is stated that some 350 persons have already joined the union, and that Mr. Izawa will probably be elected President.

In a country like Japan where rapid progress was made within a very short period, the common people could not be expected to understand at once the necessity of elementary education for their children, and consequently the Government was compelled to interfere by establishing elementary schools and by recourse to others measures. But it seems to be thought that the nation has now appreciated the situation, and that official interference in matters of education is beginning to be resented on the ground that instruction in branches of learning which exceed the general want, tends merely to unfit youths for the duty of bread-winning. Hence the efforts of public-spirited men to develop independence in educational affairs. We cannot exactly comprehend the objects of the above Union, but it apparently aims at taking the place of officialdom.

ALTERATION OF THE PASSENGER FARES OF THE NIPPON RAILWAY.

The Nippon Railway Company has announced that on and after the 1st of November, the fares on its different lines, which have hitherto been on the uniform rate of 1 sen per mile for the third class, 2 sen per mile for the second, and 3 sen per mile for the first, will be changed, and that the following scale of passenger fares will come into effect. The third class fares for any distance (approximately):—

Up to 100 miles.....	1.2 sen per mile.
Between 100 and 221 miles.....	1. sen per mile.
Over 221 miles8 sen per mile.

The first class fares are to be two and a half times the third class, and the second class to be 50 per cent. above the third class. With the exception of the Government railways, the Nippon Railway Company now controls the most important system of railways in Japan, for besides the great northern line from Tokyo to Aomori, it possesses the Akabane, Takasaki-Mayebashi, Nikko, and the recently acquired Mito railways, or the whole of the system north of the capital

with the single exception of the Ryomo Railway from Oyama to Mayebashi. In the matter of length these lines exceed the aggregate mileage of the Government railways by some forty or fifty miles. The above alterations of fares are said to have been made with the idea of offering special inducements to travellers for long distances and increasing the hitherto very limited first and second class passengers. However, the Company does not look to become losers by the change, the increase of 20 per cent. on the third class fare for distances up to 100 miles being expected to augment its earnings to an extent which will more than compensate the reductions in other directions, for the passenger traffic on this as on all railways in Japan is almost entirely local, the percentage of through passenger traffic being exceedingly small, a fact clearly indicated by the average passenger mileage on the longer railways being from 20 to 30 miles. The alteration has not therefore escaped adverse criticism from a section of the press, it being argued that the measure will tend to benefit the few at the expense of the many. Be this as it may, there can be no mistake as to the new scale of fares being a boon so far as foreign travellers on the line are concerned, for they mostly patronize the first or the second class, the fares of which have been considerably reduced. Even within the shortest limit of 100 miles the reductions will amount to 10 per cent. on the second class charges, while beyond the longest limit of 221 miles the difference will be 40 per cent. for the second class and 33 per cent. for the first class fares. The changes and reductions in the fares may be noted and compared from the appended table:—

	OLD FARES.		NEW FARES.	
	Uniform rate Per mile.	Up to 100 miles Per mile.	From 100 to 221 miles Per mile.	Over 221 miles Per mile.
Third Class...	1	1.2	1	.8
Second Class...	2	1.8	1.5	1.2
First Class...	3	3.0	2.5	2.0

We learn that a very marked increase of second class passengers has taken place between Tokyo and Sendai since the 1st inst. Passengers availing themselves of the reduced fares have been so numerous that the Company is about to increase the second class accommodation on the trains of the northern line.

DR. LOWSON AND THE LASCARS.

The singular charges preferred by Dr. Lowson against the Lascars who escaped from the *Bokhara* to Sand Island have not passed unnoticed in Hongkong. They have elicited several letters to the local press, and with the exception of Dr. Lowson himself. Dr. Lowson, we are happy to see, finds no defender. The unfortunate Lascars had been toiling without rest for thirty hours continuously before the final catastrophe. They must have been already quite worn out when called upon suddenly to make a struggle for life under circumstances not less terrible or trying for them than for Dr. Lowson. If their brains were somewhat numbed and their muscles weary when the fierce sea threw them up on Sand Island, can any one justly blame them? It does not appear, indeed, that their conduct afforded any reason for fault finding, and the officers of the ship tell a very different story from that of Dr. Lowson. But even though they had showed some apathy and want of active zeal, who could affirm that ample excuse did not exist for such a mood? Reading the whole record as well as the correspondence evoked by this particular incident, we are forced to conclude that Dr. Lowson's utterances were indiscreet, to use no stronger term.

THE "KOKKAI" AND THE TOKYO LOCAL COURT. A very strange charge is brought against the Tokyo Local Court by the *Kokkai*. Our contemporary says that on the 4th inst. Mr. Kobayashi Tamaki, a member of its staff, was summoned to the Public Procurators' Office in the Tokyo Local Court, and was examined by Mr. Yamamoto, Public Procurator, with reference to a paragraph which the paper had published about the Barristers' examination scandal, the

language of the paragraph being considered as insulting to officials. After some examination, the Public Procurator sent Mr. Kobayashi to the Court of First Instance, where he was again examined by Mr. Aki, Judge of that Court. Now, according to the Newspaper Regulations, the only persons legally responsible for the matter contained in a newspaper are the editor, the publisher, and the printer. The same regulations further expressly provide that after a law suit has been instituted, if the prosecutor discovers that there is a true editor in addition to the nominal editor, the former shall be held responsible equally with the latter. In other words, no member of the staff can be summoned and examined unless a law suit has been instituted against the editor. The editor of the *Kokkai* is Mr. Ota Hisataro. But before any proceedings had been instituted against him, Mr. Kobayashi Tamaki was summoned and examined. It is true, that Mr. Ota was summoned on the 27th ultimo, but he only underwent an examination at the hands of Mr. Koga, Public Procurator; no lawsuit was actually instituted. Such being the case, the *Kokkai* holds that the conduct of the Tokyo Local Court was a direct violation of the laws of the country. Again, Art. 23 of the Constitution expressly provides that "no Japanese subject shall be arrested, detained, tried or punished, unless according to law." But Mr. Kobayashi was tried by Mr. Aki, Judge of the Preliminary Court, before any suit had been instituted against the responsible person. Thus the act of the Tokyo Local Court is a violation of the laws of the country as well as of the Constitution; and since the question has an important bearing upon journalistic rights, the facts of the case are published by the *Kokkai* for the purpose of appealing to the opinion of jurists.

THE INDEMNITY DEMANDED FROM KOREA BY JAPAN.

MR. HARA KAI, Director of the Bureau of Commerce in the Foreign Department, who was sent to Korea some time ago in connection with the indemnity demanded by Japan on account of the Korean Authorities' illegal prohibition of the export of beans, having returned to Tokyo with unexpected celerity, various rumours began to be circulated. Some averred that his mission had failed and that his return had consequently been inevitable. Others said that he had not been sent as a plenipotentiary to negotiate, but only as an official to collect certain information, and that having obtained the desired information, he naturally came home. The News Agency reports that the true explanation is different from either of these surmises. Mr. Hara went as plenipotentiary, with instructions to demand an indemnity of a hundred and forty thousand dollars. On opening negotiations, he found that the Korean Government acknowledged its responsibility to pay immediately sixty thousand dollars, but desired that further negotiations might be suspended until certain local officials could be summoned from Gensan and elsewhere and examined. There was no choice but to comply with this request. On the other hand, it is well understood that when the Korean Government asks for time to conduct investigations, it contemplates a delay not of days but of months. Mr. Hara appreciated the uselessness of dangling his heels for an indefinite time in the peninsula, so he came home.

THE MINISTER OF THE IMPERIAL HOUSEHOLD. For some years back, says the *Yomiuri Shim-bun*, rumours have constantly recurred of a change of the Minister of the Imperial Household. But the thing has never gone beyond rumour. The same idea is now once more revived; this time with some foundation. The successor pointed to is Viscount Tani Tateki, and the recommender is Count Ito. The public will at once declare that Count Ito has begun to buy up his enemies in the Diet. But according to report, such is not the case. Count Ito has always considered that Viscount Tani, who is upright and earnest, is better suited to be Minister of the Imperial Household than a poli-

tician. Owing to various circumstances, however, the Count has not hitherto found himself in a position to speak his mind. The time having now at last arrived, he has communicated the project to Viscount Tani. Count Inouye also approves, and has seen the Viscount, and urged him to accept the offer. The Viscount finds it impossible to decline, but as he cannot abruptly abandon his political friends in the House of Peers, he has deferred giving a definite answer until he shall have reflected and consulted. On the other hand, Viscount Hijikata, the present Minister of the Imperial Household, having been in office for over five years, entertains the intention of resigning soon, and when he learned the Count's desire to appoint Viscount Tani, he was more than pleased with the suggestion, so that when Count Inouye met Viscount Tani, Viscount Hijikata was also present, and recommended the acceptance of the post. Such being the case, the change is likely to be made as soon as Viscount Tani can be induced to accept. This is a very interesting story, but its value is considerably impaired by an announcement now made by the Tokyo News Agency, namely, that the tale is a baseless canard, and that no intention whatsoever has been entertained of removing Viscount Hijikata from office.

METALS.

In their report dated September 24th, Messrs. S. W. Roys & Co. say:—In our August report we were able to mention a fairly satisfactory state of things in the pig iron trade, and reasonably good prospects for the future. This promise has, however, by no means been fulfilled, and this month has been a bad one, not only in the pig iron branch, but in the general metal trade, prices having fallen steadily almost without exception. Pig-iron, both Scotch and Middlesbrough, is now about 1/- per ton cheaper than at the beginning of the month, and prospects appear to be unfavourable. Buyers cannot be brought forward, as there is a feeling that lower prices must rule before long; business at present is only of limited dimensions, and production is increasing. Shipments from Middlesbrough are poor, being returned as 32,425 tons up to the 16th instant, as against 57,215 tons for the corresponding period of last year. The manufactured iron trade is very dull, but latest advices from the Midlands report a slight improvement. Copper has fallen steadily, but slowly, notwithstanding arrangements for a restricted production about which a great deal was heard a short time ago. Tin has come down steadily, and is about 30/- per ton lower than at the beginning of the month. Spelter has had a collapse, but is now showing some signs of recovery.

ASCENTS OF FUJIYAMA IN SNOW.

We are surprised to observe that no one has yet cared to contradict in print the claim advanced more than two months ago by the *Pail Mail Budget* on behalf of the Rev. W. Weston and Mr. Montague Fordham, that their ascent of Fujiyama last May was "the first ascent of the far-famed sacred mountain before the melting of the winter snow." Time obliterates records but does not change the difficulties of getting up Fujiyama while his slopes are still clad in white. The credit of their achievement as a physical effort belongs unreservedly to Messrs. Weston and Fordham, but whatever spice of picturesqueness is added to it by the hypothesis that they were pioneers must be laid aside. For to our own personal knowledge the mountain was attacked and conquered by a party of Englishmen in April, 1870. These climbers were not actuated by any thought of making a record, or of handing down to posterity the reputation of having been the first to fare through the snows of the Peerless Mountain. They simply wanted to go up Fujiyama. Had it been possible for them to consult their own convenience, they would have waited quietly until the season indicated by Nature for such efforts, and then, falling into line with the customary stream of savoury pilgrims, would have watched the summer sun rise from the fair mountain's summit. But it happened that two officers of artillery had obtained spring leave for a brief

visit to Japan, and as these men could never hope, in the ordinary course of events, to see the Land of the Rising Sun again, they desired ardently to devote a week of their short respite from parades and barrack routine to breasting the slopes of Fujiyama. Little thought was taken of possible obstacles. Alpine ascents are made perpetually in the midst of snow and ice, and why should Fujiyama be insuperable under similar circumstances? Of course there was no valid reason to be deterred, as events proved. The party of five reached the summit by way of Suyama without any special difficulty, though in returning two faces were more or less abraded by falls on frozen snow slopes. It will be seen therefore that the "first ascent" of Messrs. Weston and Fordham was just twenty-two years and one month after the real first ascent—that is to say, the real first ascent by foreigners, for we have very little doubt that the feat had previously been performed time and again by Japanese. Moreover, unless we are greatly mistaken, another ascent during snow time was made between 1870 and 1892, so that, in truth, the climb of Messrs. Weston and Fordham was at least the third of its kind.

SHANGHAI RACES.

THE *N.-C. Daily News* thus anticipated the recent Shanghai race meeting:—"Although the Course is very hard, it looks as if we are going to have one of the best autumn race meetings on record. The weather is perfect, there is sufficient uncertainty about the new ponies, the Grand Stand is renewed, the training has not been interfered with by rain, and Shanghai has got a little over its depression, so that all promises well for those who go up to the Course." The morning journal's anticipation as to the "uncertainty about the new ponies" turned out to be correct, for several made their mark, the fortunate backers in one instance "received each over \$430 for their \$5 invested," and the two big stables of Mr. John Peel and Mr. Sassoon had but a small share—compared with that of many former years—of winners, the first-named taking only two races and the latter three. Indeed, had it not been for Hero, Mr. Sassoon would have come out with only one win to his credit, as the skewbald landed for his owner both the Shanghai Stakes and the Champions, the latter race having now been won at four meetings by Hero. Shanghai would appear to have "got a little over its depression," if the money that changed hands at the Pari-mutuel can be taken as any guide. The total amount invested on the three days reached the very considerable sum of \$36,200, —\$9,790 on the first day, \$13,040 on the second, and \$13,370 on third. The largest sum invested on any one race was \$3,235 in the Champion Sweepstakes. Hero alone carrying \$2,225 out of the total. The most successful jockeys were Messrs. Crawford, Sampson, and Read, who tied with four wins each.

CHINESE ITEMS.

THE progress made by China in maritime affairs is evidenced by the fact that the whole of her fleet, one vessel excepted, were recently docked at Port Arthur entirely without foreign assistance. Indeed, all her acceptance of Western civilization seems to be limited to the field of warlike preparations. H.E. Chang Chih-tung, Viceroy of Hukuang, though he has spent eight hundred thousand taels on a cotton mill which has not yet turned out a yard of cloth, devotes his energies chiefly to building and equipping arsenals. His great iron-works at Hanyang were supposed to be intended for the manufacture of railway material, but it now seems that he has collected there some three thousand machines for making rifles and cannon. If this great plant were in working order, it would be capable of turning out four hundred thousand rifles a day, but inasmuch as the machines still remain in the cases that carried them from Berlin, there is as yet nothing practical to show for an enormous outlay. At the Nanking and Kiangnan Arsenals, however, work has been going on for years, and guns as well as small arms of all the most modern and most approved

Original from

types are being turned out with feverish rapidity. The Kiangnan experts have succeeded in producing steel of the finest quality, and powerful hydraulic presses are being imported for compressing it. Mr. H. Bryos has contributed to the columns of the *North China Daily News* a most interesting essay on the subject of China's military preparations. "Everywhere," he writes, as translated by our contemporary, "arms and munitions of war are being made with a devouring activity. This is the preoccupation of those who preside over the destinies of the empire. They are working with all their might with a view to war, and the moment will come when China will be provided with armaments equivalent in quality and in number to the armaments of the greatest European nations. . . . One must be blind not to recognise the movement that has been going on in China for some years in the direction of military industry. The coasts, the mouths of the rivers and their banks are being fortified with important works. In all the arsenals, the making of cannon and of rifles is going on, not to speak of the continual large purchases abroad of arms and gunpowder. Instructors are brought from Europe to teach the Chinese the art of war. Their navy of junks and inferior steamers has given way to a new fleet of modern ships, armed also with modern guns."

On the 18th of October Consul-General Hannen presented to Captain John Roberts the vellum certificate of the Royal Humane Society for conspicuous gallantry in saving life. The incident which secured for the stout seaman this much envied distinction was thus described by Mr. Hannen:—

On the 21st June, at Leuconna Island, there was a wreck of the *Holme Eden*. At about seven o'clock in the evening a swell got up and swamped a boat which was leaving the wreck. It contained 23 men. Out of these 17 were able to swim, and they swam through the gully and saved themselves. There were six other men who could not swim; two of them sank, and the four others were clinging to the rocks, with the sea washing over them. There was nothing to be done. There was no boat which could be launched, and even if it could have, the rock and sea would have prevented it reaching them. There was absolutely nothing to be done but for some one to jump into the sea, swim to these people, and help them back in some way. This John Roberts at once did. He was assisted in it by a Chinese of the name of Yung Sun. They swam through the gully and got to the people who were clinging on the rocks. After a considerable amount of patience they persuaded these men to launch themselves into the sea, and they assisted them back through the gully, through the breakers and rocks to the mainland, and after considerable time these four men were rescued, and restored to life.

At the same time another Royal Humane Society's certificate was handed to the brother of the Chinaman Yung Sun, for transmission to the latter, the Society recognising no distinctions of nationality in the rewards it bestows on useful courage. Captain Roberts received also a gold medal which Chinese divers engaged upon the wreck of the *Holme Eden* had caused to be struck in his honour, and which was handed to him by the Consul-General. The medal is said to have been very beautifully made. The obverse bore an inscription in Chinese to the effect:—"Chinese divers respectfully present this in gratitude for the saving of life, to the Englishman, Mr. Roberts; great worthiness." The reverse had the inscription: "Presented to Captain J. Roberts by Chinese divers employed at the *Holme Eden*, lost on Leuconna Island, for his conspicuous bravery in saving 21 of their lives on the night of June 21st, 1891."

A revolt of some magnitude is reported on the borders of Kiangsi and Hunan. At a place about 150 miles from Kiukiang a large body of Kolao Hui adherents have risen in arms against the Government, and at Pingsiang Hsien, in Yuenchow Prefecture, a force of several thousands of rebels, having their head-quarters in the mountains, are said to have made a descent upon the city, captured and carried off the magistrate, and defeated the soldiers sent against them. The insurgents apparently confine themselves to attacks upon officials, leaving the people unmolested. Later tidings announce, however, that

on the approach of a large force sent against them, the rebels dispersed and are no longer a menace to the country.

There has been a somewhat serious fire at Sze-yü, destroying nearly 200 houses, and another at Wuhu which consumed over 100. The latter was rendered remarkable by the fact that it destroyed the temple of the God of Fire who is supposed to guarantee his devotees, and a *fortiori* himself, against such calamities.

The settlement, or rather non-settlement, of the claims preferred in connection with the Ichang riots of September 2nd, 1891, appears to be provoking very severe criticism among foreigners in China. No one of the rioters was ever brought to justice, and concerning this conspicuous failure the *North China Daily News* says:—"We venture to assert that all the voluminous histories of the *Fus* and *Hsiens* in China may be searched in vain for a sample of similar hard winking on the part of the higher authorities, in riot cases of similar dimensions, where only natives were concerned." It is not the escape of the rioters, however, so much as the treatment extended to their victims' claims for compensation that provokes hostile criticism. The claims having been duly sent in, were leisurely examined by the Chinese, who ultimately, in May last, offered to pay in some cases one half, in others two-thirds, and in a few three-fourths of the sums demanded. This proposal having been refused, the matter was referred to Peking, and on the eve of Sir John Walsham's departure for home, he agreed that a commission should be appointed at Ichang to examine and decide the claims. Notice has therefore been issued to the claimants requiring them to be in readiness to appear before the Commission for the purpose of furnishing any proofs they may possess of the value of their claims. Against this it is naturally objected that where everything has been destroyed, proofs cannot well be furnished, and at the same time, the idea of a Chinese Commissioner being associated with H.B.M.'s Consul in such a matter seems to excite umbrage. The position is certainly difficult. People who have had any experience in the East know well what is meant by foreign claims against an Oriental Government, and the Chinese cannot be blamed if they closely and suspiciously scrutinize the demands made upon them on account of goods and chattels which may or may not have had tangible existence. But, after all, the case must go against the Chinese by default. It is owing to their failure to discharge administrative obligations that the sufferers by the Ichang riots present themselves, empty-handed, to demand compensation. The production of proofs has, in many instances, if not in all, been rendered impossible by the *laches* of China herself, and except in cases of palpable exaggeration, she has no manner of right to query the claims advanced by the victims of her own culpability.

Yellow-glazed bricks, euphemistically termed "gold bricks," are among the luxuries employed by Palace architects in Peking. The Board of Works recently indented on the Governor of Kiangsu, in which province the famous potteries lie, for six thousand of these bricks four thousand to be 2 ft. 2 in. bricks, costing a little over one tael each; one thousand to be 2 ft. bricks at .58 tael each, and the remainder to be 1 ft. 7 in. at .482 tael. These are a tolerably costly kind of building material, and not easy to make either, for the earth has to be prepared in spring and left drying until the summer, before subjection to the final processes. The Board of Works must wait for the needed supply. Yellow, as our readers doubtless know, is the Imperial colour of the present dynasty. A roof covered with yellow tiles is supposed to be a special mark of Imperialism. *Appropos* this a good story is told of a well known Roman Catholic Cathedral in Peking: To roof it with yellow tiles *ab initio* would have been to provoke official indignation and remonstrance. But the good fathers, who cheerfully endure all

kinds of personal misery and hardship for the sake of their creed, wanted to have yellow tiles as a mark of respect to the great cause represented by their cathedral. So they roofed it with yellow tiles whitewashed, and when "the rain descended," it gradually washed away the obscuring lime so that the golden ground-colour shone out in all its glitter. Thus heaven itself seemed to have interfered to roof the Cathedral in a fitting manner, *Si non e vero*. At all events, the yellow tiles are there *en evidence* today. Speaking of "golden bricks," how easy it is to conceive some commentator of future generations writing of the Palace in Peking that it was partly built of the king of metals. The requisition of the Board of Works says simply "golden bricks," and far less equivocal expressions have betrayed scholars like Julien into the most singular misconceptions.

Fighting has been going on in Shensi. On the quelling of an insurrection in northern Szechuan, a number of the insurgents escaped into Shensi, where, however, the Authorities appear to have been on the look out for them. They were defeated in three engagements, and being finally driven back over the border of the province, were cut to pieces by the Szechuan troops. Some of the same rebels had fled from their original place of revolt into Tingyuan, but they were there attacked by the local forces and either killed or captured. China is a huge empire with plenty of room for disaffection and fighting, but of late she seems to be more than usually disturbed.

A curious example of the importance attached by Chinese laws to the motive of a crime is furnished by a case which occurred at Nanking and is reported in the *Peking Gazette*. A certain Major purchased a concubine who, after some years' residence in his house, fell in love with his servant and attempted to escape with the man. She was found waiting for her paramour and would-be husband in a boat, and being carried back to her owner received a severe beating from him. By and by the servant was persuaded to come and offer his apologies, whereupon the Major consented to take him back into his service. But only with the intention of inflicting terrible vengeance on him. For, that very evening, he ordered the man to escort him in the capacity of lantern-bearer. *En route* they were joined by a friend, and at a lonely spot the two fell on the servant and killed him. The official report remarks, with charming *naïveté*, "the circumstances of the homicide and the relationship between the parties make the task of passing sentence unusually difficult, as the case is not exactly provided for in the laws." The sentence passed was three years' penal servitude and a hundred blows, which, in the case of an official, means service on the post roads in Mongolia. The concubine received almost as severe a sentence in name, and probably a very much severer one in reality. No one has ever explained exactly what is involved in service on the post roads of Mongolia, but we suspect that it is not a very terrible fate.

The latest performance of the Yellow River is to effect breaches in its banks one of which is officially reported to be a thousand feet wide. The waters pouring out of this huge gap made their way to the Tubai river and thence to the sea, while the waters on the Changchün side poured into the Hsiao-ch'ing river. It is something wonderful to contemplate China's helplessness in the face of this perpetual scourge.

Concerning the methods of some Chinese physicians, the following translation from the *Hupao*, which appears in the *North China Daily News*, is instructive:—

A good lesson was taught a physician, belonging to that class who pretend to be always busy and purposely delay calling upon their patients, in order to enhance the value of their services. It is the habit of these physicians never to call on their patients, no matter how dangerous the case may be, until repeated summons has been made to them, and until they feel satisfied that the family of the sick person has fully realised their value and importance. Frequently they put off their visit until the last hour, and in many cases when their services are no longer required.

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

With regard to fees they always charge an extortionate sum, when they think their service indispensable. When they are requested to attend especially dangerous cases, they blackmail the unfortunate family whose member is lying in bed between life and death. The physician in question was a short time ago asked to attend a patient stricken with cholera, which is raging in Formosa. The people of the patient's family sent for the doctor early in the morning, requesting to him to come with expedition. The latter promised to go, but he took his time. During the day four messengers were sent to him to hasten his advent, but he still lingered. In the meantime, however, the patient died, when and the physician did come in the evening, he was given a warm reception. Incensed beyond measure, the aggrieved household set upon him with great fury, and tore his garments to shreds. Had he remained, instead of heaving a hasty retreat to a neighbouring drug shop, he would certainly have gone home more dead than alive. There are very many physicians of this kind all over the country who trifle with life, and it is to be hoped that the people will not fail to teach them a similar lesson when occasion arises.

Turkestan has been visited by sundry calamities in the nature of untimely frosts, hail, floods, and drought. In some districts we read of vines destroyed; in others of hundreds of houses swept away by inundations; in others of crops beaten down by tempests of hail, and in others of corn withered by unchanging sunshine. Altogether the province seems to have been hardly treated by Nature this summer. Yunnan, also, has suffered terribly from constant rain. In many villages the houses have been washed away; inside some of the city walls the water is several feet deep; the crops are destroyed beyond all hope throughout a large area, and in one place over a hundred lives were lost. In Hupeh, too, there has been a serious inundation owing to an overflow of the Yangtze river; and in northern Honan, at Weihui Fu, and Hsinhsiang Hsien, wide-spread ruin has been caused by the rivers Wei, Little Tan, and Ao.

A case of torture applied under a false impression is reported by the Viceroy Li. A lunatic threw himself into a well and was drowned. The doorkeeper of the magistrate who investigated the case persuaded—from what motives we do not learn—an expert to pretend that he had discovered marks of violence on the corpse. The Magistrate thereupon tortured some innocent people with burning joss-sticks to make them confess that they had beaten the man to death. The case coming to the notice of higher authorities, the truth was elicited and the Magistrate has been cashiered. But the unfortunate victims of the burning joss-sticks still carry their scars.

HOKKAIDO IMPROVEMENT ASSOCIATION.

THE Hokkaido Takushoku Shinko-kai was organized some time ago. The object of the association is to cultivate the waste land of the northern island. It has been ascertained that among various projects of the association contemplate commencing with the extension of railways and the construction of new harbours. The railways of the island are lengthened by 874 miles, for which purpose a sum of 33,580,000 yen is required; and 23 harbours are to be constructed at a cost of 13,990,000 yen. Moreover, about 30 ships will have to be purchased at an average price of 200,000 yen. Thus the aggregate expenditure on account of these undertakings alone is over 49,170,000 yen. The idea is to raise this great sum of capital by means of a national loan. But as a financial scheme of such magnitude would be likely to embarrass the money market, the projectors talk of floating the railway loan first, and spreading it over a period of 30 years. Meanwhile the lottery system is to be sanctioned—so says rumour—in Hokkaido alone, and a large Lottery Company will be established in the island. In carrying out this last project, it is proposed that the company shall deposit 250,000 yen with the Government by way of security, and that the drawing of the lottery shall be strictly superintended by officials, so as to inspire public confidence. The total sum involved in each drawing will be 1,000,000 yen, out of which 400,000 yen is to be distributed in the form of prizes; 200,000 yen to be set aside as commission and to meet sundry expenditures; and 400,000 yen to be devoted to the improvement of the island. The drawings

will take place twice a year, so that the aggregate annual amount subscribed would be 2,000,000 yen, 800,000 going to the winning numbers, 400,000 to commission and sundry outlays, and 800,000 yen to capital for improvements. If the process were continued for 30 years, the total sum collected would amount to 60,000,000 yen; out of which 24,000,000 yen would have been returned as prizes; 12,000,000 yen absorbed by commission, &c., and 24,000,000 yen devoted to improvements. The programme is to spend 14,000,000 yen of this last sum on the construction of harbour-works; 2,000,000 yen on the purchase of ships; and to apply the remaining sum of 8,000,000 yen to the repayment of the railway bonds and to subsidies for railway enterprise. As for the Railway loan of 33½ million yen, the idea is to re-pay it out of the revenue derived from the products of Hokkaido, without asking for any disbursement from the Treasury, the proceeds of the lottery also assisting as described above. For the first five years the loan would be left unpaid, but from the 6th year to the 31st year the commission derived from the lottery would be used for its repayment, and after that year the necessary funds would be obtained from the revenue derived from the railways and various products of the island. In starting this great undertaking, it is deemed essential that the same uniform policy should be pursued throughout, and with that idea the Hokkaido Administrative Board would be reorganized—that is to say, the present Board would be abolished and a new Government Office established under the directorship of an Imperial Prince, the Sub-Director being appointed from among the ablest and most respected statesmen of the empire. The Sub-director would rank as high as a Cabinet Minister, and would control all the affairs of Hokkaido by means of first, a military Bureau; secondly, a Colonial Bureau; and fourthly, a Financial Bureau. The office should not be liable to change in consequence of changes of Cabinet: the same statesman should hold it, and the same policy should be followed through a long period. When the enterprise is completed, about 1,700,000 cho (4½ million acres) of land will have been brought under cultivation, the revenue derived being fifty or sixty million yen per annum. Moreover, large profits would accrue from aquatic products. The estimate is that the total revenue would amount to considerably over 100,000,000 yen. Add to this that if communications are fully established, the military equipment completed, and the defences of the island perfected, Hokkaido will be one of the richest treasure houses of the Empire. The promoters intend to introduce a Bill in the above sense in the next session of the Diet. We find these facts set forth in the *Kokkai* and other vernacular journals, from which unanimity we infer that some big project of the nature indicated is actually on the tapis.

THE RADICALS AND THE BANK OF JAPAN.

THE Radicals are adding a new plank to their platform in connection with the Bank of Japan. Their project is to make the Bank pay a certain proportion of its earnings to the Treasury, by which means they estimate that an addition of about eight hundred thousand yen may be annually made to the revenue of the State. At present the Bank pays nothing for the privilege of issuing notes, whereas the Radicals find that in all Western countries such a privilege is never granted without some substantial *quid pro quo*. The *Kokkai* says that these reformers have been investigating European systems, and that they find that of Austria-Hungary most suitable for their purpose. In Austria-Hungary the State Bank has privileges similar to those enjoyed by the Bank of Japan: it is protected by the Government; it has charge of the Treasury's funds, and its issues convertible notes. In return, it is obliged to give to the Government a moiety of the portion of its net earnings remaining after a dividend of 4 per cent. has been paid. Japan's circumstances being somewhat different, the Radicals propose to modify this law a little. Their plan would be to rule that after five per cent. has been paid as dividend out of the profits, after due rewards have been given to the officers of the Bank, and after a sum, not

exceeding ten per cent. of the net profits, has been set aside for the Reserve, a moiety of the remainder shall be given to the Government. In this way they count, as we have said, on increasing the State's revenue by from seven to eight hundred thousand yen annually. This project has not yet obtained the definite endorsement of the Radical members of the Diet in couclave, but there appears to be very little doubt that they will approve it.

RUMOUR OF DISRUPTION OF THE "JIYU-TO."

So long as Mr. Oi Kentaro remained in the *Jiyu-to*, people used to speak of the Radicals as being divided into the two camps of Hoshi and Oi—*Hoshi-ha* and *Oi-ha*—meaning thereby that the great bulk of the Party were enrolled under the banner of Mr. Hoshi Toru, and the recalcitrant section under that of Mr. Oi Kentaro. But since Mr. Oi openly severed his connection with the Party and drew his disciples with him, it has been supposed that complete harmony reigned in the Radical ranks, and that the whole of the remaining members gave full allegiance to Mr. Hoshi, President of the House of Representatives. According to the News Agency, however, no such concord really exists. On the contrary, a second Mr. Oi Kentaro has been developed in the person of Mr. Kono Hironaka, Radical leader in the House of Representatives. Mr. Kono, it is said, has been quietly fostering and increasing his influence, so that already in the To-hoku and Fukushima districts his followers are openly spoken of as the *Kono-ha* in hostile distinction to the *Hoshi-ha*, and in Kiushu the prominent Radicals Messrs. Matsuda Masahisa and Takekomi Tokitoshi are agitating to effect a union with the *Kono-ha* of the To-hoku region. We trust that this information may prove incorrect. The nation's chief hope of seeing something like a solid and responsible political party formed centres on the *Jiyu-to*, and even those who would have the country move at a more leisurely pace than Count Itagaki and his followers advocate, recognise and admire the earnestness and, on the whole, the integrity of purpose hitherto shown by the *Jiyu-to*. A serious split in the ranks of the party would revive the old apprehension that for many a year to come the arena of Japanese politics must be occupied by a motley group of little coteries acknowledging the attractions of persons only, and little influenced by principles.

THE SANYO RAILWAY COMPANY.

At the last general meeting of the above company it was determined to raise a sum of two million yen at 6 per cent. for the purpose of extending the line from Onomichi to Hiroshima, a distance of 50 miles. Whether the Company have decided not to sell their lines to the Government, or whether they think that Diet will not consent to the Railway Purchase Bill, it is difficult to say, but certainly there is ground for curious surmise in the fact that whereas the Railway Council is to meet immediately and vote resolutions which will be submitted to the Diet, the Company have set about raising a loan so suddenly for the construction of new lines. On the other hand, there is no manner of doubt that for strategical purposes the Government will require lines to connect Aomori with Kiushu, and that consequently, either a subsidy must be granted to the Sanyo and Kiushu Railways Companies, or their lines must be purchased by the State. In the latter case, the loan now projected by the Sanyo Company would be changed into Government Five per Cent. Bonds. But as the public will have subscribed the money at 6 per cent., Five per Cent. Bonds will not readily be accepted in exchange for the original scrip, and the Government may thus be confronted by the necessity of having to take over a loss of 20,000 yen annually as compared with the price at which money is obtainable by the Treasury in the open market. It has been asserted that the shareholders of the Company are not willing to sell their scrip at any figure under its face value, but the rumour is incredible, for the majority of the principal shareholders purchased their stock so cheaply

that they may be confidently expected to accept terms far below its face value. Probably their idea in raising a loan at present is simply to get it subscribed at a high rate, and thus put some money into their pockets. Such, at all events, is the view of the *Kokkai*, from which we take these facts.

FIRE IN TOKYO.

On Wednesday evening the residence of Lieut. T. H. James, R.N. (retired), Superintendent of Navigation in the Japan Mail Steamship Company, in Aoicho, Azabu, Tokyo, was destroyed by fire. The flames had their origin in a bathroom, and the first alarm was given at 7 p.m. Very soon the engines of the district were at work. There was an abundant supply of water, but its source being at the foot of Reinan-zaka, more than a hundred yards of hose were required, and this, of course, diminished the volume poured on the conflagration. It being apparent from the outset that no hope of saving the building—which was of wood and comparatively old—could be entertained, the firemen directed their efforts to confining the flames to the compound, and in this they were successful, though the United States Legation, which stands almost exactly on the opposite side of the street, was at one time in imminent danger. Lieut. James was absent at the commencement of the conflagration, and inasmuch as an hour sufficed to reduce the house to ashes, he did not return until the incident was virtually closed. Happily, no one was injured, and the family were soon safely housed in neighbours' residences. The building was the property of Mr. Okura Kihachiro, and we have not learned whether it was insured, but the furniture and effects were covered to an amount that will recoup a considerable part of the loss.

THE OPERATION OF THE CODES.

LESS than a fortnight remains before the opening of the next session of the Diet, yet the Government has not openly expressed any opinion about the Civil and Commercial Codes. It is, however, reported, says the *Nippon*, that the Codes Committee has decided that the Civil Code cannot be divided, but that the Law of Companies and that of Bankruptcy can be separated from the body of the Commercial Code. The Government, according to the same authority, have now decided to enforce those two sections from the 1st January 1892; and to postpone the operation of the rest. But whether the Sovereign's sanction will ultimately be sought for the Bill passed by the Diet last session, and another Bill be presented next session to obtain the Diet's consent to the enforcement of the separable and much needed portions of the Code; or whether the Diet's Bill will fail altogether to obtain the Emperor's sanction, is still an open question. The *Nippon* thinks it advisable that the former course be adopted. The *Nichi Nichi Shimbun* has a word to say on the subject, namely, that, according to rumour, the Cabinet have decided to urge the Emperor to give his sanction to the Bill passed by the Diet for postponing the operation of the Codes.

RELEASE OF THE WOMAN SUPPOSED TO BE IMPLICATED IN THE HONMOKU MURDER.

It will be remembered that when Schonenberger, an alleged Dutch subject, was arrested on suspicion of having murdered the Japanese coolie who was done to death at Honmoku on the 5th of last September, a story went abroad that the crime had been instigated by a woman who entertained some grudge against the unfortunate coolie. The police obtained sufficient evidence to warrant them in taking the woman into custody, but apparently the subsequent investigation involved much trouble and delay. It was carried on by Public Prosecutor Hattori, and on the 31st ultimo he finally came to the conclusion that no satisfactory proof of guilt could be obtained. The woman was accordingly released, and is said to have left for Hongkong.

MR. A. PATERNOSTRO.

We find that the vernacular press was right in stating that Mr. A. Paternostro, Legal Adviser

to the Cabinet and to the Department of State for Justice, has been elected a Deputy to the Italian Chamber. The district named, however, is erroneous, Mr. Paternostro having been returned, not for Palermo, but for Corleone, province of Palermo, Sicily. The general elections in Italy took place on the 6th instant. Evidently Mr. Paternostro's reputation must stand very high, or he would not have been chosen Deputy in his absence. The circumstances greatly enhance the honour. For Japan's sake, however, the event is to be regretted, since it will entail Mr. Paternostro's departure from Tokyo at an early date—December 2nd, we believe—and this country will thus lose the services of an expert who has shown himself a thoroughly competent jurist and a publicist of deep insight.

AMERICA AND HOME RULE FOR IRELAND.

ALBERT SHAW, writing in the *Contemporary Review*, gives a very succinct and well constructed definition of the feeling entertained by the average American towards the question of Home Rule for Ireland:—

The reason Americans favour Home Rule is simply this: They have realized in their own political system the strength of that happy adjustment of centrifugal and centripetal forces that we call the "federal balance." Ask any American what he means by Home Rule, and he will reply, that measure of local sovereignty and autonomy left by the American Constitution to each of the constituent States of the Union. It is the sense of reasonableness and fair play, guided by the practical knowledge of government in the United States, that has always made Americans so perfectly sure that they favoured Home Rule for Ireland. They know that Ireland, whether or not she would manage her domestic matters in an ideal fashion, would manage them far better than they could possibly be managed by any outside authority, just as they know that California, or Massachusetts, or any other of the forty-four sister States, can attend to ordinary home matters far more satisfactorily than any legislative or executive authority at Washington.

This would be very convincing were it not so very partial. The writer appears to forget, in the first place, that at the root of the demand for Home Rule is an agrarian programme which sets at naught the rights of property and contemplates spoliation on a colossal scale. He appears to forget, also, that were there question merely of such a measure of local autonomy as is enjoyed by an American State, England would not hesitate for a moment to accede to Ireland's wish. But even as America fought to the death, waged such a war as has no parallel in the history of the world, to prevent the secession of certain of the States, so England is sternly determined not to sanction anything which seems to embody the embryo of secession, and in that light she regards the demand for Irish Home Rule. "Perfect home rule in all matters of local concern" is, as Mr. Shaw says, an excellent administrative recipe. But not less excellent, and equally essential, as he himself admits, is "perfect and indissoluble union in affairs of general or imperial concern." Have the Irish agitators given any evidence that they desire such union?

THE LADIES' BAZAAR.

It has hitherto been the custom with the Committee of the Ladies' Charity Bazaar to send a number of tickets for sale among the foreigners of Yokohama and Tokyo. But this year, for the first time, the habit has been abandoned, nor has any step been taken to advertise the Bazaar in the foreign local press. We are unable to say what considerations influenced the Committee to make this marked departure from the usual programme, but we cannot refrain from expressing our regret that the change should have been thought advisable. It is true that the assistance rendered by the foreign community in the matter of purchasing tickets was always inconsiderable. The maximum number sold in advance never exceeded four hundred in Yokohama, and at most as many more among the foreign residents of Tokyo outside the Legations. Evidently a sum of about two hundred yen stands in an insignificant ratio to the total proceeds of a Bazaar from which something like eight or nine thousand yen is always realized. But if foreigners did not contribute more liberally to this special charity, it was certainly not because they lacked a spirit of generosity. They gave as much as they were asked to

give, for their unvarying habit has been to meet every appeal of the kind with large-handed liberality. On the other hand, if their contribution was comparatively trifling from a material point of view, it was morally valuable for the sake of the bonds of common sympathy in which it linked the Japanese people and the foreign residents. Nothing brings the foreigner so close to the inhabitants of the country as unity of benevolent aim, and appreciating this we regret that any opportunity should be abandoned which contributes to such a happy result. Doubtless the Committee of the Bazaar had good reasons for its change of procedure, but it is difficult to view with equanimity any such symptom of an apparently diminishing desire to seek foreign co-operation.

RESIGNATION OF COUNT OKI.

It is rumoured that Count Oki, President of the Privy Council has presented his resignation. The *Nichi Nichi*, which publishes this item of news, does not deny it, but vaguely promises to make inquiries. The *Kokumin Shimbun*, however, is more explicit. It alleges that the Count divulged an official secret with reference to text-books. The story is constructed thus:—Some time ago Mr. Sawayanagi, Director of the Bureau of Documents in the Educational Department, resigned, owing to a suspicion that he had improperly given information to publishers about the text-books which had been officially selected. But now rumour has it that Count Oki, while holding the portfolio of Education, was desirous of having good text-books compiled, and made all necessary preparations to that end. Being, however, soon removed from office, he could not complete his project. Recently, some officials having been commissioned to select text-books, the Count sent for Mr. Sawayanagi, and asked of him the names of the authors whose books had been chosen. At first Mr. Sawayanagi declined to answer the question, on the ground that such information was strictly reserved from general ken. But the Count was urgent, and pointed out that he could not be regarded as one of the general public. Mr. Sawayanagi, reflecting that as the Count had been Minister of State for Education, and was now holding a high position in the Government, no wrong could be done in giving him the desired information, returned to his office, and having copied out the names of the books, despatched the list to the Count. The latter doubtless kept the document under lock and key, but the mystery of the secret having got abroad is now explained by the theory that one Tsuruhashi, a book-seller, who was in the habit of frequently visiting the Count privately found means to peruse the list. It is interesting to conjecture, says the *Kokumin*, on what business Tsuruhashi visited Count Oki so often, and how he could find means to see such an important document while the Count was absent from his home.

We have very little doubt that this will prove to be in the main one of the canards which certain Japanese journals so readily ventilate and so unconcernedly retract afterwards. The other day these particular newspapers were entirely convinced that the examiners had divulged the questions for the Barristers' examination, and some of them even went so far as to charge the Chief Judge of the land with having deliberately sold the papers. Ultimately it was proved that the offender had been a petty probationer, who, having been entrusted with the duty of copying out the questions, had remembered them and divulged them to a relative. Now we have the case of Count Oki and the text books, which, in all probability, will be found equally baseless. These journals are establishing for themselves a reputation which, in the end, must effectually guarantee the intended victims of their slanders against any serious inconvenience.

YOKOHAMA CHINESE MISSION.

The Committee appointed at the last annual meeting of the members and congregation of the Union Church, Yokohama, to take steps to

secure for the Chinese community at this port, a Chinese Christian missionary, have, after much correspondence and negotiation, succeeded in obtaining the services of Mr. Lau Sing from Canton, who has been for a number of years teaching and preaching in connection with the Methodist Mission of that city. A large room has been engaged in China-town for the purpose of holding meetings, classes, &c. Some thirty-five yen per month will be needed to support the mission (this includes the missionary's salary and the rent of the rooms), and in addition a small sum will have to be disbursed for benches, seats, &c., to suitably fit up the place. At present not much pecuniary help can be expected from the Chinese themselves, and therefore for some time to come the maintenance will, it is expected, have to be borne by Foreign Christians and charitable friends. To this end donations or monthly subscriptions are earnestly invited.

THE JUDICIAL CIRCLE.

OWING to the existence of a French school, a German school, and an English school of jurisprudence in Japan, petty quarrels are frequent among the judges. Even the resolute proceedings of Count Yamagata have not sufficed to terminate the friction. Only a brief interval has elapsed since the Count accepted the portfolio of Justice, yet he has already succeeded in sweeping away several of the old abuses. He made the judges connected with the gambling scandal resign, and he has contrived that some of the old and infirm incumbents of the Bench should be removed under the provisions of Article 74 of the Organization of the Law Courts. But what does he intend to do, asks the *Nippon*, with Mr. Nambu, President of the Tokyo Court of Appeal, and Mr. Kodama, Judge of the Supreme Court, who were also implicated in the scandal? Without answering that question, our contemporary goes on to report that at the meeting of all the Presidents of the Appeal Courts, held during last month, the following resolutions were passed at the request of the Minister for Justice:—

- 1.—Any judge whose conduct is censured by the public, shall be placed on the Retired List, in accordance with Art. 74 of the Law of the Organization of Law Courts, whether he be enfeebled or not.
- 2.—Any President of an Appeal Court shall resign his office should he receive a communication from the Minister for Justice advising such a course.

The above resolutions, we read, were presented to Count Yamagata, and he expressed his thanks that they had been adopted. Soon afterwards the Presidents requested an interview with the Minister, and asked him to remove Mr. Nambu, President of the Tokyo Court of Appeal. They declared that Mr. Nambu's connection with the gambling scandal was too well known to the public, and that, consequently, he must be advised to resign. The Count thereupon declared that he could only act in strict accordance with the laws of the country, and that it was not within his administrative competence to advise a Judge's resignation. The Presidents then asked whether they might personally counsel Mr. Nambu. To this the Count replied that it was not his business to say yes or no to such a query. Since this dialogue between the Minister for Justice and the Presidents of the Courts of Appeal, the Presidents of the Courts of Appeal of Osaka, Nagoya, and Nagasaki, and some others have been busily engaged trying to bring about the resignation of Mr. Nambu. How the affair will end is a question that remains to be answered.

It is very difficult to imagine that the Presidents of Appeal Courts passed any such resolutions as the *Nippon* attributes to them, and still more difficult to think that they did so at the instance of the Minister of State for Education. The Constitution would soon become a dead letter if methods of this kind were adopted to drive a coach and four through its provisions. At all events, whether the resolutions were passed or not, the Minister of Justice evidently appreciates the spirit of the Constitution and is resolved to abide by it. The permanency of judicial office guaranteed by the 58th Article, would be a dead

letter were the Minister of Justice invested with competence to order or advise the retirement of a Judge whenever he thought such a step advisable. The Judges themselves set too high a value on the privileges secured to them by the Constitution to make it conceivable that they would deliberately vote for their practical repeal.

MILITARY INDUSTRY IN CHINA.

We translate the following from an essay published by M. Henri Broyols in the *North China Daily News*:—

In the course of my various peregrinations in China, one fact has singularly struck me—it is the wonderful activity displayed by the high authorities of the land in the way of improved military organization. This fact is new in the history of the Middle Kingdom and deserves, from the fact itself, to be brought into conspicuousness. I will add that it is of importance, momentous enough for thought to be directed towards it in the official bureaux of Europe and of America.

Thus, for instance, in two places in the Yangtze, in Hanyang, and in Nankin, I have been able to verify *de visu*, coached by competent persons, that industry in war material had considerably developed, something most unexpected by me. We are in the China of 1892, very far from the times of matchlocks or of stone projectiles and of muzzle loading guns. At Hanyang the shops for the manufacture of arms are not yet finished; but already there are stored under temporary sheds, higgledy-piggledy, nearly three thousand machines of very varied sizes, that Chinese coolies content themselves with greasing and cleaning, prior to their being put into operation—a matter than will not be delayed long. I have examined with a curiosity that can be easily understood, all this stock of implements. However, my incompetence in such matters does not allow me to go farther in technical details that are too special, and besides are of little interest for my readers. But what I can affirm without fear of contradiction is, that the arms-factory at Hanyang will be able to furnish an average of nearly 400,000 rifles a year, provided, however, that European workmen are entrusted with their manufacture. The Chinese machinists, fitters and locksmiths, as yet unskilled, could not probably reach the half of that figure. The plant mentioned above, comes from the house of Lœw, in Berlin. Others are still expected.

It is evident that it would be more economical for the Viceroy residing at Wanchang, to buy arms in Europe ready made. I even think that with the money already expended for the establishment of the rifle factory at Hanyang, excellent modern rifles might have been supplied to the greater part of the Hunan and Hupeh troops. But the profound conception of the Viceroy, Chang Chih-tung, must be fathomed, his idea, the one that is in the depth of his brain, namely, to dispense the soonest possible with the coöperation of foreigners. Indeed, all administrative effort, the paramount and patriotic sentiment that agitates this absolute master of two provinces, more powerful than an European Sovereign, tends towards making a China solely Chinese, rid of inconvenient, indiscreet guests, that demand open ports and locate themselves in them, that interfere in the affairs of a country that is not theirs, that come there to seek fortunes or competencies, and whose encroachments, growing from day to day, become a real menace for the integrity of the land.

Hence, it is easily understood why the Chinese are erecting all over their vast territory, arsenals and rifle factories, and are desirous of finding within their own confines what they might not perhaps be able to find elsewhere at a given moment; for it may happen that supplies of improved rifles, with which at the present time German houses provide them, may fail them. Now, the machinery for the manufacture of arms is on the ground, in the sheds at Hanyang, to be used as a model, that later on Chinese machinists and locksmiths, become real artificers, will avail themselves of.

But that is not all. The Viceroy, a circumspect and prudent man, has thought that his work of military industry would be incomplete, were it necessary to look for raw material elsewhere than at home—material with which the soil of his own country is so abundantly provided. And for that purpose and by his order, the soil is being dismembered, ore is being extracted, blast furnaces are being erected, and steel works are being established, gigantic works of which I have been a very much wonder-struck witness.

The manufacturing education of the Chinese in Hanyang once finished, there is no doubt that the Viceroy will bar politeness to the initiators of military industry and deffing his coral buttoned head dress he will, with bow upon bow, say to them: "Gentlemen, it is time for you to depart, we no longer have any need of your services."

In fact, I do not have to go far to find a precedent. The arsenal at Nankin furnishes me the proof of what I state. Sir Halliday Macartney is the founder of it, and I am unaware that a European successor to the general direction of the present works, has been appointed after him. At Nankin there is no foreigner. The Chinese alone are masters in the place. The lofty chimneys smoke there, steam roars and puts into motion thousands of machines in an apparent entanglement of belts. There again I find the most modern

tools, enormous steam-hammers, the most varied hydraulic apparatus, machines for cutting or for sawing wood or metals. In numerous newly erected buildings, there is a wise division of labour according to the best rules of political economy, and in the end there come out of the workshops at Nankin, cannon and rifles with which Li Hung-chang's army is abundantly supplied.

Thus the northern arsenals are not sufficient for the work and do not respond to needs. Taku is supplied from Nankin, which regularly sends material of war to Tientsin. I have been able to examine these arms close by, having had as cicerone an amiable and the politest of mandarins, a former student in the arsenal at Foochow. The guns made at Nankin are a kind of duck gun, very heavy, each one served by two men and the handling of which seemed to me to be rather inconvenient. But their range is very long. I have in my possession a specimen of the cartridges used for this gun; they have a metallic shell.

So, too, I have been able to see with what rapidity small pieces of copper take the shape of tubes; how others still smaller are converted into caps. Not far off are powder-mills. You see, the arsenal at Nankin supplies everything. I pursue my visit through the workshops. Here are lying moulds of different sizes for shells of various shapes. Finally, I enter a vast hall where guns for the Navy are made, Hotchkiss, Maxim and Nordenfeldt. I examine one of the models that serve for numerous reproductions and I read on it: Hotchkiss, Paris, 1886. There is no more difficulty about it than that.

It is useless to enter into further details and to multiply examples. What I saw in the centre of China exists in the North and in the South. Everywhere arms are being manufactured with ravenous activity. Such is the absorbing idea of those that preside over the destinies of the Empire. Preparations for war are being vigorously carried on, and the time will arrive when China will be furnished with military equipments equal in quality and in quantity to those of the greatest nations of Europe.

However, one question presents itself. Has China men, in the virile meaning of the word? Or, to make myself better understood, has she soldiers? For if it is important to be provided with arms, it is more important still to have an army. This is what, with the greatest appositeness, the author of an interesting article that appeared in these same columns last week, pointed out.

It is evident, on the other hand, that China lacks, always from a military point of view, strategic railways, without which no important concentration of troops at a given point can take place. However, it is known that at the present moment, Li Hung-Chang's thoughts are directed towards the construction of a line the real point of departure of which would be Shun-hai-kuan and its terminus Kirin. Has he not already made use of the bit of line, actually in existence, to transport troops and horses, at the time of the rebellion in December last? This information I discovered in the extracts from the "*Peking Gazette*," that were likewise reproduced in the Chinese newspaper the "*Hepao*." It seems as though this were an insignificant statement among "miscellaneous items" stuck in between the official report of a mandarin and the announcement of an invasion of grasshoppers. What an error!

Nevertheless, is it not evident that we are witnessing a first effort at mobilization after the European fashion, that similar efforts will be renewed, will be developed, and in the end be perfected? Is it not apparent that while the Viceroy of the North devotes all his pains and the vigour of his seventy years of age to the trans-Manchurian strategical line, there is another Viceroy, the one of the centre of China, who has no other idea than to connect Peking with Hankow and the latter city with Canton, by a very long, very direct railway, the construction of which if it cannot be rapid, is at least possible and probable. To the incredulous, to those that wag their heads, it is easy to answer that the bulk of the work has been accomplished, since the idea of executing such work has arisen.

Indeed, it is more difficult to eradicate a rooted prejudice from the brains of a people than it is to construct a railway. And the prejudice has been reduced to nullity, and the Chinese no longer repulse with horror the vision of a locomotive trampling the ground in which their ancestors are reposing. No doubt the Viceroy Chang Chih-tung will not see the realization of the project he has conceived; but his idea will germinate, will grow in the minds of his successors, who grasping a rough scheme will carry a creation into operation.

One would have to be blind to controvert the movement which has been in process of completion in China for the last few years in the direction of a martial industry. The coasts, the entrances of rivers and their shores are being fortified with important works. In all the arsenals cannon are being made and rifles manufactured—I omit the considerable purchases of arms that are being made abroad—European instructors come to teach the Chinese the art of war. Their Navy composed of junks and of miserable cockleshells has given place to the very recent fleet of modern vessels, likewise provided with modern artillery.

All these facts are symptomatic and indicate a new order of things, as well as the predetermination of the Chinese to impose the progressive and insensible

irruption of foreigners upon their territory. They mean that the Chinese, in the anticipation of future wars, desire to be no longer taken unprepared and that to improved arms they will oppose arms of the same kind, leaving to the god of victory the chances of battle.

But if the Chinese should have arms, will they have men? It is permissible that I should doubt it.

HENRI BRYOIS.

* I know besides, that Krupp's agents have received from the Viceroy Li Hung-chang, a large order for powder. I got this information from the agent himself.

PROJECT OF THE MILITARY PARTY.

THE *Yiyu*. Radical organ, undertakes to expound the attitude of the Military Party towards the Cabinet. The story runs as follows:—"At the time of the last general election a certain politician called on a statesman, and their conversation soon turned on the current topic. The statesman sighed and said that though the Government were interfering with the elections for the purpose of securing the return of their supporters, he feared that the real enemies to attack the Cabinet and attempt to take over the reins of the Administration hereafter would be the so-called "Pro-Government Party." For these, having no policy of their own, support the Government entirely in view of some personal interests. Therefore if they are victorious they become exacting, and if they have a chance they will attempt to take over the reins of Administration. It is, he continued, a case of the old proverb, "Getting bitten by one's own dog!" The *Yiyu* admired the foresight of this statesman at the time, and now his words prove to be true. Notwithstanding all its efforts the last Cabinet was defeated after a session, and consequently its supporters not only received no reward but were disgraced. Their selfish intrigues, however, were not terminated. When Viscount Shinagawa, the originator of official interference, joined them suddenly, their spirit was roused and they once more turned eager eyes towards the sweets of power. Moreover, the Matsukata Cabinet having been quickly defeated, the Ito Cabinet came into office. But since the latter does not meddle with political parties, the so-called Pro-Government men have entirely lost the means of satisfying their desires by giving support to the Cabinet. Thus once more they have begun to entertain the project of getting hold of the Administrative reins. They consider that there is no hope of utilizing the present Cabinet, and that the only course left for them is to upset it as quickly as they can, and organize a Cabinet out of their own supporters. The first scheme attributed to them in the next session is, on the one hand, to remain opportunists, and thus make the Government fear them; while on the other, they will instigate the Popular Party to attack the Government. Then when they find that the Cabinet is on the verge of destruction, they will join the Popular Party, and attain their object, which is to bring the Military Party once more into power. So soon as that is effected they will turn their backs upon the Popular Party. Such is the programme already mapped out by them, and it is stated that Viscount Takashima and Viscount Shinagawa will lead them. These two men have much influence among the Military Party, but they are neither learned nor experienced, so they require some able councillors. Messrs. Inouye Ki, Shirane Senichi, and Kiyoura Keigo, will hold that position. Though Mr. Shirane occupied a nominal post as Court Councillor till quite recently, he has been removed to the Directorship of the Imperial Treasury, and thus he will regain his former influence. Mr. Inouye Ki is well-known to be one of the wisest and most learned men in the Government, and Mr. Kiyoura Keigo, whose influence as Vice-Minister for Justice under Count Yamagata is well understood, also constitutes a tower of strength. Beside the above named councillors, there are Mr. Yamada, Governor of Osaka, Mr. Matsudaira, Governor of Kumamoto, Mr. Yasuba, ex-Governor of Fukuoka, and a few other men of the party who assist in pushing the scheme. One question, however, they have not yet settled. It is no other than the appointment of their own leader when their projected scheme shall have been accomplished.

Be that as it may, their desire is to rule the empire by pure military force once more. Hence, concludes the *Yiyu*, "the so-called Pro-Government Party is not only the enemy of the Popular Party but also the foe of constitutional government!"

EXHIBITION OF ORNAMENTALLY ARRANGED FLOWERS AT UYENO.

THE attractions of the National Museum at Ueno have been considerably increased during the week by an exhibition in the main hall of a large collection of specimens of ornamentally arranged flowers by the followers of the Ikenobō school of this art. The collection consists of the productions of all the professional artists (of this school) in Tokyo, who number about a half a dozen, and those of over a hundred amateurs; the exhibits, numbering in all about a hundred and fifty, occupy the whole of the spacious hall. The works of the professionals are accorded places of honour in the shape of recesses formed by paper screens to serve temporarily the purposes of the *Tokonoma*, whilst those of the amateurs are placed in rows along the walls. Most of the exhibits naturally lose much of their grace and beauty by the surroundings. Vases of flowers, each one arranged to decorate a single *Tokonoma*, when placed side by side in long rows, very much in the fashion of the displays on the plant stalls in the neighbourhood of temples of a festival evening, cannot but have their effects seriously marred, a fact easily recognizable by the great contrast (apart from the differences of design and skill in execution) perceptible between the effect of flowers within the temporary recesses and those in the outer row, which leads one to contemplate how they would all improve were each placed in its legitimate place—the *Tokonoma* with *kakemono* and other accessories. However, the show is both pleasing and interesting, and affords a rare opportunity of seeing the varied productions, from the stately *rikkyū*, used on occasions of ceremony, to the simple *tomari-bune*, representing a junk at anchor, of the masters of the highest repute and the best amateurs of this quaint art of the Japanese, which has been so much talked of since the Western world were enlightened on the subject by the publication last year of Mr. Conder's work on the "Flowers of Japan." The Exhibition opened on Tuesday and is to be closed next Sunday afternoon.

THE VERNACULAR PRESS ON THE RESIGNATION OF COUNT OKI.

THE rumoured resignation of Count Oki has naturally excited public interest. The vernacular press comments on it in various tones. We reproduce the gist of some of the remarks:—"The *Kokumin Shimbun* states that the Count's resignation is still in the hands of Viscount Hijikata, Minister for the Imperial Household. The reason openly assigned is illness; but the real cause that induced him to take such an unexpected step is understood to be the fact that he was instrumental in divulging the secret of the text-books. It is stated that Viscount Hijikata has advised him to remain in office, as the Emperor will not easily agree to his retirement in view of his long and faithful service. The *Kokumin* congratulates the Count. It says that for the last 25 years he never once presented his resignation, his principle being to remain always in office. Whatever circumstances occurred, he steadfastly stood his official ground. But now, having at last discovered the error of such a course, he has presented his resignation. On such a discovery he deserves to be congratulated, while at the same time the recognition which official morality receives from the incident is also a subject of congratulation.

The *Fiji Shimpō* says that Count Oki has acted very cleverly in avoiding the shock of political waves during the last 25 years, but that he has at last been compelled to present his resignation, seeing that a scandal has been created by the conduct of his own household, and he cannot remain in his post any longer. But when his resignation is presented to the Throne,

the Emperor will probably refuse to grant it, as the nature of the scandal is not sufficiently grave to involve his withdrawal from the chair of President of the Privy Council. It may be anticipated that the trouble will die out in a day or so.

The *Mainichi Shimbun* alleges that there are two reasons for the Count's presenting his resignation. He has for years suffered from a painful ailment which has grown much worse since last spring, so that he announced his intention of resigning to some of his friends. The second reason is the scandal about the text books. The *Mainichi* repeats the story which we reproduced in a previous issue from the *Kokumin Shimbun*; and concludes that though it may be claimed that Count Oki never intended to make an improper use of the secret entrusted to him, the public will probably decline to acquit him.

The *Kokkai* also announces the news in its usual minute manner, adding that Viscount Hijikata called on the Count and advised him to abandon the idea of resignation, but the Count's resolution proving immovable, his visitor went away expressing a hope that the Count would reconsider his decision. It is already rumoured that though some influential statesmen recommend Count Higashi-kuze as the retiring official's successor, the majority are in favour of Count Soyejima, so probably the latter will take the chair as soon as the resignation of Count Oki is granted.

The *Nippon*, in addition to the intelligence of the Count's resignation, reports that Mr. Kono, Minister for Education, has advised Mr. Tsuji, Vice-Minister for Education, to resign at once. The *Nippon* alleges that there have been many rumours concerning Mr. Tsuji for years past, and that he is now charged with being implicated with the text-book scandal, but the public do not attack him, knowing that he is totally indifferent to newspaper assaults. The same journal reports that Mr. Aoki, newly appointed Director of the Documentary Section in the Department of Education, and successor of Mr. Sawayanagi, is not pleased with the situation, and intends to resign in a day or two. The *Nippon*, more so, attacks Count Oki in a leading article, declaring that though he resigns his position, he cannot thereby escape his moral responsibility. It also announces that there are many persons besides Count Oki implicated in the scandal, and that they should be degraded and punished without delay, but truly experience has shown the *Nippon's* allegations to be so greatly in need of wholesale discounting that we almost hesitate to allude to them.

The *Nichi Nichi Shimbun*, which originally published the rumour of Count Oki's resignation, now states that though he tendered his resignation on Tuesday last, Count Ito, for some reason not yet divulged, commissioned Mr. Kono, Minister of State for Education, to advise the Count to abandon the idea of resigning. Mr. Kono went to Count Oki's on Wednesday and conversed with him for some hours. The result was that the Count promised to abandon his intention. Count Goto also called on the President of the Privy Council, but on what business the *Nichi Nichi* does not say.

The most trustworthy source of information about such matters is the *Nichi Nichi Shimbun*. We infer from its assertions that one of the oldest and staunchest members of the Government will not resign at present. But as the political weather changes so suddenly and unexpectedly in these shifting times, circumstances may possibly compel the Count to insist, after all, on retiring from office. Certainly, if journals like the *Kokumin* and the *Nippon* represented or guided public opinion, every trivial incident that occurred would be puffed into a political tempest, and nothing like smooth or stable administration would be possible. No one in possession of his five senses can suppose for a moment that Count Oki deliberately

abused a trust officially reposed in him, and abused it through greed of paltry gain. But that a statesman should have grown old in the service of his country, and preserved throughout his career an unsullied reputation, does not seem to press with the weight of a feather on the consciousness of some Japanese journalists. The better the record offering for attack, the more vehemently and gleefully do they tear it to pieces. Some of these days public opinion will awake to the discovery that the fourth estate, for all its boasted virtues and loudly claimed privileges, can be transformed into the shape of a graceless mischief-maker.

DR. WAGENER'S FUNERAL.

THE funeral of Dr. Wagener yesterday was very largely attended. The great majority of the deceased's numerous friends from Tokyo and Yokohama, including a multitude of Englishmen, were there. A more significant feature, however, was the great number of Japanese. Among them were Mr. Tsuji, Vice-Minister of State for Education, Viscount Shinagawa, Mr. Kato, President of the Imperial University, Dr. Hamano, Mr. Watanabe Koki, Mr. Wada Tsunashiro, and a number of others. Mr. Von Waldhausen, German Chargé d'Affaires, and all the members of the German Legation, as well as the whole German community of Tokyo, were present. Before the bier, which was escorted by a company of infantry, marched a large band of white-robed flower-bearers, carrying handsome sprays and wreaths sent from numerous friends. The soldiers were followed by the students of the *Shokko Gakko*, and after them came crowds of public mourners, stretching a long distance. After a short prayer read by the Rev. M. Brinckmann in the house of the deceased, the procession moved to Aoyama Cemetery where a military band assisted in the ceremonial. At the grave the Rev. Brinckmann, in touching and sympathetic terms, paid a well deserved tribute to the excellent life, work, and character of the deceased, and thus was consigned to Japanese soil a man who had devoted the best years of his existence and the fullest stores of his ripe knowledge to the service of a country which he loved, and where he was himself widely beloved and respected.

DANGEROUS ILLNESS OF COUNT YAMADA.

COUNT YAMADA, former Minister of Justice, appears to be in a very dangerous condition. Last year, it will be remembered, his health caused some anxiety to his friends and the public, but he was believed to have recovered, and his recent movements seemed to indicate at least convalescence. Yesterday, however, several telegrams of an alarming character were received in Tokyo. The first, despatched in the forenoon from Ikuno, said that the Count had proceeded as far as Omori to visit the mines in that neighbourhood, when he was suddenly taken ill. The second announced his condition as dangerous (*kitoku*), and other messages sent in reply to inquiries from his friends, declared that his present condition precluded any hope of recovery.

Vernacular papers received after the above was in type, announce the death of Count Yamada yesterday.

THE CINDERELLA DANCES.

WEDNESDAY evening the second of the series of Cinderella Dances was given at the British Legation in Tokyo. The magic hour indicated by the legend of the glass slipper is supposed to be punctually observed by the guests at these charming entertainments, but the hospitalities of the Legation are so admirably dispensed and the general enjoyment of the dances is so thorough, that the fairy godmother's injunction has hitherto been honoured in the breach rather than in the observance, and the small hours of the morning have found the Cinderellas, of whom the capital can boast so many, dancing as merrily as ever.

ABOLITION OF THE GAMBLING LAW.

THE advocates of abolishing the law which prohibits gambling seem to be more numerous and earnest than we had at first imagined. They

are for the most part members of the Oriental Friendly Society (*Toyo Gyu-kai*)—for example, Messrs. Miyaji Mohei, Tsuda Kanjiro, Ando Yagoro, Ito Matsugoro, Masuda Tozaburo, and about twelve or thirteen others. They have mapped out the greater part of the empire into districts, and divided themselves into parties each of which will stump one or more of these districts for the purpose of winning converts to their cause. We have not as yet seen any statement of the reasons that actuate this singular movement, but by those familiar with the Japanese people's tendency to gamble, the notion of abolishing all interdicts against the habit, can scarcely be regarded with complaisance.

THE LECTURE AT THE IMPERIAL HOTEL.

THE lecture recently delivered by Mr. A. B. de Guerville at the Imperial Hotel, Tokyo, for charitable purposes, produced a net sum of 472 yen, which has been distributed as follows:—

Leper Hospital Gotemba	157 yen
Charity Hospital	105 yen
Princess Mori's Industrial School	105 yen
Azabu Cottage Home for Destitute Girls	105 yen

The Committee request us to publish their grateful thanks to Mr. de Guerville, who gave the lecture, to Dr. C. S. Eby, who presided at the Stereopticon lantern, to the Imperial Hotel for lending the room, to the press for advertising the affair, and to the public for so generously supporting it.

MR. INOUE KAKUGORO FINED.

MR. INOUE KAKUGORO's remarkable speech, delivered a few days ago at the Koseikan to an enthusiastic audience, has brought him into collision with the law, which is no respecter of persons. It appears that his lecture was considered by the Police Authorities to have belonged to the category of *Seidan*, or political speeches, concerning the delivery of which the Regulations require that a certain procedure shall be followed. Mr. Inoue ought to know by this time the difference between a scientific or literary lecture and a political address, but apparently he made a mistake, for he failed to comply with the measures prescribed by the provisions of the Regulations.

ACCIDENT TO THE "SUMIDAGAWA MARU."

A TELEGRAM from Osaka, dated on the afternoon of the 5th instant, reports that the *Sumidagawa Maru*, a steamer of 742 tons, belonging to the Osaka Shosen Kaisha, having left the port of Sakai at 2 p.m. on the 3rd instant, struck a sunken rock before she had proceeded far on her voyage, and sustained considerable injury, over five thousand packages of her cargo—containing rice, vegetables, and dried, fish—being damaged by sea water. Fortunately the safety of the ship was not seriously endangered and no one was hurt.

POSTAL CONVENTION WITH CANADA.

THE rumour that the Canadian Government had signified its desire to postpone the operation of the Postal Convention with Japan would appear to be correct, for the News Agency reports that a despatch in that sense has been received from Canada, and that the date indicated as convenient for enforcing the Convention is May of next year. This means a delay of six months, to which Japan is not likely to demur. An Imperial Ordinance will doubtless deal with the matter in a few days.

THE KOREAN FISHING QUESTION.

SOME idea of the great importance to Japan of the privilege of fishing on the Korean coast may be gathered from a statement published on the authority of the Tokyo News Agency. The number of Japanese boats, we read, engaged in the fishery is no less than upwards of four thousand four hundred, of which about eighteen hundred have licenses. Their annual take averages from a million and a half of yen to two millions in value, and it is estimated that with more diligence and improved methods they might easily bring this figure to three or four millions. We cannot wonder that under such circumstances there is much reluctance on Japan's part

to agree to any arrangement tending to restrict the valuable privilege of fishing on the Korean coasts.

A SMART PIECE OF WORK.

ANOTHER very creditable detective performance has to be placed to the credit of the Superintendent of the Yokohama police. On the 1st of November, about eight o'clock in the evening, a person named George Sweeney was relieved of a gold watch of the value of 130 yen, while walking through Minato-cho. Information was given to the police as to the loss, and on the afternoon of the 4th inst., the watch was traced to a pawn-shop. It was recovered and returned to the owner next morning.

TWO SOLDIER PRINCES.

THE *Official Gazette* announces that H.I.H. Prince Kotohito, better known as Prince Kanin, has been promoted to be a Captain in the Cavalry; and that H.I.H. the Prince Imperial is promoted to be a Lieutenant of Infantry. Prince Kanin is in his 28th year, and the Prince Imperial was twelve years old on the 31st of last August.

THE THIRD OF NOVEMBER IN SHANGHAI.

IN addition to the very pretty decorations and illuminations at the Japanese Consulate-General, says the *N. C. Daily News*, in honour of the Mikado's birthday, there was a performance of Japanese jugglers in the evening. During the day a number of Consuls, Chinese officials, and others called to tender their felicitations.

GOVERNOR OF KAGOSHIMA.

THE *Official Gazette* announces that Mr. Yamanoichi Teiun, Governor of Kagoshima, has been permitted to resign his appointment, and that he is replaced by Viscount Oseko Sadakyo, formerly a Senator and subsequently placed on the Retired List. Viscount Oseko is a native of Kagoshima.

THE MILWAUKEE FIRE.

A GENTLEMAN at present in Japan, whose home is in Milwaukee, telegraphed for information as to the locality of the great fire in that city, which were recently reported by telegraph, through Reuter, and got for answer that the conflagration occurred in the "third ward from Buffalo street south."

THE STANDARD LIFE ASSURANCE.

THE first in the field with a reminder of the close of the year is the Standard Life Assurance Company, the local agents of which have sent us a neat and handy almanack and diary for 1893.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The fourth session of the Diet being now near at hand, Tokyo papers devote much space to discussing the position of the various political parties towards each other and towards the Cabinet. Nobody seems to be at all certain as to the turn which affairs will take on the assembling of the Diet. There are journals which incline to think that the coming session will be comparatively peaceful; while a few seem to expect that it will be exceptionally stormy. Some believe that the National Unionists (*Kokumin Kyokai*), who supported the preceding Ministry, will also support the present one; but the majority of writers seem to suppose that these politicians will be very cool toward the Ito Cabinet and may even join the Popular party in a vehement attack upon the former. Speaking generally, most of the Metropolitan papers seem inclined to believe that the approaching session will not severely tax the resources of the Ministry.

It is now generally assumed that the Government will pursue a negative policy for the present; that is to say, that it will not attempt to inaugurate any new undertakings. This evidently is very galling to the Progressionist politicians, for various reasons. In the first place, under such a régime they will be unable to gra-

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

tify their passion for attacking the Government. In the next, they are very well aware that a period of comparative quiet at this juncture would help to bring about a better feeling and a better understanding between the Government and the Radicals. This latter circumstance must cause no small anxiety and embarrassment to the politicians of the Progressionist party. Having placed themselves in a position from which they cannot—or, at least, they think that they cannot—honourably beat a retreat, they are resolved to fight the battle to the bitter end. Their courage is to be admired; but it is a pity that they cannot understand why their former allies refuse to follow them in such a desperate and suicidal course. The *Kaishin-to* organs, assisted by the *Kokumin Shimbun* as usual, are, therefore, on the one hand, trying to persuade the Government to adopt an active policy; while, on the other, they ridicule the Radicals for their adoption of a more or less favourable attitude toward the Government. The Ministers of State are told that, although they are popularly called the *Genkun Naikaku* (a Cabinet composed of men distinguished for meritorious services at the time of the Restoration), they were not the authors of the Restoration, and that they have yet to prove their title to the honours which they already enjoy. It is no time for them to sit idle and undecided. There are, say these papers, many things that must be undertaken by the Government, and it is to be regretted that Count Ito and his colleagues should be so indifferent to the true interests of the country as to pursue a policy of inaction.

As to the relations between the Progressionists and the Radicals, their attitude toward each other, owing to the circumstances mentioned in the preceding paragraph, seems to be becoming more and more reserved. Notwithstanding the well understood prevalence of a rumour of estrangement between the two parties the Radical organ, the *Fiji*, does not take any means to deny it. The Progressionist organs, on the other hand, no longer make any secret of their displeasure with the conduct of the Radicals. The *Mainichi Shimbun*, for instance, remarks that "now is not the time for the different sections of the Popular Party to be instigated by the insinuating writings of their opponents and to regard each other with suspicion and even antipathy." Having thus urged the importance of united action on the part of the various associations composing the so-called Popular Party, our contemporary concludes by "lamenting that, on the eve of the fourth session of the Diet, the Popular Party, instead of consolidating its union, shows signs of dissension and disruption. The *Kokumin Shimbun* writes in a similar strain. It regrets to observe that "the iron chains, which have united the Radicals and the Progressionists since the opening of the Diet, are about to be cut asunder by arrows shot from the enemy's camp. Nor does it hesitate to state that "men now advocating an active policy, nevertheless avow their readiness to support such Government Bills as may appear to deserve endorsement, thus confessing their ignominious surrender to their enemy." In another article, the same journal deplores a growing tendency among certain politicians of the Popular Party to be satisfied with partial and incomplete reforms. Some politicians, we read, finding the difficulties of carrying out thorough reforms in the political sphere, and feeling the effects of advancing years, have of late become very conservative in their opinions. It is not difficult to guess to whom our contemporary alludes in these lines.

The *Fiji Shimpō* is anxious to effect the transfer of political power from the old to the new generation smoothly and naturally. It recommends the elder statesmen now in power to apply their attention to correcting evils which have sprung up within the Government during the past ten years; and urges the young politicians of the Popular Party to wait patiently until the elder statesmen shall have completed their part, which will be within the next ten

years, at latest. The present Ministers of State are all men of tried capacity, but the weakness of the Cabinet is said to be want of cohesion. Various rumours are circulated about a probable change of front on the part of some sections of the Popular Party, but the Government is warned not to put confidence in such stories, and is advised to be prepared for a strong and general attack by the Opposition. The individual ability of the different members of the Cabinet will be of little avail against such an assault, unless they are united under the direction of their chief. They are consequently told to own implicit obedience to the orders of the Minister President and to sacrifice their personal opinions on the altar of their common good. They are also reminded of the importance of taking into consideration the existence of a numerous and very powerful class of independent observers who do not belong to any of the existing political parties. Men of this class are not so much *in evidence* as professional politicians, but they nevertheless constitute the most influential body in the country. It is their support that the different political parties struggle to obtain in every crisis. The Government must take care not to estrange the hearts of these men.

As to the politicians of the Popular party, the *Fiji* admits it to be an undoubted fact that they have forfeited the confidence of the nation by their unreasonable opposition to the Cabinet. It even goes so far as to say that the Opposition themselves acknowledge this, and that they, or at least some of them, are now inclined to repent the course hitherto followed. Some among them seem to have entirely lost hope of realising their programme of political reformation. Such persons are exhorted not to be disappointed. Their future is bright. What they require is only a little patience. The elder statesmen now in power will not be long in expending their force. A time must soon come when it will be necessary to call in the aid of the young politicians of the Opposition. Until then the latter cannot do better than devote their attention to some means of regaining the confidence of the nation at large.

An interesting discussion is going on between the *Hochi Shimbun*, on the one hand, and the *Nichi Nichi Shimbun* and the *Choya Shimbun* on the other. The *Hochi*, in a series of articles, discussed the importance and possibility of introducing large reductions in the ordinary expenditures of the Government, and advocated in particular the necessity of cutting down the salaries of officials. The Progressionist organ referred to foreign statistics to illustrate its assertion that official salaries are comparatively higher in Japan than in Western countries. Its object is to cut down salaries and retrench other items of expenditure to such a degree as to bring the amount of the Ordinary Expenditure to the figures of about fifteen years ago. The *Nichi Nichi* and the *Choya* have exposed the fallacies contained in the arguments of the *Kaishin-to* organ. In the first place, that journal's comparison between the salaries received by Japanese officials and those of their confrères in foreign countries is entirely vitiated by the *Hochi's* apparent ignorance of the difference of value between gold and silver money. It makes no allowance on this account, and thus the Japanese official salaries of course appear relatively higher than those in the West. Moreover, the figures employed by the *Hochi* are all very old, and in some instances are of doubtful origin. It also ignores the steady increase of the wealth of Japan, and the growing necessity for expanding the administrative machinery in proportion to the general progress of the country. As to the reduction of the land tax and several other topics discussed by the *Kaishin-to* organ, it is not necessary to speak in detail, seeing that the arguments adduced in reply are merely a repetition of what has already been urged over and over again.

Apropos the reduction of the land tax, some

papers have pointed out the singular circumstance that this subject is conspicuous by its absence in the new programme adopted at the Osaka meeting of the Radicals of the western localities. It is not known whether or not the programme will be approved by the Radical Party at its coming meeting in Tokyo. But the circumstance is certainly noteworthy that men who have hitherto joined the Progressionists in persistently demanding the reduction of the land tax should have thought it desirable to drop the subject altogether from their new platform.

The obloquy recently heaped upon the chief members of the Judiciary, is now being transferred to the Education Department. The complication had its origin in the divulging of official secrets connected with the selection of text-books on morals for primary schools. The story is this: a secretary of the Department handed to Count Oki, now President of the Privy Council but formerly Minister of Education, a paper relating to the method which the authorities concerned had secretly decided to pursue in selecting the above mentioned text books. Count Oki in turn showed this to a bookseller in Tokyo. The Secretary in question has been dismissed; and Count Oki has tendered his resignation. It being rumoured, however, that the resignation has been withdrawn by the Count in ready compliance with the advice of the Minister President of State, the whole press of the capital, from the *Nichi Nichi Shimbun* downwards, calls in strong language upon Count Oki to go out of office. The *Nichi Nichi* turns round upon Count Ito and reproves him for advising Count Oki to withdraw his resignation. If the facts mentioned by the vernacular papers be true, it will be very difficult for the President of the Privy Council to retain his position.

The Game Regulations still continue to occupy journalistic attention. There is no doubt that they will cause much trouble in the coming session of the Diet. The Progressionist organs propose that there should be introduced a project of law defining the limits of the term "tax" as applied to Revenue. The object is to include in the turn "tax" fees charged for game licences and thereby to place on record or declaration that the recent Regulations are unconstitutional. A writer in the *Fiji*, the Radical organ, recommends that a new Game Law, be introduced next session, and that the Government be compelled to advise His Majesty to sanction it. It is not known whether or not this project represents the opinion of the majority of the Radical party, but unquestionably there is in the ranks of that Party a strong feeling of opposition to the new Regulations.

The subject of Hokkaido is now on the tapis. As we have noticed, there is a big project on foot for the speedy colonization of the island. Whether it will receive the approval of the Government and the Diet, is more than doubtful. But it is an undoubted fact that the northern island now receives an amount of attention never bestowed on it before. The Opposition journals demand the establishment of a local Assembly in Hokkaido, for they think that such an institution would have the effect of correcting many evils still existing there as relics of mal-administration in former years. The injurious ascendancy, says the *Mainichi Shimbun*, which a certain class of persons have obtained in Hokkaido, is prejudicial to the healthy growth of commerce and industry there. This ascendancy must, above all things, be crushed by the creation of a local popular assembly.

The *Fiji*, writing on the subject of Exhibitions, urges the postponement of the Fourth Domestic Exhibition, about the site of which so much noise is now made, and the holding of an International Exhibition. It advises the citizens of the three cities, Tokyo, Kyoto, and Osaka, to stop their struggle, and take the initiative in the opening of an international Exhibition within the next few years.

THE AUTUMN MANŒUVRES.

(COMMUNICATED.)

THE Grand Manœuvres of the Army which were terminated on Wednesday, the 26th ult., by His Majesty the EMPEROR reviewing 35,000 troops on a magnificent plain to the N.E. of Utsunomiya, were by far the largest which had ever taken place in Japan. As far as the strategy of the Manœuvres goes, they were not more important than the Grand Manœuvres at Nagoya three years ago. The central idea of the latter was to defend the country from an army disembarking at Oshima, Shimoda, an invasion by Awaji, and Wakayama, and marching on Tokyo from the West; while this year's Manœuvres illustrated the manner in which an Army of Invasion landing in the Northern part of Japan, say at Sendai, would be met. The troops employed in the Nagoya Manœuvres were naturally the garrisons of Hiroshima and Nagoya, with reinforcements from Tokyo sent forward by the Tokaido Railway. This year, on the other hand, the forces were the Sendai and other Northern garrisons, reinforced as before from Tokyo, and their transport tested the capabilities of the Northern Railways. The great number of troops employed, however, made this year's manœuvres exceptionally interesting, and subjected to a very severe proof the arrangements for moving, feeding, and housing such a large body of men, as well as the tactical handling of considerable masses on the field of battle. The largest European Manœuvres which have been fully described were probably those of the French in 1891, when 110,000 men were engaged. Even judging by that gigantic standard, we see that the Japanese have not been idle in providing for the defence of their country. The general strategical idea of the Manœuvres may be described somewhat as follows: A Northern Army, which is much stronger than the Sendai garrison and other troops in the neighbourhood, has possessed itself of Sendai and the country round about; while the two divisions of the Southern Army have retired before it, and taken up a position on a line extending from Utsunomiya to Mito, and are making preparations to check the North Army at all hazards somewhere about this line, pending the arrival of reinforcements from Tokyo. The 1st division of the Southern Army is at Utsunomiya, while the 2nd division is at Mito, this 2nd division being only a hypothetical force, which has drawn a part of the Northern Army after it (also an imaginary force), and then, suddenly marching to the West, reinforces the 1st division on the flank at Utsunomiya.

From this it will be seen that the centre of the Southern Army's position for defence was Utsunomiya. The time occupied by the critical part of the manœuvres was three days, viz., the 23rd, 24th, and 25th October, on each of which days battles

were fought; but the troops as they advanced respectively from the North and South had been exercised in small tactical manœuvres among themselves since the 10th October, so as to thoroughly utilize the time during which they were in the field, and improve their facility in company and battalion movements. Parts of the long distances covered were performed by rail, other parts by marching; the troops being probably detained at places where the country was suitable for minor tactical manœuvres. Thus by the 23rd the men had been subjected to a great deal of hard work, testing their powers of marching and general endurance. It is reported that they did not get much more than three hours sleep each night during this period. No tents were carried except for officers, the men being billeted in the various villages, and occasionally having to lie out under their blankets. Nevertheless, on Sunday the 23rd, which, as has been said, was the first day of the meeting of the two hostile armies, the men, although of course they were not in barrack-square trim, looked exceedingly fit and serviceable.

On Saturday night the 22nd the position of the two armies may be described as follows:—The Northern Army rested on Yaita and Saikayawa, with advance posts covering its whole front, and pushed as far to the South as Kamikawato.

The Southern Army rested on Utsunomiya, with advanced posts pushed out to the North as far as Kamikiraide, the advanced posts covering a frontage of probably about eight miles; and the distance between the advanced posts of the two Armies being 10 miles. We are now in a position to describe the operations of Sunday the 23rd.

The Northern Army started at 7 o'clock and advanced to the South in three columns, the 1st column marching by the Western Rikuu Main Road, the 3rd column by the Eastern Rikuu Main Road, and the 2nd column by a smaller road which lies between the other two. These roads all converge on the large village of Ujiie, which lies about half way between the position occupied by the two Armies at 7 a.m. The Southern Army, finding that reinforcements from Tokyo were on the way to join them, and having seen the enemy's cavalry patrols as far South as Ujiie, determined to advance at once and check the enemy before he reached this point. Two things would probably influence the General in making this decision: first, that the heads of the columns should be attacked before they attained the point where their three lines of advance converged; and secondly that Ujiie lies to the North of the river Kinugawa. So that by making a stand at this point, and then retiring and destroying the bridges, the enemy's advance would be delayed, until the reinforcements arrived.

HIS MAJESTY and Staff left Utsunomiya at 7.30 by rail for Nagakubo, and from thence

proceeded on horseback to the western Rikuu road about two miles to the north of Ujiie. The heads of the columns of the Southern Army appeared a little after 10 o'clock, and proceeded to deploy on receiving information from their cavalry patrols that they were nearly in the presence of the enemy. The country to the front was pretty open, with plenty of scrub, but further back it was very close, with patches of rice fields, clumps of trees, and bushes. It was also very flat so that there were no vantage points for placing Artillery to check the advance of the enemy at long ranges. The enemy was first seen about 11 o'clock, advancing in skirmishing order through the scrub, and the firing soon became general, the Southern Army falling back on their supports, while the enemy's lines appeared thicker and thicker and always pressing on. As far as could be seen it was a company officers' battle, the country being so close that it was difficult for any one to know what was going on except in his immediate vicinity; but the connection between the various units, seemed well preserved. The rice fields were hard, and the general aspect of the fighting was holding the causeways between the rice fields, and then rushing back across the fields to take up a position behind the next causeway from which protection could be obtained. There seemed to be no cavalry surprises on this day, the country probably being too close for the employment of this arm. But artillery was brought into action, probably only the mountain guns, and on two or three occasions these were very smartly posted among clumps of trees by the Northern troops, from which they unexpectedly opened fire at a close range, probably with great effect. Nothing could exceed the zeal of the company officers, and the men seemed to work with great intelligence. The rushes looked straggly, but they were made at very good speed, and the way in which the men regained their order when they halted to resume firing was very remarkable.

There was one very well meant flanking attack made by the extreme right of the Southern troops which was reported to have taken the Northerners by surprise, but this apparent success was not allowed by the Umpires; and the fortunes of the day rested with the Northern Army, which had pushed the Southern Army back all along the line, almost into Ujiie.

The Northern troops engaged on this day were the advanced guards of the two Western columns: the Eastern column, having marched by a more circuitous route, does not seem to have come into action, and this shows good judgment on the part of the Southern general in choosing his position. The Southern troops engaged seem to have been those already mentioned as resting on Utsunomiya the night before; the reinforcements from Tokyo not yet having arrived.

In real War this Battle on the North

side of Ujiie would probably have ended in a desperate attempt to defend the town, prolonged until the evening, the weaker Southern Army then retiring before the stronger Northern one, after having inflicted severe losses from their position of vantage. But in Manœuvres it is evident that battles must cease outside towns. So, at 12 o'clock, the bugles sounded the "cease firing." Gradually the tremendous din was subdued, and the troops could be seen on all sides standing up perfectly motionless. So far as could be detected, there was no disorganization, nor were any men straggling about to find their Companies. HIS MAJESTY and Staff then entered the town where a house had been prepared for their reception, and soon afterwards every one's thoughts were turned in the direction of tiffin. The streets thus became crowded with the Southern Army, most of whom seemed to be provided for in the town, while their Northern friends, enemies no longer for the moment, had not such good fortune, the place being incapable of accommodating such a large body of men.

This ended the first day's fighting, and the retreat of the Southern Army on their reinforcements now arriving in Utsunomiya, occupied the remainder of the day, HIS MAJESTY and Staff going back to Utsunomiya from the Nagakubo Station at 4 o'clock.

We may at once pass on to describe the position of the Armies on the morning of the 24th.

The Southern Army, when retiring on the previous day, had destroyed the great bridges which span the Kinugawa at Akitsu and Hosekiji, and had taken up a strong position two or three miles on the N.E., of Utsunomiya. The regiments of the Imperial Guard arriving from Tokyo were now being detrained in great numbers, and were being pushed to the front to reinforce the Southern Army. The advance of the Northern Army on Utsunomiya had been momentarily checked by the destruction of the bridges over the Kinugawa; but these bridges having been repaired during the night, after a few hours' work, the troops of all arms were now marching on Utsunomiya. A misfortune had, however, happened to the Southern Army. It will be remembered that a part of the Northern Army had been pursuing a part of the Southern Army in the direction of Mito, both being only supposed forces. It appears that the Southerners had been obliged to retire as far as Tsutsuiura, thus leaving their enemy free to march westward on Utsunomiya, and that the latter had very daringly detached some cavalry patrols and destroyed the Main Railway between Koga and Oyama. The consequence was that, on the morning of the 24th, the commander of the Southern Army found that the greater part of his reinforcements from Tokyo had been detrained at Koga and could not possibly be up for this day's battle.

We find then that, on the morning of the 24th, the Southern Army were still weaker than their enemy: and although they held a strong position, they were also liable to be taken on the right flank by the Northern division coming from Mito.

The morning of the 24th was dull, but though rain had fallen during the night and made everything pretty wet under foot, the day luckily held up. The field of battle was almost an ideal one. On leaving Utsunomiya by the Main Rikuu road which runs to the N.E., the ground gradually rises until one is at a distance of about two miles out; here the road passes through dense woods, and when the summit of the rise is reached, the country opens out, and a magnificent plain about two miles long is seen, not perfectly flat, but depressed in the middle and rising to about the same height at the farther or Northern end. There were no rice fields, but the country was the sort of market-garden expanse with which travellers to Nikko and Karuizawa are so familiar: patches of trees were here and there, and a good many lots of mulberry trees. In addition to the dense forests in the rear, the flanks of the position were also heavily wooded.

The main body of the Southern Army is drawn up in the woods on the reverse side of the slope, and could be seen on each side of the road which seemed to be about the centre of the position. They were perfectly concealed from the enemy, and protected from his infantry fire. It is difficult to say what was the length of front, but probably it measured two miles. The advanced part of the line was pushed down the slope of the plain clear of the trees, and was apparently composed of alternate groups of Infantry and Artillery all along the line. Some of these were protected from the enemy's fire by being among the mulberry trees. In other places where the ground was clear, shelter trenches were thrown up and the men squatted down in them. Some of the batteries were well to the front, but where this was the case it was generally near a clump of trees in which the Infantry, giving protection to the guns, could be sheltered. The Cavalry, of which there seemed to be very few, were either scattered in the front patrolling, or else beyond the woods on the flanks of the position.

One cannot tell even in Manœuvres the exact time when the enemy will choose to appear. The Southern Army was in position about 9.30 a.m., guns unlimbered and shelter trenches made; but it was 12 o'clock before the white caps of the Northerners were seen at the farther end of the plain. The infantry fire commenced at over a mile range, and the Southern skirmishers were thrown out in advance of the position, gradually pressed back by the continual advances of the enemy, the guns opening fire as the dense masses were seen advancing. It was difficult to

make out the exact form of the latter Army's attack. The first line was in extended order, supported by the companies in close order two deep, with considerable gaps between the companies. Whether the first line was a true skirmishing line which falls back on supports when pressed, or whether it was a "firing line" continually fed from support Reserves, it was difficult to make out. The company seemed well held in hand by its Captain; closing in or extending with great intelligence as the nature of the country rendered necessary. The successive rushes to the front were made with plenty of spirit, and the art of getting sharply down under cover seems to have been carefully taught. The pauses in the advance often seemed too long, the men blazing away at each other from indifferent cover without advancing or retreating. The terrible fire of modern rifles will effectually prevent troops from standing still under it, when once they have entered an effective zone of fire; and if they cannot be persuaded to advance, they must of necessity retire. As the battle swept on, the fire of both guns and rifles was tremendous, with of course the inevitable smoke, so that not much could be seen. While the fire was at its hottest a vigorous cheering was heard on the left of the Northern Army, and on getting over to that flank it was found that the Northerners had made a flanking attack out of the woods without being seen until close up to the enemy. They came on in thick masses with tremendous cheering; but they failed to see the equally large masses of Southerners standing concealed in the mulberry trees, and although the attack penetrated close to the Southern guns in position, the Southern Infantry were quickly on the spot to protect the batteries. The cease firing was sounded when the combatants got too close, and the result was, it is believed, that the flanking attack failed.

There were rumours of a cavalry charge by the right of the Northerners coming from the woods and surprising the left of the Southern position, and a point was claimed for this by the Northerners, which was probably allowed. The battle ended about 1 o'clock, by which time the Southern Army was supposed to be in retreat towards Utsunomiya. As a matter of fact the men had a well earned rest and ate what food they had brought with them, while HIS MAJESTY, having dismounted and entered a small house on the road side, summoned the two Generals and other principal officers, and proceeded to decide upon the different claims made by the rival Armies, assisted by his Commander-in-Chief of the Army, Prince ARISUGAWA. The results of the battle of the 24th were the entry of the Northern Army into Utsunomiya and the retreat of the Southern Army to the villages which skirt the south and west of the town, where, being reinforced by the whole of the Guards from Tokyo, they would endeavour to force the

enemy to evacuate Utsunomiya and retire to the Northward.

The morning of the 25th will not be easily forgotten; the sun came out brilliantly after the dull weather which had been the rule on the two preceding days. It was a typical Japanese Autumn day, and those whose only idea of Utsunomiya is associated with the intense heat of summer, and the too monotonous green of the surroundings, would have been charmed with the beautiful colours of the woods, the delightful Autumn odours of the fresh earth, the sparkling dews on the leaves of the crops, and the towering forms of the Nikko Mountains in the distance.

The Northern Army's position was a circular arc extending from the West to the South of Utsunomiya, while the Southern army was divided into two parts, one being to the South, and the other to the West, or rather to the South-west of the town. HIS MAJESTY and Staff appeared on the left of the Northern position about 8.30 a.m. The front of this position looked towards the South. The principal part of the Artillery seemed to be massed here in the vegetable gardens which fringe the town at this point, and the guns were already in action firing over the heads or through the intervals of small bodies of infantry which had been pushed as far to the front as the embankments of the Nikko railway, and occupied shelter trenches dug in the sand mounds which border this part of the embankment. These advanced posts had, however, speedily to retire before masses of the Southerners now approaching from the South, who occupied the trenches, and poured in a fire on the retreating enemy. The feature of the day's battle seemed to be the opening by the regularly authorised Artillery of duels at long ranges. The left of the Northerners was strongest in this arm, while the heaviest gun fire from the Southerners came from their left or Western flanks. The ranges at which the artillery fired seemed rather too long, as there was plenty of cover for the troops among the mulberries, and the firing must have been a good deal guesswork. Moreover it looked at times as if there was danger of the Northern Artillery firing into their own infantry, especially on the right of the position where large masses of men were being deployed for attack. Soon after the advanced posts on the left of the Northern Army had been driven in, attention was called to something very serious happening on the right, or Western part of the position. The Southern Army's Artillery fire had been very heavy at this point, indicating that the way was being prepared for a grand attack, and the Infantry of the Northern Army had been deployed under cover of the mulberry trees in large numbers, and were now advancing for a final attack on the left of the Southerners' position. They seemed to have got almost up to the enemy's guns, when they were met by overpowering numbers of In-

fantry who advanced from the thick woods behind the guns, showing that the greater part of the Southern Army were at this part of the battlefield, while the attack on the South part of the town had only been a feint for the purpose of deceiving the enemy, and obliging him to separate his forces. The Northern Army were therefore outnumbered at the critical moment, and further resistance seemed hopeless. At about 10.30 the bugles once more sounded the cease firing, which proclaimed that the last and greatest of the battles was over. A very impressive ceremony now took place. HIS MAJESTY, having dismounted, retired to a small house near the scene of the final attack, and received the reports of the umpires on the different phases of the battle. During this time the officers of both Armies were collected together in a great square facing inwards, the generals being in the front. HIS MAJESTY, attended by His Imperial Highness Prince ARISUGAWA, and others of the Staff, then entered the square and received the reports of His Imperial Highness Prince KOMATSU, commanding the Imperial Guards, and Generals YAMANASHI and SAKUMA, commanding the Southern and Northern Armies. Prince ARISUGAWA then delivered his judgment on the different points of the three days' fighting, and finally HIS MAJESTY delivered his supreme verdict on the results of the battle. The general results have been pretty clearly indicated in the above descriptions. The Northern Army having landed in greater force than the garrisons of the adjacent districts of Japan could muster to oppose them, were able to press steadily to the South. A battle was fought near Ujiie which stayed the progress of the invader, but did not stop him. Another battle followed near Utsunomiya: but owing to the reinforcements from Tokyo being delayed by the destruction of the railway, this battle also failed in its object, and the Northern Army occupied Utsunomiya. Finally, on the third day, the Southern Army, being reinforced by the Tokyo troops, drove the enemy out of Utsunomiya, and it might be presumed that, if his communications from over the sea were now cut, he would not again be able to take the offensive.

Criticisms on Grand Manœuvres are difficult. The ground covered in this case was so extensive that only Umpires on the different points of the line of advance could tell whether the connecting links between the various units were well preserved, whether the cavalry scouting to the front and flanks was efficiently performed, and a hundred other things. But there can be no doubt that the Japanese Army as it appeared in these manœuvres is a thoroughly well-drilled, well-equipped, and mobile force, and that the men are well disciplined and capable of bearing great fatigue. Shooting and marching are very important points to observe upon, but of course nothing can

be known of the former from a sham fight. Of the marching power of the troops it will be interesting to take one example. On Sunday the 23rd the Southern Army marched from Utsunomiya to beyond Ujiie about 12 or 13 miles. They then fought a battle finishing at noon. In the afternoon or evening they marched back again to Utsunomiya, arriving about 11 p.m., and by the time they had found their quarters, prepared their own food, &c., and could get to bed, it was 1.30 a.m. The next morning they were in position to receive the enemy 2 or 3 miles outside Utsunomiya. Very few men were reported as having fallen out from fatigue or sore feet.

The Review on the 25th was a very brilliant spectacle, the weather, too, being magnificent. There was nothing, in respect of detail, to distinguish the affair from most other reviews. First HIS MAJESTY and Staff rode out and inspected the army, after while the usual march past took place. The locality was a huge rolling plain near the scene of the second day's battle, and the Army was drawn up apparently in columns of double companies on two sides of an oblong, covering a frontage of about a mile and a half. The men looked remarkably well and handled their arms with great precision. The march past occupied exactly one hour, which gives a good idea of the number of troops on the field. They came past in the same double company columns at a very quick pace, and the men marched admirably, considering the hard work they had lately been through. The Mountain Guns followed the infantry, and the Field Batteries and Cavalry came past at the gallop. HIS MAJESTY then left the field and, having dismounted at a house where the Imperial Carriage was waiting, returned to Utsunomiya to be present at a great Civil and Military fête held in the afternoon.

THE BARRISTERS' EXAMINATION.

THE Barristers' Examination affair has had an ending which, with reference to one of the culprits, is at once ineffective and regrettable and yet not surprising. We have all along wondered what legal offence would be attributed to the person who revealed the contents of the papers, and now we learn that by the judgment of the lower Court no legal offence at all has been committed. A probationer whose duty it was to copy the draft of the questions disclosed their tenor to an intimate friend and relative, at the urgent solicitation of the latter, and this disclosure it seems, cannot be brought under any section of the Criminal Code. That a flagrant breach of honour has occurred no one doubts; that the offender escapes easily with a punishment of summary dismissal is equally plain; but it is after all no easy thing to imagine just what sort of crime we shall label the conduct of this faithless

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

official. We cannot at present think of any category of our own law which will cover it. The only statutory offences of the sort customarily mentioned in Codes are the betrayal of testimony by a grand jury man and, in very recent times and in a few jurisdictions, the disclosure of the contents of telegrams by operators. The offence that might perhaps be charged is that of receiving a bribe; but it does not appear here that any money passed, and, even if it did, the possibility of a conviction would depend on whether the wording of the law could be stretched to cover this case—a not very promising possibility. It appears to be one of those unfortunate instances in which the prevision of legislators has been unable to show itself omniscient. Because this has occurred in Japan, there are doubtless persons who will raise an outcry against the imperfections thus (presumably) demonstrated to exist in the Criminal Code. For ourselves, however, we confess that this incident appears as no more than a part of the ordinary experience of every civilized nation. New crimes and new methods of evading the law are constantly appearing, and everywhere these present themselves in the law as new gaps which call for new precautions and new prohibitions. That embezzlement should be punished seems now elementary to us; but there was a time in England when it could not be punished at common law; and not until after experience had taught Courts that the meshes of the common law allowed offenders of this sort to slip through, did the legislator step in with a statute for the purpose. Every one knows of the famous case in which the English thief was charged with attempting to commit larceny by picking a pocket, but was acquitted because the pocket was empty, and an attempt to commit an impossible crime was in law no attempt at all. This ludicrous, but at that time logical result, was afterwards, we believe, remedied by statute; and so of course will the deficiency in the Japanese Criminal Code be cured as soon as possible.

The notable thing about this incident, and the one which to our mind is more significant of good than the failure to convict could possibly be of harm, is the stand taken by the Court, the *non possumus* decision. If there is any one characteristic which has distinguished the British judiciary as a body (and its younger branch in America), it is the strictness with which the law is construed. Let justice fail and crime go unpunished rather than the judge usurp authority and venture beyond the strict provisions of the law;—this is the spirit of the Anglo-American judicial attitude. That this spirit has shown itself strong and predominant in Japan under the greatest temptations—nobably the Otsu affair and now the Examination misconduct—should be one of the best proofs to the West that the Japanese judiciary are

working on exemplary principles. Japan has a right to claim comparison with other countries on the point, and each year is multiplying the proofs she can afford.

That this whole incident should become a text for the severest censure of the Japanese by a few implacable critics was perhaps to be expected. The method of procedure is usually to assume for the West certain standards that do not exist, then assume certain facts about Japan, and finally produce a comparison to the egregious disadvantage of this country. We cannot refrain from noticing one or two of these airy bubbles of criticism which collapse when pricked with the wand of investigation. It has been said, for instance, in hearty agreement with the wild statement of a vernacular journal, that "the fact of judicial officers like judges and public prosecutors being allowed to give instruction in private schools is as ridiculous as it is injurious," that "it must inevitably give rise to abuses and to neglect of duties, if nothing else." We do not pretend to believe that it is the best system. Legal education is an art engrossing enough to demand the instructor's whole attention. But this is the attitude of only the advanced few in the legal profession. The incontestable fact remains that what Japan is doing is being done in the same field by almost every leading nation, with the possible exception of Great Britain. In England there was until two decades ago no systematic legal instruction outside of a few lectures on jurisprudence at Oxford and Cambridge, and thus for a very good reason the Judges were not concerned in it. But since London has seen organized law lectures at the Inns and elsewhere, we believe that the old rule has been broken through. How common the practice is in France and Germany we do not know, but instances certainly occur. It is the United States, however, and not Japan, whose reputation is most thoroughly blasted by the prevalence of this "ridiculous" and "injurious" system. Some of the most eminent judges in that country in the past have been at the same time instructors in Law Schools,—Justice BATTLE, of the North Carolina Supreme Court, in the University of that State; Justice DUTTON, of the Connecticut Supreme Court, in Yale College; Justice SHARSWOOD, of the Supreme Court of Pennsylvania, in the University of that State; and Chief Justice COOLEY, of Michigan, in the State University. As for to-day's record, we can affirm that there are now at least 40 Judges in that country, members of the U.S. Supreme, Circuit, and District Courts, and of the State, Supreme, and Superior Courts, who are delivering lectures at institutions for legal instruction. This is doubtless a "ridiculous" record; but Japan may comfort herself with the thought that she sins in reputable company.

Take again, the assertion, that it is

preprehensible for the Committee to "despatch these papers to the provinces by post." This is to be sure, unpardonable. We have ourselves aided, it seems, to further equally unwarrantable methods, for we have given publicity in these columns to the announcement that examinations for admission to Harvard University would be held in Tokyo, and the printed papers for these examinations have invariably, we believe, been despatched to Japan by registered mail, and are, moreover, so dispatched to London, Berlin, and a dozen of places throughout the United States. If we are to judge Japanese methods by Western standards, we must here acquit the former of any greater guilt. We learn furthermore, that "such a thing as the purchase of information at home would be impossible," because in Japan, "the nation has not yet been educated up to that nice unwritten code of what constitutes honour which most European nations at home obey." This may be so; but educators at home appear to entertain a singularly different view of the nicety of this Western code of honour, and the persuasiveness of its sway. In a university we happen to be acquainted with, the experience on the point of honour at examinations has been such that nowadays the papers are printed in a stone basement fitted up as a printing-room, with iron-barred windows and a single heavy door, where the work is done exclusively by an employé of 20 years' standing whose fidelity has been well tested; and during the examinations watchers are appointed, one for every 20 or 30 candidates, to patrol the rooms and prevent all cheating. As for instance of papers fraudulently obtained, it would be idle to attempt to enumerate such occurrences in the West. They are innumerable. A fair comparison, fairly made, is a legitimate mode of argument in any discussion. But we are tired of having to take up the cudgels to demand that comparisons, where Japan is criticised, shall be in fact fair. To demonstrate that the world is very much the same, whatever the longitude, becomes an ungracious task when it involves calling attention, as it sometimes does, to instances where improvement is desirable in one's own nation. But there seems no escape from it, until we shall have an end of misleading comparisons and the reign of facts and fair play shall be inaugurated.

CARSTENS AND EXTERRITORIALITY.

(COMMUNICATED.)

THERE occurred in the Yokohama Local Court on Wednesday last an incident so significant that it deserves to be chronicled as one of the remarkable events in the international history of Japan. It was the demand made by the Counsel of CARSTENS, the foreigner accused of murder, that the defendant should receive his trial in the Japanese tribunal and not in the German

Consular Court. If there is anything for which the doctrine of Exterritoriality stands in history and in theory, it is the notion that (to speak plainly) Japanese laws and Japanese Courts cannot be trusted. It is this notion which is incarnated in the provisions of nearly every one of the Western treaties with Japan. It is to this end that diplomatic negotiation and popular agitation have been consecrated. But at last the sanctity of this cardinal dogma has been violated. The first defection from the ranks of the faithful has occurred. A man has been found so wanting in consideration for the welfare of his nationals and so absorbed by selfish considerations of personal interest, as to declare openly that he prefers a Japanese tribunal to his own. One who was asked what he considered the most significant event in the history of parliamentary institutions in Japan, replied that it was the Tuesday when the gates of the Parliament grounds were opened for the first time, and the first Member of Parliament was whirled up to the vestibule and alighted to attend the first meeting of the House. We think that the demand of CARSTENS for a trial in a Japanese Court is the first knell of the dissolution of Exterritoriality. We do not wish to exaggerate the significance of the occurrence. We realize that it would have been one thing for Messrs. JARDINE, MATHESON & Co. to have made such a demand; and that is another for the sailor CARSTENS to make it. But the telling fact is that the demand has been made, and that it rests on a proposition which undermines the whole doctrine of Exterritoriality, the doctrine that Japanese laws and Japanese Courts are not to be trusted. The specific reason mentioned by the defendant's Counsel was that the accused is not entitled under the German Code to a diminution of penalty on the ground of extenuating circumstances, and that this might be allowed under the Japanese Code. This particular reason is really immaterial, in the presence of the astounding fact; but if the reason is to be noticed at all, it is because it teaches the irony of fate. Twenty years ago the Government of a leading Western State wrote to its representative here, respecting the extritorial provision in its treaty: "All that has been sought by the Christian Powers is to withdraw their subjects from the operation of such laws as conflict with our ideas of civilization and humanity." In 1892 we are presented with the spectacle of a subject of another leading Western Power endeavouring to "withdraw" himself "from the operation of a law" of his own State because the corresponding law of Japan is less in "conflict" with his "ideas of humanity." The whole occurrence is an effective satire on the factitious and unnatural assumptions forced upon us by the continued maintenance of a principle which has outlived its usefulness.

But, after all, can CARSTENS succeed in

his demand? This question brings up a point of extritorial practice which seems to be as novel as the incident that has given rise to it. That issue is whether CARSTENS can repudiate the Court of his own Consul and elect to be tried in a Japanese Court. It is true that the accused rests his demand on the fact that he is no longer a German subject. As his counsel puts it, the fact that the subject of a country has remained abroad for over 10 years without notifying his Government of continuing allegiance, disqualifies him as a subject of that country. What warrant there is for this proposition in German law we do not know; but, put in this form, it can hardly be maintainable as a principle of international law. Questions of domicile, expatriation, and the like depend chiefly on the intention of the person concerned, not on fixed and formal rules. Naturalization, to be sure, requires the satisfaction of certain formalities; but there can be no doubt that expatriation (assuming that it is recognized as allowable at the will of the subject) rests, in international law, on the expressed intent of the person. In some cases 10 years absence would be more than is required, in others less. The fact that CARSTENS is by occupation a sailor, points to the latter conclusion. But that is a question of fact for the judge (speaking internationally), and we express no opinion upon it.

Behind this claim of expatriation, however, is the question above referred to, which the defendant's counsel did not choose: Can CARSTENS elect to be tried in the Japanese Court, assuming that he cannot prove himself to be any longer a German subject? This is a fundamental inquiry, which has apparently never been made before, but is no less applicable to any other individual among the four thousand subjects of treaty nations in Japan. The peculiar fact which here intervenes to cause complication is that the German Authorities have signified their desire to try the accused and have requested that he be handed over to them. The situation, then, is that the Treaty nation demands to exercise its privilege of trying its own subject (as we assume him to be), while the subject himself repudiates this claim and declares his election to be tried in the Court of Japan. At first sight one might have some hesitation in reaching a conclusion. The language of the treaties, it may be urged, is on this point imperative,—"shall be tried and punished in" the Consular Courts. But this is the language of every contract; otherwise there would be no obligation. The imperative form of the language does not affect the right of waiver, if such a right of waiver is otherwise found to exist. When one considers the purpose of these clauses of extritoriality, the solution of the question becomes apparent. The provisions reserving the right of trying treaty nationals in the Consular Courts were in-

tended solely for the benefit of those nationals themselves. This has always been the expressed understanding. In the declaration above quoted, "all that has been sought is to withdraw their subjects from the operation of" certain laws of supposed harshness. Another declaration has referred to the Consular Courts as furnishing "such safeguards as our own Government may interpose for the protection of citizens who come within its sway." If these subjects or citizens see fit to relinquish or waive these supposed safeguards, is it possible that their Governments can hold them back? The interest of the Government in the matter is only the interest of its nationals; and these declare that they voluntarily abandon their privileges. It is hard to see what doctrine would justify such a Treaty Power in forcibly compelling its nationals to submit in Japan to trial by a Court which has received from the Japanese nation a peculiar and abnormal jurisdiction only—a jurisdiction which in the present case has lost its only *raison d'être*, viz., the desire of certain nationals for protection from Japanese laws. We trust that the question will be settled in such a way as to recognize clearly the right of any treaty national to elect Japanese jurisdiction; for if Treaty Revision is to come, as seems likely, by slow degrees, one of the most important privileges for foreigners will perhaps be that of electing to put themselves under Japanese jurisdiction.

DEATH OF DR. G. VON WAGENER.

WITH keen regret we find ourselves called on to announce the death of Dr. GOTTFRIED VON WAGENER, which took place at his residence in Surugadai, Tokyo, at 4.30 p.m. on the 8th instant, the cause being heart disease. Dr. WAGENER had not enjoyed robust health for some time. A recent trip to his native country was in part dictated by evidence of feebleness developing with a degree of rapidity that his years did not warrant, and he probably understood very well that his life must be unduly shortened. His last illness was long, entailing a full measure of the suffering that attends certain forms of heart trouble, but borne by the patient with all the serene fortitude for which his character was ever remarkable. Under happier constitutional conditions a long term of usefulness should have remained to this eminently useful man, for he had only just entered his sixty-second year, having been born in Germany on July 5th, 1831. He came to Japan in 1870, in the service of the Feudal Baron of Hizen—the family now represented by Marquis NABESHIMA—his function being to introduce improved methods of porcelain manufacture at the great potteries of Arita. It is a curious historical fact that fully 250 years previously, a permanent influence had been exercised on the very same porcelain by another M.

Original from

WAGENAAR, who in the third decade of the seventeenth century presided over the Dutch Factory in Deshima. "*Le Sieur Wagenaar*," as he is called in *Les Ambassades Mémorables*, did not go beyond suggesting a more profuse style of decoration, but the modern Dr. WAGENER, who was a man of remarkable knowledge and resource, indicated improvements which produced most happy results, and which, had there been means to carry them out in their integrity, would have revolutionized the ceramic industry of Hizen. Having conceived and inaugurated such changes as the resources of the province permitted, he was invited to Tokyo, where, after being nominated a Professor in the University, he was appointed, in 1872, to the chair of Chemistry and Physics in the College of Medicine. In the same year he received an additional appointment as Adviser to the Bureau for the Promotion of Industries in the Department of Agriculture and Commerce, where he became entrusted with a large share in the work of preparing art exhibits for the Japanese section of the Vienna Exposition. He subsequently proceeded to Vienna as one of the Japanese Commissioners to the Exhibition, and after his return the Department of Education engaged his services for the establishment of an Artisans' School (*Shokko Gakko*), in Tokyo, conferring on him at the same time an additional appointment at the Uyeno Museum. The Philadelphia Exhibition next occupied his attention, and to it also he was despatched as a Commissioner for Japan. It was in 1877, that he commenced a series of experiments destined to lead to permanently remarkable results. Up to that time the Cloisonné Enamels of Japan had been sombre, uninteresting objects, asserting no claim to the consideration of either decorators or art amateurs. But Dr. WAGENER's skilled investigations enabled him to indicate such excellent methods of preparing colours that the Japanese artisans, supplementing his scientific acumen by their own wonderful manual dexterity, have now carried the manufacture of Cloisonné Enamels to a point never dreamed of by their predecessors in any country. In 1878 we find Dr. WAGENER serving as Professor of Chemistry in the Kyoto College of Medicine until 1881, when he was again transferred to the University in Tokyo. Three years later, having received the additional appointment of Adviser and Teacher at the Artisans' School, he introduced and supervised the manufacture of a ware invented by himself, namely, the *Asahi-yaki* (Morning Sun Faience). The chief characteristic of this ware is that colours are employed freely under the glaze, an entirely new departure, for although porcelain had been thus treated by earlier experts, it had never previously been found possible to decorate faience in such a manner. Dr. WAGENER continued in the service of

Japan up to the day of his death. In 1874, the EMPEROR of Austria-Hungary conferred on him the decoration of the Francis-Joseph Order, which carries with it the personal rank of nobility, and in the following year he received the Fourth Class of the Prussian Order of the Crown, these honours being supplemented in 1878 by the Fourth Class of the Japanese Order of the Rising Sun. During the present year he was distinguished by having *chokunin* treatment extended to him, and on the day of his death the EMPEROR of Japan conferred on him the Third Class of the Order of the Sacred Treasure. Dr. WAGENER was one of those rare men who to deep knowledge and absorbing love of science, added an absolutely self-effacing disposition. No thought of himself seems to have ever occurred to him in connection with his innumerable researches and many valuable discoveries. He worked simply and unaffectedly for the sake of the general good that work might bring, and he passed quietly and unostentatiously through life, loving and beloved by his fellows, a philosopher of humility, a gentleman of unswerving integrity. Japan, in the course of her modern progress, has incurred, and doubtless recognises, a large debt of gratitude to Germany. But among the many benefits bestowed on her by the great European Empire, few can possibly exceed the long services of this noble man, whose private character was as beautiful as his scientific attainments were profound.

THE PRESIDENTIAL ELECTION.

A TELEGRAM received yesterday in Tokyo announces that Mr. CLEVELAND has been elected PRESIDENT of the United States. This result was not foreseen, but in truth there appears to have been very exceptional uncertainty about the issue of the election on every side. Probably no Presidential contest ever found the Great Republic so calm, if not apathetic, and none certainly was ever fought more honestly on political issues. Personalities obtained no place at all in the campaign. Newspapers with injurious paragraphs scattered permanently throughout their leading columns, scandal-mongers with scraps of ancient history about deserted paramours—this kind of foul material was entirely discarded, and the struggle went on fairly and squarely between two men of irreproachable lives, representatives of well understood and clearly defined political creeds. The interesting question now is, what are those creeds, or rather, what is the avowed creed of the man who for a second time has been chosen to preside at the White House. There exists among many Englishmen an idea that Democratic sway in the United States is synonymous with the prevalence of Free trade doctrines, and that a Democratic Administration

would not terminate its tenure of power without inaugurating radical tariff reforms. We believe this to be true in part and false in part. It is undoubtedly true that GROVER CLEVELAND is a free-trader. He may have played a little with the vital issue on the occasion of his first candidature, for despite the courageous honesty that distinguishes him, he knew that the time was not ripe for a heroic platform, and that precipitancy would only have wrecked a great cause. But in his letter—published at the close of September—accepting the Democratic nomination, he spoke in an absolutely unequivocal tone:—

Tariff legislation presents a familiar form of federal taxation. Such legislation results assuredly in a tax upon the daily life of our people as the tribute paid directly into the hand of the tax gatherer. We feel the burden of these tariff taxes too palpably to be persuaded by any sophistry that they do not exist or are paid by foreigners.

Such taxes, representing a diminution of the property rights of the people, are only justifiable when laid and collected for the purpose of maintaining our Government, and furnishing the means for the accomplishment of its legitimate purpose and functions. This is taxation under the operation of a tariff for revenue. It accords with the professions of American free institutions, and its justice and honesty answer the test supplied by a correct appreciation of the principles upon which these institutions rest.

This theory of tariff legislation manifestly enjoins strict economy in public expenditures and their limitation to legitimate public uses, inasmuch as it exhibits as absolute extortion any exaction, by way of taxation, from the substance of the people, beyond the necessities of a careful and proper administration of Government.

Opposed to this theory the dogma is now boldly presented that tariff taxation is justifiable for the express purpose and intent of thereby promoting special interests and enterprises. Such a proposition is so clearly contrary to the spirit of our Constitution and so directly encourages the disturbance by selfishness and greed of patriotic sentiment, that its statement would rudely shock our people, if they had not already been insidiously allured from the safe landmarks of principle. Never have honest desire for national growth, patriotic devotion to country, and sincere regard for those who toil, been so betrayed to the support of a pernicious doctrine. In its behalf, the plea that our infant industries should be fostered, did service until discredited by our stalwart growth; then followed the exigencies of a terrible war which made our people heedless of the opportunities for ulterior schemes afforded by their willing and patriotic payment of unprecedented tribute; and now, after a long period of peace, when our overburdened countrymen ask for relief and a restoration to a fuller enjoyment of their incomes and earnings, they are met by the claim that tariff taxation for the sake of protection is an American system, the continuance of which is necessary in order that high wages may be paid to our working men and a home market be provided for our farm products.

These pretences should no longer deceive. The truth is that such a system is directly antagonized by every sentiment of justice and fairness of which Americans are preëminently proud. It is also true that while our working men and farmers can, the least of all our people, defend themselves against the harder home life which such tariff taxation decrees, the working man suffering from the importation and employment of pauper labour instigated by his professed friends, and seeking security for his interests in organized coöperation, still waits for a division of the advantages secured to his employer under cover of a generous solicitude for his wages, while the farmer is learning that the prices of his products are fixed in foreign markets, where he suffers from a competition invited and built up by the system he is asked to support.

The struggle for unearned advantage at the doors of the Government tramples on the rights of those who patiently rely upon assurances of American equality. Every governmental concession to clamorous favourites invites corruption in political affairs by encouraging the expenditure of money to debauch suffrage in support of a policy directly favourable to private and selfish gain. This in the end must strangle patriotism and weaken popular confidence in the rectitude of republican institutions.

These utterances proclaim Mr. CLEVELAND a free trader pure and simple. But how far will it be possible or expedient for him and his Party to give practical expression to their sound theories? Not to any very large extent, we imagine, for the present at all events. There have sprung up, under the conditions which the new PRESIDENT so graphically describes, enormous interests and vast commercial ventures towards which the utmost circumspection and deliberation must be exercised. It is one of the curses of Protection that it fastens itself, with all the tenacity of Sinbad's Old Man, on any nation which has once bent its shoulders to the burden. To get rid of it entails an effort scarcely less painful than the ills that it has begotten. Mr. CLEVELAND and his Party do not intend to subject the United States to any dislocating wrench. They mean to go slowly, though they will try to go soundly. "Tariff reform," said the Democratic nominee, "is still our purpose. Though we oppose the theory that tariff laws may be passed having for their object the granting of discriminating and unfair governmental aid to private ventures, we wage no exterminating war against any American interests. We believe a readjustment can be accomplished in accordance with the principles we profess, without disaster or demolition. We believe that the advantages of freer raw material should be accorded to our manufacturers, and we contemplate a fair and careful distribution of necessary tariff burdens, rather than the precipitation of free trade."

From Mr. CLEVELAND's faith, therefore, to its full embodiment in tariff legislation, there is still a far road to travel. Those of us who have passed middle age may not live to see the goal attained, but that America has entered the route leading to Free Trade, there can be very little doubt.

The second great question connected with the Presidential election is the Silver problem. It is a question of world-wide interest. All countries between which commercial changes take place, suffered disastrous loss and were thrown into a state of embarrassing confusion by the extraordinary and almost fanatical currency legislation of the Republican Government now going out of power. Ignorant or thoughtless persons have attempted to deduce from the history of that singular vertigo an argument against the soundness of the bimetallic theory. But neither BLAND nor any of his imitators were bimetallics in the sense of the CERNUSCHI and LAVELEYE School. No reasoning bimetallic ever imagined that an evil which has really nothing to do with the ultimate gold value of silver, but is due primarily to the refusal of certain nations to recognise the white metal as reputable currency, could be mended by the solitary effort of one State, especially when that effort took the form of dumping a moiety, approximately, of all the silver

taken from the natural mines of the world into an artificial mine in Washington. Senator JONES and his friends dealt with the silver problem as though it were simply and solely a question of over-production, whereas that is precisely what the bimetallics have always denied and the monometallics as persistently affirmed. The experiment of 1890, so far from discrediting bimetallicism, dealt a conclusive blow to the contention of the monometallics that the gold price of silver has fallen, not because of demonetization but because of over production. Such a doctrine becomes almost comical in the presence of the fact that the colossal operations of a purchaser who annually absorbs nearly one half of the aggregate silver produced in the world, have signally failed to check the depreciation of the metal. Mr. CLEVELAND and the Democrats will probably abandon the always ill-judged and now fatally discredited procedure inaugurated in 1878 and carried to its acme in 1890. Here is the new President's latest utterance on the subject:—

The people are entitled to sound and honest money, abundantly sufficient in volume to supply their business needs. But whatever may be the form of the people's currency, national or State—whether gold, silver, or paper—it should be so regulated and guarded by governmental action, or by wise and careful laws, that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With this condition absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our currency.

In dealing with this subject no selfish scheme should be allowed to intervene and no doubtful experiment should be attempted. The wants of our people, arising from the deficiency or imperfect distribution of money circulation, ought to be fully and honestly recognized and efficiently remedied, it should, however, be constantly remembered that the inconvenience or loss that might arise from such a situation can be much easier borne than the universal distress which must follow a discredited currency.

There is here just enough hedging to show that caution will be the order of the day. The selfish projects of the silver men will receive no support from the PRESIDENT, neither will any risky ventures be essayed. In a word, from the two vital points of view of tariff and exchanges, the regimen of the new Administration promises to be sound and enlightened.

CORRESPONDENCE.

TREATMENT OF THE LEADERS OF THE PEOPLE'S PARTY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—General Weaver, presidential nominee of the People's party in the United States, meets with some rather barbarous receptions in "stumping" the cause he represents among the people of the South. The political harmony that should prevail among a people so closely related in other matters as are the people of America, is seriously wanting in some of the most progressive communities. The citizens of the South have long been noted for their hospitality in entertaining strangers, but when their political principles—rather political opinions—are attacked, they evince an animosity similar to that of days gone by. Here is what one, who is personally interested, says of the

work done, and the cordiality shown them in the political struggles in the South:—

Mrs. Lease spoke strongly about the Macon meeting. "No, I did not speak at Macon, she said, 'although I went there with the intention of so doing.' After supper at the Garnier House Gen. Weaver went upon the front porch, Mrs. Weaver and myself following him. In front of us was a howling mob of several thousand people. Mrs. Weaver stepped behind a table upon which were three lamps burning brightly. Hardly had she seated herself before she was struck violently upon the head with a rotten egg."

"At this juncture a gentleman rushed up to me, and, catching me by the shoulders, begged me to come inside in order to escape any danger. 'No,' I said to him, 'if this cause needs martyrs, I will be the first.' All during this the General was cool and collected, although the crowd continued to throw eggs, striking persons who were not with our party. Gen. Weaver attempted to speak three times, but each time was silenced."

"It was not the boys of Macon and hoodlums who attempted to break up the speaking, but some of that town's most prominent citizens were on hand. The people of Macon will receive retribution for egging Mrs. Weaver, who is a pure, Christian woman and president of the State W. C. T. U. of Iowa. Already eighty cotton planters have announced that they will withdraw their patronage at once."

"At Albany," she continued, and Mrs. Lease's eyes flashed fire, "we were met by a howling, drunken mob. The lower regions seemed to have been turned loose. We were informed that we might use the opera house free, but I suspected a blind in their generosity."

"They had formed a conspiracy. Even the policemen of the town were in it. Their intention was to corner us at the opera house, and after Gen. Weaver spoke there was a hireling negro who was to speak in answer to him, but they failed, although the black brute afterward spoke from the veranda of the hotel."

Gen. Weaver has sent a letter to M. D. Irwin, chairman of the state committee of the People's party, explaining his abrupt abandonment of the Georgia campaign.

The struggles for political supremacy in the States at this time are very severe. There is no measure touched in any party that will not enhance its own interests, and cripple those of its opponents.

We are in semi-suspense until the returns of the present election are made public.

I am, Sir, your obedient servant,
November 7th, 1892.

G.

LORD TENNYSON'S DEATH.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—Thousands of people will no doubt turn up their "Shakspeare to try and discover the passage in Cymbeline" which enchaind the attention of the dying Laureate. It appears to me that there can be no doubt which it was; I mean the Song in Act 4, beginning—

Fear no more the heat o' the sun,
Nor the furious winter's rages;
Thy worldly task hast done,
Home art gone and 'a'en thy wages;
Golden boys and girls all must
Like chimney-sweepers turn to dust.

"There is only one thing," said Tennyson to me on one occasion, "of which I feel absolutely sure; and that is a future life."—"And you can't prove even that," I replied.—"No," rejoined the poet, "unless spiritualism is true."

Yours faithfully,
November 4th, 1892.

Q.

THE CRATER OF ASAMA-YAMA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It has occurred to me that there are many people who have heard various conjectures and statements with regard to the crater of Asama-yama, but have never heard what it really looks like, and that therefore it might not be uninteresting to some, at least, to know what was seen by the writer together with several others this summer.

I had been up Asama five times without seeing anything of the crater, or at least the inside of the crater, and was getting rather tired of climbing the same mountain so many times without finding anything worthy of note; but, inasmuch as many others had arranged to go up in the night, I decided to go with them, especially as the air was unusually clear, and had been so for several nights.

We started from Karuizawa at about 7 p.m. one night about the middle of August, with a good moon to light our way. We reached Ko-Asama at about 10.30 and there rested a short time and prepared ourselves for the ascent, inwardly by edibles and outwardly by *waraji* and sticks.

When we were ready we proceeded at a steady pace, taking rests on the way up. We noticed that there was apparently very little smoke proceeding from the crater, and were in hopes that we might be able to see something of the fire when we reached the summit. Whether there was smoke or not, there was certainly a great deal of bad gas coming down the side of the mountain, for we felt it in our throats more than we appreciated, and were made uncommonly thirsty. At last, at about 3 a.m., we succeeded in gaining the summit.

Original from

I will now describe the crater as I saw it myself. As soon as I got near enough to the crater to see a little way down, I saw that there was very little smoke, and that the opposite side could be plainly seen. The smoke that I saw, however, had a reddish glow, as if from fire below; and this induced me to make a closer inspection, so I went nearer to the edge (on the north side), and thought I could distinguish a small yellow flame of fire proceeding from the rocks on the opposite side. As yet I was unable to see the bottom of the crater. I then went round to the west side, and, at the highest point, carefully leaned over, and there I saw the whole of the bottom of the crater.

This position was not very safe, however, so I went a little further round until I came to a small crevice, and there, supporting myself by leaning my hands on the rock each side, I leaned over, and could see almost as much as in my first position, and quite enough to satisfy me. The crater appeared to be not more than from 150 to 200 ft. deep, and at the bottom was a mass of red hot rock, black only at the top where it appeared to be comparatively cool. In the centre was a large hole, the size of which I could not estimate well, but which might have been from 10 to 25 feet in diameter. The sides of this hole were red hot to the top, and began to approach a white heat deeper down. From this hole there were many others branching out like the spokes of a wheel towards the side of the crater, and there was also a circle of holes round these, close to the sides. All these holes were red hot, and all were of different sizes, none being as large as the centre hole. Out of a few of the holes flames were emitted. It is difficult to suggest the real cause of these flames, but they appeared to me to be only caused by the force of the hot air, which was being emitted with terrific power. There was a continual noise like the bellows of an immense furnace, and occasionally, also, a slight noise like the crushing of stones.

We had our breakfast on the summit and then walked round to the east side to watch the sunrise. On our right, far down, was a sea of clouds over the Karuizawa plain, but on our left everything was clear, except some heavy clouds in the distance. Straight in front were long rows of small clouds which were gradually becoming red by the approaching sun. We waited until the sun was fairly high above the mountains before we began our descent. The sunrise was the most beautiful I ever saw, and I hardly expect to be so fortunate as to get such a sight again.

We all enjoyed the trip and returned to Karuizawa well satisfied with what we had seen.

Yours very faithfully,

EDWARD GAUNTLETT.

Chiba, November 8th, 1892.

THE AUTUMN MANŒUVRES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with great interest your account of the recent Manœuvres of the Japanese Army, and would feel much obliged if you would kindly explain (if possible), why the Umpires disallowed the claim of a successful "flank attack" made by the extreme right of the Southern troops. There must have been a reason for this important decision of the Umpires. To be taken "in flank," according to the law of Tactics, is, one might say, "an unpardonable error," but as it was, in this instance the claim of the Southern Army was disallowed; notwithstanding that, the "reason" of the claim would be interesting to know.

I am, Sir, your obedient servant,

LATE MILITIA FORCES.

November 7th, 1892.

[We believe that the attack was held to have failed. It was delivered in ignorance of the force which the other side was able to array against it.—Ed. J.M.]

The *Gazette* announces that the Queen has been pleased to approve of Mr. Robert G. Shewan as Chilean Consul at Hongkong.

The following appointments have been made at the Admiralty:—Lieutenant—H. H. Stileman, to the *Hyacinth*. Surgeons—J. M. C. Martin, to the *Daphne*, and E. C. Ward, to the *Hyacinth*, undated; Captain H. J. May, C.B., to the *Hyacinth*, dated Sept. 22.—*L. & C. Express*.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

The regular monthly meeting of the above mentioned Society was held on Friday, November 4th, at the rooms of the Geographical Society (Chigakukio Kai) Nishikonyacho, Kyobashi, Tokyo. Work done by Messrs. C. D. West and W. K. Burton during the Summer vacation was on exhibition.

The regular meeting began at 5 p.m., Mr. G. Gilbert in the Chair. The following gentlemen were unanimously elected members of the Society. Messrs. A. B. Brown, J. B. M. Barrett, P. C. E. Choisoné and J. Kiyokawa, Drs. E. Scriber and Augustine Wood.

Mr. J. Tanaka showed some results of experiments in collotype. They were not quite perfect, but were remarkable as the results of first attempts in this difficult branch of photo-mechanical work, the more especially as Mr. Tanaka had worked entirely from written instructions. After trying various more or less complicated formula, he had settled on the following:—

Bichromate of Ammonium	1 gram
Pure Gelatine	6 grams
Water.....	10 c.c.

He had found an admixture of isinglass, even in small quantities, the reverse of an advantage.

Messrs. W. K. Burton and K. Arito showed the results of experiments in orthochromatic work. They had set themselves the task of getting photographs showing a brilliant pure scarlet, a bright but darkish blue, and a pure chrome yellow, in their true value. If these could be shown truly all other colours could. They had succeeded best with a mixture of eosine and cyanine. Eosine was a strong sensitizer for the yellow and the green, cyanine for the red and the orange. The following formula was used:—

Cyanine solution 1 part in 1000 ..	1 part.
Eosine solution 1 part in 1000	1 part.
Ammonia 10 per cent. solution	4 parts.
Water (distilled)	14 parts.

The plates were bathed for 2 minutes and dried. Of course such plates need the extremest care in working.

A yellow screen was used with plate glass sides, inclosing $\frac{1}{2}$ inch thickness of the following solution:

Picric Acid	1 part.
Water	500 parts.

The intense but very light yellow colour of a picric acid solution seemed particularly well tinted to orthochromatization. With a denser solution than that mentioned it was possible to drench the orthochromatization. The exposure needed was to times that with the same plate untreated, but without any yellow screen.

Mr. J. Favre-Brandt sent a most interesting paper on "pin hole photography" (photography without a lens), along with samples of the work done, and of the pin-holes used. It was agreed that these samples were remarkably good. In fact, in some respects they were better than photographs taken with a lens, showing a pleasing softness. The exposures had been from 1 to about 5 minutes. The unusual excellence of these results was probably due to the great care with which the pin-holes were prepared. They were in thin plates of nickel, were perfectly circular, in each case of the exact diameter that would give the finest definition with the focal length used, and the edges were delicately bevelled.

Mr. Kajima Sebi showed a hand camera in the form of an opera-glass. The arrangement on the whole was ingenious, but samples of work done by the camera were much under-exposed. The lens working at about $\frac{1}{8}$ was far too slow for this kind of work, especially as the shutter was one that gave a bad co-efficient of light. Further, there was no means of adjusting the focus.

Mr. T. Kiyokawa presented the Society with a bottle of "retouching solution." This was to be applied to the plates whilst still wet, after fixing and washing. It was evidently an aqueous solution. Mr. T. Tanaka was asked to take the bottle with him, to try the solutions, and to report to the next meeting.

The following is a translation of the paper on Pin-hole Photography read by Mr. J. Favre-Brandt at the meeting of the above mentioned Society on Friday, 4th inst.

PIN-HOLE PHOTOGRAPHY.

Attention has been called many times to the quality of photographs that can be obtained in a darkened chamber, or camera, without special optical apparatus, simply by means of a small hole in a very thin plate.

Amateur Photographers can make pictures,

pretty large in size, of landscapes and even of monuments, without being obliged to buy lenses costing from \$10 to \$300.

No doubt to reproduce plans and engravings it is necessary to use the famous lenses of Ross, Dallmeyer, Beck, Hermagis, Francals, Nadar, and others. But we wish to perceive, when we examine a photograph, the particular effect which is produced on a more or less near-sighted eye by its entire surroundings, when it looks at nature from a little distance. It seems to us that suppressing the lens and replacing it by a pin-hole gives more artistic results as far as regards monuments, or landscapes without moving figures.

"Nevertheless, far from us," says the *Amateur Photographer* (journal), "is the idea of crying down the photographic lens which has in the last year attained so great perfection; for in the greater number of cases these instruments are, and will remain, indispensable," but leaving out the instantaneous photograph which has such charm for the amateur; and the portrait, the specialty of the professional, let us confine our ambition to obtaining in an artistic a manner as possible either landscapes or copies of monuments; and of these latter there are certainly no lack in Japan.

M. Meheux says that the most suitable hole is round, and drilled in a plate of copper or sheet brass of $\frac{1}{8}$ millimetre in thickness; it is necessary that the borders show no burr and are bevelled, forming a cone.

Captain Colson has remarked that, although the depth of focus is unlimited, the greatest sharpness of definition for each size of hole is found at a determined distance, and he has succeeded in finding the proper focal distances for different diameters of holes; he has thus found that:—

The best definition for a hole $\frac{1}{8}$ millimetre is at 11 centimetre.
The best definition for a hole $\frac{1}{16}$ millimetre is at 20 centimetre.
The best definition for a hole $\frac{1}{32}$ millimetre is at 30 centimetre.
The best definition for a hole $\frac{1}{64}$ millimetre is at 44 centimetre.

It may be mentioned that the size of the object to be reproduced is proportional to the distance from the apparatus, and to the distance from the hole to the sensitive surface.

It follows from this rule, that after having taken, for example, one view of an entire Cathedral with a focal length of 20 centimetres, say with the $\frac{1}{16}$ millimetre diameter of hole, if we wish to have the details of the gate-way without moving from our place, it is sufficient to lengthen the focus to 44 centimetres and to use the $\frac{1}{32}$ millimetre hole.

We may further remark that the *Stenope*—the name given to the above mentioned plates—easily includes an angle of 100 degrees, or even more, without at all deforming architectural lines, and without destroying the perspective, which is far from being the case with even the most perfect wide-angle lens.

The length of exposure presents much less difficulty than with lenses, except we expose enormously beyond the proper time, it is nearly impossible to over expose; we can always obtain a good negative by developing intelligently.

Nevertheless, if one must have a general approximate rule, we may say as a general proposition that the time of exposure is at least twenty-five times longer with the $\frac{1}{32}$ mm. hole than with a lens focussed upon the same view and provided with a medium diaphragm. Fifty times longer with the $\frac{1}{64}$ mm. hole; one hundred times longer with the $\frac{1}{128}$ mm. hole, and two hundred times longer with the $\frac{1}{256}$ mm. hole; it being well understood that we use the focal lengths corresponding to these holes.

But we can modify these times of exposure without over exposing the plate; on the whole this depends very much on the plates, the developer, and the actinic power of the light. Experience will be the best guide for every class of picture. Just the same as in Nature, the sun has here great influence on the clearness of the view, more than it has when using lenses.

To sum up the advantages of using the *Stenope*:

- (1) More artistic definition than with a lens.
- (2) Unlimited depths of focus.
- (3) Perfect perspective for lines in architecture.
- (4) Mathematical exactness in the scale of plans.
- (5) The angle of view can include as much as 170 degrees.

All the proofs, under the numbers 1, 2, 3 and 4, represent the same subject, and are taken with the same apparatus from one and the same distance, say 20 metres from the corner of a house marked A. The number representing the house and garden was taken with the $\frac{1}{32}$ mm. hole, distance from hole to sensitive plate 11 centimetres, time of exposure 1 min. 25 sec.

No. 2 view from same plate with the $\frac{1}{64}$ mm. hole 20 centimetres from the plate.

No. 3 is taken with the $\frac{1}{128}$ mm. hole, 30 centimetres from the plate, and finally No. 4 is taken with $\frac{1}{256}$ mm. hole 44 centimetres from the plate; distance between the apparatus and the house 18 to 20 metres. Time of exposure varies in the different numbers from 1 min. 25 sec. to 2 min. 30 sec.

CENSUS FOR 1891.

The Official Gazette publishes the following census of the population ascertained by the Department of Home Affairs on the 31st December, 1891:—

Total number of houses	7,806,369
Total population	40,718,677
(Males)	20,563,416
(Females)	20,155,261
Peers	3,844
Shioks	4,009,396
Heimins	38,705,437
Foundlings	4,631
Unregistered prisoners	1,037

The above figures show an increase of 317 houses and 265,216 in population. The return for each prefecture in the country is as follows:—

	Males.	Females.	Total.	No. of houses.
Tokyo Fu	570,000	570,000	1,140,000	947,000
Kyoto Fu	440,000	440,000	880,000	733,000
Osaka Fu	600,000	600,000	1,200,000	1,000,000
Kanagawa Ken	450,000	450,000	900,000	750,000
Hyogo Ken	780,000	780,000	1,560,000	1,266,667
Nagasaki Ken	370,000	370,000	740,000	616,667
Niigata Ken	870,000	870,000	1,740,000	1,450,000
Saitama Ken	540,000	540,000	1,080,000	900,000
Chiba Ken	600,000	600,000	1,200,000	1,000,000
Ibaragi Ken	540,000	540,000	1,080,000	900,000
Gumma Ken	540,000	540,000	1,080,000	900,000
Tochigi Ken	540,000	540,000	1,080,000	900,000
Nara Ken	540,000	540,000	1,080,000	900,000
Osaka Ken	600,000	600,000	1,200,000	1,000,000
Shizuoka Ken	540,000	540,000	1,080,000	900,000
Yamanashi Ken	370,000	370,000	740,000	616,667
Shiga Ken	370,000	370,000	740,000	616,667
Gifu Ken	540,000	540,000	1,080,000	900,000
Nagano Ken	540,000	540,000	1,080,000	900,000
Miyagi Ken	540,000	540,000	1,080,000	900,000
Fukushima Ken	540,000	540,000	1,080,000	900,000
Iwate Ken	370,000	370,000	740,000	616,667
Awamori Ken	540,000	540,000	1,080,000	900,000
Yamaguchi Ken	540,000	540,000	1,080,000	900,000
Akita Ken	370,000	370,000	740,000	616,667
Fukui Ken	370,000	370,000	740,000	616,667
Ishikawa Ken	370,000	370,000	740,000	616,667
Tottori Ken	370,000	370,000	740,000	616,667
Shimane Ken	370,000	370,000	740,000	616,667
Okayama Ken	540,000	540,000	1,080,000	900,000
Hiroshima Ken	540,000	540,000	1,080,000	900,000
Yamaguchi Ken	540,000	540,000	1,080,000	900,000
Wakayama Ken	370,000	370,000	740,000	616,667
Tokushima Ken	370,000	370,000	740,000	616,667
Kagawa Ken	370,000	370,000	740,000	616,667
Ehime Ken	370,000	370,000	740,000	616,667
Kochi Ken	370,000	370,000	740,000	616,667
Fukuoka Ken	540,000	540,000	1,080,000	900,000
Oita Ken	370,000	370,000	740,000	616,667
Kumamoto Ken	540,000	540,000	1,080,000	900,000
Miyazaki Ken	370,000	370,000	740,000	616,667
Kagoshima Ken	540,000	540,000	1,080,000	900,000
Okinawa Ken	370,000	370,000	740,000	616,667
Hokkaido	200,000	200,000	400,000	333,333
Total	20,563,416	20,155,261	40,718,677	33,913,333

In addition to above figures, the population at various ages is also given, as follows:—

	Males.	Females.	Total.
1 year	460,378	480,546	940,924
2 years	497,837	483,018	980,855
3 years	513,981	501,470	1,015,451
4 years	491,108	477,702	968,810
5 years	446,004	435,562	881,566
6 years	456,525	451,040	907,565
7 years	439,905	431,850	871,755
8 years	438,166	431,497	869,663
9 years	455,783	450,603	906,386
10 years	448,143	438,803	886,946
11 years	453,901	449,273	903,174
12 years	440,539	431,392	871,931
13 years	443,645	434,829	878,474
14 years	440,546	429,043	869,589

Colonel Ardagh, C.B., Royal Engineers, private secretary to the Marquis of Lansdowne, who has been England for several months, leaves directly for Calcutta, travelling by way of San Francisco and Japan. Colonel Ardagh will resume his duties as private secretary to the Viceroy about December 1st.

The Missions to Seamen Society have heard from Hongkong that the Sunday Cargo working Ordinance of that colony, which came into operation there on August 1st, 1891, has given great satisfaction to the seafaring community, and has not evoked any active opposition from either natives or Europeans. Whilst about 700 ships annually worked their cargoes on Sundays in Hongkong before the Ordinance came into force, only sixteen vessels are reported as availing themselves in the course of the first year of the "permits" to work cargoes on Sundays by payment of fees as arranged for in the Ordinance.—*L. and C. Express.*

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, October 10th.

At the close of my last letter I referred briefly to the opening of the University of Chicago, to its remarkable history, development, and prospects. I ought, perhaps, to add, that work began Saturday morning, October 1st, without any preliminaries or ceremonies. Even the first chapel exercises were not marked by any conventionalities or formalities or oratorical flourishes, but were conducted by Dr. Harper in the usual manner. Not display, but work, is the purpose of the institution.

The total number of students in attendance is 520, of whom 243 are undergraduates, 151 are in the divinity school, and 126 are in the other graduate courses. Besides this, there are about 125 at the Morgan Park Academy, which, though only a fitting-school, is an organic part of the University. It is expected that there will be considerable increase after the first turn of six weeks.

The students, after long discussion and experimenting, finally decided upon a "yell" which is truly appropriate, as follows:—

Chi-ca-go! Chi-ca-go! Chi-ca-go-go!
Go it Chi-ca, go it Chi-ca,
Go it Chi-ca-go!

The *Inter Ocean* of this city, in an editorial on "higher education in Chicago," calls attention to the fact, that "the same month of the same year in the city" will witness the dedication of the temporary Columbian Exposition and permanent University of Chicago,—each in its way an educational institution. It also suggests that October, which saw this city reduced to ashes in 1871, is now properly Chicago's month, which marks the beginning, in 1892, of a new phase in her development; for she will be known hereafter, not merely as a place of marvellous growth and material development, but as an intellectual and educational centre. It may be more than boasting, it may be the actual drift, that will bring the "hub" from Boston to Chicago.

World's Fair matters are moving along rapidly. A large number of Japanese women arrived the other day, and have begun their labours on the building for Japan. Chan Pak Kwai, a wealthy Chinese importer of this city, has been appointed by a local Chinese syndicate to proceed to China and purchase materials for an exhibit to represent every phase of native life. On Midway Plaisance will be erected a Joss house, a tea-house, a Chinese theatre, and several Chinese Stores. It is now quite probable, that ex-President and Mrs. Cleveland will be present at the dedicatory ceremonies, but it is likely, and very unfortunate, that President Harrison, on account of his wife's precarious condition, will be unable to leave Washington.

The executive committee has found the necessity for a separate building for educational exhibits too great to be slighted, and has decided to provide a building with a ground floor capacity of 150,000 square feet. This will relieve the Manufacturers Building.

This has been a week of conventions. The National Real Estate Congress held a session of three days at Buffalo, N.Y., and discussed their methods of doing business. The Torrens system of the registration of land came in for strong commendation.

The Methodists of the Rock River Conference, including this city, met at Sterling, Ill., and had the pleasure of listening to encouraging reports. Among the missionaries present was Dr. Hobart, of China.

Last Friday evening about 5,000 people were assembled at the Auditorium, under the auspices of the American Sabbath Union, to rejoice over the closing of the World's Fair on Sunday. Addresses were delivered by Col. Elliot T. Shepherd, Rev. Joseph Cook, and others.

Yesterday afternoon Mr. L. D. Wishard spoke at the Y.M.C.A. rooms on the work of that organization in Japan, China, and India.

The New York Presbytery will meet November 9th to try Dr. Briggs. The public will be admitted, if they keep silence.

The American Board of Commissioners for Foreign Missions held its 82nd annual session in this city last week. It has assets of \$1,000,000; occupies 97 stations and 1,136 out-stations; 183 ordained missionaries (of whom 11 are also physicians), 12 physicians and others not ordained, and 337 female assistant missionaries,—a total of 539. The native workers number 2,648, of whom 757 are pastors and preachers. The native churches are 410 in number, with 38,226 members, of whom 10,100 are credited to Japan. The mission school work is very successful.

Among the missionaries present at the meeting of the Board were Revs. Henry P. Perkins and

Mark Williams, of China; and a prominent personage was a lineal descendant of John Bunyan, Rev. Dr. Brown, of London. This gentleman, and Dr. Storrs, Dr. Geo. F. Pentecost, and others, delivered eloquent addresses. The question of a closer and better connection of the churches with the corporate membership of the Board was discussed, and referred back to the committee. It will thus come up again next year at Worcester, Mass. The various women's missionary societies also had a meeting, at which Mrs. Atkinson, of Japan, was one of the speakers. Dr. R. S. Storrs was unanimously re-elected President of the Board; and Drs. Nathaniel G. Clark, Edward K. Alden, and Judson Smith were chosen Corresponding Secretaries. The vexing question concerning the creed qualifications of missionaries was brought up, and once more settled on the old basis.

The newspapers lately have had scarcely anything about cholera; and the scare has just about subsided. In that connection the following clipping is of some interest:—

"Theosophy has been brought into prominence in connection with the cholera scare," said S. L. Dement, of New York, at the Auditorium yesterday "by a speech recently delivered in New York by William Q. Judge, the leader of the American Society. The subject was 'Epidemics from the Theosophical Standpoint.' Cholera came in for its share of treatment, and it was sought to be shown that there are mental and physical epidemics, and that all can be traced to the evil thoughts of men. According to theosophy, thoughts are stored up as pictures in the ether recognized by scientists and exert a hypnotic influence on the minds of men. There is also a theory that the vast accumulation of evil thoughts have so polluted the ether that when conditions are favourable they become the cause of plagues of various kinds. It is believed that a five thousand year cycle will end in a few years, when a great deal of this stored up psychic force will be precipitated, causing wars, epidemics and catastrophes."

Tabor College, Iowa, has among its students a young Japanese woman sent from Kyoto by Miss Nellie Wainwright, a former pupil of that school.

R. G. Dun and Co. give out the information, that there is increased activity in trade; that "business is distinctly better in the South on account of the improvement in the price of cotton, move active at the West with improved crop prospects, and only slightly retarded in the East."

Political affairs are growing a little hotter. The Democrats had a big day (Oct. 4) in New York, when Cleveland and others spoke at the national convention of the Democrat League of Clubs; and the Republicans the same date filled both Music and Faneuil Halls in Boston to hear Reid and McKinley. The Democrats rejoice in the announcement that Wayne MacVeagh, Garfield's Attorney-General, has come out for Cleveland; and the Republicans exult over the accession of George Ticknor Curtis, the well known constitutional lawyer, to their ranks; the People's Party is happy, because Penneyer, elected Governor of Oregon by the Democrats, has come out for Weaver; and the Prohibitionists are encouraged by steady gains among the rank and file. North Dakota and Idaho are now added to the list of states in which the Democrats are supporting the Populist's electoral tickets in the hope of defeating the Republicans. It is rather early in a decidedly "mixed up" state of affairs to venture on a prediction concerning the result of the election; but, as this is my last chance, I may say, that it really looks as if the People's Party will carry enough states to throw the election into the House of Representatives.

The arguments in the case of Labour Commissioner Peck have all been made before the Court of Sessions at Albany; and the decision will be announced October 18th.

Judges Walter Q. Gresham, of Illinois, and Thomas M. Cooley, of Michigan, are reported as accessions from Republican to Democratic ranks.

Mrs. Harrison's condition is practically unchanged; it is fitful, with days of improvement and then days of decline. There is now little hope of recovery.

America mourns with England the death of Tennyson. The newspapers, for the past few days, have teemed with Tennysonian and appreciative sketches of his life and writings; and yesterday the pulpits echoed with his praises.

New York City has begun its series of Columbian celebrations, which will be reported in the next letter.

The new Chicago is just "of age" to-day. It is twenty-one years since the great fire, which began the night of October 8th, and raged fiercely all the next day, was finally stopped October 10th. That fire destroyed over \$200,000,000 worth of property; rendered 100,000 people homeless; reduced 18,000 buildings to ruin; and seemingly put a check to the growth of this city. But Chicago, phoenix-like, sprang into new life from its ashes, and has astonished the world by its phenomenal development, as shown by this paragraph:—

The greatness of Chicago and Cook County is emphasized by the following figures, published in a hand-book of domestic and foreign securities: Area of Cook County, 960 square miles. Population, 1,880,607,584; 1890, 1,701,084. Assessed valuation 1880, real, \$129,481,199; personal, \$48,622,199. Total, \$178,103,398. 1890, real, \$155,295,500; personal, \$50,000,000. Total, \$205,295,500.

railroad, \$13,699,674; total, \$240,108,959; 1891, real, \$155,859,166; personal, \$43,793,749; railroad, \$15,021,861; total, \$171,670,167. Estimated actual value for 1891, \$1,413,388,835. Cook County and Chicago being virtually one, it can be stated without exaggeration that no city in the history of the world ever showed such remarkable growth and development as the western metropolis. But the best celebration of this twenty-first year is the educational renaissance noted at the beginning of this letter.

THE CAPTAIN OF THE "MARY ROSE."

A TALE OF TO-MORROW.

BY W. LAIRD CLOWES.

GOLD MEDALIST, UNITED STATES NAVAL INSTITUTE.
(FROM "THE ENGINEER.")

IX.—A "GLORIOUS FIRST OF JUNE."

Mr. Binnacle took command of the privateer. The *Alger*, which was evidently sinking fast, was now aflame with lights, and all firing from her had ceased. The men clustered on her decks were shouting wildly for help. Some even leapt into the water, and strove to reach the *Mary Rose* by swimming. Regardless, for the moment, of everything except the saving of life, Binnacle ordered the boats to be got out, but soon learnt that he had not a single boat of any kind which would float. In the meantime the *Troude* was waging coming up, with the obvious intention of action. Binnacle's decision was soon taken. He steamed round the *Alger* so as to place her between him and his new enemy, and when he was as close to her as he dared venture, hailed her.

"I have no boats," he cried. "Signal to your consort to help you. I won't interfere unless she attacks me. God preserve you!" And then, pretty confident that his permission would be gladly taken advantage of, he steamed back to where the *Cécile* lay motionless on the water a mile or more to the eastward.

The *Cécile*, it was now plain, had struck, and as the *Mary Rose* approached her, she hailed to say so. Binnacle replied, ordering her to send a boat, and in five minutes a boat left her side.

The officer who came in her was a grey-headed captain in full dress. He climbed on deck with some little difficulty, for his left arm was bound up in a sling; but although, as his slit sleeve showed, he had put on his full uniform after he had received his wound, and although he was in considerable pain, there were about him no other traces of having been in action. His face was clean, his linen was spotless, and his hair and whiskers were carefully brushed. The side was pined for him, and, hat in hand, he stood with bowed head asking in broken English for the captain.

Binnacle moved forward, a great contrast in every way to his visitor. The latter was clean, and almost spruce. The former had his clothes burnt full of holes, and wet blood upon his cuffs, while his face was black, his hands were dirty, his head was bare, and his hair was badly singed. "Have I the honour of speaking to the captain of this ship?" asked the Frenchman in a voice which, though distinct, trembled with emotion.

"The captain is wounded, sir," rejoined Binnacle; "and I am in command."

"Perhaps, nevertheless, you will conduct me to the captain."

Bowling lay near the break of the poop, where Dr. Rhubarb was attending to him. He had not received any further injury of importance. He had merely fainted from the effects of excitement acting upon his already sorely injured frame, and he was now regaining his senses. Binnacle pointed him out to the Frenchman who approached him. Bowling looked up, and, realising the situation, struggled to his feet and took off his cap. But that Mr. Nipchese supported him he would, however, have again fallen.

"Sir," said the French captain, who had put his hat on the bits and who now tendered his sword; "my engines are disabled, half my crew are killed, and I have no choice but to surrender. It is a sad consolation for me to know that I surrender to an officer of your distinguished gallantry. Permit me to say that you have fought me splendidly and have handed your ship to perfection. I do myself the honour of constituting myself your prisoner, and of begging you to assist my poor fellows."

He had prepared this little speech, no doubt, and had steeled himself to utter it. When he had finished it he burst into tears and sobbed like a child. Bowling, still dazed, grasped the proffered sword, and attempted to reply, but was too weak to speak aloud. He could only beckon Binnacle to him and whisper: "Poor chap! Tell him to keep it, Binnacle. And do you carry on." Then once more he fainted.

It was arranged that the prize should be towed to Malta, unless, indeed, her engines could in the meantime be rendered servicable, and unless the vessels of the enemy endeavoured to interfere.

But it soon appeared that the enemy had no further stomach for fighting. The *Troude*, lying close to the *Alger*, was busily engaged in saving the ship's company of that ill-starred craft, which, before daylight, but not until all her people had been removed, gave a great roll to port, and pitching down by the bows, sank; whereupon the *Troude* steamed slowly away to the westward. In the interval Lieutenant Tripper had gone to take charge of the *Cécile*.

He found on board of her a perfectly awful state of affairs. Tompion had worked his guns only too well. The *Mary Rose*, with her concentrated broadside, had raked the great French cruiser fore and aft along nearly the whole length of the spacious deck; and by that one terrible discharge had not only killed or wounded 239 out of the 486 officers and men in the *Cécile*, but had dismounted two out of six 6.4in. and four out of ten 5.4in. guns; had carried away the foremast close to the deck, had demolished the forward funnel, and had literally filled up the open engine-room hatch with heavy debris from the foremast, the funnel, the fore-bridge, the boats and the deck structures. The debris had choked and jammed the engines, and had so caused a general dislocation of the machinery. Two out of the three 9.4in. shells had, it appeared, burst high up under the upper deck, and, besides tearing it open and covering the upper deck from end to end with splinters, had spread equal devastation on the lower deck, which was in places actually covered with the mangled and unrecognisable remains of brave men, and across which a wash of blood swept from side to side as the ship rolled. Tripper was not squeamish. He had already seen some frightful sights in his own ship. But when he first went down to the *Cécile*'s lower deck, and experienced the horrible warm odour of the slaughter-house there; when lantern in hand he saw splashed brains, the fragments of flesh, and the trickling streams of crimson; and when he heard the sounds that filled that den of horrors, he could barely force himself to remain. Here a 6.4in. gun, weighing about four tons, had been torn from its mounting and flung upon three men whom it had crushed out of all shape of human kind; there again a body cut in half lay across the gangway and oozed blood and horror. The new war methods may not be more cruel, nor even more fatal than the old, but they are a hundred times more fearful.

When matters had been put a little ship-shape on board the prize, and when some of the prisoners had been removed from her, and a small prize crew, which could hardly be spared, had been sent on board from the *Mary Rose*, a lawser was passed to the *Cécile*, and she was taken in tow.

Malta was about 750 miles steam from the scene of action, and, had the privateer been alone, she would probably have reached Valetta Harbour by six o'clock in the evening of Saturday, the 16th. With the French cruiser astern of her she did not, however, reach it until twenty-four hours later, and even then she made very good time, seeing that she covered the distance at an average speed of over 11 knots. This she could not have done had not a favourable wind sprung up, and had not the prize been able to slightly help her by hoisting a certain amount of sail.

During the passage Bowling picked up wonderfully, as did also Maintruck, Day, and Salthorse, and when, late on Sunday afternoon, the *Mary Rose* and the *Cécile* dropped anchor, by direction from the admiral, off Point Bichi, all four of the wounded officers were not only on deck, but on their legs. For a fortnight Malta had been almost cut off from the rest of the world. A few Italian small craft had run across from Syracuse and Alicanti, but they had busied themselves with the bringing of supplies rather than of news. All the cables were cut; a torpedo boat, which had been sent for orders to Messina, had not returned, and was supposed to have been captured; and a considerable French force, including the ironclads *Richelieu*, *Friedland*, *Bayard*, and *Duguesclin*, and the cruisers *Milan*, *Fean Bart*, and *Faucon*, having been observed off the island, it was not difficult to account for the non-arrival of the duplicate dispatches which, as Bowling knew, had been sent overland from London and about the time of his own departure from the Tyne.

The arrival of the two ships caused a scene of the wildest enthusiasm. Within a few minutes the harbour, as if by magic, became crowded with boats, the occupants of which seemed to be never tired of staring at the blue ensign which floated above the tricolour at the *Cécile*'s peak, or of examining the various marks of rough usage with which both vessels were liberally covered; and ever and anon some excitable person on the water started rounds of cheering for the mysterious British cruiser and for her gallant but unknown captain, officers, and complement.

The warships in harbour or in dock were the

Colossus, *Sanspareil*, *Polyphemus*, and *Surprise*, besides the half-dismantled *Orion*. Their boats came off to the strangers, and many of those who came in them were rather astonished to find on the *Mary Rose*'s quarter-deck old shipmates, or at least old friends. The admirals, also, too anxious to be able to stand strictly on their dignity, came off, the Mediterranean Commander-in-Chief in the *Sanspareil*'s galley, and the Admiral Superintendent in his steam launch. To the latter officer Bowling had the satisfaction of personally handing Sir Humphrey Thornbeigh's dispatch. Warm indeed were the congratulations which he received from all ranks when, in a few words as possible, and very modestly, he told his story.

"By Gad, Bowling," said the Admiral Superintendent, a little man, who habitually jumped about as if he were treading upon hot bricks: "to be able to say that I had done what you have done, I would willingly surrender all this gold lace. Darn me, sir, if they don't make a K.C.B. of you, I shall leave the service in disgust—when the war is over, of course."

"I'm more desirous to get a little of the gold lace, sir," laughed Bowling. "If they will give me my three stripes I shall be content, although that would involve my leaving the ship."

The two Admirals, as soon as they had satisfied a little of their natural curiosity concerning what Bowling could tell them, took possession without any ceremony of his cabin, and in privacy opened Sir Humphrey's dispatch. It was externally addressed to the Admiral Superintendent, because Sir Humphrey, when he wrote it, was of course ignorant as to the whereabouts of the Mediterranean Commander-in-Chief, but it was internally addressed to the senior officer at Malta. It directed him to spare no efforts in getting ready for service as many vessels as possible, and then, taking command, to proceed to sea with them, running as little risk as might be, yet, if necessary, at all hazards. The object to be strictly kept in view was to make a rendezvous at one o'clock a.m. on Monday, June 1st, five miles south of Europa Point; and to effect this everything was to be sacrificed. "At the place and hour mentioned," continued the despatch, "I purpose to concentrate all available forces from Malta, from Gibraltar, and from home, in order, if the French fleet be still off the Rock, to annihilate it; and if that fleet be gone elsewhere, to resume our command of the Mediterranean, and then to follow the enemy, should they have left it for the Atlantic or the Channel."

The despatch—which was a long one—need not be further quoted. It contained plain directions as to the manner in which each squadron was to approach the rendezvous; a special code of signals; and minute instructions as to the course to be pursued in almost every conceivable combination of circumstances; and it concluded with the expression of a hope that the senior officer would treat Captain Bowling, of the *Mary Rose*, letter-of-marque, with favourable consideration, and would utilise the services which Captain Bowling, Sir Humphrey felt sure, would be very eager to render to her Majesty's officers.

From that moment, Bowling, although he had no rank, held a unique and exceptional position. He was taken into the councils of the Admirals to an extent to which even the oldest post-captains were not; his advice was not merely asked, but frequently followed, and he was offered every facility which the dockyard officials, without prejudice to the naval service, could supply towards refitting his ship, and bringing her sorely reduced complement once more up to the mark. Of men there was no lack, for many large merchant ships, including several vessels of the P. and O. Company's fleet, were laid up in harbour. Indeed, it was found possible to refit and re-man the *Cécille* as well as the *Mary Rose*. The former was renamed *Rose*, and the Commander-in-Chief suggested that, unless Bowling very much desired to keep her under his orders, she should be purchased into the Navy and officered by naval officers. Bowling preferred the latter course; whereupon the admiral assumed the responsibility of the bargain, and the prize having been duly condemned, he gave Bowling bills for the very large amount at which she was officially valued.

In pursuit of the orders from home, Malta Dockyard, which had been busy enough before the *Mary Rose*'s arrival, became busier than ever. The *Sanspareil* was in No. 4 Dock, the *Colossus* in Somerset Dock, and the *Polyphemus* in No. 2—Inner Dock—so that the other vessels of large size had to make shift to repair alongside; but labour being plentiful, and the Admiral Superintendent having with foresight erected some temporary but very powerful shears, it was found possible to lighten both the *Mary Rose* and the *Rose* sufficiently to enable their underwater injuries, which were not extensive, to be repaired.

set to rights. The Commander-in-Chief decided to sail on the evening of Wednesday, the 27th; but he did not allow his determination to become known to any one except his brother Admiral and Bowling. Everyone, however, knew quite well that exciting events were in the air. Such matters seem to have mysterious tongues of their own, and to be unable to keep silence concerning themselves, even although they do not always blab of particular details.

In the battle off Toulon both the 111-ton guns of the *Sanspareil* had been put, or rather had put themselves, out of action, but as at Malta there were neither reserve guns nor appliances for, in so short a time, lifting out the old ones, they were obliged to be left in the ship. The accident was a very serious one, for it condemned the most important portion of the great vessel's armament to inactivity, and deprived the craft of the whole of her bow fire. This being so, the Admiral, though very unwilling to desert her, felt it incumbent upon him to haul down his flag in her, and to transfer it to the *Colossus*. He even went so far as to question whether he should allow the *Sanspareil* to go to sea at all, and only at the urgent solicitation of her captain did he at length consent to permit her to accompany the squadron when it should leave harbour. In the meantime, and in order to neutralise to some slight extent the ship's absence of heavy guns forward, he succeeded in getting a couple of 4.7-in. quick firing guns mounted behind shields on the spar deck abreast of the funnels, so that they were partially protected by the otherwise useless turret, and could fire over it.

The ten days that were spent by the *Mary Rose* at Malta went very quickly. Work went on by night with as little interruption as by day, and upon the morning of the 27th all the vessels with which the Admiral intended to sail had hauled out from their docks and jetties, and lay at anchor in harbour, fully coaled, and in all respects ready for sea. During these ten days very little news of a trustworthy nature dribbled in from the outer world. It became known, however, that a further attempt by the French against the ships collected at Spithead had been repulsed, without serious loss on the British side; but that, on the other hand, several open towns on the south coast had been bombarded by French cruisers, after having declined to pay ransom; that the Channel trade, so far as Great Britain was concerned, was almost at a standstill; and that in some parts of the country bloody bread riots had occurred, while in London itself there had been much disorder, owing to the supposed undue dilatoriness of the Board of War, and to the great rise in prices. Sir Humphrey Thornbeigh had been burnt in effigy in Trafalgar-square, and had immediately afterwards ridden out of the Admiralty court-yard, addressed the crowd from on horseback, and been cheered by the rabble as he returned. It became known also that, as late as the 22nd, the nightly bombardment of Gibraltar was being continued, and that the French were pretty confident of reducing the place by the end of the month, as they had improvised some floating batteries, armed with mortars of the largest calibre, throwing mellite shells, which were excessively destructive.

Bowling was almost well, and, but for the loss of his eye, was very little the worse for having been in action. Hard work, indeed, seemed to be the best restorative for both him and his officers.

The 27th of May was a magnificent day. The sky was clear and of the deepest blue, and the gentle breeze was barely sufficient to blow out the bunting of the ships in harbour and the Union Jacks of the forts on shore. At ten o'clock the admiral suddenly signalled for steam to be got up ready for 12 knots at five o'clock; at half-past four, having already unmoored, he signalled "Prepare to weigh," and at five he weighed and led his ships out. Earlier in the day he had sent torpedo boats to scout all round the island, and, as they returned reporting no signs of the enemy, he did not hesitate to put to sea before dark. It subsequently appeared that the French vessels, which for a time had formed a squadron of observation off Malta, had, two days earlier, been ordered to reinforce the fleet off the Rock, preparatory to the general and, as was hoped, the final bombardment, the French Admiralty having made up its mind that the ships in Malta were too badly damaged to venture much for some time to come, and too weak to dare to come out, even if they were patched up. Only a single cruiser had been left to watch, and she had, it turned out, gone off in chase of a vessel which she took to be British, but which was really the Italian corvette *Cristoforo Colombo*, bound for Palermo. The excellent Italian captain did not deem it to be his duty to enlighten his French "opposite number," and steamed gaily away at 13 knots without answering the signals which the cruiser made to him. He was at length

overhauled, and he then made, of course, most courteous explanations; but by that time the British squadron was at sea, and well on its way to the westward. When the cruiser returned to her station it was too dark for her to discover that the bird had flown. Next morning she did discover it, and then she pelted off to Toulon with the news; and received from the Commander-in-Chief there a sound rating for having been lured away by an Italian, who, as the admiral chose to put it, was "only an Englishman in disguise." There may have been an atom of truth in this assertion, for throughout the war the Italians certainly, although they always spoke to and of the French with the greatest politeness, spoke, as used to be said at the time, with a decidedly English accent. In other words, they scarcely disguised their sympathies, and would, upon the smallest encouragement, have openly declared them. Happily for all parties, they managed to preserve for themselves that greatest of blessings—peace.

In the days of sailing ships pre-concerted action between fleets or even between single vessels was difficult and precarious. It was not, for example, of much use for the Admiralty to base important plans upon the junction at a particular time and in a particular place of two forces. It might be absolutely impossible for one or both of the forces to reach the spot within a month of the specified hour,—impossible, not because of the occurrence of unforeseen accidents, but simply because of the normal and natural conditions under which the work had to be done. If the winds did not blow, the ship did not go. But in modern days ships are independent of winds, tides, and currents. Mail steamers run, and have run for years, between points thousands of miles distant with almost the punctuality of railway trains; and if it were desirable that at eight o'clock in the morning or every Monday in the year a vessel should leave New York, and that, at eight o'clock in the morning of the following Wednesday week she should drop anchor in the Cove of Cork, there is no doubt whatever that in fifty cases out of every fifty-two, the programme could be literally carried out. If, in short, a slight margin over and above the time actually necessary for the voyage in moderate weather be allowed, ships can, barring unforeseen and unpreventable accidents, now move about with something akin to absolute punctuality. This fact lies at the root of all modern naval strategy, and at the root, also, of much of modern naval tactics; but it had never before been so frankly recognised and so boldly utilised as it was for the combined operations which were planned at Whitehall to be carried out on the 1st of June in the Strait of Gibraltar.

The gallant admiral whose flag flew in the *Colossus* took care to keep a certain amount of time in hand from the beginning. At twelve knots, Gibraltar is, as nearly as possible, ninety-six hours' steam from Malta. The rendezvous was for one o'clock a.m. on June 1st; therefore in order to keep it, a squadron steaming the whole distance at twelve knots, a little speed in hand, was not obliged to leave Malta until one a.m. on the morning of May 28th. But the admiral prudently allowed himself an additional eight hours; and thus, towards the end of his cruise, when he might reasonably expect to fall in with the enemy, he was able to go warily.

The last day was indeed an anxious time. To approach the African shore was to risk encountering French vessels on their way to or from Gibraltar and Algiers or Biserta. To approach the Spanish shore, on the other hand, was to risk encountering French vessels on their way to or from Gibraltar and Toulon. Upon both routes men-of-war must necessarily be continually moving, Toulon being the repairing, and Algiers or Biserta in all probability the coaling depot for the hostile fleet; and although the admiral had come out to fight, he had come to fight in a particular place at a particular time, and not otherwise. In this difficulty the *Rose* was useful. Her French build and rig, and her general resemblance to other cruisers which still flew the tricolour, rendered her, the Admiral felt, invaluable as a scout; and, as a matter of fact, in the early morning of the 31st she was able, without exciting suspicion, to warn the squadron of the vicinity of a French ironclad, which, although she might have been captured, might also have fatally delayed the combined movements upon which the success of the entire scheme depended. The admiral kept for the most part a course as equidistant as possible between Spain and Africa all that day, the order being *Colossus*, *Sanspareil*, *Polyphemus*, and *Mary Rose*, in column of line ahead, with the *Rose* on the port and the *Surprise* on the starboard bow of the column at a distance of five miles. Bowling was treated almost exactly as one of the captains of the squadron, and obeyed signals, just as they did; nor, owing to the good services which he had already done, was there the

least trace of jealousy concerning him. Indeed, the squadron was proud of him.

The grand bombardment of Gibraltar began on the night between May 30th and May 31st. The French had previously collected for the purpose a fleet of twenty-five ironclads, inclusive of armoured coast-defence ships, ten floating batteries specially prepared, and numerous small unarmoured vessels, each mounting a single heavy gun. Attached to this force were two large squadrons of cruisers, one of which was disposed fan-wise at the Atlantic end, and the other at the Mediterranean end of the Straits, so as to give timely alarm in case of any threatened interference with what was going on at the Rock. In fact, almost the whole available resource of the French Navy were concentrated for the occasion, it having been determined in Paris that—at all costs—Gibraltar must be made to fall. Many of the most enlightened French critics doubted the wisdom of this policy; and among others M.E. Weyl, the distinguished naval editor of *Le Yacht*. In the course of an article, which he published within a few hours after the scheme had been decided upon he wrote:

"We shall never deal an effective blow at the Naval power of Britain by hurling ourselves against her fortresses. We have rightly made up our minds, for the present, to leave Malta alone. Why not deal in a similar manner with Gibraltar? And why not consistently pursue those principles which, in the ardour of the moment and before the theorists had time to make themselves heard, we put in force off Toulon on the glorious day of the 28th of April? Gibraltar, like Malta, stands or falls with the British Navy. On the other hand, we may possess ourselves both of Gibraltar and of Malta without materially or permanently diminishing the power of our opponents on the sea. It is our duty, rather, to keep a single eye on the Navy of the enemy. If we destroy that, we gain everything; if we do not destroy it, all our other gains will be vain and illusory. Let us, then, implore the Ministry to alter its plans while there is yet time. Let us seek for decisive action on the ocean. Already in the past, Gibraltar has been the scene of one of the most costly of naval follies. Surely we are not about to deliberately repeat the stupidity of 1782? To attack Gibraltar with this huge force is to court disaster."

But the French Ministry did not listen to the advice of M. Weyl, and of those who, with him, were students of the great principles enunciated by Captain Mahan, U.S.N. The official mind could not resist the specious reasoning:—"If you place the tricolour on Gibraltar you become the doorkeeper of the Mediterranean," and so, as has been said, the grand bombardment began. It was resumed on the night of May 31st—June 1st, and fearful indeed upon forts, town, and Rock itself was the effect of that unexampled fire. But for two nights only did it continue.

At dusk, on the evening of the 31st, the little squadron from Malta slowed down to nine knots, being then about fifty miles from the Gut of Gibraltar. Steam was, however, kept for full speed, and the Admiral signalled that, as soon as any French cruiser should be observed full speed should be put on, and that the squadron should thenceforward restrain its pace only by the best speed of the flagship. The *Surprise* and *Rose* were directed to fall back before the enemy, and to take station astern of the other vessels and avoid engaging.

The incidents leading up to the battle of Toulon and to the passage of the Straits by the *Mary Rose* had been exciting; but they were far less so than the incidents which were now leading up to an action, the nature and results of which not one man of the thousands who were about to take part in it could form even the faintest idea of. Three separate forces were moving independently upon the scene and towards the great French fleet. None knew for certain how any one of the others was composed; none had any means of making sure that any one of the others would arrive at the right moment; and none knew either the strength or the disposition of the foe. Only afterwards did the world at large learn that the fleet from Spithead consisted, so far as armoured ships were concerned, of two divisions—the first composed of the *Royal Sovereign* (flag), *Anson*, *Camperdown*, *Howe*, *Rodney*, *Aurora*, *Immortalité*, *Narcissus*, and *Galatea*, and the second of the *Hercules* (flag), *Triumph*, *Neptune*, *Audacious*, *Iron Duke*, *Superb*, *Northampton*, *Nelson*, and *Shannon*; that the *Trafalgar*, *Dreadnought*, and *Australia* issued from Gibraltar, and that from Malta came the *Colossus*, *Sanspareil*, *Polypheus*, and *Mary Rose*. The first Spithead and the Gibraltar and Malta divisions—fifteen ironclads in all—had orders to effect the junction at the rendezvous at one o'clock a.m. The second Spithead division,

to which were attached an exceptional number of fast protected cruisers, had orders to make the same rendezvous forty minutes later, and had, in fact, left British waters two days earlier than the second division.

The arrangement seems to have been upon the whole a very prudent one. The second Spithead division was the weakest and slowest. Its numerous fast scouts would bring it while on the passage early information of the approach of an enemy, and would enable it, if necessary, to fall back upon the first, and most fast, powerful division. On the other hand, the first division, in conjunction with the modern ships from Malta and Gibraltar, would, if the French were still engaged at the Rock bear the first brunt of the fight, and allow the second division in its wake to come fresh upon a partially disorganised and probably badly damaged foe. The weakness of the scheme, if weakness there was, lay in the fact that at the outset fifteen British ironclads might be opposed to twenty-five French. But it must be recollected that while nearly all these British ships were vessels of very large size and modern design, at least half the French ships were smaller and older, and several of them, as far example, the *Colbert*, *Richelieu*, *Bayard*, and *La Galissonnière*, were partially built of wood. Even the ships of the second Spithead division were most of them, vessel for vessel, nearly equal to the average of the French off Gibraltar.

It is hopeless to attempt to describe in detail the episodes of a great fleet action. The best general description of the battle of Gibraltar is contained in the official dispatch which was afterwards addressed by the Commander-in-Chief to the Chief Director of Fleets, and which is here copied:—

"*Royal Sovereign*, Gibraltar Bay, June 1st.

"SIR,—I have the honour to inform you that it has pleased God to bless her Majesty's arms with signal success, and that the combined movements which were directed to be carried out by the fleet under my command, and by the squadrons at Malta and Gibraltar respectively, have been performed, and have to day resulted in the gaining of a victory which, while it will, I trust, add a ray of glory to her Majesty's crown, will also, I pray, tend in no small degree to benefit the Empire and to bring to a speedy conclusion the present unhappy war."

"The second division of the Spithead fleet, composed of H.M. ships mentioned in the margin, sailed from Spithead on the 24th of May. The first division, with my flag in the *Royal Sovereign*, followed, in pursuance of your instructions, on the 29th. Neither division encountered on the passage any force of the enemy, and on the 31st, at noon, I communicated with and passed the second division and proceeded at 13 knots for the mouth of the Strait. Shortly before 11 p.m., at which hour we could distinctly hear that the bombardment of Gibraltar was being vigorously continued, my cruisers, the night being clear and brilliant, sighted the cruisers of the French fleet about six miles ahead, and soon afterwards exchanged shots with some of the most advanced of them. The French cruisers presently withdrew, and I increased speed to 14 knots, formed my command into quarter line, and disposed my cruisers on the quarters at the rear of the division, with orders to them to expose themselves as little as possible, to keep out of the way of the second division as it came up forty minutes later, and generally to be prepared to render assistance to the battleships. The French fleet upon receiving intelligence of our approach must have relinquished the bombardment, and in a formation of which I could not learn the nature, they steamed leisurely to the eastward. At this time we had not ourselves sighted it, but a little before one o'clock, when we were already nearly abreast of Europa Point, and when the *Trafalgar*, *Dreadnought*, and *Australia* were visible coming out of the Bay, we discovered the enemy about seven miles ahead, fiercely engaged with the squadron from Malta. This consisted only of the *Colossus*, *Sanspareil*, *Polypheus*, and *Surprise* of her Majesty's Navy, but attached to it, and obeying the orders of the vice-admiral, were the *Mary Rose*, an armoured privateer, commanded by Mr. Thomas Bowling, late a lieutenant of the Royal Navy, and the *Rose*, late *Cecille*, a prize which was captured from the French Navy by the *Mary Rose* in a very gallant manner on the 14th ult., and which had been purchased into the service and manned at Malta by the vice-admiral upon his own responsibility, a course which I venture to hope will meet with approval. The Malta squadron was handled with conspicuous ability, but ere I could come up with the enemy, was, I regret to say, very severely mauled, the *Sanspareil* being rammed by two ships, and sinking with her colours flying and guns firing, and the other vessels being much damaged and losing heavily. The squadron,

however, broke through the French fleet, which followed it, maintaining a running action until I was able to interfere. The enemy was by that time in somewhat confused formation, and my division in its original order, but reinforced, passed through it with less loss than might have been expected, and then altered course sixteen points together and returned, executing the whole movement at full speed, and with a precision which I have never seen equalled. Unhappily in this second passage, the *Howe* became unmanageable, and was torpedoed, rammed, and sunk. I am proud to be able to report that except the vessels which received damage to their machinery or steering gear, and which were thus obliged to quit the line, all my ships preserved their stations, and that, so far as the British fleet was concerned, there was nothing in the shape of a chance *mêlée*. Having twice passed through the French, and perceiving that they were falling into disorder I fed the way through once more, so as to place them between my own ships and the second division. In this passage I had the misfortune to lose the *Dreadnought*, which, after joining from Gibraltar, had taken station in the line, and which was blown up by the concentration of the depressed heavy gun fire of three French ships upon her lower deck. After the third passage the enemy ceased to manoeuvre as a fleet, but his single ships fought with great determination. As soon as I observed the approach of the second division I made the signal, 'Ships will engage the enemy independently,' and also that for close action. The latter, however, I presently annulled, it rapidly becoming clear that for a vessel to obey it was to unnecessarily expose herself to the French torpedoes. I made instead a signal ordering the ships of the first division to keep to westward of the enemy, and to engage as much as possible beyond torpedo range. It was now 1.45 a.m., and the second division had opened fire. I had ceased to have any doubts as to the general results of the action, but I was scarcely prepared for the effect which the arrival of the fresh ships had upon our opponents. The French had lost terribly and were thoroughly disorganised; and when they found themselves placed between two fires, and with retreat cut off in both directions by forces of the exact strength of which they were no doubt ignorant, they evidently lost heart. So bright was the moonlight that we could distinctly see some of them strike their flags. Upon this, using the electric semaphore, I directed the Vice-admiral in command of the second division to send his torpedo gun vessels into the French fleet. With admirable alacrity these little craft obeyed the order. The French, whose cruisers and torpedo boats were nearly all to the eastward of us, and were easily kept at a distance by the fire of our quick-firing guns, made some considerable resistance and, I am sorry to say, sank two of our gun vessels. But when three of their number had been torpedoed, the rest to my great relief surrendered, and were before three o'clock taken possession of by the ironclads of the second division. The cruisers of the combined fleet were meanwhile dispatched in general chase of the cruisers of the enemy, and, as I write, are beginning to return. So far as I can at present ascertain, they have destroyed four and captured two of the cruisers which were attached to the French fleet, but several reports have yet to come in. Concerning the losses on both sides in armoured ships I can inform you more exactly. We went into action with in all, twenty-three vessels, including the *Mary Rose*, of this class. Of these four are sunk or blown up, two have had to be run ashore to save them from sinking, and seven are so badly damaged as to be totally unfit for future service for some time to come. The enemy went into action with twenty-five armoured ships, and of this number she has not preserved one. Fourteen have been sunk or blown up; three are ashore; and eight, all more or less damaged, are now at anchor here under my orders. As to the losses in officers and men, they are, I am pained to inform you, exceedingly serious. My own flagship has over 300 killed and wounded, and many other ships, especially those of the first division and of the Malta squadron, have suffered heavily in proportion. The names of the ships lost and captured are set forth in the margin, and in an enclosure are such detailed statements as have yet reached me of the loss in officers and men.

"All ranks behaved in a manner which merits my warmest approbation, and which is worthy of the finest traditions of our country and of the service. In a future despatch I hope to render to individuals that particular meed of praise which as yet I lack the necessary materials for fairly apportioning. Of Mr. Bowling of the *Mary Rose*, whose situation both before and during the action has been an exceptional one, I cannot delay speaking. To do so would, I am convinced, be to

* Proving to be capable of steaming only at 6 knots, she returned on the second day to England.

hurt the feelings of every officer under my command. On the 14th ult. he, being at the time entrusted with duplicate despatches to the Admiral Superintendent at Malta, ran through the French fleet into the Mediterranean, sinking the cruiser *Davout*, and badly damaging the ironclad *Terrible*, and the cruiser *Tage*. In this gallant exploit he was badly wounded. On the following day pursued by the cruisers *Cécile*, *Alger*, and *Troude*, he took the first, which is now H.M.S. *Rose*, sank the second, and only permitted the third to escape because she had taken on board the survivors of the second. He was again injured. In the action of this morning he behaved with a courage and coolness to which I cannot do justice, passing four times through the French fleet, handling his ship in the most magnificent manner, and I regret to have to add, being once more severely wounded. It will be within your recollection that a month ago the name of Mr. Bowling was removed from the list of her Majesty's Navy. I venture respectfully to represent that the Royal Navy would be greatly honoured by having it restored, though in what rank I do not venture to suggest. I merely, with all the urgency which I can attach to my words, beg that the magnificent services of Mr. Bowling and of his officers—nearly all of whom are retired from the Royal Navy—may be recognised in a manner that will partially repay the country's great indebtedness to him and them. In this specially mentioning Mr. Bowling, who, on account of his wounds, goes home in the *Surprise*—his own ship being on shore badly damaged—I am acting not only in accordance with my own promptings, but also in accordance with the wishes of I believe, every officer and man in the fleet which to-day has had the happiness to gain for her Majesty a complete and conclusive victory."

H.M.S. *Surprise* left Gibraltar at noon on the day of the victory of the Glorious First of June, and, steaming at 14 knots in very favourable weather, dropped anchor in Plymouth Sound at about breakfast time on the 5th.

On the passage Bowling, who in the height of the action had received a ball from a Hotchkiss revolving gun that had shattered his left elbow, was obliged to have the arm amputated, but happily the operation was perfectly successful, and his other wounds, though numerous, were not dangerous, and soon began to mend. Upon her arrival the ship discharged into the Royal Hospital all such wounded naval officers as she had brought home; but Bowling, not being a naval officer, was retained on board as a guest of the captain, whose cabin he shared. The captain at once proceeded to London with his despatches, and Bowling, who was already a great hero at Plymouth, received plenty of attention from everyone, and not least from Sir Taffrail and Miss Stormer, who were at the Royal Hotel when the *Surprise* reached port, and who went off each day to the ship.

The rest of the story may be briefly told by quotation of the following announcements:—

"Admiralty, June 6th.—Her Majesty has been pleased to restore Mr. Thomas Bowling, late lieutenant in Her Majesty's fleet, to his former rank and seniority as a lieutenant."

"Admiralty, June 6th.—The following promotion has been made:—Lieutenant Thomas Bowling to be Commander in Her Majesty's fleet. To date May 14th."

"Admiralty, June 6th.—The following promotion has been made:—Commander Thomas Bowling to be Captain in Her Majesty's fleet. To date June 1st."—*London Gazette*, June 7th.

"Her Majesty has been pleased to confer a baronetcy upon Captain Thomas Bowling, R.N., late commander of the privateer *Mary Rose*, in recognition of his distinguished services in that vessel, previous to and during the victory of the 1st inst."—*The Times*, June 8th.

"Yesterday, at Plymouth, Captain Sir Thomas Bowling, Bart., R.N., the gallant capturer of the *Duguay*, *Trouin*, *Cécile*, &c., was married to Mary Rose, only daughter of Admiral Sir Taffrail Stormer, G.C.B. The wedding, which was celebrated in the Dockyard Church, was a naval one, and was attended by nearly every officer of the ships in port, where, in consequence of the happy conclusion of peace with France, there are now about forty vessels paying off. The bride was given away by her father, and Commander Maintruck, R.N., C.B., who, it will be remembered, was first lieutenant of the *Mary Rose*, and who, for his services in her, was promoted, was the bridegroom's best man. The presents were very numerous, and included a magnificent silver gilt centrepiece from Her Majesty, and a sword from the officers of the fleet in the Mediterranean. We are glad to say that Sir Thomas has now completely recovered from his severe wounds, and is in excellent health."—*Morning Post*, July 29th.

19—Q R to Q sq. (c) 19—Q x Kt
20—R x Kt ch. 20—Kt x R

White mates in four moves.
(a) Played by Steinits with much success, but otherwise it does not appear to be a prosperous defence.
(b) The disposition of Black's forces suggests the idea that White's 15th move was not only effected but desired by Dufresne. Certainly his position now looks most menacing.
(c) This very remarkable move paralyzes what is obviously threatened, viz.—Q x Kt but completely commands the board. White in fact wins in every variation.

Saikio Maru, Japanese steamer, 1,350, Conner, 11th November.—Yokosuka, Light.—Nippon Yusen Kaisha.

Empress of China, British steamer, 3,003, R. Archibald, 11th November.—Vancouver, B.C., Mails and General.—Frazar & Co.

Tsuruga Maru, Japanese steamer, 742, Shimadzu, 11th November.—Yokkaichi, General.—Nippon Yusen Kaisha.

Ancona, British steamer, 1,880, W. D. Mudie, 12th November.—Hongkong via Kobe and Nagasaki, Mails and General.—P. & O. S.N. Co.

PASSENGERS.

ARRIVED.

Per British steamer **Ancona**, from Hongkong via ports:—Messrs. W. Martin, Mourato, Kaneko, Lewis C. Shaw, Wing Sang, and Mrs. and Miss Wing Sang in cabin; 2 Europeans in steerage.

Per British steamer **Loo Sok**, from Tacoma, Wash., via Victoria, B.C.:—Messrs. W. Bridgeman, Geo. Medhurst, E. Libeand, and J. H. Miller in cabin; 40 passengers in steerage.

Per Japanese steamer **Sandai Maru**, from Kobe:—6 passengers in steerage.

Per British steamer **China**, from Hongkong:—Mr. C. S. Weir and Mr. and Mrs. J. J. Weicher in cabin.

Per Japanese steamer **Omi Maru**, from Kobe:—Mr. and Mrs. K. Iwai in cabin; 2 passengers in second class, and 25 passengers in steerage.

Per Japanese steamer **Takasago Maru**, from Yokkaichi:—12 passengers in steerage.

Per Japanese steamer **Miki Maru**, from Hakodate via ports:—Mr. Ukon in cabin; 68 passengers in steerage. For Kobe: 38 passengers in steerage.

Per Japanese steamer **Saikio Maru**, from Shanghai and ports:—Miss May Lee, Mr. and Mrs. A. Graudier and infant, Mr. T. W. Hellyer, Bishop J. S. Key, Rev. Wm. Imbrie, Rev. G. W. Knox, Mr. C. W. Crosse, Mr. N. O. Gutierrez, Mr. A. F. Remedies in cabin; Mr. Shimoda and Mr. E. Ricci in second class, and 13 Japanese and 4 foreigners in steerage.

Per British steamer **Empress of China**, from Hongkong via ports:—Mr. Jose Baston, Mr. H.

B. Haskill, Mr. T. B. Glover and native servant, Captain Martin, and Mr. P. S. Cabeldu in cabin; Mr. Chung Seng in second class; Mr. Krause in European steerage, and 118 Chinese in Asiatic steerage. For Vancouver, B.C.: Messrs. C. E. Higginbotham, A. Richardson, L. Millward, C. Nouchen, P. K. Thomson, Geo. Turner, J. Moffatt, W. W. Rockhill, A. M. A. Evans, and A. J. de Saiza in cabin; Mrs. Bond and two children in European steerage. For Victoria, B.C.: Mrs. Mee Wah in European steerage.

Per Japanese steamer **Tsuruga Maru**, from Yokkaichi:—10 passengers in steerage.

Per Japanese steamer **Hiogo Maru**, from Hakodate via ports:—Mr. K. Chiba in cabin; Mr. I. Inouye in second class, and 23 passengers in steerage.

Per Japanese steamer **Nagato Maru**, from Kobe:—Mr. M. Tamura in cabin; 12 passengers in steerage.

Per Japanese steamer **Takasago Maru**, from Yokkaichi:—17 passengers in steerage.

DEPARTED.

Per French steamer **Oxus**, for Shanghai via Kobe:—Messrs. A. L. Robinson, de Guerville, Green, Chandler, Miss Claukinton, Miss Graves and boy, Messrs. H. W. Lee, J. R. Gibson, Tim, Noel, Brockhurst, Shepherd, G. C. Pakenham, C. W. May, F. A. Sampson, W. Adams Oram, Mr. and Mrs. King On and infant, Miss Williams, Mr. Fonseca, Mr. G. Adet, Dr. F. E. Hyde, Mr. B. E. Hyde, Mrs. F. E. Hyde, Mr. and Mrs. C. Stewart Smith, Mr. J. A. Sampson, Madame Kuhn, Mr. and Mrs. S. Smith, Mr. Churman, Mr. Milham, Mrs. Baumant, Messrs. W. Michell, E. G. Simpson, J. S. Broomhead, de Vogue, Garnier, Feller, Mrs. Laurette, Messrs. de Marguerie, Beret, Nevans Freke, D. Horton Tilder, A. Hackmack, R. B. McKinnell, R. Hata, and J. J. Adam in cabin.

Per German steamer **Nuernberg**, for Hongkong via ports:—Captain Gelfen, Mrs. Gelfen, Mr. Ingles, and Mr. Amot in cabin; 25 Chinese in second class, and 28 Chinese and 4 European in steerage. From Kobe: Major Hutchinson, Mr. S. Cummings, and Mr. H. T. Cummings in cabin.

Per Japanese steamer **Yokohama Maru**, for Shanghai and ports:—Mrs. Chapman, Mrs. Muir-Drew, Lieut. Okubo, Lieut. S. Obata, and Mr. F. L. Marshall in cabin; Lieut. Hiras and Mr. T. keda in second class, and 55 passengers in steerage.

Per British steamer **China**, for San Francisco:—Mr. C. Barker, Mr. F. Bartlett, Mrs. Blanchard, Mr. J. T. Boag, Miss Carr, Mr. B. P. Davis, Mrs. Goodrich, Mr. A. W. Goodrich, Bishop Jos. D. Key, Viscount de Labry, Rev. and Mrs. Lancaster and two infants, Miss Lauterbach, Mr. A. Lauterbach, Mr. and Mrs. Lincoln, Miss Lincoln, Mr. and Mrs. G. T. Marsh and son, Mr. and Mrs. E. B. McCagg, Miss Julia Miller, Mr. and Mrs. H. M. Parker, Mr. J. H. Hume Rothery, Mr. and Mrs. E. Holden Smith, Miss Smith, Mr. R. T. Stirling, Mr. and Mrs. Geo. Talcott, Mr. Geo. Vanderbilt, Mr. T. Watanabe, Mr. and Mrs. F. S. Winston, Miss Winston, Mr. T. Savorsin, Mr. and Mrs. J. J. Weicher, Mr. D. P. Weintraub, Mr. C. S. Weir, Mr. R. A. Wylie, and Mr. M. Zavarzin in cabin.

Per British steamer **Ancona**, for Hongkong via ports:—Mr. T. L. Carson, Mr. W. G. Hay, the Misses Hay (2) and maid, Messrs. T. Yoshida, M. Hamaguchi, K. Hamaguchi, G. Iida, Rumpack Ariga, S. Hirose and Master Hirose, Messrs. W. Martin, L. C. Shaw, J. Polyblank, W. Dixon, E. Griffin, F. Gibson, J. Bowden, J. Merryfield, Tai Tuck Tong and 2 children, Mrs. Tai Tuck Tong and infant, Messrs. H. E. Ware, C. J. Prince, W. Ware, Dr. Bearblock, R.N., and Mr. and Mrs. Woolley, child, and amah in cabin; 4 Europeans and 5 Chinese in steerage.

CARGOES.

Per Japanese steamer **Saikio Maru**, from Shanghai and ports:—Treasure, \$30,000.00.

Per French steamer **Oxus**, for Shanghai via Kobe:—Raw Silk for France, 289 bales; Waste Silk for France, 356 bales.

Per British steamer **China**, for San Francisco:—

REPORTS.

The Japanese steamer *Sandai Maru*, Captain Tittle, reports:—Left Kobe the 5th November at 10 a.m. and arrived at Shiwotsu at 1.14 p.m. Left again at 2.42 p.m. and passed Oshima the same day at 8.34 p.m.; had moderate to fresh N.W. winds to Rock Island, which was passed the 6th at 1.20 p.m.; thence to port gentle, variable winds, with fine and clear weather. Arrived at Yokohama the same day at 8.15 p.m.

The British steamer *China*, Captain Seabury, reports:—Left Hongkong the 2nd November; experienced fresh N.E. monsoon through Formosa Straits to Turabout; moderate variable winds and calms across the Eastern sea, and up to Oshima; strong N.W. gale to Omai-saki; thence to port strong north-easterly, fine weather throughout the passage. Passage, 5 days and 1 hour.

The Japanese steamer *Omi Maru*, Captain F. Brown, reports:—Left Kobe the 6th November at noon; had fresh N.W. winds and fine weather; passed Oshima the same day at 8.30 p.m.; passed Rock Island the 7th at 11.30 a.m.; fresh N.E. winds to port. Arrived at Yokohama the 7th November at 5.40 p.m.

The Japanese steamer *Takasago Maru*, Captain Nirei, reports:—Left Yokkaichi the 7th November at 4.30 p.m.; experienced fine, cloudy weather with smooth sea and moderate north-easterly breeze; passed Rock Island at 3.27 a.m. and arrived at Yokohama the 8th November at 9.55 a.m.

The Japanese steamer *Tokio Maru*, Captain T. S. Kenderdine, reports:—Left Kobe the 6th November at 5 p.m.; had light winds and fine weather to Oshima; thence to Omai-saki moderate breeze and slight sea; thence to port light winds and fair weather. Arrived at Yokohama the 8th November at 1.30 a.m.

The Japanese steamer *Miike Maru*, Captain W. Thompson, reports:—Left Hakodate the 6th November at noon. Arrived at Oginohama the 7th at 11.30 a.m. and left at 5 p.m. Arrived at Yokohama the 8th November at 7 p.m. Experienced strong N.W. winds from Hakodate to Yamada Head; thence light variable winds and fine weather throughout the passage.

The Japanese steamer *Sakiko Maru*, Captain Conner, reports:—Left Shanghai Wharf the 4th November; at 10 a.m. crossed Woosung; barometer 11.15 a.m. Arrived at Nagasaki the 6th at 2 a.m. and left again the same day at 6.30 a.m., arriving at Shimonoseki the same day at 6 p.m. and left again at 11.30 p.m. Arrived at Kobe the 7th at 7 p.m. and left the 8th at midnight, arriving at Yokohama the 10th November at 5 a.m. Experienced from Shanghai to Nagasaki fresh winds from N.E. to north with rain, and on the Japan Coast light winds from north-east to north with fine, clear weather.

The Japanese steamer *Tsuruga Maru*, Captain G. Shimadzu, reports:—Left Yokkaichi the 9th November at 5 p.m.; had light variable breeze and fine, clear weather; passed Omai-saki the 10th at 3.05 a.m., had moderate north-easterly breeze and weather cloudy; at 7.04 a.m. passed Rock Island; at 1.16 p.m. passed Kanon-saki, moderate north-easterly breeze and cloudy throughout the passage. Arrived at Yokohama the 10th November at 3 p.m.

The Japanese steamer *Hiogo Maru*, Captain M. Matsumoto, reports:—Left Hakodate the 8th November at 12.30 p.m.; had gentle south-westerly breeze and fine weather till reaching Kuro-saki at 0.15 a.m. on the 9th; thence north-westerly breeze and fine weather; arrived at Oginohama the 9th at 11 a.m. Left at 11 p.m.; had light variable breeze and fine weather till reaching Cape Katsuo at 9.30 a.m. on the 10th; thence gentle south-south-easterly breeze and overcast rainy weather with rough sea. Arrived at Yokohama the 10th November at 5 p.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 9th November

at noon; had light variable winds and fine, clear weather to Oshima; thence to Omai-saki fresh easterly winds with moderate sea; from Rock Island to port light S.E. winds with light rain showers. Arriving at Yokohama the 10th November at 5.50 p.m.

The Japanese steamer *Takasago Maru*, Captain Nirei, reports:—Left Yokkaichi the 10th November at 5.10 p.m.; experienced overcast, rainy, and thick weather with fresh south-westerly gale and heavy S.E. and S.W. cross seas; passed Rock Island the 11th at 4.20 a.m., wind shifted to northerly and blew a fresh gale at 7.30 a.m. and weather commenced to clear up from the same quarter. Arrived at Yokohama at 10.45 a.m.

LATEST COMMERCIAL.

IMPORTS.

Buyers do not seem to have gotten into swing yet, and the market is much as last noted. On the other hand, with the declining exchange, holders are firmer, which tends to restrict trade. Sales noted, while they have been in most every line, are of small proportion. Market closes steady.

Wire Nails, assorted	4.50 to 5.00
Tin Plates, per box	5.00 to 5.20
Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

Market very strong, and with decreasing stocks holders have asked a further advance, which in some cases has been paid.

	QUOTATIONS.
Chester	\$1.75 to 1.77 1/2
Comet	1.72 1/2 to 1.75
Devoe	1.67 1/2 to 1.70
Russian Anchor	1.67 1/2 to 1.70
Russian Moon	1.65 to 1.67 1/2

SUGAR.

The advance hoped for by holders has been "knocked out" by recent arrivals, prices on the contrary showing a further decline of 25 to 35

cents. Stock of Browns (unsold) at writing is reported to be about 30,000 piculs.

	PER PICUL.
Brown Takao	—
Brown Daitong	\$3.75 to 3.80
Brown Canton	4.30 to 4.35
White Java and Penang	5.80 to 5.85
White Refined	5.65 to 5.90

EXPORTS.

RAW SILK.

Our last was dated the 4th inst. Since then settlements on this market amount to 974 piculs, divided thus:—*Filatures*, 760 piculs; *Reels*, 154 piculs. In addition to these figures, direct shipments have been 185 bales, making the total business for the week equal to 1,100 piculs.

This has been a quiet week; at the same time, considerable business was done every day. Some little anxiety was felt about the Presidential election in the States, and the reported Democratic victory may have alarmed some people. Other buyers are apparently undaunted, and while writing considerable settlements are reported, principally in *Kakeda*, a class of silk which has been rather neglected of late. In good *Filatures* and *Reels* for the United States, some business has been done, the market for these being very firm and somewhat higher prices have been paid as exchange declined. Buying for Europe has gone on to some extent and the general opinion is that stocks of Raw material there are small and that consumers will enter the market again ere long.

Arrivals continue on a fair scale as regards quantity, but quality leaves much to be desired, and of our present stock, a large proportion is of common and inferior grades.

There have been four shipping opportunities since we last wrote. The French mail steamer *Oxus*, on the 6th instant, carried 280 bales for Europe and the German steamer *Nuernberg*, on the 7th, took 72 bales for the same destination. The P. M. steamer *China*, which left port last night, had 956 bales for the New York trade, and she is followed by the *Empress of China* to-day with 801 bales for the same destination. These departures bring the present export figures up to 26,174 piculs, against 20,885 piculs last year and 7,981 piculs to the same date in 1890.

Hanks.—No business. The stock here is in strong hands and is not of very high grade. The quality of *Hanks* this year has not been good and all through the season we have only seen a few desirable parcels.

Filatures.—Something done every day of the week. Prices for anything approaching good quality in coarse sizes have somewhat advanced, best No. 1 *Shinshu* bringing \$880, with other grades in proportion. In European sorts, business has continued at about the same rates, the lower grades declining somewhat. Among the purchases are *Usen* at \$850, with *Hikone* and similar silk at \$840; *Mino*, \$845; *Goshu*, \$835.

Re-reels.—Not a large business in these, the quality of stock now on offer being very inferior, and some of the well-known Joshi chops show very poor quality just now. Sellers are fairly current and are inclined to unload, which they can well afford to do, having made large profits this season hitherto.

Kakeda.—No business reported in the statistics, but while writing several good parcels have been taken up both by native and foreign buyers, details of which will appear in our next. The prices paid are reported to be on the basis of \$740 for 1 Bacupi; \$690 for No. 2, and \$640 for No. 3.

Osaka.—No business at all in this class and prices are quite nominal. The demand for some time past has been on fine sizes and these coarse kinds have been neglected.

WASTE SILK.

Here there has been less doing, settlements amounting to 666 piculs, divided thus:—Cocoons, 277 piculs; Noshi, 88 piculs; Kibiso, 301 piculs.

Prices are easier, but without any quotable change. It looks as though sellers must give way in the near future, for the heavy stock begins to press rather hardly upon them and they probably will listen to reason ere long. Consumers abroad still talk downwards, and we look for a lower range of values in the near future.

The French and German mail steamers took between them nearly 800 bales of Waste and Cocoons for Europe. The *Empress of China* has one bale of Waste for New York, and the Canal steamer *Glenash* carries 74 bales Cocoons for the same destination. These sailings bring the present export figures up to 11,692 piculs, against 9,213 piculs last year and 8,772 piculs the previous year.

Pierced Cocoons.—Buying still continues to some extent, the last prices paid ranging from \$90 to \$102½, according to quality and yield. There is still considerable stock but not of the highest grade.

Noshi.—A small business, buyers objecting to pay the prices which holders require. The only sales noted are fine *Bushu* at \$130, *Tegara* at the same price, and a parcel *Shinshu* at \$102½. Nothing done in *Filatures* or *Oshu*.

Kibiso.—A fair amount of buying in the medium grades at prices ranging from \$45 to \$70 for *Oshu* and *Zaguri* sorts. One parcel *Curlies* was done at \$35, with a few bales *Filatures* at \$100 to \$110. **Mawata.**—Nothing done so far this season. Arrivals from the interior have been very small.

Neri.—Supplies are now coming in, but as a rule are of inferior quality, while holders are stubborn as to prices. So far, very little business, if any, has been done this season.

Export Table Waste Silk to 11th Nov., 1892:—

	Season 1891-92.	1892-93.	1893-94.
	Piculs.	Piculs.	Piculs.
Waste Silk	9,967	8,683	7,972
Pierced Cocoons	1,785	530	800
Total	11,692	9,213	8,772
Settlements and Direct	Piculs.	Piculs.	Piculs.
Export from 1st July	16,200	12,950	12,500
Stock, 11th November	18,500	15,900	11,600
Available supplies to date	34,700	28,850	24,200

Exchange has fallen considerably in sympathy with lower prices for Bar Silver at home. We quote:—LONDON, 4m/s. Credits, 2/10½; Documents, 2/10½; NEW YORK, 30d/s. U.S. \$70; 4m/s. U.S. \$71; PARIS, or LYONS, 4m/s. fcs. 3.69.

Estimated Silk Stock, 11th Nov., 1892:—

	RAW.	WASTE.
	Piculs.	Piculs.
Hanks	450	650
Filatures	3,216	9,300
Re-reels	4,157	8,072
Kakada	1,012	110
Oshu	486	368
Tayssam Kinds	29	—
Total piculs	9,350	18,500

TEA.

As the quality falls off the prices for the best offerings are correspondingly higher and very firm. Total export to date (not including the mail steamers of 10th and 11th inst.) is 27,350,000 lb., being about 1,000,000lb. less than for the corresponding period in season 1891-92.

	PER PICUL.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

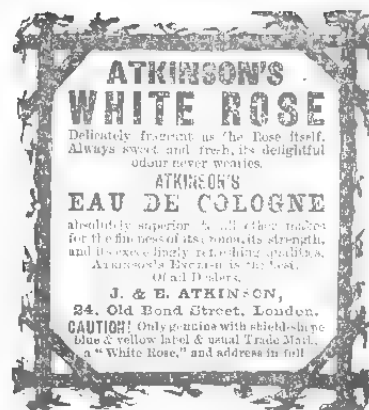

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and a quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.

STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others.

The chief advantages are:—

1. Wonderful Economy of Fuel.
 2. First-class Workmanship.
 3. Moderate Prices.
 4. Greatest obtainable power for weight and space occupied.
 5. Quickness in raising steam.
 6. High rates of speed guaranteed.
 7. Absence of noise and vibration.
- We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

KINGDON PATENT LIGHT PORTABLE ENGINE

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives three times the power, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

MARRIAGE.

On Monday, November 14th, 1892, before the American Consul, and at 8 p.m. at 72D. Bluff, by Rev. John L. Dearing, assisted by Rev. C. H. D. Fisher, Rev. GEORGE W. TAFT, of Tokyo, to JESSIE D. HUMPHREY, of Philadelphia, P.A., U.S.A.; Mr. and Mrs. Taft will be at home on the first and third Tuesdays of December, at 30A. Tsukiji, Tokyo.

SUMMARY OF NEWS.

CHRYSLER MICHELE FOLLINA is gazetted Japanese Honorary Consul at Palermo, Italy.

SNOW fell at Morioka and Aomori on the 11th inst., and at Sendai the following day.

MR. OISHI MASAMI has been appointed Japanese Minister Resident to the Korean Court.

H.I.H. THE PRINCE IMPERIAL visited the glyptic exhibition, now open in Ueno Park, on Sunday afternoon.

THE value of property consumed by the recent great fire in Asakusa, Tokyo, amounts to about 60,000 yen.

TWELVE cattle were attacked by infectious disease in Nara on the 12th inst. Two died and seven were destroyed.

AN exhibition of marine products has been opened in Ueno Park, Tokyo, and will remain open until the end of this month.

THE opening of new buildings of the Ichimura Theatre, Tokyo, took place on the 10th inst. in the presence of a large number of guests.

MR. NISHI, Japanese Representative in Russia; Mr. Kaneko Kentaro, Chief Secretary of the Upper House, who lately returned from abroad; and Mr. Sujii Saburo, newly appointed Japanese Consul-General in Hawaii, were received in

audience by the Emperor and Empress on the 14th inst. at 10 a.m.

CATTLE disease is now raging in the Kumage District of Yamaguchi Prefecture. Twelve animals are reported to have been attacked on the 10th inst.

HIS MAJESTY THE EMPEROR has graciously presented yen 2,000 to Major Fukushima, now engaged in his famous ride from Berlin to Peking on horseback.

MR. MAKAMARU SEIJURO, an oil painter, has been ordered to paint a portrait of Mr. Hoshi, President of the House of Representatives. The picture, when completed, will be hung in the parlour of the House.

AN extraordinary meeting of the Cabinet was held on the afternoon of the 11th inst. at the official residence of Count Ito, at which there were present Counts Yamagata, Kuroda, Oyama, Inouye, and Goto, and Messrs. Kono, Watanabe, and Mutsu.

A TELEGRAPHIC message from Gensan, Korea, received by the Authorities on the 14th inst., reports that the spread of rinderpest in Genra and Keiki has been considerably checked, but the Konkyo and Tokuzen districts are still seriously infected.

THE meetings of the Harbour Regulations Committee, which have been held in the buildings of the Communications Office for some time, concluded on the 11th inst., and the results of their deliberations were reported to the Minister of State for Communications by the Chairman.

MR. TAKAHASHI SHOJIRO, of Toriyama-mura, in the Tsukui District of Kanagawa Prefecture, and four other discoverers of a coal mine at Miyagase-mura, Aiko District, Province of Soshu, have applied to the Authorities for permission to commence trial mining.

THE funeral expenses of the late Count Yamada are estimated at yen 30,000. The Emperor contributed five thousand yen and the Empress and Empress Dowager one thousand yen each. The funeral took on the 17th inst. and was conducted with much pomp and splendour.

THE total quantity of articles sold at the recent Charity Bazaar at the Rokumeikan amounted to 4,362.58 yen in value, of which 2,264.70 yen was received on the first, 1,267.72 yen on the second, and 830.79 yen on the third day. Over 1,600.00 yen was realized from the sale of tickets.

ANOTHER batch of Japanese emigrants to the Hawaiian Islands, numbering 1,038 persons in all, left Yokohama on the 15th inst. Of the above total 464 men and 97 women were from Hiroshima Prefecture, 309 men and 69 women from Yamaguchi Prefecture, and 80 men and 19 women from Niigata Prefecture.

ARRANGEMENTS have been made to amalgamate the Union Shipping Company and the Kanda Steamship Company in the port of Ise, under the name of the Kibi Union steamship Company. The capital of the united company is fixed at yen 250,000, of which yen 195,000 is to be raised by shareholders in the two companies, and the remainder is thrown open to the general public.

THE number of shares sold in the Osaka Stock Exchange, and their maximum and minimum prices during last month were as follow:—2,545 Kiushu Railway shares from yen 34.50 yen 33.00; 3,030 Sanyo Railway shares from yen 23.60 to yen 22.90; 4,050 Kansai

Railway shares from yen 38.10 to yen 36.50; 835 Osaka Railway shares from yen 60.90 to yen 57.10; 18,255 Naniwa Cotton Spinning shares from yen 51.10 to yen 45.55; and 855 Temma Cotton Spinning shares from yen 52.90 to yen 48.20.

A CERTAIN Mr. Magara Kwanyee, of Niitsu-machi, Naka-Kanbara District, Niigata Prefecture, has raised an action for damages amounting to yen 85,000 against Count Goto, Minister of State for Agriculture and Commerce. The plaintiff alleges that he has suffered great loss in consequence of an injunction, by which he is restrained from exploiting kerosene in that Prefecture.

It is stated as probable that important changes will be effected in the Naval Department at no distant date, when Vice-Admiral Hayashi, Commandant of the Sasebo Admiralty Station; Rear-Admirals Tsubo, Motoyama, and Fukushima, Captains Takino, Kodama, Sugi, and Tanaka, and several high officials will be retired. Vice-Admiral Hayashi, it is said, will be made an Imperial Nominee in the Upper House.

HER MAJESTY THE EMPRESS, attended by Madame Takakura, Viscount Kagawa, Grand-Master, and Mr. Sannomiya, Vice-Grand Master of Services; Marquis Nabeshima, Grand-Master of the Board of Ceremonies, and Messrs. Tanaka, Nagasaki, Toku Takasaki, and Honda, Masters of Ceremonies, left the Palace at 9.30 a.m. on Friday last, and proceeded to the Ladies Bazaar, which was opened in the Rokumeikan in aid of the Tokyo Charity Hospital, where she was received by several Imperial Princesses, Princess Ichijo, Marchioness Nabeshima, Countesses Ito, Matsukata, Kuroda, Toda, Inouye, and others ladies. The Empress was at once conducted to a room, where she received in audience several notables. Accompanied by members of the Imperial Family, Viscount Kagawa, and Mr. Sannomiya, Her Majesty then walked through the Bazaar, Princess Ichijo guiding the party. The Empress purchased articles to the value of over 200 yen in each section, and left for the Palace about noon.

THE Import trade remains without material alteration, and though Yarns are enquired for very little business has been done, Cotton Piece-goods and Woollens being in similar case, due mainly to a rise in Manchester, which has extended to this, and prices are consequently on the ascending scale. There is not much moving in the Metal market, and though stocks are small, holders asks more money than buyers feel inclined to pay. The Kerosene trade is not extensive, but the market is very firm. A cargo of Russian amounting to 70,000 cases arrived in the steamer *Exe*, this oil now being in good repute and fair demand at full rates. The Sugar trade is somewhat unsettled, White sorts having improved in value, while Browns—the stock of which has further increased during the week—have declined in value and are slow to move. There has been a daily business in Silk, but the total is not great, quality becoming rapidly scarcer and arrivals decreasing as the season draws on. The stock today is nearly 10,000 piculs, but is very largely composed of common and inferior grades. More has been done in Waste Silk, at prices somewhat easier, and holders appear desirous of moving off some of the large stock—18,000 piculs. There is nothing to report in Tea, the season being well on towards the close. Exchange has fluctuated again, the movements being mainly on the downward line, though the trend change is in the direction of firmness.

EDITORIAL NOTES.

CHANGE IN THE GAME REGULATIONS.

An Imperial Ordinance published on the 11th instant announces that the Emperor, with the advice of the Privy Council, authorizes a change in the 29th Article of the Game Regulations. The amended article reads as follows:—

Art. XXIX.—Any person who pursues game in contravention of the provisions contained in the first clause of Art. VI. and in Art. XX., or who obtains a license of Class B in contravention of the provisions of Art. XIV., shall be liable to a fine of not less than 3 yen and not more than 30 yen. And any one who obtains a professional license in contravention of Art. VIII., shall be liable to a fine of not less than 7 yen and not more than 70 yen.

The Article for which the above is substituted reads as follows:—

Any person who pursues game without a license, or who, by false representations obtains a license or a permit for establishing a hunting preserve, shall be liable to a fine of not less than 5 yen and not more than 50 yen.

These Game Regulations have elicited in Kobe some comments which it is difficult to read without laughter. It is asserted, in the first place, by the *Hyogo News* that the issue of these Regulations indicate how near we are to Treaty Revision, which singular assertion is apparently based on the fact that Her Majesty's Chargé d'Affaires has re-enacted the provisions of Japanese Regulations and made them binding on his nationals. "How," asks the *Hyogo News*, "can such a step be construed but as a preparatory movement towards that consummation which paid advocates so ardently strive for, the submission of all foreigners to Japanese jurisdiction." "This is the first installment of Japanese law." "Her Britannic Majesty's Representative has lent himself to confirming a law which shall hedge in the foreigner at every turn, and which may be only the first of a formidable series." It will be noticed at once that the writer of these singular statements fails even to distinguish between submission to Japanese jurisdiction and obedience to Japanese laws. He appears to think that because Her Majesty's Representative, in the ordinary routine of his duties, takes once again a step which has often been taken by his predecessors, namely, employs British jurisdiction to enforce observance of a Japanese regulation, therefore British subjects have been brought so much nearer to the sway of Japanese Law Courts. Surely the time has long past for such confusion of ideas. The Railway Regulations, the Quarantine Regulations, the Shooting Regulations themselves, and so forth, have all been made binding on British subjects by precisely the same process as that now followed.

The real trouble with the writer in the Kobe journal is evidently the fact that the new Regulations restrict the exercise of a privilege hitherto enjoyed by foreigners with comparative freedom. It will no longer be lawful to walk through cropped fields or enclosed lands in pursuit of game without the consent of the owner. The *Hyogo News* finds this a great hardship. Yet precisely the same restriction is applied in England, France, Germany, and other European countries. Fancy a man throwing his gun over his shoulder and proceeding to take his way in pursuit of game through the cropped or enclosed lands of a British farmer without previously obtaining permission. If private property in game is to be recognised at all, it can be recognised only through the medium of legislation such as that now enacted by Japan. Hitherto game in this country has been at the mercy of every one, and the foreign residents themselves have repeatedly urged the unwisdom of not adopting some system of protection. Japan now adopts the same system as that practised in the West, and immediately this singular outcry is raised.

The queerest part of the affair is the nature of the perplexities which it suggests to our dis-

turbed contemporary. How is a foreigner to know a shooting notice when he sees one? asks the Hyogo journal. "How is he to discriminate between public and private property?" "Even on the hills, what can he know of ownership?" Could anything illustrate more forcibly the extraordinary notions entertained by some foreigners as to their position in Japan? "We cannot read your outlandish ideographs," they say. "Therefore, we cannot spell out the purport of a notice against shooting. Therefore, we cannot be expected to concern ourselves about such a notice. We cannot speak your language. Therefore we cannot know anything about your property. Therefore we must be permitted to trespass wherever we please. We cannot decipher your landmarks. Therefore we cannot tell who owns this hill or who owns that. Therefore we must be free to shoot over all your hills without distinction." It is a delightful doctrine. Fancy expounding it, *mutatis mutandis*, in England or France! Fancy how it would fare with a Japanese in Great Britain, who, being arraigned for trespassing in pursuit of game should coolly plead:—"Truly it is extravagant to expect me to understand your written prohibitions or to seek oral information about your property, seeing that I can neither read nor speak your language. It would be exceedingly harsh, in view of my ignorance, to require me to observe any of your laws or respect any of your rights. I know nothing about yourselves and your regulations, and it therefore follows that I am free to do exactly what I please while I am in your country."

Stated in that manner the proposition becomes comical. Yet the absurdity lies in the fact, not in the manner of presenting it. To be ignorant, according to this creed, is to be irresponsible. Only let a man neither know, nor try to know, and he possesses at once a valid justification for any form of license.

"It would be somewhat exasperating to the foreigner to know that he could wander all over Japan with a shooting license in his pocket, but that he must not set foot on an inch of ground without first obtaining consent." Anyone might be justly exasperated were such a feat proposed to him. To "wander all over Japan without setting foot on an inch of ground." An atmospheric journey would be the only way to manage it. The Hyogo journal is evidently in the clouds about the whole affair.

Perhaps the queerest complaint of all is the allegation that the object of the new Regulations is not really to preserve game at all, but to deprive foreigners of the privilege of shooting it. The grounds of this suspicion are set forth by the *Hyogo News* in a manner worthy of the whole lament:—"No foreigner who is a sportsman would raise the slightest objection to the new Ordinance if its clauses were rigidly enforced, but as we have one or twice pointed out recently, it is already a dead letter so far as the Japanese are concerned, for the supplies of game are as plentiful as ever. The proper way to prevent the killing of game in the close season is to prohibit the sale as well as the shooting, for if there are no receivers there will be few poachers. The householder desirous of furnishing his table with game can obtain snipe, woodcock, and pheasants in abundance, while the foreigner may not pull a trigger." One would imagine, reading these charges, that game was being killed and sold openly by the Japanese in the close season. But we are now in November. The open season began on October 15th; nearly a month ago. How on earth can the sale of game at present, or its plenitude in the market, prove that the close season prescribed by the Regulations is not observed by the Japanese? Such ludicrous accusations would be impossible if the situation were examined with anything like a spirit of fairness and discrimination.

It seems to have escaped writers discussing the new Regulations that although the foreigner will hereafter find himself considerably restrict-

ed in the pursuit of game, there is now for the first time offered to him a chance of enjoying good sport. Let him preserve. In other countries no one expects to have the pleasure of killing game unless he can afford either to rent some one else's preserves or to preserve on his own account. That is the *régime* now introduced in Japan. Irrespective of the new Regulations, shooting within Treaty Limits has become a farce: there is no longer any head of game. But if a district were preserved, the game on it would soon become plentiful. We see no serious difficulty in the way. A club of half a dozen foreigners, each subscribing a couple of hundred yen annually, could preserve an area large enough to afford excellent sport. If any man in England were offered a season's shooting on payment of thirty pounds he would count himself most fortunate. Sportsmen ought to welcome the new Regulations. As for those that cannot afford, or are not sufficiently enthusiastic, to pay, they must do without shooting in Japan as they would have to do without it under similar circumstances in any Western country.

THE CEMENT CASE.

The case of the Tokai Cement Company against the Governor of Kanagawa Ken was heard at the Yokohama Local Court on the 2nd instant. The plaintiffs were represented by Mr. Hirai Tsunesaburo, Barrister, and the defendant by Mr. Mitsuhashi Nobukata, Councillor of the Kencho. The Court was opened at 10.40 a.m., and counsel for plaintiffs pleaded that as the purchase of cement for harbour works ought to be concluded by general public tender, as expressly provided in the Law of Finance, it is illegal on the part of the defendant to contract as he did with the Asano Cement Company, and that the business right of the plaintiffs was thus violated. Hence they prayed the Court to annul the contract and grant whatever other remedy the circumstances might warrant. For the defendant it was argued that as the Law of Finance is an Administrative Order, any disagreement with reference to its interpretation must be presented to the Administrative Court for decision. The Judge endorsed the latter contention, and dismissed the case with costs.

The facts of this case are so simple that its reference to a Court of Law seems surprising. By the terms of the Regulations, any Government Department, in calling for tenders, is entitled to limit the number of competitors, should such a course appear to be dictated by the interests of the public service. In the case of cement for harbour works two important considerations have to be taken into account. The first is the quality of the cement; the second, the capacity of the works supplying it. Evidently no engineers could undertake to subject to conclusive tests each barrel of cement furnished for use in large works. A comparatively superficial method of examination has to suffice, more or less trust being placed in the integrity of the firm supplying the material, which, for the rest, has of course been fully tested in sample. We believe that practical experience has disqualified more than one Japanese cement manufactory from this point of view. The second consideration, as to capacity, is not less imperative where the people in charge of the works have to be sure that a certain large quantity of cement shall be monthly available for current use. Here, also, several cement companies are disqualified, and for the Tokai Cement Company, we should say that its producing capacity does not come within a long distance of the limit fixed by the Yokohama Harbour Works Bureau. Hence the right of the Bureau to limit tenders to certain firms is clearly established. It will be remembered that when the firms excluded from competition on this occasion began to air their supposed grievance, the main point emphasized by the agitators was the admission of the Onoda Cement Company to the ranks of the favoured few. Certain newspapers openly declared that exceptional favour had been shown to that Company because its chief shareholders were Choshu *shizoku*, a Choshu statesman being now at the head of the Department of Home Affairs. These

Original from

extraordinary accusations, in themselves conclusively indicative of a bad case, received striking refutation in the sequel of the competition, for though the Onoda Cement Company was allowed to tender—as indeed the extensive and admirable character of its works rendered necessary—it failed to obtain any part of the contract, a more advantageous offer being made by a rival firm. We do not suppose that the Tokai Cement Company will be foolish enough to push the case any farther, for there can be no question that the Harbour Works Bureau acted strictly within its competence, and that the Administrative Court would have no choice but to endorse its action.

THE LADIES' BAZAAR.

HER IMPERIAL MAJESTY THE EMPRESS left the Palace at 9.30 a.m. on Friday last to proceed to the Ladies Charity Bazaar at the Rokumeikan. The grounds of the building were gaily decorated with flags, and the vestibule and corridors with quantities of beautiful chrysanthemums. When the Imperial carriage arrived, the Imperial Princesses together with Princess Ichijo, Machioness Nabeshima, and all the other ladies concerned in the Bazaar, assembled at the entrance to receive the Imperial Party. Princess Ichijo led Her Majesty through the Bazaar, the Empress purchasing two hundred yen worth of articles in every section. The Imperial Party left the Bazaar at 11.50.

The Bazaar has been, as usual, a distinct success. Great numbers of Japanese, though very few foreigners, attended, and by the afternoon of the second day almost the whole of the articles had been sold. We have not yet received any statement as to the pecuniary result, but it will doubtless be considerable.

THE VERNACULAR PRESS ON THE DEATH OF COUNT YAMADA.

COUNT YAMADA AKIYOSHI left Himeji for the Ikuno Silver-mine on Thursday last, and after inspecting the mines, he proceeded as far as Omori on Friday, where he suddenly fell ill, apparently from heart complaint. Medical aid was at once called in, but the Count never recovered his senses, and passed away quietly in a few hours from the time of the seizure. Telegrams announcing the sad news reached Tokyo late on Friday evening, but the vernacular press, with remarkable celerity and enterprise, managed to give portraits of the deceased statesmen simultaneously with the publication of the news on the following morning, many of them adding editorials of considerable length. It will interest our readers to hear what the principal journals of Tokyo have to say about a man who played such a prominent part in the modern history of his country.

The *Nichi Nichi Shimbun* writes that Count Yamada suffered from a lung complaint last year, and that, from the Emperor and Empress downwards, all persons in the Empire were extremely anxious about him. At length, however, news of his recovery was announced, to the joy of the nation. During the long interval since that time, the Count led a retired life, very rarely taking any share in the political affairs of the State. How suddenly the sad intelligence of his death reaches us. His great merits are well known to every individual in the Empire. No comment is needed to emphasize them. But it should be particularly pointed out that the Count was both a soldier and a statesman of the foremost rank. His achievements at the Restoration in the capacity of a General are still remembered by all with applause, and in him the country recognises the master spirit that directed the compilation of the Codes. He was one of the youngest statesmen in the Government, being only 49 years of age at the time of death. The untimely demise of such a man throws the whole nation into mourning.

The *Yifu* expresses deep sorrow for the loss of one of the ablest statesmen and most competent captain of the Empire. It particularly

eulogizes the Count on account of the fact that he rose from the ranks where he served as a common soldier, and he attained almost the highest office and position within a subject's reach. The *Yifu* also records Count Yamada's achievements in the Satsuma Rebellion, and notes that he attained distinction in three capacities, as Minister of Public Works, Minister of Home Affairs, and Minister of Justice.

The *Kokkai* says that the deceased statesman was a mere youngster on the eve of the Restoration, but that with all the ardour and spirit of youth, he travelled from end to end of the Empire in the Imperial interests, and his elders already regarded him as an able official. After the Restoration he received a post in the Cabinet remaining there for over 20 years, and attaining the highest rank and position. He himself was no doubt perfectly satisfied with the honours that had fallen to him before his death. But it is none the less sad to think that a statesman of great merit is lost to the country. The *Kokkai* concludes by hoping that though the Count is no longer in this world his heroic spirit will aid in protecting the empire for ever.

The *Kokumin Shimbun* pens a eulogy of the deceased with its wonted vigour of style. It considers that his nick-name, "Little Napoleon," was not an inappropriate title. Equally as a soldier and as the father of the Codes his name will never be forgotten. On account of the latter work he might well be compared with Justinian. Despite the fact that many persons criticised his legislative efforts unfavourably, it is certain that he sacrificed nearly his whole life to them. The *Kokumin* compares him to Pitt, who is said to have died after hearing of the defeat of the Russian and Austrian army at Austerlitz. The Count was ill in bed when he heard that the operation of his Codes had been postponed, and he died just when the Bill for postponement is on the point of receiving Imperial sanction. When historians come to record the event, they will have to say that the Codes killed the Count.

The *Choya Shimbun* also gives expression to strong regret. It declares that not only will the 40 million subjects of the Empire lament the Count's death, but the Emperor also will mourn for the loss of one of the most trusted statesmen of the country. The *Choya*, too, speaks of the Count's devotion to the Codes, and the *Hochi Shimbun* publishes a leaderette on his death, in which it says that no one can help lamenting his sudden decease, especially as it has occurred when the affairs of the country are becoming more and more difficult to manage.

MR. MUTSU AND THE WAKAYAMA CLUB.

THOUGH the Wakayama Club possesses a scanty number of members of the Diet, says the *Hochi Shimbun*, its name became publicly known last session owing to its action in uniting with the Popular Party. What it will do in the next session, however, is a difficult question. Mr. Mutsu tendered his views with reference to official interference in elections to the former Cabinet, and as he failed to obtain a hearing, he resigned his seat, thus enabling the Wakayama Club to act independently, with the result that it joined the Popular Party. But now Mr. Mutsu is once more in the Cabinet, therefore the members of the Club cannot attack the Cabinet with any determination. If we may consider that Mr. Mutsu is Mr. Mutsu, and the Wakayama Club the Wakayama Club, there need be no perplexity. But unfortunately the five members returned from Wakayama owe their seats entirely to Mr. Mutsu's influence, so that they must obey his orders. On the other hand, as they co-operated with the Popular Party last session, they cannot now declare that they leave it because their benefactor is in the Cabinet. They may allege that the new Cabinet is different from the old, but they cannot say that it has entirely adopted the policy of the Popular Party. Were Mr. Mutsu not a member of the Cabinet, they

would assuredly join the ranks of the Opposition. If, however, regardless of the existence of Mr. Mutsu, they were to attack the Government, some members of the Cabinet would at once allege that as the opinion of Mr. Mutsu was not adopted by his colleagues, he had directed his followers to attack his own Cabinet. Even without such a complication, the members of the National Union, who oppose Mr. Mutsu, are ready to bring discredit on him whenever they find any opportunity. Such being the case, the position of the Wakayama Club is difficult to maintain. The *Hochi* alleges that this statement was made to it by a certain nameless politician, but the same journal declares on its own authority that the members of the Wakayama Club have resolved to act as independently as they did last session, but that lest their attitude might give some trouble to Mr. Mutsu, they propose to publish a statement of policy, to which they will strictly adhere, and in the event of any objectionable proposal being brought forward, they will oppose it resolutely from whatever quarter it emanates.

The whole of this story reads like the essay of a child playing at politics. We do not imagine that the *Hochi Shimbun* intends to hold itself seriously responsible for the statements of its hypothetical informant, but if it does, its political creed cannot be greatly admired. For it is plain that the *Hochi's* one idea in politics, the one note to which it tunes all its chant, is men not measures. Mr. Mutsu, we are told, left the former Cabinet because, unable to approve of the action taken in electioneering matters, he failed to get his censure endorsed by the majority of his colleagues. Thenceforth the Wakayama Club voted against the Cabinet. But now Mr. Mutsu holds a portfolio in an entirely different Cabinet, yet the Wakayama Club having voted against the Government once, is bound by some inexplicable principle of honour and consistency to maintain its position of opposition, though the Cabinet is changed and though the President of the Club holds an important portfolio in it. Was ever such singular reasoning heard before? If we may accept as accurate the portrait which the *Hochi Shimbun* here draws vicariously of its Party's policy, the *Kaishin-to* must be compared to the Irishmen who, landing in New York and being asked about his political faith, replied:—"Have yez a güvinnin? Av so, I'm agin it." Once against the men in power, always against them, seems to be the Progressionist organ's motto. How plainly the practice of the *Kaishin-to* politicians themselves contradicted this principle three years ago. For when their leader Count Okuma, after more than seven years' retirement, re-entered the Cabinet, and served with the very men who had composed the Administration during his term of abstinence, his Party and the organs of his Party became staunch and stalwart supporters of the Ministry. Then, when Count Okuma went out of office, his Party and its organs resumed their old attitude of bitter implacability, though the bulk of the statesmen in power remained unchanged. Records are sometimes inconvenient. Would it be so very culpable on the part of the Wakayama Club to do in 1892 exactly what the *Kaishin-to* did in 1889?

OFFICIAL APPOINTMENTS.

THE *Official Gazette* announces that Mr. Oishi Masami is appointed a Minister Resident. Concerning this appointment the *Nippon* writes as follows:—"Mr. Oishi Masami visited Europe at his own expense and spent some time in London, where he studied the question of national debts and foreign intercourse. Returning to the Orient, he went to Korea and thence to Peking, collecting in both places information whereon to base views with regard to the future of the Eastern Problem. He has now been appointed a Minister Resident. Mr. Oishi entertains Radical views. He was associated with Count Goto in the organization of the *Daido Danketsu*, and was twice imprisoned in connection with those proceedings. It is a great honour that a member of the Radical Party should be directly appointed to be a Minister

Resident. Scarcely any precedent is to be found for such an appointment in the procedure of the *Meiji* Government during the past twenty years.

Mr. Mizukami, hitherto Secretary of the House of Representatives and Councillor of the Department of Finance, has been appointed Private Secretary to the Minister of State for Home Affairs and Councillor of the same Department.

OSAKA.

THE cattle plague, writes a Correspondent, which has recently appeared in Japan is very severe in this city and vicinity, and scores of cows in dairies as well as draught bullocks in various parts of Osaka are reported to have died of the disease. As a sample of the severity of the visitation, I may mention the case of Mr. Yoshida, whose dairy herd has been thinned to the extent of seventeen in one week dead, while a number of others were sick and under treatment.

The General Synod of the United Presbyterian Church has just closed a protracted session here, at which prominent divines, both Japanese and foreign, were in attendance from all parts of Japan. The Rev. Dr. Knox, of Tokyo, preached in the Concession on the 6th inst.

The Rev. Mr. Scherer passed through this city a few days ago on a tour of exploration in Kiushu, where he expects to establish a strong mission for the Evangelical Church of America.

Bishop Key, who has made extensive tours in Japan and the interior of China, has left for San Francisco, and hopes to return within a year with a large force of Methodist missionaries. Our small settlement in this city has almost been completely changed in regard to its residents, so many having recently left and so numerous have been the new arrivals.

MAJOR FUKUSHIMA'S RIDE.

THE *Yiji Shimpō* publishes further intelligence regarding Major Fukushima's long ride, of which we have heard very little of late. The major left Katham on the 13th of June, and after a rough journey—sleeping in the day time and travelling by night to avoid the heat—of a fortnight, in the course of which he covered 618 kilometres, arrived at Perm on the 28th. The military officers in garrison there accompanied by a band, went out to welcome him three miles from Perm, and escorted the major to the town amid the strains of the Japanese National Anthem. He left Perm for Ekaterinburg on the 2nd of July, after a sojourn at the former place of three days. He then passed the night of the second day of his departure at a town called Kinggo, where he was also warmly received, and invited to a splendid dinner promoted by the principal residents of the place. The distance between Perm and Ekaterinburg is 389 kilometres, and although the route lies among the Ural ranges the path is not very elevated, not exceeding more than six thousand feet above sea level. Moreover, as the road is well graded there is little or no inconvenience in travelling. A stone monument marks the dividing line between the European and Asian continents. Major Fukushima and his horse were much exhausted by the intense heat and the vitiated atmosphere prevailing at this period of his ride, in addition to which they were subjected to the constant attacks of thousands of bees (?), which swarmed in the neighbourhood. The stinging of this insect greatly affected the physical condition of man and beast and consequently the journey to Ekaterinburg was delayed. He reached the latter place in eight days—covering 48 kilometres daily—during which time the major only had a comparatively quiet sleep twice, being almost invariably prevented from rest by the attentions of obnoxious insects. At one time he was compelled to hire a special mattress; this he placed on a pile of grass upon the floor, but in spite of these precautions, he soon found himself worried by overwhelming numbers of insects, who seemed to be reinforced by other hordes coming from all directions. The major was therefore obliged to act upon the defensive until day-break. His meals were very irregular, food often consisting of nothing but eggs and coarse

bread. He obtained chicken soup only twice during the course of eight days, as more substantial nourishment was not obtainable in those districts. Moreover, as usual in mountainous regions, showers of rain were almost constant, and the major was often wet to the skin. Fortunately, he is a man of extraordinarily robust constitution and strength, nothing seeming to impair his health, while apparently he is pursuing his journey with ever-increasing energy. He entertains fears that unless he traverses the desert of Gobi before October, it will be almost impossible to pass it in consequence of the snow. With this apprehension in mind, he is endeavouring to arrive of Uiga in October, but as there remained only seventy-five days for over 5,000 kilometres, he will have to ride 70 or 80 kilometres daily, thus precluding the idea of any days of rest. He further considers that his present pony, Ural, will be unfit for the journey through the Mongolian regions where little food is available for animals, and he has decided to buy a couple of good horses for this purpose. It was on the 15th July that he left Ekaterinburg for Omsk, arriving at a little town called Kamshuloff on the 17th of the same month. The roads, during the latter part of the way, leading along cultivated fields and forests, for the most part are wide and smooth, but having no overshadowing trees, the heat was severe, while rough food and bad accommodation at night continued.

THE IMPERIAL GARDEN PARTY.

It is beginning to be considered a more than probable contingency that the Imperial Chrysanthemum Garden Party will always be marred by rain. The weather used to be much kinder in other times, but of late years it has fared badly with the garden party of the season. For foreign residents the affair has not much direct interest. Very few indeed, outside the circle of Government employes ranking as *chokunin* and possessors of Third Class Orders, have the honour of receiving an invitation. Globetrotters are more fortunate. They regard the party as one of the great events to be compassed, and they cause their Ministers no little trouble by asking for invitations with a matter-of-course air of assurance. This year the rain held off till a little after four o'clock, by which time a great part of the guests had taken their departure, but the weather was gloomy and threatening throughout, and the chrysanthemums, for all their marvellous profusion of blossoms, did not look nearly so brilliant and striking as they do when the sun shines. The Emperor and Empress looked well, and it was remarked that his Majesty's manner of acknowledging the salutes of the foreign guests was more than usually gracious. The vernacular press says that many of the ladies were dressed so beautifully as to throw the flowers into the shade, and that three hundred umbrellas were prepared to avert a repetition of last year's calamity, when the rain suddenly poured down upon the guests and found them wholly unprepared to resist it, their umbrellas and wraps having been necessarily abandoned at the entrance.

The number of foreign *invits*, especially Americans, was exceptional. Among them were Mr. and Mr. Winston, concerning whom the vernacular press—and the *Nichi Nichi Shimbun*, too, at that—tells a wonderful yarn, namely, that Mr. Winston paid ten thousand dollars to the Pacific Mail Steamship Company on condition that they postponed the sailing of the mail steamer for a few hours in order to enable him to be present at the party. Mr. Winston will be tickled when he learns what large ideas and liberal measures Tokyo attributes to the men of the "Windy city."

TOKYO MERCHANTS' ASSOCIATION.

THE members of the above association entertained Mr. Hara Kei, Director of the Commercial Bureau, and Mr. Suyehiro Shigeyasu, a well known journalist, at the Maple Club on the 5th inst. Both guests had just returned from a

tour in Korea and Siberia. Mr. Suyehiro delivered a long speech. He divided his subject into the following heads:—First, Railway construction at Vladivostok; second, the Military organization of Russia; third, the Influence of Russia; fourth, the Relations between Japan and Russia; and fifth, the Political and Commercial circumstances of Russia and Korea. The last theme, again, was subdivided into statistics of exports and imports; corruption of the Korean Government; Japan's commercial rights in Korea, and the future commerce of the peninsular kingdom. The speaker said that though Japanese merchants held commercial sway in Korea for a long time, they had been deprived of it since last year by the Chinese in Gensan, while in Seoul business was entirely done by Chinese. The Japanese had gradually lost their influence after the insurrection in Seoul in 1884. From that time the Japanese Government had adopted a somewhat conservative policy towards Korea, with the immediate result that the development of Japanese commerce was checked, and that the Chinese merchants gained confidence, so that now the latter had obtained the lion's share of the trade. In speaking of the future condition of Korean commerce, Mr. Suyehiro said that one of the most serious difficulties against which Japanese merchants usually have to contend is want of capital. Fortunately, however, there is over a million *yen* of Japanese money in Korea, and great profits are derivable from the fisheries. When Mr. Suyehiro had concluded his speech Mr. Hara Kei took up the theme and laid before the audience various information about Korea. He dwelt much upon the agricultural condition of the country. Afterwards, Mr. Iwaya Matsuei introduced the subject of changing the site for the next national exhibition to Tokyo, and asked the members to subscribe funds for carrying on a campaign in that sense. A sum of 121 *yen* was at once raised. The seance lasted till 9 p.m.

It is evident that a great number of Japanese are bent upon making Korea the topic of the time. In various issues we have reproduced the gist of the opinions frequently ventilated by the vernacular press on this subject, and no one can have failed to observe that, without exception, though with varying degrees of earnestness, the journalists of the day are bent upon forcing the Government to adopt a strong and uncompromising policy in the peninsular Kingdom. It is not easy to set down in a moment all the contingencies which the pursuit of such a policy might involve, nor do we propose to make the attempt. It will suffice for the moment to note the undoubted existence of this militant spirit in Japan. Messrs. Suyehiro and Hara are only two fresh advocates of national aggressiveness, and though we do not underrate the importance of such additions to the ranks of the agitators, we regard them rather as results than instigators of the general sentiment.

CHINESE NOTES.

THE bore of the Tsientang River must be an interesting and magnificent spectacle. A most attractive account of it is given in the *North China Daily News*. The Hangchow Gulf, into which the river falls, is fan-shaped, the arc being seaward. Thus when the tide rolls in from the Pacific, the volume of water entering from the mouth of the gulf is piled up with extraordinary rapidity—something like 12 feet per hour—at the narrow end, and is there precipitated over the bar at the mouth of the river in such masses that the water has not time to find its level. Forced onwards by the tidal wave behind, retarded by the sand and the opposing stream of the rapid Tsientang in front, the advancing volume acts, in the first place, like a cascade, tumbling over itself, and then finally, after a violent struggle, masters the river current, and travels onwards steadily towards the mouth of the Tsientang, twelve to thirteen miles distant. The river has two channels at its mouth, and upon these the two divisions of the bore sweep to their junction in the main stream at a point where the banks are about a mile apart. In the effort of adjusting themselves to the configuration of

the channel at their place of union, the two branches behave with wild turbulence, the rebounding waters "breaking in a succession of magnificent rollers all over the middle of the bore," the tops of the waves being here some twenty feet above the normal surface of the river in front. Then the forces of the vast volume fall into orderly coöperation, and the wall of water sweeps gradually onwards, at a rate of from 12 to 14 knots an hour, its height varying from 12 to 8 feet, its width some 1,800 yards, and its progress being accompanied by a roar like thunder. The eagle is distinguished by the features that it occurs twice a day all the year round, and that it "presents a uniform surface of cascade throughout the whole breadth of the river." The effect of the scene is often enhanced by a fleet of junks which, with all sails set and heading in all directions, come sweeping up towards Hangchow at the rate of 11 or twelve knots an hour. Our Shanghai contemporary, in concluding its interesting account, says:—

But apart from a contemplation of the eagle, the visitor to Haining will find enough to reward him for his trouble, in an inspection of the sea wall, which is one of the finest public works even of this country. The exact dates of its commencement and completion have not yet been correctly ascertained; nor has any light been thrown upon the manner in which it was built. One opinion we may confidently affirm; that the people who are capable of finding the skill to design, and the labour to execute, so well planned and costly a barricade—in the face of this impetuous flood,—are able to construct and to maintain a suitable defence against the Hoang Ho, even if the rapid deposit of loess renders it necessary to create a double channel.

So violent have been the attacks made upon Sir John Walsham by the foreign press of the settlements in China, that it is a pleasure to read the moderate and well informed remarks of the Peking correspondent of the *North China Daily News*:—

The departure of the British Minister, and Lady Walsham and family, after a residence of six years among us, has caused a very regretful feeling. At no time have the honours, amenities, and socialities of the British Legation been more or better displayed than during the past period. Sir John Walsham has most worthily maintained the dignity of the British diplomatic service, and if he has not given in all cases the satisfaction which the merchants have expected, the blame ought not perhaps to attach exclusively to the Minister. His policy to a large extent is dictated from Downing Street. Our Foreign Office wants a good deal more of diplomatic pressure. A rupture with us, from pressing our rights, demanding protection, the execution of treaties, and suchlike, is quite impossible. We should be respected all the more, and the measure of our respect is the measure of the dread which our power exercises in the minds of the higher officials. Russia at the present time is all-powerful by virtue of the forthcoming Trans-Siberian Railway. Our proximity in the south-west ought to secure for us like attention. One advantage of the return of the Minister will be the placing before our Foreign Office the true aspects of Chinese diplomacy and the conduct of the government in the matter of the late disturbances. The foreign community will doubtless reap benefits in the future from the late Minister's representations at home. The merchants themselves are also largely to blame for their inactivity. The Foreign Ministers are powerless to act, to a very large extent, unless urged to and backed up by their nationals at the ports.

The recent telegraphic convention between Russia and China, by which the Great Northern Telegraphic Company is protected by a high tariff for another ten years, and which treaty is dead against the international treaties, Telegraphic Union rules, and trade in general, is a case in point: not a single protest has yet reached Peking from Shanghai. No protests have been lodged against its ratification by the Chinese Ministers, because no protests have come that those interests are in jeopardy. If all were known of the active part taken by their Minister with the Chinese authorities, less complaint would be heard from the merchants. Many of the questions have more sides than one, and although it is the duty of the foreign Minister to see only the side of his nationals and argue for it, it is very difficult with an astute people like the Chinese to act otherwise than in an upright and honourable way, and to admit that there is something to be said on the other side. It is proverbially difficult to argue on both sides of a question, and the British Minister was placed in this dilemma on the Telegraphic question by the force of circumstances. In the first place he was the mouthpiece of his government against it, and anon in favour of it when the commercial agitation forced Her Majesty's government to reverse their policy. When the history of Sir John Walsham's tenure of office is written, a fairer estimate will no doubt be formed of his policy. Much of what he wrote could not be published in

Blue Books. Throughout his career here he was always characterised as the English gentleman. At first the Chinese Ministers thought him a bit stiff; they soon came to respect him for his sterling worth, and if he had only been more strongly supported from home he would have made a most successful Minister.

A reference made elsewhere by another correspondent to Sir John and Lady Walsham's escape from the *Bokhara* disaster scarcely conveys a sufficient idea of the happy chance which saved them. All their plans had been laid to catch the *Bokhara*. Their places had been booked by that steamer, and their preparations for leaving Peking in time to catch her were fully completed. But at the very last moment some official business cropped up which compelled the Minister to remain a day longer in Peking, and the result was that the party missed the *Bokhara*, and could not leave Shanghai until October 11th, instead of sailing in the ill-fated steamer on the 8th. There can be very little doubt that but for this most fortunate, though at the moment irritating, delay in Peking, the whole Walsham family would have perished, for Sir John, even supposing that his own possibilities of rescue had been of any value, would certainly have preferred death with Lady Walsham and the children to escape without them. This happy accident finds a parallel in the case of a young resident of Hongkong who originally formed one of the cricket eleven for Shanghai. He, too, had laid all his plans to travel northward with the team, when, unexpectedly, his brother arrived in Hongkong the very day before the departure of the eleven for Shanghai, and he therefore decided to let the twelfth man take his place. Heaven certainly sent that brother at a most opportune moment.

In connection with the return journey of Sir John Walsham, a quaint incident may be noted. The *Straits Times* finds it very remarkable that British Ministers returning home from Peking always choose the French mail, and is evidently disposed to conclude that they do so because they prefer to escape contact as far as possible with their own countrymen. It would not be altogether surprising if some British Ministers, in view of the treatment extended to them by a section of the settlement's press, did feel a disposition to avoid all risk of further slights. But when we remember how it happened that Sir John Walsham choose the French mail instead of the *Bokhara*, and what the fortunate, though not optional choice entailed, it becomes very funny to read the grave observation and profound inference of the *Straits Times*. There is no need of straw to manufacture some journalistic bricks.

A peculiar incident occurred in Shanghai at the end of last month. An Englishman who contemplated sailing in the French mail steamer, was standing on the French pontoon, preparatory to stepping on board the tender, when the usher of the Supreme Court attempted to serve a writ upon him. He declined to accept service, alleging that he was on French soil and that the concurrence of the French Consul was a necessary preliminary. The usher, regarding the pretext as valid, suffered him to escape. We imagine that the usher must have had a pretty warm time ten minutes later when he reported progress to his superiors. Strange claims have occasionally been advanced as to the nature of the tenure of the so-called "French Settlement" in Shanghai, but there cannot be the slightest doubt that the place is Chinese territory, and that the British Consul's warrant is just as fully entitled to run there as it is on the French *Hatoba* in Yokohama.

The old saying that an incident owes nine-tenths of its effect to the nature of its surroundings, is well illustrated by the enthusiastic applause which the conduct of the Pescadorian Chinese towards the *Bokhara* survivors has evoked. The kindness of these people is spoken of on all sides in most glowing terms. No eulogistic expressions seem too superlative, and it is plain that this humane action will not

easily be forgotten by the foreign communities in China. Yet what the Pescadorians did, is done invariably, and has been done invariably for the past twenty-five years, by the Japanese. It is a recognised certainty that the crew of a foreign ship cast away on Japanese shores will meet with nothing but kindness and ready help, and there stands to the credit of the Kanagawa folk this extraordinary and, we imagine, unprecedented incident, that on the occasion of the loss of a P. M. Steamship Co.'s steamer, nearly the whole of her treasure—in \$20 gold pieces for the most part—was by degrees brought in by its finders and restored to the United States Consulate. What is common in Japan attracts little or no attention, however often it be repeated. What is very uncommon in China naturally assumes disproportionately large dimensions in the vista of public observation.

A correspondent of the *North China Daily News*, writing from Chinkiang, uses this suggestive language:—

Any reader of history can see as plainly as he reads this letter that the causes which led to the downfall of the Roman Empire are vigorously at work in China to-day, and one of those causes is omnipresent, grinding poverty by the side of enormous wealth. It has been said that the income of the Taotai here is nearly three times as much as that of the President of the United States. Hundreds of Chinese would be eager to accept the position of coolie at the rate of four Mexican dollars a month and keep themselves. There are many poor wretches in this badly governed Empire who are in the position of the Arctic explorers when the food became so scarce that they were obliged to subsist on the leather book covers. The true philanthropist who considers the situation, the stress of hunger and squalor to be undergone this winter by this patient suffering people, will feel his heart sink; and if he has the *sun-pa-thos*, he will open wide his purse notwithstanding the fact that his help will be but a drop in the bucket.

The possibility of foreigners' acquiring land for the purpose of building churches in the interior of China, rests on a very precarious basis, if the *Shenpao's* account of the matter be correct. According to that journal, the process prescribed by the treaties is that a Chinaman proposing to sell his property to a mission must first report to the local administrator who has to ascertain whether or not the erection of such buildings would affect the *Fungshui* of the neighbourhood. If the administrator judges that no ill consequences will ensue, then he sanctions the sale of the land, but not otherwise. The *Shenpao* alleges that an official proclamation has been issued reminding the people of this procedure, which apparently, they have of late been remiss in observing. If the erection of Christian churches really depends upon *Fungshui* being favourable, the Chinese being the augurs, these edifices ought not to be numerous in the Middle Kingdom.

Captain Lang's unpleasant experience in the Chinese Navy—an experience which is not likely to be forgotten or forgiven for many a day by the British Government—seems to have been repeated in the case of a German officer. The Tientsin correspondent of the *North China Daily News* says:—"It is now definitely announced that Mr. Von Hanneken has terminated his engagement with the Chinese Government; and it is pretty freely understood that he has done so under circumstances essentially similar to those under which Captain Lang retired,—a victim to a strong combination of envy, ignorance, and intrigue."

THE "NICHU NICHU" ON COUNT OKI'S RESIGNATION.

THE fact that Count Oki, President of the Privy Council was implicated, willingly or unwillingly, in the revelation of information which ought to have been kept secret, is now pretty generally regarded as true, and that Count Oki has presented his resignation in consequence is also certain. We have mentioned that the *Nichi Nichi* condemns Count Ito's action in endeavouring to retain Count Oki's services, and it will interest our readers to learn something of that journal's line of argument. The *Nichi Nichi*

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

says that many reasons have been assigned for the Count's resignation. Some attribute it to his long illness; and others are equally positive that the incident of the secrets of the Educational Department having been divulged is entirely unconnected with his present position. But these reasons are worthless; for according to the former hypothesis the Count ought to have left the Cabinet in June, his malady being at that time said to be very acute; while with regard to the latter, it is plain that no official in the Government is at liberty to divulge administrative secrets, especially when the act is prompted by commercial considerations. No high official can venture to expose himself to the disgrace of such suspicions. It is therefore right for the Count to present his resignation. Undoubtedly he sets much store by his honour, and shrinks from disgracing his prominent official position. On the other hand, since he wishes to resign in order to preserve his honour, none of his colleagues in the Cabinet ought to advise him to remain in office. Yet it is reported that nearly every member, from Count Ito downwards, has tendered this advice, and that Count Oki has promised to remain quietly where he is. What a farce, to be sure! When the public heard the intelligence of Sawayanagi's resignation, they attacked Mr. Kono, Minister for Education, because the consequences of the affair had not been extended to Count Oki. But that was a misconception. No single Minister can take measures to punish a colleague, since the latter is appointed by the Sovereign and is responsible to the Sovereign. The only power by which such a step can be taken is the Cabinet itself. The Cabinet recognized the fault of Sawayanagi, and dismissed him; but when there is question of extending the blame to a colleague primarily in fault, there is hesitation. If such a singular strange policy be pursued, how can the present Ministers hope to hold the reins of Administration? Count Oki, indeed, can excuse himself by saying that he presented his resignation, but what excuse can the other Ministers of State find? The *Nichi Nichi* is especially anxious to elicit a satisfactory reply from the mouth of Count Ito.

To ordinary observers it must seem that the manner of dealing with this affair should be largely influenced by details which have not yet been published. The chief point is, how did the information furnished to Count Oki become public property. If the disclosure did not occur through any act of his which can reasonably be called careless or a breach of trust, we fail to see why he should suffer. Indeed, we find it difficult to comprehend why the Director of the *Tosho* Bureau in the Department of Education should have been obliged to resign at all. If it be necessary for a Director of a Bureau to withhold official confidences from a former Minister of State and present President of the Privy Council, the margin of permissible trust must be exceedingly narrow in Japan. Supposing that Count Oki's position warranted the confidence placed in him, then Mr. Sawayanagi should not be blamed for trusting him. In other words, supposing that Count Oki's official position guaranteed his circumspection, then Mr. Sawayanagi might with propriety have made him the repository of official secrets. On the other hand, if the Count's official position did not bind him to reticence, then he, in turn, ought not to forfeit that position for speaking. That both should be driven out of office simultaneously is a perplexing result. We cannot help suspecting that this is another case of the sentimental agitation to which the Japanese sometimes—may we not say often?—lend themselves. It is not to be conceived for a moment that Count Oki deliberately betrayed an important official confidence for the sake of some paltry commercial consideration. The information he possessed must have been obtained surreptitiously and without his knowledge by the booksellers. In that case the whole matter might be cleared up by simply explaining the details. Such would be the course pursued in the West. But no. In

Japan the first thought is, an untoward thing has happened; and the second, some one must suffer for it. Mr. Sawayanagi resigns because a secret connected with his Bureau has been divulged, never mind how or by whom. Count Oki is invited to resign also because the secret passed through him *en route* to the public. Mr. Sawayanagi may have been perfectly justified in trusting the President of the Privy Council, an old statesman of nearly forty years' service. Count Oki may have taken every reasonable precaution to guard the secret. But nobody stoops to such details as these. The issue alone fills the whole vista of public vision; the secret is out; let a sacrifice be made.

Were this incident less open to query it might be recognised as a cause of congratulation. Official secrecy is not sufficiently observed in Japan. Information which ought never to be published, frequently finds its way into the press, and conferences which in other countries are strictly veiled from general ken, become known somehow or other in Japan. It is therefore a wholesome and welcome sign that the necessity for discretion is beginning to be recognised. But we wish that the recognition should take a more practical and less sentimental form.

MR. INOUE KAKUGORO, M.P., ON THE KOREAN QUESTION.

MR. INOUE KAKUGORO, who is acknowledged to be the most powerful debater in the House of Representatives, delivered an interesting address on the Korean question at a meeting of the Tokyo Educational Society held on Sunday last in the Kōseikan, Kobikicho, Tokyo. The exceptionally popular festival of the National Cemetery at Kudan, and the chrysanthemum blossoms at Dangozaka, kept away many of the usual attendants at public lectures. Despite these circumstances, however, the meeting was very well attended, for, when the well known orator ascended the platform, all the seats were packed with attentive listeners except one or two rows in the rear. On any subject Mr. Inoue is an entertaining speaker, but on the Korean question he has special claims to be heard, having been for several years an adviser to the Korean Foreign Office as well as editor of the *Korean Official Gazette*. He was in Sōul at the time of the celebrated *emeute* of 1884; and he is personally acquainted with many other interesting episodes in the modern history of the peninsular kingdom. These circumstances, together with the report that he is engaged in preparing interrogations to be put to the Government on the Korean question in the coming session of the Diet, had made the audience so impatient to hear him that the speaker advertized to deliver the first address was forced to terminate his speech abruptly about midway.

Mr. Inoue commenced by congratulating his countrymen on the attention paid by them to the foreign policy of the empire. He extended hearty acknowledgment to the labours rendered in this sphere by men like Mr. Inagaki Manjiro, Mr. Oishi Masami, and the members of the Tōhō Kyōkai (Oriental Association). But he regretted to observe a tendency to become engrossed by abstract principles and distant contingencies of foreign relations, leaving unnoticed practical and important questions daily arising in Japan's intercourse with foreign states. To discover such questions, it was not necessary to go farther than Korea. He invited his audience to study with him a few of the more important of the Korean problems. The first related to the working of the telegraph line between Sōul and Fusan. That the line would be of little service to Japan in case of emergency had been conspicuously proved in June last. On the 16th of that month, an attempt had been made in Sōul to blow up the Tai Won-kun's residence. A telegram reporting the occurrence had been despatched by the Japanese Legation on the morning of the 17th. The message had taken a week to reach Fusan, where it had been delivered on the 23rd. Had

anything happened to the line? Certainly not, for commercial telegrams had been transmitted all the while much as usual. Moreover, a telegram which the Foreign Office in Tokyo had wired on the 23rd of the same month, asking for detailed information, had not arrived at the Japanese Legation in Sōul until the 27th. Such mysterious delay had not been confined to telegraphic messages. A letter mailed for Tokyo by the *Fiji Shimpō's* Sōul correspondent had experienced a similar fate. Mr. Inoue then fully entered into the circumstances under which the Sōul-Fusan line was constructed, relating how Japan had obtained in 1883 the consent of Korea for the construction of the line; how China had stepped in, compelling Korea to break faith with Japan and to give to the Middle Kingdom complete control for 25 years over all lines constructed in the peninsula; how, after protracted negotiations, Korea had been induced, as a sort of compromise, to construct the Sōul-Fusan line at her own expense. Thus Japan had lost her opportunity, and the only line of communication with the Korean capital was now in the hands of men evidently interested in stopping Japanese messages. At all events the unpardonable irregularities that had occurred at the time of the attempted outrage in the Tai Won-kun's residence, ought to be enquired into by the Japanese Government, and full satisfaction obtained for the insult put upon this country. At this point, Mr. Inoue referred to the Tientsin Treaty of 1885. Count Ito was very proud of the Treaty, and indeed, so far as the convention itself was concerned, the speaker readily acknowledged the great service rendered to Japan by the present Minister President of State, seeing that Japan's rights in the peninsular kingdom had been placed on an equality with those of China. But of what avail could the Treaty be, when in practice Japan could not even count on receiving timely information of any important event in Korea?

The second question to which Mr. Inoue directed attention, was the illegal prohibition of the exportation of beans by the Korean Government in 1889. This measure had inflicted upon resident Japanese merchants an aggregate loss of 140,000 *yen* approximately, for they had not been able to obtain delivery of a staple on which they had advanced cash to the Korean farmers. The Korean Government had been at once approached on the subject of indemnifying the loss, but by various pretexts the claims of the Japanese Minister had been put off, and the question remained still unsettled. Mr. Hara, Director of the Commercial Bureau in the Foreign Office, had recently gone to Sōul to see what could be done about the matter. His mission, it was said, had not been productive of any definite results.

The third and last point which the speaker wished to bring to the notice of his audience was the fisheries question. Japan had obtained, in 1883, the privilege of fishing along the coast of Korea. But subsequently, in view of peculiar circumstances connected with the fishermen, or rather fisherwomen, of the island of Saishu (濟州島), this empire had agreed to waive the privilege for a certain period of time. On the expiration of that period, Japanese fishermen had begun to ply their calling off the island of Saishu, whereupon the inhabitants of the place had given them a savage reception. The matter had at once become a subject of negotiation between the two Governments, but remained still unsettled. Meanwhile, an act of barbarity had again been committed, and on this second occasion the local Governor had gone the length of expelling the Japanese fishermen from the coast of the island. Now what did these questions teach? They taught that the Japanese Government had been guilty of excessive timidity and weakness in dealing with Korea since the year 1884. The prestige acquired and held by Japan in Korea up to the disturbance of 1884, has been suffered to wane conspicuously through the helplessness and

apathy of the statesmen in power. The position of Japan in Korea resembled that of a good-natured, but weak-willed old man quietly jostled out of the wrestling arena by a cunning child. By way of illustration, Mr. Inouye referred to the attitude of the Japanese Government towards the occupation of Port Hamilton by England. At that time he had been adviser to the Korean Government; and becoming acquainted with the fact of the occupation in the course of official routine, he had reported the event to the Japanese Minister at Seoul, who, on consultation with his superiors at home, had replied that Japan did not propose to take any notice of the matter. Would the Japanese Government have assumed such an attitude of indifference, had the thing happened prior to 1884? Mr. Inouye had submitted to the Government various interrogations relating to Korea in the first session of the Diet, when Viscount Awoki, though refraining from dealing directly with the points at issue, had promised that no further cause of complaint should be given. Had this promise been fulfilled? The speaker answered in the negative, but took care to observe or hint that the blame rested, not with those in power since then, but with the originators of the weak and passive policy, namely, Count Ito and Count Inouye, whom he designated as the original culprits. He further declared that Japan's invertebrate attitude has not been confined to the case of Korea, but as to this point he refrained from details. What was to be done in future? On the one hand, the Japanese should devote serious attention to the practical questions of foreign intercourse; while, on the other, the Government should supply the public with true and undisguised information about the country's foreign relations, within the limits of due diplomatic secrecy, and should exercise more care in the choice of diplomatic functionaries despatched abroad. Above all, he urged the importance of adopting an active and strong policy, not only towards Korea, but also towards every other foreign country, and he declared that the empire's earnestness in her new policy should be proved by some practical test. What the test should be he did not definitely indicate, but he alluded, in a significant tone, to the sudden rise of Japan's prestige in the East after the Formosan Expedition. At the same time, he disavowed any intention of suggesting an invasion of Korea, though repeating his expression of ardent desire that something should be done to recover the country's lost prestige in the peninsular kingdom.

BUDDHISM IN JAPAN.

THE regeneration of Buddhism is a very popular topic in a certain circle of Japanese scholars, but to all appearances their writings on the subject have not yet produced any noteworthy result. The difficulty seems to be that there does not exist at present any priest equal to the task of reformation. Nobody appears to question, however, that the time for reformation is nearly ripe. The *Ajiya*, a periodical very favourable to Buddhism, thinks that the day has passed irrevocably when any form of religion can hope to exercise over the hearts of men a hold comparable with that exercised by theological superstition during ages of comparative ignorance. The progress of science, says our contemporary, is daily narrowing the sphere of religion, and the Buddhist priests had better console themselves with the knowledge that not their creed only is losing influence. At the same time, the *Ajiya* is not without hope that Buddhism may yet recover something of ancient power. The present scarcity of able men in the ranks of its priesthood is not likely to be remedied within a short space of years, inasmuch as the requirements of other departments of life are absorbing virtually all the available talent, and will continue to do so for many years to come. In feudal days the priesthood was the only sphere where men of genius but insignificant lineage could hope to profitably utilize their ability. Consequently, those days were productive of great reformers and able teachers. But now the priesthood

is composed, for the most part, of the lowest dregs of society, bankrupt spendthrifts, knaves who have no other place of refuge left, and good-for-nothing fellows incapable of earning a livelihood in any sterner line of life. Moreover, the number of priests is unduly great. The first step towards the regeneration of Japanese Buddhism should be to purge the priesthood of all its undesirable elements. This measure is of urgent importance, even from an economical point of view alone; for many temples are quite unable to maintain their present staff of priests. We read that one of the causes of the increase of worthless priests is the repeal of the law of celibacy which used to be rigidly enforced in all the sects, except the *Shinshu*. The liberty of modern times has been followed, in many cases, by the introduction of a hereditary system in the appointment of priests.

THE MASON AFFAIR.

A SPECIAL correspondent of the *Nichi Nichi Shimbun*, writing from Peking, says that the Mason Affair has once more come before the public. Our readers remember that Mason was charged with secretly procuring gunpowder and arms for the Ko-lao-hui (a secret society in China). Arraigned on this charge, he was convicted and imprisoned. But since he left Shanghai, being deported to England, no news has reached China. It is rumoured that he has since then been living at Foochow disguised as a tea-broker. In the middle of July it was reported that he came to Nanking, and urged the members of the Ko-lao-hui to renew their treasonable doings. The Chinese Government discovered the fact, and at once requested the British Authorities to adopt rigorous measures. The first application in this sense was despatched some two months ago, but the British Government took no notice of it. After the request had been repeated several times, however, the British Government at last sent an inferior official to confer with the Taotai of Shanghai. But the latter refused to approach the question under such circumstances, for in view of the importance of the affair, the Taotai considered it a slight to China that an official of such junior position should be entrusted with its conduct. The British commissioner thereupon left Shanghai in high dudgeon, and as soon as he arrived at Hongkong he despatched a telegram to his Government giving information of the fact. On the receipt of this telegram the British Government were so indignant that they at once directed the British Minister in Peking to open formal negotiations with the Chinese Authorities. Of late, adds the correspondent, the relations between Great Britain and China have been very harmonious, but the present question has involved some friction. How it will end there is as yet no certainty, but the correspondent promises to lose no time in communicating the result to the *Nichi Nichi*.

* *

We think that without waiting until our Tokyo contemporary's correspondent learns the end of the above interesting incident, we can submit a few facts which will facilitate knowledge. On October 29th, 1891, Mason was sentenced to nine months' imprisonment. His term of punishment consequently expired on July 29th, 1892. In addition to the sentence of imprisonment, he was ordered to find two securities, in \$2,500 each, for his good behaviour, and if he failed to find them, he was to be deported to England at his own expense. On July 26th, he was brought up in H.B.M.'s Supreme Court, Shanghai, before Chief Justice Hannen, and being asked whether he had found, or was prepared to find, such securities, he replied in the negative. Thereupon the Chief Justice ordered him to be deported at the termination of his sentence, and deported he was at the end of July. It will be seen, therefore, that the story of his arrival at Nanking in the middle of July is a palpable falsehood: he was then safely lodged in the Shanghai Consular Prison. Further, the procedure attributed to the British Government is manifestly absurd. Had Mason escaped en route for England, and resumed his treasonable practices in China, the Tsung-li

Yamên would have approached H.B.M.'s Representative in Peking, not the Foreign Secretary in Downing Street, and the idea of the latter's sending an inferior official from London to confer with the Taotai of Shanghai is one of the most comical results of ignorance ever published. We venture to denounce the whole history as a baseless *canard*, and to advise the *Nichi Nichi Shimbun* not to mar its well earned reputation for accuracy by admitting to its columns the lucubrations of a correspondent who is without not only essential information of the notable events he discusses, but also the most rudimentary knowledge of official procedure.

CONFERENCE OF THREE COMPANIES.

To facilitate the transmission of parcels, the Department of Communications ordered the Japan Railway Company, the Tanko Railway Company, and the Japan Mail Steamship Company to make some arrangement for connected service. The three companies held a number of conferences but could not come to any agreement, as the programme presents many pros and cons. For instance, the Japan Railway Company desires to open direct communication with the Tanko Railway Company, by utilizing the railway from Tokyo to Aomori; and by establishing a regular steamship service between Aomori and Mororan, leaving Hakodate out in the cold. This scheme would greatly increase the business of the railway companies. But, on the other hand, the Japan Mail Steamship Company oppose the proposition as it would deprive them of a large amount of business. At present the service between Aomori and Hakodate costs the Company some twenty to thirty thousand *yen* per annum owing to the scanty quantity of cargo procurable. Therefore, were the route changed to Mororan, which has a still smaller population than Hakodate, the loss to the Company would be prohibitive. Moreover, the proposed route is known to be one of the most dangerous in the empire, so that the Company would have to engage the services of specially expert captains and officers. Further, the change to this route would mean that the Company must lose the passengers and cargo now shipped from Yokohama to Hakodate. Under such circumstances, the Steamship Company absolutely refuse to endorse the above programme. The Directors point out that since they were ordered by their charter to transmit postal matter to Hokkaido, they have never been guilty of any mismanagement; therefore, if the Government desires to extend the route or alter the original arrangement, some appropriate subsidy must be granted: otherwise the Company cannot possibly agree to a ruinous proposition. How the matter will end is a problem awaiting solution. But it is rumoured that the Directors of the two Railway Companies intend to adopt a measure similar to that practised now by the Sanyo Railway Company namely, to charter steamers, and open the new route on their own account. These facts are published by the *Nichi Nichi Shimbun*.

THE DIET AND THE ANNUAL SURPLUS.

THE method of disposing of the annual surplus of 6,500,000 *yen* resulting from the reductions effected in the first session of the Diet, has yet to be determined. Writing on this subject, the *Keisai Zasshi* (the Economist) observes that the present Cabinet will not introduce any Bill for the transfer of the prison expenses to the charge of the Treasury or for the establishment of a steel foundry, though both of these measures were submitted to the Diet last spring by the Matsukata Ministry. The only project which the Cabinet intends to advance for employing the surplus is said to be a Bill for the construction of war vessels. But that will absorb only a small part of the amount. Hence it would seem, says the *Keisai*, that the Government's object is to leave the Diet to find some suitable means of utilizing the surplus. What then will be the Diet's plan? The Progressivists are very plain on this subject. They aim at augmenting the surplus to about 12 million *yen* by further reductions in public expenses, and devoting the amount thus realized to the reduc-

tion of the land tax, the reassessment of the taxable value of land, and the abolition of the duties on exports. The Radicals, on the contrary, are anything but decided in their views. Straightforward and disinterested men they certainly may be accounted, but it does not appear that they are at home in financial questions, nor does the public credit them with possessing any definite plan about the surplus. They hold very erroneous views as to the necessity of giving pecuniary protection to the silk industry, and as to the extension of the maritime carrying trade. With regard to the questions of the reduction of the land tax and the reassessment of the taxable value of land, they are evidently at a loss, and though recognising the importance of abolishing export duties, their unwillingness to accede to any further reductions of the public expenditure, prevents them from putting their hand resolutely to this branch of the tariff. The *Keisai* laments this incomprehensible hesitation on the part of politicians of the *Fiyu-to's* standing and influence. As to the National Unionists, they advocate the use of the surplus for the transfer of prison expenses to the charge of the Treasury, and many of them are in favour of reassessing the taxable value of land, as well as of abolishing export duties. But few of their party will support a project for the reduction of the land tax. Such being the attitudes of the three great parties towards the problem of the surplus, the *Keisai* apprehends that the coming session may possibly close without any measure for its disposal being adopted. To demonstrate the impossibility of satisfying the wishes of all the parties at the same time, our contemporary gives the following table, showing the amounts of money required for the various schemes which the different political bodies advocate:—

Transfer of the prison expenses to the charge of the Treasury	YEN. 3,200,000
Reassessment of the taxable value of land	5,000,000
Reduction of the land tax	7,000,000
Abolition of export duties	1,500,000
Revision of tax on confectionery	500,000
Revision of other taxes	2,000,000
Total	19,200,000

It is evident that the wishes of all can not be satisfied simultaneously. They must be prepared to approach the solution of this question in a perfectly fair and impartial spirit, if they really mean to promote the benefit of the people. The surplus has lain idle in the Treasury for three years, and it is high time that something should be done to replace it in circulation. The *Keisai's* proposal is to apply it for transferring the prison expenses to the charge of the Treasury, for abolishing export duties, and for revising various minor taxes.

SHOOTING LICENSES.

According to the vernacular press, the only foreigners who have applied for and obtained shooting licences, up to the present, under the provisions of the new Regulations, are three, namely, a Korean, a Mexican, and a Portuguese. In the case of the two former, the matter is simple enough. The Mexican and Korean treaties with Japan have no extraterritorial clauses, and all citizens of Mexico or subjects of Korea, while within Japanese territory, are under Japanese jurisdiction. Thus the prohibitions of the Game Regulations are applicable to them at once, without any diplomatic intervention, and can be enforced against them by Japanese tribunals. To observe the prohibitions is the only condition necessary for enjoying the privileges of the Regulations, and Mexicans and Koreans can therefore obtain licenses at once. As to Portugal, however, the Radical organ declares itself much perplexed. The reason assigned by its informants for the immediate extension of the privilege to Portuguese subjects, is that extraterritoriality has been abolished in their case. "If that be so," says the *Fiyu*, "are we to understand that Portuguese residents receive the same treatment as Japanese subjects; and if they do, why are they not required to pay land tax, local taxes, and so forth like the Japanese?" It is surprising that the *Fiyu*, at this late period, does not yet understand the position in which

Portuguese subjects stand. The treaty with Portugal has not been denounced. It stands precisely as it always stood, with the one exception that Portuguese subjects have become judiciable by Japanese Law Courts, and are therefore directly amenable to Japanese laws. But they do not receive in other respects the treatment of Japanese subjects: they cannot trade in the interior or visit it without a passport; they cannot own land outside the settlements; they cannot enter into partnerships with Japanese, and so forth. So far, however, as concerns the Game Regulations, or any other Japanese laws, their prohibitions are binding upon Portuguese subjects in Japan, and can be enforced against them by Japanese tribunals. Consequently, no diplomatic action is required to extend the Regulations to Portuguese residents, and the latter therefore obtain shooting licenses at once. We do not perceive anything perplexing about this state of affairs.

THE EASTERN RADICAL PARTY.

THE above political association held a meeting, to celebrate its establishment, in the Nakamura-ro on Sunday last. The garden was decorated with flags of all nations and lanterns. Mr. Oi Kentaro, promoter and leader of the Party, took the chair. The following declaration of policy and Rules of the Association were read out:—

POLICY OF THE PARTY.

1. To maintain the prestige of the Imperial Household, and to extend popular rights, thus achieving the practical reality of Constitutional Government.
2. To adopt uncompromising measures in foreign policy and thus assert the national rights.
3. To adopt a progressive policy in internal affairs, and thus increase the national wealth.
4. To arrange the finances of the nation, and thus gradually lessen the burdens of the people as much as the requirements of the empire will allow.
- To protect poor labourers specially.

RULES OF THE PARTY.

- Art. 1.—The business office shall be established in Tokyo.
- Art. 2.—The following officers shall be appointed in the office:—Managers 3, Clerks 2.
- Art. 3.—The Managers shall discharge all the business of the Association; and the clerks shall transact miscellaneous affairs under the orders of Managers.
- Art. 4.—The managers shall hold a meeting every month, and may hold special meetings when any important business requires adjustment.
- Art. 5.—General meetings shall be held in Spring and Autumn, and the policy of the Party shall be determined at such meetings. In the event of the Managers passing a resolution that an important question calls for solution, a special general meeting may be held.
- Art. 6.—The Managers shall report the transactions and accounts of the Association at the general meeting.
- Art. 7.—Any person desiring to become a member of the Party must apply to the office with the introduction of at least two members of the Party. Any person desiring to resign must also apply to the office, but need not have any supporter.

* * *

After the above platform and rules had been passed, Mr. Oshima Somenosuke delivered a speech on the organization of the Party, and this concluded the celebration. At dinner, afterwards, Mr. Oi Kentaro declared in favour of universal franchise. He said that the national spirit is degenerating fast, and that the cause of the trouble is the Diet as well as Clan Government. To revive that spirit, it is necessary to improve the Diet and the Government; and to the latter end universal franchise is essential.

* * *

There is no mistake about Mr. Oi Kentaro and his followers: they are out and out Radicals. It is pleasant, at all events, to find some coterie of politicians who propose to themselves and to the public a distinct issue. Critics may say that Mr. Oi has been clever enough to detect the political hiatus of the era; that it does not greatly matter to him what complexion he assumes, but that, observing how lack of vertebrate purpose has brought about the disintegration of party after party in Japan, he sees a unique opportunity for any leader who offers to the weary public something with a little "snap" about it. That may or may not be true. We do not venture to discuss it, preferring rather to accept facts and leave the probing of motives to those who like such work. The facts in this case are that

before parliamentary institutions have been two years in existence, universal franchise has been adopted as the shibboleth of a political party. And not only universal suffrage, but also something very like socialism, and a kind of foreign policy which might soon endanger the national existence of Japan. These things are disquieting enough. Mr. Oi will find followers because he has something tangible to offer them, if for no other reason. But to outsiders it seems almost comical that at the head of a programme based on universal suffrage he should declare a purpose to maintain the prestige of the Emperor; and that side by side with professions of a progressive domestic policy, he should announce his resolve to exclude all foreigners from the interior.

THE MANNER OF EXTENDING THE PUBLICATIONS OF JAPANESE REGULATIONS TO FOREIGNERS.

WE observe that although the United States Consulate-General is usually very prompt in taking necessary administrative action with regard to its nationals in Japan, it has not published any notification about the recently issued Game Regulations. The course generally pursued by the American Consul-General in these cases has been to call the attention of his nationals, by notification, to the circumstance of such and such a Japanese law or set of Regulations having been promulgated. This has not been done in the present instance. But the omission, we learn, does not imply that the Game Regulations are ignored, or that American citizens may not take advantage of their privileges. On the contrary, the Consul-General, in refraining from any direct action, has adopted a view which seems to be perfectly logical and consistent. America's attitude with regard to Japanese laws is that they are binding, *qua* Japanese laws, on her citizens in Japan. They need not be re-enacted, nor need any special penalties be provided. The penalties already prescribed by American law are applied, whenever applicable, and when penalties directly applicable do not exist, the case is treated as a misdemeanour. In accordance with this principle, enunciated by the Government of the United States, the present Consul-General assumes the position that no necessity exists to publicly call his nationals' attention to any Japanese law. The mere fact of a law being duly promulgated is in itself sufficient to necessitate observance of its provisions. This procedure, or rather absence of procedure, completely rounds off the attitude of United States officials towards Japanese laws. The law is there and must be observed. Whatever machinery the Japanese Government employs to promulgate it, that machinery is sufficient in the eyes of the American Consul-General.

THE VERNACULAR PRESS ON THE PRESIDENTIAL ELECTION.

THE vernacular press takes much interest in the political affairs of foreign countries as well as in any noteworthy event that occurs there. After the general elections in England and the formation of a new Cabinet, many of the leading papers in the capital discussed the situation and showed an intimate knowledge of the strength of the Gladstonian Government. The deaths of Lord Tennyson and Mr. Whittier were also spoken of at length. The *Kokumin Shimbun* devoted a leading article to the latter, eulogising him as a true popular poet; and the *Kokkai* and other papers published articles on the English Poet-Laureate. To these things we have already alluded. We now observe that journalistic eyes were very keenly concentrated on the Presidential Election. The day after the receipt of the news, every paper in the capital contained some account. Among their articles the most noteworthy are those of the *Fiji Shimpō*, the *Kokumin Shimbun*, the *Mainichi Shimbun*, the *Hochi Shimbun*, and the *Kokkai*. Everyone of these papers gave a portrait of Mr. Cleveland; the *Fiji Shimpō* published a portrait of Mr. Stevenson as well, and the *Mainichi Shimbun* contained skillfully engraved pictures of both Cleveland and Harrison, while the *Fiji*, the *Kokumin*, and the *Kokkai* devoted long

leading articles to the subject. The *Yiji* assigns various reasons for Mr. Cleveland's victory. It says that he has always been upright, and that he does not act simply for the benefit of his party. Hence, he was well regarded by independent as well as by some of the Republicans themselves. Again, in the last election, when Mr. Harrison was returned, it appears that bribery was freely practised by the successful side, some three million dollars having been spent in this manner, according to rumour, which proceedings doubtless discredited the Republicans more or less.

The *Kokumin* congratulates Mr. Cleveland on his victory, and states the hopes it founds on the administration of the newly returned President. These hopes are four in number, as follow:—After the War of the North and South the Republicans held the Presidency for over 30 years, except 4 years when the Democrats were in power. All sorts of abuses gradually came into existence during these long years, and the most suitable statesman to eradicate them is Mr. Cleveland. In the second place, the Republicans profess the creed of Protection, and one of the grossest pieces of maladministration under Mr. Harrison was the Mc'Kinley Bill. But Mr. Cleveland and the Democrats have openly declared themselves free-traders, and will gradually inaugurate a wholesome system. Thirdly, civil service reform will be carried out by Mr. Cleveland. President Harrison appointed to the position of Postmaster-General a man whose only claim was that he had contributed largely to the expenses of the political campaign. Such a scandal will not occur under the Cleveland administration, whatever personal considerations may exist. Fourthly, President Harrison spent the surplus of 130,000,000 dollars on army pensions, but Mr. Cleveland will sanction nothing of the kind.

Such, in brief, are the views of the vernacular press. We make no comment on them, but reproduce them for the edification of our American readers.

THE BARRISTERS' EXAMINATION AFFAIR.

THE Barristers' Examination scandal excited public interest some weeks ago, but people ceased to think more about it when the discovery was made that the culprit had trusted to memory for the questions to which he had had access as a copyist, and that he had divulged them to a relation of his own, who in turn had sold them to other candidates. The judgment of the Court before which these persons were arraigned has already appeared in our columns. In connection with the affair, however, it was reported that a certain Yuruka had attempted to obtain money by selling examination questions prepared by himself, which he alleged to be the genuine questions. This Yuruka, and another youth named Sekiuchi, have been tried on a charge of obtaining money by false pretences, and the following judgment has been delivered:—

JUDGMENT.

YURUKA SANEAKI, Defendant, Clerk of a Law Court.

SEKIUCHI HYOKICHI, Defendant, Employé in a Barrister's Office.

With regard to the charge of obtaining money by false pretences preferred against the defendants, as examined in the Preliminary Court, the following are the facts elicited:—While Sekiuchi Hyokichi, defendant, was in Tokyo in August, 1892, on business in connection with a law suit, Watanabe Kaoru, a relation of his, came to visit him. Watanabe said that he had failed to pass the Barristers' Examination several times, and that there was no hope of his passing unless he could obtain the examination papers beforehand. He requested Sekiuchi to procure them for him, promising him a handsome reward for his trouble. Sekiuchi was acquainted with one Kobayashi Mitsutaro, who had been a probationer of the Judicial Department when Sekiuchi served in the same Department. Hearing that Kobayashi's functions were connected with the Committee of Examination for Barristers, Sekiuchi promised Watanabe to procure the questions for him from Kobayashi. Sekiuchi therefore invited Kobayashi to the Fujimi-ro (restaurant) in Iidamachi, on or about the 24th of August, and requested him to give him the papers, but without success. Thereupon, knowing that Yuruka Saneaki, the defendant, was an intimate friend of Kobayashi, Sekiuchi thought it advisable to ask Yuruka to apply once more to Kobayashi, and accordingly called, the next evening, on Yuruka at his house. It happened that Kobayashi also was in the house, and thereupon Sekiuchi invited the two to the Shuyetei, a wine-shop in Kanda, where, after drinking some wine, Sekiuchi proposed that they should proceed to the Yoshiwara to spend the night. But Kobayashi excused himself *en route*, so the other two went to the Yoshiwara, and spent the night at a brothel. The following morning, they returned as far as Asakusa Temple, and breakfasted at the Ichoku in Asakusa Park. Sekiuchi asked Yuruka whether there were any means of obtaining the examination papers from Kobayashi. In reply, Yuruka declared that he also was a candidate at the next examination for barristers, and that, inasmuch as Kobayashi was an intimate friend of his and had promised to assist him in every way, there would be no difficulty whatever in obtaining the papers. Sekiuchi at once sent for Watanabe, and introduced him to Yuruka, whereupon the latter declared that he should do his best to assist Watanabe. Subsequently, Yuruka called on Kobayashi at the Judicial Department, and begged him to divulge the secret. Kobayashi was not willing to comply with the request, but he did not definitely refuse. Therefore, on the 4th of October, Yuruka invited the said Kobayashi to dinner at the Nishiki-tei in Kanda, and again asked him to divulge the secret. Kobayashi thereupon produced a list of his debts, and said that being unable to pay them, he was in trouble. Thus, indirectly, he asked for a consideration. He also stated that some of the questions had escaped his memory, so he should be obliged to reflect about them. While they were engaged in the negotiation, Sekiuchi came into the room, and they accordingly parted for that evening. On the following day the three assembled at the Nishiki-tei again. Kobayashi showed his figures, and asked Sekiuchi whether he was ready to pay a sum of 500 yen, but added that as he had forgotten several of the questions on the Code of Civil Procedure and the Commercial Code, he should like to see the questions compiled by Yuruka to refresh his memory. He further said that the Wakamatsu Local Court having no candidate for the examination, the papers had not been sent there, but that if any one applied to that Court, the papers would have to be despatched, and he should then have an opportunity of refreshing his memory by reading them once more. Yuruka thereupon took Kobayashi to the house of Watanabe, and they negotiated there. Kobayashi declared that he had forgotten two or three questions, and did not divulge anything that day. But judging from the conduct of Kobayashi, Yuruka thought that he could obtain the questions, so he took a collection of questions to Kobayashi on the following day for the purpose of refreshing his memory. Frequently he called on Kobayashi at the latter's house and office, until the 9th October when Kobayashi at last definitely refused to comply with the request. Previously to the above event, Watanabe had negotiated with Murozumi Daisaku, Masunaga Tamaki, Jojo Motozo, Watanabe Kumakichi and some others, and they had agreed to pay the expense jointly. While Watanabe was engaged negotiating with Yuruka and others, for the purpose of collecting funds, that is to say, during the period between the first conference with Kobayashi and the latter's final refusal, Watanabe demanded a sum of over 300 yen from the others on various pretexts—such as to pay the cost of secret-meetings with Kobayashi; to defray expenses incurred by Yuruka; to discharge Yuruka's old debts, so as not to lose his good offices, and so forth. Watanabe and Sekiuchi lodged at the Seigaian in Asakusa, and enjoyed themselves for over 10 days with the funds thus collected. To obtain the questions, however, a large sum was still required, and as Murozumi and the rest had no more money, Watanabe communicated the plot to Kumeda Shonosuke, another candidate for the examination. The latter was also anxious to obtain the papers, so he promised to pay a sum of 1,000 yen. Watanabe thereupon communicated the fact to Yuruka, and asked him to divulge the secret without any more delay. But as Yuruka had been refused by Kobayashi, he could not produce the genuine papers. He therefore resolved to prepare a set of questions in fulfilment of his promise, and for the purpose of obtaining more money for the forged document. On the 11th of October, he extracted twelve questions from his collection of questions, and took them to the Seigaian in Asakusa, where he met Sekiuchi, Watanabe, Jojo, and Kumeda, and informed them that he had obtained the questions from Kobayashi at last, and that a sum of 500 yen was demanded by way of consideration. After some bargaining, he agreed to sell the questions for 300 yen, and on these terms he dictated the false questions to Watanabe. Kumeda then handed him three 100 yen cheques of the First National Bank, and these Yuruka gave to Sekiuchi to cash. Kumeda, however, suspecting the genuineness of the questions, went to the First National Bank the following day to stop payment of the cheques, and Yuruka consequently failed to obtain the cash on that occasion. But Sekiuchi induced Kumeda to re-write one cheque for 100 yen in exchange for the former, and that sum was finally procured, the remaining two cheques being held by Yuruka. Watanabe Kaoru, believing the questions to be genuine, sold them to Masunaga, Murozumi, and Watanabe at the Mangan, a restaurant in Sambancho, on the 11th of October for 30 yen in cash and a promissory note from each. Watanabe also showed them to Kuniyoshi Takuro and Kojima

Shusaku and received 30 yen. The sums thus collected were devoted to paying various debts incurred in obtaining the questions, but the promissory notes were subsequently returned. Kuniyoshi showed the questions to Iotta Masao, who showed them to Shiro Momokichi, Taketa Hatsutaro, Kawai Shin, and Shimizu Masahiro; from whom they passed to Ito Tomokichi; thence to Hanzawa Shokichi and Kono Shusaku, and finally to Kuroda Kenfu. On the other hand, Murozumi Daisaku, after obtaining the questions from Yuruka, communicated them to Hayashi Kurajiro; by whom they were given to Maruyama Toshio; by him to Nagata Tokusuke; by him to Nagaya Seizo and Hotta Danshi; by Nagaya to Hirose Takisaburo and Yoshiike Shigenosuke; by the last to Takei Kumakichi; and by him to Yonekawa Keishi. For all these communications some received money, while others obtained promises of future payment.

The above facts are clearly proved. The Court considers that the act of Yuruka Saneaki, defendant, in obtaining cheques in exchange for spurious questions compiled by himself, is a crime as contemplated by Arts. 390 and 294 of the Criminal Code. Therefore, in accordance with Art. 167 of the Code of Criminal Procedure, Yuruka Saneaki is remanded for trial by the Tokyo Criminal Court. But as the defendant Sekiuchi Hyokichi, believed that the questions handed by Yuruka to Watanabe were genuine, which also is proved by the evidence, his conduct cannot be considered criminal. Therefore, in accordance with Art. 165 of the Code of Criminal Procedure, he is acquitted.

(Dated) 12th October, 1892.

(Signed) YAMAGUCHI JUN,
Judge of Preliminary Trial.

MR. OISHI MASAMI.

CONCERNING the appointment of Mr. Oishi Masami, a Radical, to be Minister Resident in Seoul, the vernacular papers have much to say. Among them the *Mainichi Shimbun's* account is interesting. We extract the following criticism from it:—Mr. Oishi is fond of discussing great problems, and has spirit to accomplish any daring deed. In a word, he stands by far above the 'boneless-fish' now swimming in the official pond. Both Count Ito and Viscount General Tani regard him with great favour. In December last a certain Kuromaku Minister confidentially offered him the governorship of Osaka, but Mr. Oishi refused the offer. Some months afterwards he was offered the post of Minister Resident. He at once enquired what country he was to be sent to, and when he heard that there was no post immediately vacant, he refused to accept the appointment, inasmuch as he was unwilling to receive a high salary without discharging any duty. The Government once more offered him the same position with the information that he should be sent to Korea, and he then accepted. It is rumoured that some influential members of the Foreign Office were opposed to the appointment on the ground that Mr. Oishi being a Russo-phobe, his presence in Seoul might create some unpleasantness with the Russian Government. But the Cabinet did not endorse this view. The *Mainichi* thinks it a great mistake to appoint him Minister Resident in Korea, if the Government hopes to establish its Eastern Problem through him; for the centre of action is not Korea but Peking.

This criticism appears characteristic of the implacable opposition of the *Katshin-to* to every Government measure. The *Mainichi Shimbun* itself, when discussing the relations between Japan and Korea, has urged the importance of sending a clever and resolute representative to Seoul. But now that the step is taken, the *Katshin-to* organ turns round and denounces the Cabinet's procedure as futile, since Peking not Seoul is the centre of action for the Eastern Question. Apparently the *Mainichi* thinks that provided the citadel be well occupied, the outposts may be left to take care of themselves. That is not the kind of organization likely to be approved by the astute statesman who stands at the head of the Progressionist Party.

KOMINATO HARBOUR WORKS.

THE *Nichi Nichi Shimbun* gives an interesting account of the proposed construction of a harbour at Kominato. Marquis Ikeda and other principal Directors of the Fifteenth National Bank, we read, were the original projectors of the scheme. They sent in a petition on the subject, and this petition the Governor of Aomori Prefecture submitted to the Divisional Assembly for consideration. It was approved unanimously,

and the promoters are now awaiting the permission of the Department of Home Affairs. Previously, however, to the presentation of this petition by the Fifteenth Bank, Messrs. Murata, Katsura and others had laid before the *Kencho* a memorial in a similar sense. But their available capital was not more than fifty thousand *yen* and their principal idea was to reclaim land along the coast. Under these circumstances, the Divisional Assembly preferred to vote in favour of the subsequent application. The north of Japan possesses great importance from the point of view of national defence. A railway has been constructed from Tokyo to Aomori, so that troops can be easily moved, but there is no suitable harbour in the district. Hakodate doubtless, may be called a good harbour, but being separated by a wide stretch of sea from Aomori, it cannot play a part in any scheme for developing the resources of the main island. Aomori harbour might certainly be much improved, but as there is no shelter between that port and Hakodate, a distance of 59 miles, the navigation is difficult in stormy weather. Moreover, the water outside the harbour is shallow for many miles, so that there is no possibility of making the place a really good port. On the other hand, when the Nicaragua canal and the Siberian railway are completed, which will be in a few years, a large development of maritime traffic will take place towards the northern parts of Japan. To meet the needs of that time, no better port can be found than Kominato, which is situated about 12 miles to the east of Aomori. Within the harbour deep water is found, and perfect shelter is furnished by a chain of mountains. Moreover, the place is fully ten miles nearer to Tokyo than is Aomori. The excellence of the harbour has been proved by experience, but as its extent is very limited at present, a large number of ships cannot find anchorage there simultaneously. The project of the Fifteenth National Bank is to include an area of 212,800 *tsubo* (176 acres) of land along the coast. This space will have, on its outer edge, breakwaters at a height of 4.5 feet above the sea at high water, the construction being solid and massive. A jetty, 150 *ken* (900 feet) long, and having a depth of 36 feet of water at its edge, will be built. The shore inside the breakwaters will be reserved for steamers, which can discharge their cargo at the jetty. Further, a lighthouse is to be constructed at the entrance of the harbour; and a short branch line of railway will be laid from the jetty to join the main line. The expenditure on account of the breakwater alone is estimated at 312,640 *yen*, but the whole enterprise will involve an expenditure of at least a million *yen*.

ABOLITION OF IMPORT DUTY ON COTTON.

THE members of the Cabinet, reports the *Kokkai*, have been engaged discussing the question of abolishing the import duty on cotton. Count Inouye and Mr. Mutsu are reported to be strongly in favour of the change. Mr. Watanabe, too, has always supported the proposition since he became Vice-Minister for Finance. He argues that though there have been signs of a rapid development of cotton manufacturing, the enterprise is not yet firmly established, and therefore, even though the Treasury receives less revenue, the nation will profit by removing the import duty on raw cotton. On the other hand, if this step be taken with regard to cotton, it may have to be followed by a similar step with regard to iron and other staples, in which case the Government would have to look for some compensatory source of revenue. Hence the question must not be dealt with too hastily. It is reported that no member of the Cabinet opposes the project.

THE GAME REGULATIONS.

MR. INOUE KAKUGORO has been expounding his opinion about the Game Regulations, and it finds expression in the columns of the *Nichi Nichi Shinbun*. He considers that the right of property in game has been created for the first time by these Regulations, and that the license fees levied under their provisions, or the fines imposed, cannot be regarded as a tax, since, in the one case, their payment is purely optional—a

reciprocal arrangement, so to speak, between the Authorities and the game owners or pursuers—and in the other, it is a sum collected for the purpose of securing this special privilege, not to the nation in general, but to particular individuals. Not considering the theory of the matter, however, there is another view which Mr. Inouye puts forward in his eminently practical way. Certain politicians, he says, declare that the Diet's legislative functions are encroached upon and its dignity impaired by this procedure on the part of the Government, but they forget that the Emperor, before promulgating the Ordinance in question, submitted it to the Privy Council, and that it was promulgated by the latter's advice, as the preamble distinctly says. If, now, the Diet attempts to question the constitutionality of the measure, and approaches the Throne on the subject, the Sovereign can only seek the opinion of the Privy Council once more, so that the Diet will place itself in the position of bringing a suit against a party which is to sit as judge in the case. Mr. Inouye thinks that if the Diet has any genuine respect for its own dignity, it will refrain from such a fiasco, and will be careful not to engage in a contest where defeat is a foregone conclusion. Mr. Inouye might have added that, after all, the present Cabinet is much less likely to make an error in interpreting the Constitution than any other body of statesmen or politicians in the Empire, and that, moreover, its interpretation is sure to obtain Imperial endorsement.

THE JIYU-TO.

THE third general meeting of the *Jiyu-to* was held on Tuesday last at their office in Shiba Park. The entrance was decorated with flags, and various preparations were made to signalise the event. At 10 a.m. 132 members had assembled in the hall. Mr. Kono Hironaka was voted to the chair, and business commenced at once. Count Itagaki Taisuke, President of the Party, rose, and delivered a speech which, as it possesses great interest at the present juncture, we translate in full:—

GENTLEMEN,—I intend to speak to you to-day of past events as well as of our future policy in the Diet. At the close of last session, I considered the problem of our future very profoundly, and came to the same conclusion as that expressed in my lecture delivered before the opening of the session; that is to say, that we must employ our full energy. I mean that we must prepare ourselves first so as to be competent to meet all opposition; in other words place ourselves in an upright and unassailable position, and then settle our policy. We must proceed by deductive methods of reasoning founded on thorough investigations. Further, it seemed essential that some of us should travel round the empire in order to make our opinions known to the public. But the central office experienced much pecuniary difficulty in defraying travelling expenses. Possibly you have thought that the central office did not exert itself enough. But I assure you that only the inevitable was bowed to. Fortunately, owing to invitations from local members, I was able to travel in the Shin-Yetsu districts, and Mr. Hoshi, in Fukushima, Yamagata, Iwate, and Miyagi Prefectures, while Messrs. Matsuda and Yamada attended the North-eastern Conference. Mr. Ishizuka proceeded to Fukushima, Miyagi, Aomori, Iwate, and Akita Prefectures; Messrs. Kono, Tatekawa, and Tatsu to the eight western Prefectures; and many of our members were present at the Northern and Western Conferences. Further, Messrs. Fukui and Amakasu went to inspect the districts which had suffered from inundations; Mr. Asanaga inspected the Kamaishi iron mine; Mr. Kato Katsuya journeyed to America; Messrs. Takechi and Yamada went to Hokkaido to examine the existing state of cultivation; and Messrs. Takechi, Kaino, Fujino, and Horie returned from the earthquake district to-day. Moreover, Messrs. Matsuda, Kurihara Makino, Eguchi, and Inouye, and other members of the party in the capital, were busily engaged investigating political affairs. But unfortunately we have not enough numbers to complete all our tasks. I think, however, we have made thorough investigations into the matters of chief importance. No doubt some of you will feel dissatisfied, but if you remember how poor we are, I think you will admit that we have done well with our slender means. I propose now to speak of the method of determining our political programme. When I was in Yechigo, the Cabinet changed, and the present Cabinet was organized. The new Cabinet consists of portions of the Military party and the Civil party. It nevertheless consists of Clan statesmen, and is still a *Yofutsu* Cabinet. In obedience to the just and loyal principle which guides us, we hoped to be able to support some of the Cabinet's measures. But it has made no improvement whatever beyond adopting the time-serving device of

removing, or changing the positions of, certain local governors who interfered in the elections. Such being the case, our Party cannot choose but fight against the Cabinet. When the battle commences, the Military Party may seek to seize the opportunity, and attempt to use us as its tools. But we are not such contemptible folks as to fall into that trap. It is impossible for us to support the present Cabinet merely because we fear that the Military Party may take the Administrative reins in its stead. Even if the present Cabinet falls, and the Military Party comes into power, we shall continue to fight on undaunted, so as at last to attain our great aim. With such a Government and such a House of Peers in our front, and a feeble and unsympathetic public venally ready to change their opinions in our rear, our Party cannot but experience much difficulty in accomplishing its task. Hitherto, nearly all the Bills passed by us have been either unsanctioned, or rejected, or withheld from final discussion. Many years have already elapsed, yet not a single thing has been accomplished; and we cannot foresee for how many more years such a state of affairs will continue.

Turning our attention outwards, now, and examining the condition of the world, we find that Japan stands on most dangerous ground. No allowances will be made for her by the nations. Therefore we, as true patriots, must consider her circumstances very profoundly. The disputes of political parties must have a distinct limit, and that limit ought to be as narrow as possible. For instance, as to the policy of maintaining a Sovereign of unbroken lineage to rule over us, and protecting the empire with its forty millions of inhabitants, His Majesty's subjects, no one ventures to differ. But in order to accomplish those ends, it is necessary to develop the resources and education of the people, to be circumspect in our foreign policy, and to complete the defences of the country. Unless these important points are attended to, however the Cabinet may change, the welfare of the country cannot be promoted, or the tranquillity of the people assured. Therefore, these questions ought to be considered in the light of social problems, and placed beyond the range of party quarrels. Our hope, accordingly, is to adopt thorough measures with regard to these problems. The policy of our Party hitherto has been to devise means of accomplishing Administrative improvements little by little, and when the Administration is perfected, then to put our hand to new enterprises. But certain individuals, whose object is to protect the Government by crafty statements, not only oppose the progress we contemplate and injure our Party, but also mislead feeble and lukewarm folks by declaring that we follow destructive principles. Under these circumstances, our best policy hereafter will be, while attacking these enemies on the one hand, to distinctly declare, on the other, the projects we entertain. First, then, since the national defence is one of the most urgent and important problems of the day, we have been making investigations into the matter for years, but after the last session of the Diet we pushed our inquiries still further, the result being that we arrived at the opinions, the gist of which is published in the columns of the *Jiyu* of this morning, and a full statement will be submitted to the Diet by Messrs. Sugita and Yebara. Last session we passed a Bill relating to the Extension of Railways, and we now have in prospect the above great undertaking. These projects require large expenditure, and consequently in carrying them out it is necessary to consider the development of the national wealth. Take, for instance, our agricultural products. The first product of the country is rice, the second cocoons. If scientifically improved methods of culture be applied to these, the crops will at once increase. At the Nishigahara Experimental Farm, the results of scientific methods gave an increase of at least 10 per cent.; and we hope to take steps towards popularizing the teaching of those experiments. Again, one of the principal staples of export is silk. If proper protection be given to the sericultural industry, the amount of the export will doubtless increase. Among imports, cotton and piece-goods occupy the principal place. But as the manufacture of cotton develops in the country, the amount required from abroad will decrease gradually, and our import will be reduced to half of what it is now. If we extend proper protection to the enterprise, we shall be enabled to dispense altogether with imports, and even to compete with Indian cotton manufactures in the Chinese market. Moreover, since the population of the empire is increasing very rapidly, we shall soon find difficulty in supplying the people with necessities. Hence an emigration scheme must be adopted, not only to Hokkaido but also to foreign countries. Emigration will have the effect not only of increasing our exports, but also of extending our commercial interests. Efforts should also be made to extend maritime facilities, so as to enable the emigrants to travel more conveniently, and to augment our commerce. As to foreign policy, it is needless to speak of the great importance of accomplishing treaty revision speedily. Education is the next question to be considered. Its object is to develop the national talent of individuals, and bring means of expert training within easy reach, so as to produce skilled men in every branch of theoretical and applied science. To accomplish that aim it is necessary to place educational institutions on an independent footing. Hitherto, education has been regarded in the same light as the manufacture of articles of daily use, and the administrative officials

have consequently interfered with it, and produced useless scholars. Education means to bring up a younger generation competent to succeed us in the empire. If education be neglected we shall no longer be able to compete with other nations. Thus the maintenance and education of the people, the foreign policy and the defences of the country, are all of vital national importance, and we have spared no pains to make our preliminary investigation of these subjects as profound as possible.

In addition to the above, we have many other important projects which we shall submit to the meeting. Among them some require more thorough investigation while others need amendment, or withdrawal from the Diet owing to the situation. But I leave them entirely to the discretion of our representatives.

This speech was received with loud cheers. The first measures, relating to the organization of handicraft schools for the poor, the establishment of a University in Kyoto, and some amendments in the Organization of Middle Schools, were then considered. Messrs. Hasegawa and Suzuki explained them, and they were passed unanimously. The next subjects were the disposal of the Surplus Revenue, and the Taxation of the Bank of Japan. M. Ishida explained the former and Messrs. Nakajima and Misaki opposed the latter, but both were passed by a large majority. Subsequently, a report of proceedings during the past three months was read out by Mr. Ishizuka, and finally Count Itagaki having proposed three cheers for the Emperor and the *Yiyu-to*, the meeting closed at 4 p.m.

The following Bills were handed to the Radical representatives for consideration, as to the propriety of introducing them next session:—

- 1.—Bill for amending the Regulations relating to Political meetings and Associations.
- 2.—Bill for amending the Newspaper Regulations.
- 3.—Bill for amending the Publication Regulations.
- 4.—Bill for amending the Law of Election.
- 5.—Bill for amending the Organization of City Local Government.
- 6.—Bill for amending the Organizations of Gun.
- 7.—Bill for amending the Organizations of Shi, Cho, and Son.
- 8.—Bill for amending the Law of the Houses.
- 9.—Bill for abolishing the Peace Preservation Regulations.
- 10.—Bill for amending Law No. 84, promulgated in the 29th year of Meiji.
- 11.—Bill for abolishing the Premonition Law.
- 12.—Bill for amending the Administrative Organization of Hokkaido.
- 13.—An Address to the Throne on Treaty Revision.
- 14.—Bill for amending the Customs Tariff.
- 15.—Bill relating to the Extension of Navigation.
- 16.—The Game Regulations.
- 17.—Punishment of officials who interfered in the general election.
- 18.—Bill for amending the Registration Law.
- 19.—Reorganization of the Navy.

HOUSE OF PEERS AND THE GAME REGULATIONS.
RECENTLY the members of the *Sanya-Kai* the *Konwa-Kai*, and the *Kenkin-Kai*—sections of the House of Peers—appointed a committee to investigate the new Game Regulations, and on the advice of the Committee, resolved to present a question to the Government in the approaching session of the Diet. The question has not yet been actually drafted, but the following is reported by the *Kokkai* to be the opinion of the Committee:—

1. The 62nd Article of the Constitution provides that "Any imposition of a new tax or modification of the rates (of an existing one) shall be determined by law." Hence, since fees levied for permission to pursue game have always been publicly recorded among taxes, it seems to be a violation of the Constitution to modify such fees without obtaining the consent of the Diet.
2. The provision contained in Art. 17, sec. 2 of the Game Regulations, namely:—"If the proposed hunting preserve belongs to another person, the permission of the owner or controller must first be obtained," coerces the right of usufruct of as well as that of ownership. Such a provision ought to be enacted with the consent of the Diet. Hence, from this point of view also, it seems to be a violation of the Constitution to promulgate the Game Regulations as an Imperial Ordinance?
3. The Regulations not having been urgently required, they ought to have been submitted to the Diet for its concurrence, instead of being promulgated as an Imperial Ordinance. This procedure seems to cast a slur upon the Diet.

COLLISION AT WOOSUNG.

YESTERDAY afternoon, says the *N. C. Daily News* of the 9th inst., we received the following telegram from Woosung:—Steamer *Ningchow* collided with steamer *Feima* and the latter was sunk on the Woosung Bar. No lives lost.—Later telegrams, however, were received announcing that the steamer which collided with the *Feima* was the *Hangchow*, and that

the *Feima* was out of the fairway. Subsequently we ascertained that the *Feima* sank at 2.15 p.m. on the inner Bar, off the Harbour Master's Station and that her deck from the funnel to the stern was under water. Both vessels were outward bound, the *Feima* for Tientsin and the *Hangchow* for Newchwang, the former vessel having a full cargo and among other things, kerosene, spelter, and paper. The *Hangchow* was the overtaking boat, and by some means got drawn into the *Feima*, striking her on the starboard quarter such a severe blow that she began to sink. Under these circumstances, her commander, Captain Leask, found it necessary to run her ashore out of the channel, and this was accomplished without further accident, and Mr. Hansen, the Berthing-officer at Woosung, took off in his steam launch all those who chose to leave. The *Hangchow*, having two of her bow plates above the water line stove in, returned to Shanghai yesterday afternoon for repairs and is now at the New Dock. As soon as possible, Captain Charlton, Marine Superintendent of the China Navigation Co., Ltd., the owners of the *Hangchow*, and Captain Tisdall, Marine Superintendent of the Shanghai Steamship Co., Ltd., the owner of the *Feima*, and Mr. Carlsson of the Customs, proceeded to the sunken vessel, while the agents sent sufficient boats to lighter 500 tons of cargo of the *Feima*. The following day the same paper says:—The news from the *Feima* is very discouraging, for the hopes that were formed of floating her, now seem unlikely of realisation. Up till noon yesterday it was expected that the divers who had been sent down would be able to patch up the hole in her starboard quarter, and then she could be pumped out and floated, but we now learn that she is burying herself more and more in the mud, and she has a heavy list to port. She is nearly broadside to the tide. At low water yesterday morning, her after deck was more covered than it had been at high water on Tuesday afternoon. It is therefore probable that she will become a total wreck. The latest news from the *Feima* is that she is sinking still deeper in the mud. Divers were sent down to her yesterday (10th) to see what could be done towards raising her, but as it was blowing hard, no work could be done. The *Hangchow* was seized by H.M.'s Supreme Court yesterday at the suit of the owners of the *Feima* who claim Tls. 175,000. The agents of the C. N. Co., having given the necessary security, the *Hangchow* was afterwards released.

THE TOYO GIYU-KAI.

RECENTLY a new socialistic club was organized under the above name, as reported in our columns at the time. The first subject taken up by this club was the abolition of the law relating to gambling. The members set about obtaining signatures throughout the empire to a petition which they intended to present to the Diet next session. On the 11th instant, however, Messrs. Miyagi Mohei and Tsuda Kwanjiro, promoters of the club, were summoned to the Metropolitan Police Office, and the following order was given to them:—

"The *Toyo Giyu-kai* is considered injurious to the maintenance of public peace and good order; therefore, in accordance with Art. 30 of the Regulations relating to Political Meetings and Associations, the organization of the association is hereby prohibited.

(Signed) SONODA YASUKATA,
Superintendent-General
of the Metropolitan Police."

THE EASTERN WHALING COMPANY.

THAT the idea of the man who started the Eastern Whaling Company, which has its headquarters in this Settlement, was a golden idea, there can be little doubt. The Company has not yet succeeded in paying any big dividend, but a notion of what kind of fortune may befall it at any moment is obtainable from the experiences of the whaler *Mary D. Hume*, as reported from San Francisco under date September 28th:—"The steamer *Bertha* arrived to-day from Alaska bringing news of the champion whaling catch on this coast. The whaler *Mary D. Hume*, which left here two and one-half years ago, is now on the way home

with the produce of thirty-eight whales, worth \$400,000. This beats the record even for vessels which have spent two years in the Arctic. Capt. Tilton's share will be \$30,000, and each sailor will receive \$2,000. The *Hume* spent the two long Arctic winters at the mouth of the Mackenzie River, and the Captain kept all his men in good condition. News was also received to-day from the sealing schooner *Henry Dennis*, which has 2,485 sealskins. This gives each seal hunter \$6,000 for his season's work."

THE NEW REGULATIONS AS TO OFFICIAL GRADES AND SALARIES.

THE new Regulations as to Official Salaries and Grades, which we publish elsewhere, will not convey much information to the generality of our readers. We shall, therefore, state briefly their significance and the changes they introduce. So far as salaries are concerned these Regulations do not touch them. The emoluments attached to each office remain just as they were. It would appear, therefore, that the re-fixing of salaries by Imperial Ordinance is a superfluous procedure, but such is not the case when we remember that, in many cases, salaries in Japan are influenced by the grade of the holder of the office. Consequently, a change of grades involves either a re-adjustment or a re-statement of salaries. At the same time, it cannot be doubted that a section of the public will attach special significance to the issue of an Imperial Ordinance fixing salaries within ten days of the Diet's session. With the ink hardly dry on this Ordinance, the Opposition will find some difficulty in applying any drastic measures of reduction to official emoluments.

The changes effected by the Ordinance in this matter of Grades may be summarized as follows:—

1. Officials appointed directly by the Sovereign, who were formerly classed in the first grade, now cease to have any grade. The consequence of this is that the officials belonging to the former second grade now ascend to the first.
2. High officials are divided into 9 grades instead of 10.
3. Vice-Ministers used to be of the 2nd grade only, but will henceforth be of either the 1st or the 2nd grade.
4. Directors of Bureaux will be from the 3rd to the 5th grade, instead of belonging to the 4th grade only.
5. Examiners of the Pension Bureau will be from the 4th grade instead of from the 6th grade.
6. The Chief Secretary of the Privy Council will be of the 1st or the 2nd grade, instead of the 3rd grade.
7. The Manager of the Police Bureau used to be of the 6th grade, but will now be from the 3rd to the 5th grade.
8. Managers of the Printing Bureau and of the Mint used to be of the 6th grade, but will now be from the 4th to the 6th grade.
9. The Director of the School of Navigation and the Judges of the Marine Inquiry Office used to be of the 6th grade or under, but will now be of the 4th grade or under.
10. Directors of First Rank Postal and Telegraph Bureaux, and Managers of Postal Saving Banks, used to be of the 5th grade and under, but will now be of the 3rd grade and under.
11. Judges of the Administrative Court used to be of the 3rd grade and under, but will now be of the 1st grade and under.
12. Directors of Central Police Stations used to be of the 5th grade, but are now of the 3rd grade.
13. Commercial Agents and Consuls used to be of the 6th grade, but are now of the 4th grade.
14. Chief Judges of the Supreme Court used to be of the 3rd grade, but are now of the 1st and 2nd grades.
15. Principals of Upper Middle Schools, the Upper Commercial School, Technical Schools, the Fine Art School, and the School of Music used to be of the 5th grade, but are now of the 3rd grade.
16. The Director of the Imperial Library used to be of the 7th grade, but is now of the 5th grade.
17. Local Governors used to be of the 2nd grade, but are now of the 1st or the 2nd grade.
18. Secretaries of Prefectures used to be of the 5th or the 6th grade, but are now of the 3rd grade and under.
19. Police Inspectors and Head Tax Collectors used to be of the 6th or the 7th grade, but are now of the 4th grade and under.
20. Councillors of Prefectures used to be of the 8th grade and under, but are now of the 5th grade and under.

DEER-KILLING IN HOKKAIDO.

THE first special prohibitive measure taken under the provisions of the new Game Regulations, was announced in the *Official Gazette* of the 18th instant. The Island of Yezo used formerly to possess an abundance of deer. A dozen years ago, visitors to valleys and plains of that northern region saw great herds of deer everywhere. But as immigrants began to settle in the island, the deer were slaughtered in ever increasing numbers, and it is said that at present they are as scarce as they once were plentiful.

and that unless something be done to protect them, their extermination is inevitable. The Minister of State for Agriculture and Commerce has accordingly issued a Notification, under the authority of the 27th Article of the new Regulations, temporarily interdicting all pursuit or capture of deer in Hokkaido. The penalty for breach of this prohibition is a fine of from two to twenty yen.

FIRE IN TOKYO.

The winter's conflagrations have now fairly commenced in Tokyo. Every night the clang of the fire-bells is heard. On the 11th instant a very serious fire occurred in the Asakusa district. It began at 11.25 p.m. in Shinfukui-cho, and was not subdued until 2.55 a.m. on the 12th, by which time it had swept along Shinfukui-cho, the second and third wards of Fukui-cho, Heiyemon-cho, Sayemon-cho, and the second and third wards of Kaya-cho, reducing 625 houses to ashes, and partially destroying 35. Among the firemen eight sustained injuries more or less severe, and three were missing on the morning of the 12th.

PRESIDENT CLEVELAND AND THE NICARAGUA CANAL.

Now that Mr. Cleveland has been elected to the Presidency of the United States, it is interesting, especially interesting to Japan, to recall the fact that in his letter accepting the nomination, he made use of the following language with reference to the Nicaragua Canal:—"The importance of the construction of the Nicaragua Ship Canal as a means of promoting commerce between our States and with foreign countries, and also as a contribution by Americans to the enterprises which advance the interests of the world of civilization, should commend the project to governmental approval and endorsement."

THE "EMPERESS OF CHINA."

We regret to learn that on the voyage up from Nagasaki, Dr. Meadows of the *Empress of China* was struck down with typhoid fever. On reaching Kobe he was taken ashore, and Dr. Graham, of that port, at considerable inconvenience, came in the ship to Yokohama. Here the services of Doctor Gordon Munro were requisitioned, and after some pressing he consented to accompany the ship to Vancouver, Dr. Graham being obliged to return home. Mr. Moffat of the Hongkong and Shanghai Bank (Shanghai Branch), is, we learn, taking a trip across, and probably home, on account of a breakdown in health.

THE LATE DR. WAGENER.

The News Agency communicates to the vernacular press a short but sympathetic reference to the late Dr. Wagener. It says that ever since the Geological Survey Office was established Dr. Wagener acted as its adviser, and superintended the operations for conducting not only the geological but also the mineralogical survey of the empire, which have now, through his exertions, been almost carried to completion. He was also the inventor of a new kind of falcence called *Asahi-yaki*, which has found much favour abroad, especially in America and Germany. His services to Japan were large, and his death is a source of keen regret.

OFFICIAL APPOINTMENTS.

The *Official Gazette* announces that Major-General Baron Shigeno Kyohiko, is appointed a Lieutenant-General; that Mr. Oshima Seiji, Private Secretary of the Minister of State for Education, is appointed a Secretary and Councillor of the same Department, and that Mr. Koyama Kenzo, Secretary of the Department of Education and Instructor in the Tokyo Artisans' School, is appointed Private Secretary to the Minister of State for Education and Secretary of the Department of Education.

CONCERT AT THE SEAMEN'S MISSION.

The Concert at the Seamen's Mission on Thursday evening proved a decided success, considerably over a hundred seamen and officers from the various ships being present with their friends. Captain Castle, of the *Leander*, pre-

sided, and a good programme was gone through without a hitch. The mission building and its approaches were gaily decorated with coloured lanterns, which had a pretty effect. At the close of the programme hearty cheers were given to the ladies, and another for Captain Castle. Captain Castle expressed the thanks of all the sailor visitors to Mr. and Mrs. Austen for the pleasant evening they had spent, and said it was a great boon for those who had no homes here, expressing the hope that the entertainment would be held frequently during the winter.

YOKOHAMA LITERARY SOCIETY.

A PLEASINGLY diversified programme was discussed by the Yokohama Literary Society last evening in the Van Schaick Hall. There was a rather small attendance, the unpromising climatic conditions which prevailed during the early part of the evening being no doubt the cause. Mr. Gregory received an encore for his splendid rendering of "Jessie's Dream." The following was the programme:—

Overture	Norma (Bellini)	Mr. J. T. Griffin.
Original Paper	The "Taj Mahal"	Miss Griffin.
Song	The Bengalee Baboon	Mrs. Apcer.
Song	By Normandies Blue Hills	Miss Eford.
Recitation	The Hanging Picture	Mr. C. Griffin.
Song	The King's Own	Mr. F. G. Sale.
Pianoforte	Hungarian Dance (Brahms)	Miss Alice Young.
Song	"Her bright smile haunts me still"	Miss Annie Moss.
Reading	The Charity Dinner (Litchfield Mosley)	Mr. S. E. Unite.
Song	Jessie's Dream	Mr. W. D. S. Edwards.
		Mr. Gregory.

RAILWAYS IN CHINA.

ACCORDING to a report compiled by Mr. Arakawa, Acting Japanese Consul in Tientsin, the railway from Ku-ya to Lan-chow has been completed, and from the 21st of October the train service commenced. The following are the mileages and fares:—

Distance from Tientsin	
Ku-ya to Lan-chow	56 1/2 (Chinese)—88 miles English.
Ku-ya to Lan-chow	60 1/2 (Chinese)—90 miles English.
Fare from Tientsin to Ku-ya	1st class 2,100 cash (\$2.12)
	2nd class 1,000 cash (\$1.06)
Fare from Ku-ya to Lan-chow	1st class 300 cash (\$0.36)
	2nd class 150 cash (\$0.18)

RESIGNATION OF COUNT OKI.

It is reported that Count Oki had adopted the advice of Count Ito and other members of the Cabinet, and promised to abandon the idea of resignation. But now the *Choya Shimbun* says that after mature consideration he has once more made up his mind to resign, and that this time his resolution is immovable. In a day or two, therefore, his resignation will be accepted.

RECOGNITION OF DR. WAGENER'S SERVICES.

We have already stated that on the day of Dr. Wagener's death His Majesty the Emperor conferred on him the Third Class Decoration of the Order of the Sacred Treasure. The News Agency now reports that in consideration of his eminent services, the Department of Agriculture and Commerce contributed a sum of eight hundred yen towards the expenses of his funeral.

THE JIZEN-KAI.

We are requested to state that the proceeds of the lecture delivered by Mr. de Guerville at the Public Hall, and subsequently at the Minatoza before a Japanese audience, amounting to \$193, have been handed over to the treasurer of the Jizen-kai, who desires to express on behalf of that institution her gratitude to Mr. de Guerville and others who assisted to bring about so excellent a result.

THE HARBOUR REGULATIONS COMMITTEE.

The members of the above committee, according to the vernacular press, assembled again last Friday, and conferred till 3 p.m. It is reported that their investigations have been at last completed, but as the nature of the discussions are kept secret, no particulars can be obtained.

TOTAL LOSS OF A SAILING SHIP.

PART of the crew of the *Gretna*, recently lost on the Rifleman Shoal, arrived in Hongkong on the 10th inst. from Saigon, which port they had reached in the ship's boats after the vessel had been abandoned. The other portion of the

crew are known to have since arrived at Saigon. The *Gretna* was a ship of 1,657 tons register, nine years old, owned by Messrs. Guthrie, McDonald, Hood and Co., of Glasgow, and commanded by Captain John Webster. She carried a crew of twenty-nine all told. She left Cardiff on July 9th with a cargo of 2,400 tons of coal consigned to the Naval Authorities at Hongkong.

THE FIRE IN AGICHO.

We are requested by Lieut. T. H. James and Mrs. James to express their heartiest acknowledgments for the large-hearted sympathy and kindly helpfulness shown towards them by a very wide circle of friends and acquaintances on the occasion of the fire at their residence last Wednesday. It is more than a consolation at such a time not only to be assured of the strength of old established ties, but also to learn that from innumerable unexpected quarters practical goodwill is waiting to manifest itself.

GROUNDING AT THE HARBOUR'S MOUTH.

The British schooner *Aurora*, Captain P. Touissant, reports bad weather and heavy head winds and rain throughout the passage from Victoria, B.C. While coming into the harbour she ran on to the breakwater between the shore and the inner tightship, it being thick at the time and the captain not having a chart of the harbour; but she was towed off by the *Leander's* launches with very little damage to her keel forward.

THE THIRTY-THIRD NATIONAL BANK.

The affairs of the Thirty-third National Bank have now been nearly wound up, and the final look-out is anything but pleasant for the creditors. We read in the *Shogyo Shimpo* that the Bank's total available assets are only 120,000 yen, while its liabilities aggregate 800,000. A dividend of ten per cent. will be paid next month.

THE KOBE EMBEZZLEMENT CASE.

The prisoner Miller, in custody at Singapore, was again brought up on the 3rd inst., but on a point of procedure the case was again adjourned.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The so-called "do nothing policy" (無爲政策) of the Ministry is the subject of severe and persistent criticism in the Opposition press. It is very natural that the Opposition papers, especially those belonging to the Progressionist Party, should object to such a policy, since it deprives them of occasions to gratify their constant purpose of embarrassing those in power. Accordingly, we find the Cabinet charged with losing the confidence of the nation by its attitude of irresolution and inactivity, and summoned to humbly enter the camp of the Popular Party, and carry out the latter's programme. The arguments employed by the vernacular press on this topic having been reproduced in our columns more than once, it is not necessary to repeat them here.

The Cabinet's neutrality in matters of politics is also condemned by the Opposition press. The *Hochi Shimbun*, writing on this subject, observes that the Cabinet is very cold to the National Unionists, who were the supporters of the Matsukata Ministry in the last session of the Diet. But Count Ito and his colleagues seem to the *Hochi* unable or unwilling to secure the support of the Popular Party, and the only result of the policy of neutrality pursued by them has been to increase the number of their antagonists. The Cabinet's policy toward the House of Peers is declared by the Progressionist organ to be superior to that of its predecessor, for while the latter sought to maintain its ground in that House by introducing new and obsequious elements, the former is trying to befriend the leaders of the extreme section there. But it is open to doubt whether the House of Peers will support the Ito Ministry; and consequently our contemporary regards the Government's position as anything but cheering. The *Hochi* advises Count Ito and his colleagues to ally themselves with the Opposition Party. If, on the contrary, they

should be so unwise as to fall back upon the support of the National Unionists, they are assured that they must be prepared to meet uncompromising assaults from the Popular Party.

The *Fiyu*, the Radical organ, writes in a milder strain. It is almost sure that the present Cabinet will not commit the folly of casting in its lot with the National Unionists, whom it considers doomed to extinction. Their leaders know very well that the Party is in a critical situation, and are doing their best to avert its disruption. But their efforts will be in vain. As to the Cabinet, since there can be no question of relying upon the support of the National Unionists, the only recourse, in the *Fiyu's* opinion, is alliance with the Popular Party. The Radical organ, confident of this, proclaims the fact specially to the members of its own Party.

That the article just reproduced from the *Fiyu* was published on the eve of the general meeting of the Radical Party, is a significant circumstance. It virtually amounts to a proclamation that the *Fiyu* may now count upon the Cabinet's readiness to co-operate with them on certain conditions. The *Kaishin*-to papers, as usual, complain of the friendly attitude of the Radicals toward the Government. The *Yomiuri Shimbun* characterizes as weak and inconsistent the conduct of politicians of the Popular Party who are favourably disposed towards the Cabinet; for the primary object of the Popular Party is not to help the Cabinet to reform itself but to secure the establishment of a system of Party Government. Our contemporary hopes, however, that such a disposition is limited to a section of the Popular Party. The *Choya Shimbun*, on the other hand, advises the Radicals to manfully declare their change of attitude toward the Government. There is no longer any doubt, in our contemporary's opinion, that, unlike the incorrigible Progressionists, they are prepared to pursue in the coming session of the Diet a policy very different from that which they pursued in the past three sessions. They have hitherto been distinguished by straightforwardness, but their conduct at the present juncture is open to the charge of equivocation and dissimulation.

The general meeting of the Radical Party, which took place in Tokyo on the 15th instant, was the most important event during the week under review. The result of the meeting is to confirm the belief that the Radicals are really bent on moderating their zeal to attack the Government. The *Fiyu* has repudiated the charge that its party is favourably disposed towards the Government, saying that, although the Radicals have decided to follow a positive instead of a negative policy, they are as firm as ever in their resolve to demand the correction of abuses in the Government. The leader of the party, Count Itagaki, declared in a speech delivered at the meeting of the 15th, that the Radicals are prepared to fight with the present Cabinet. But he at the same time insisted on the importance of limiting the sphere of party politics as much as possible, and maintained that industrial, educational, diplomatic, and Military and Naval questions must be placed outside the arena of party warfare. It is regarded as a significant circumstance that he did not say a single word on the subjects of the reduction of the land tax or the reassessment of the taxable value of land. When, in the course of discussions that followed, a certain politician asked the reason why these two topics were not included in the Bills to be introduced in the next session of the Diet, it was explained that investigations relating to the questions had not yet been concluded; and those present readily agreed that the matter should be left to the discretion of Radicals having seats in the Diet. Taking these circumstances into consideration, it is impossible not to conclude that the Radicals will be comparatively pacific in the approaching session.

Such, at any rate, is the opinion of the majority of the papers not belonging to the Popular

Party, notably the *Kokkai*, the *Nippon*, and the *Choya Shimbun*. The *Kokkai* remarks that the conflict between the Government and the Radicals in the past three sessions of the Diet has had a salutary effect on both. The Government has awakened to the importance of paying more attention to the protection of individual rights, while the Radicals, on the other hand, have learned the importance of safeguarding the interests of the nation as an entity. Our contemporary thinks it quite natural that the two bodies are about to go hand in hand. The *Choya Shimbun* congratulates the Radicals on their progress; for it regards it as distinctly a sign of progress that they are about to pursue a positive policy in the coming session of the Diet. The *Nippon* is disposed to ridicule the Radicals for their sudden change of policy. They are charged with having become weak and decrepit.

Count Itagaki's memorandum on the augmentation of the Navy has attracted much attention. The Radical leader severely criticizes the vacillating policy of the Government in relation to this service. His plan is to increase the strength of the Navy to 150,000 tons by constructing large war-vessels, the work to be completed in ten years at an annual outlay of 5 million yen. Simultaneously with the increase of war vessels, he proposes to extend the operations of the Naval University so that it may turn out larger numbers of officers. The *Nichi Nichi Shimbun*, commenting upon this memorandum, does not hesitate to declare itself entirely at one with Count Itagaki in attacking the time-serving policy hitherto pursued by the Government regarding the Navy, and likewise approves the Count's scheme so far as relates to the construction of new men-of-war and the extension of the operation of the Naval University. But as to increasing the Fleet to 150,000 tons, our contemporary fears that this would involve an effort somewhat too onerous in the present condition of the country. The *Nichi Nichi* also points out that Count Itagaki's scheme is very weak in economical features, but readily concedes that he merits unstinted applause for the salutary stimulus given to those in power by the publication of such a memorandum, and also for the accuracy of his researches into the condition of foreign States.

The *Fiji Shimpō* is also an enthusiastic advocate of Naval development, but attaches more importance to the education of officers than to an increase of the number of war-vessels. The present officers, above the rank of commander, are stated to be deficient in education. The establishment of the Naval College dates from 1869, but it was in 1873 that the existing system of Naval education was introduced under the able management of Captain Douglas, R.N. The officers educated under the new system are lieutenants, only a few of them having been promoted to the rank of commander. It will, therefore, take many years to fill all the posts in the Navy with men of the new education and training.

The controversy between the *Hochi Shimbun* and the *Nichi Nichi Shimbun* on the subject of public expenditure is still going on. The Progressionist organ insists on the importance and possibility of effecting large reductions in the expenses of the Government, and in support of its position refers to the economies accomplished by the Government in 1877 and 1886. The *Hochi* evidently feels the force of the criticism that its views are destructive and impracticable; and retorts by denouncing its opponents as cowardly and degenerate. The *Nichi Nichi* explains the reasons why an increase of public expenditure in recent years has been unavoidable, and reminds its adversary of the importance of taking a broader view of the requirements of the country. To what purpose are the Progressionists clamouring for impossible reductions in public expenditures? They do so with the sole object of benefiting the wealthier class of landowners who are already faring very well. The *Nichi Nichi* also points out

various mistakes in the statistics employed by the *Hochi Shimbun*, but we need not follow the controversy into such details. The former journal's conclusion is that the extravagant views so persistently propounded by the Progressionist organ are happily limited to a small section of party politicians.

Local Assemblies being now in annual session, their conduct receives a good deal of notice from the vernacular press. In several localities, the Assemblies have refused to vote appropriations for police expenses, on the ground of the illegal conduct of police at the time of the general elections last February. The Progressionist organs exhort these Assemblies to exercise strict supervision over the conduct of local police and other functionaries; and complain that whereas they had expected the Ito Cabinet to punish all the Governors and Police-in-Chief who interfered with the elections, no indication is apparent of such measures being taken by the new Premier. Hence they recommend the Local Assemblies to tighten their purse-strings and thus chastise the offending functionaries.

The *Kokkai* counsels moderation to the members of the Local Assemblies. The question of interference in elections, says our contemporary, has already become matter of history, and the police functionaries who were charged with obnoxious conduct have repented of their behaviour and are now attending to their official duties in a proper manner. It is very well to condemn the obnoxious conduct of the police, but the Local Assemblies must not, on their side, commit the folly of refusing consent to appropriations which are absolutely essential to the maintenance of peace and order in their localities.

The *Mainichi Shimbun* also regrets to learn that in several Prefectures members of the Standing Committee of Local Assemblies are accused of having received bribes from local officers in charge of engineering works, as well as of combining with contractors to gain illegal profits in connection with such works. Our contemporary observes a depreciation in the general standard of members of Local Assemblies since the attention of local politicians began to be turned to party discussions in the Diet. The provincials are advised to keep watch over the doings of their local representatives.

Count Yamada's sudden and premature death is regretted by the vernacular papers of all parties. He was the youngest of the elder statesmen, and was distinguished for straightforwardness of purpose and boundless loyalty to the Sovereign. Of late years he became ultra conservative in his attitude towards political and social questions, and was regarded as the leader of the priestly conservatives who support the *Kōten Kōkyūjo* (a place for investigating ancient institutions of the country). The press does ample justice to the high qualities he exhibited as soldier and statesman.

Mr. Oishi's appointment to the post of Resident Minister has attracted much notice. No paper denies his ability, but some write in a doubtful strain as to his capacity to carry into practice in a responsible position all that he has been fond of declaring with regard to the policy that ought to be pursued in Korea, whither he is reported to be accredited. However, there is complete consensus in regarding the appointment as a welcome departure from the ordinary channels of diplomatic selection.

We have already reproduced the comments of the vernacular press upon the victory of the Democrats in the presidential election in the United States. We may here add that the *Mainichi Shimbun* rejoices over the election of Mr. Cleveland, because it believes that his coming into office will lead to some salutary changes in the tariff system of the States, and that such changes will promote the extension of commerce between this country and the great Republic.

CODE TRANSLATIONS.

SOME recent doings in Tokyo in the book-making line make it worth while to say a few words about the translation of the Codes. This translation, it will be remembered, was something as to which, at the close of the Treaty Revision Conference in 1887 an assurance was given that it would be accomplished with all reasonable speed after the enactment of the Codes; while at the same time the submission beforehand of the Codes to foreign criticism was expressly refused. The Codes began to be promulgated early in 1890. Before the end of 1891 the first portion of the translation was prepared. It bore the imprint of that year, but it is only in the present year that it has been available to outsiders, and the copies are so limited in number that most of them have been secured by the officials and others immediately interested.

This volume comprises the portion of the Civil Code upon which M. BOISSONADE has worked, and is accompanied by a new edition of M. BOISSONADE'S Commentary. It is in French and bears the legend "*Production Officielle*." There are here included the books dealing with Property (Real and Personal), Acquisition of Property, Suretyship (Personal and Real), and Proof,—no numbers being affixed to any of the books. The book of Persons and Chaps. XIII. XV. of the book of Acquisition of Property (which deal with Succession) are omitted; for in these M. BOISSONADE has had no hand, and the Japanese Committee has had sole responsibility. The volume itself, we cannot refrain from saying, is (though bound in stiff paper only) a beautiful specimen of the printer's work, with thick paper, clear type, and large margins,—perhaps the best that the Kokubunsha has ever turned out. It is as fine a work in appearance as the volume containing the German Draft Code, recently issued by the German Government. The numbering of the articles consecutively (as in the original draft) would, however, have proved better than the system here adopted of beginning the numbering afresh with each book; for citation will be a much more cumbersome matter and memory will have a greater burden. The cause of the change of plan, nevertheless, is easy to see; for with the doubts about the permanent form of the first book it would have been impossible to number the articles consecutively throughout the Code.

But it is about the translation of the untranslated portions (to speak in paradox) that we wish here specially to speak. Besides the above-mentioned portions of the Civil Code dealing with Persons and Succession, there are the Codes of Crimes, Criminal Procedure, Commerce, and Civil Procedure. Of the Code of Crimes, and we believe, also the Code of Criminal Procedure, an official translation was pub-

lished some 10 years ago; though the impending revision will ultimately necessitate another. The Law of the Organization of Courts, which belongs among these larger works, was translated in full in this journal last year. This leaves the Codes of Commerce and of Civil Procedure, with the above mentioned portions of the Civil Code, alone unknown to us,—if we except the brief notice of them given by Mr. RUDORFF in his essay on "Recent Legislation in Japan." Now we have lately come across, somewhat by accident, privately published translations of the Commercial Code and of Laws Persons and Succession in the Civil Code, and they call for some comment.

The former, we may say at once, is a very worthy work—for those who will know how to use it. No work of the sort performed by private enterprise can be expected to have the same accuracy and trustworthiness that may be looked for at the hands of experts whom the Government can command. In this case there is even something of a mystery about the origin of the book; for the only indication of any sort as to its sponsors is the Japanese address of the publishing house, the Yawo, in Kanda. The cover is inscribed "Commercial Code," and the next word that meets the eyes within is "Contents." The translators remain incognito; but there is a smoothness and an idiomatic construction of the sentences which indicate the coöperation of a foreigner. If a man is desirous of learning the general tenor of the Code, and does not intend to insist upon shades of meaning and technical interpretations, he may be satisfied with what is here given him. An extract (Art. 710) from the chapter (XII.) on negotiable paper, will indicate at once how great a measure of smoothness and ease has been obtained, and yet how the translation has just fallen short of that technical perfection of legal exactness which would be expected of official experts:—

The possessor of a bill, note, or cheque, who has acquired it by lawful means and without gross negligence, cannot be required to deliver up such bill, note, or cheque, or the proceeds thereof, except in cases where the demand so to do is based on such facts as would constitute a plea to a claim on his part for delivery up of the instrument to him.

Of the other volume, the translation of the Book of Persons and the chapters on Succession, we can only say that it is at once useful and dangerous, and that we have obtained no little entertainment from it. We say "useful," because it is good to be enabled to get some general idea of a work hitherto entirely sealed to most foreigners; yet "dangerous," because the reader must guard himself against judging the Code from this translation, and because complete reliance cannot be placed on its rendering. The singular thing about it is that the volume is published by the very same house (the Yawo) as the Commercial Code translation, at the very same time and as a part of the very same undertaking. But that the handiwork of the two is differ-

ent, is as clear as the difference between sand and brown sugar. The get-up of the smaller volume (on Persons, etc.) is in a cheap, poorly-bound style, in contrast to the neat, broad-margined, paper-covered Commercial Code. As our readers may not have an opportunity of regaling themselves for some time with this volume (for our last information is that the edition is sold out), we may indicate the grounds of our criticism by quoting one or two of the articles. Here is a puzzler to begin with:

Art. 94. The possession of the status is a combination of facts which will be sufficient to prove the quality of parents and child from the time of birth between the husband and wife and one who asserts to be born of their marriage.

We should say that Japanese Lawyers under this section would find considerable difficulty in proving the required "quality." Again, in Art. 63, we learn that:—

The nullity of the marriage which has been contracted with the vicious consent obtained by coercion can only be demanded by one who has been coerced.

We should think that the Penal Code ought to provide a special section for the punishment of those abandoned persons who are guilty of a "vicious consent." Here follows an interesting proposition:—

Art. 110. Any person having the spouse cannot be adopted unless be jointly with such spouse.

Art. 31. A person who has the spouse cannot contract another marriage.

We advise the translator to put an advertisement in the papers requesting the "person having the spouse" to come forward and identify himself. As to the duty of mutual support, it is to be noted (Art. 27) that:—

As between brothers and sisters, they are only bound to give alimony to each other where they cannot live themselves by sickness or any other causes not attributable to them.

This reminds one of the farmer who put up on the gate of his field the peremptory notice, that "All persons are hereby forbidden to dump ashes in this field under the law or any other garbage." As to the "nationality of Japanese," by which we presume is meant Japanese citizenship, we learn (Art. 8) that:—

A child can elect nationality of Japanese:

* * *

4. Where born of a naturalized person and is a major.

This provision, we confess, seems to show too much partiality to the higher ranks of the military. This rule seems to include even females, as we see by Art. 106:—

Any person cannot adopt unless he or she is older than one who is to be adopted, and major.

The conscientiousness shown in mentioning both genders on every occasion is really delightful. For instance (Art. 12):—

A Japanese loses his or her nationality:

* * *

2. When he or she has * * * entered into the service of foreign army or navy, without, etc.

This almost exceeds the particularity of the choleric rural gentleman who posted an announcement, that "Any person whose ox or cow is found trespassing in my field will have his or her tail cut off as the case may be." In other cases, however, we find less care in distinguishing identities. Art. 105 tells us that:—

Any one whose quality of father and child has irrevocably been established before the time of the

marriage of his or her father and mother has the rights of a legitimate child from the day of their marriage."

No easy "quality," we should think, to establish "irrevocably." The next passage will doubtless be somewhat obscure:

Art. 285:—Any person who demands a right to fall to a person whose existence is not certain on account of absence, must prove that the latter was alive, etc.

This "right to fall to" is not, as might be expected, a new belligerent right, but simply the right of becoming heir, as the neighbouring articles show.

MR. DROPPERS AND LAND TAXATION IN JAPAN.

WE confess that we find much difficulty in adapting the discussion of land taxation in Japan to any method that will meet Mr. DROPPER's approval. In his original letter he quoted in support of his own position a calculation of Dr. RATHGEN'S. That calculation was made "by dividing the amount of taxes received from rice land by the average price of rice *per koku*." Mr. DROPPERS having accepted this manner of reckoning "to prove the truth of his own statement"—our quotations are from his letter—it was not unwarrantable on our part to employ the same method for the purpose of proving our statement in turn. We therefore multiplied the average rice crop—as fixed by Mr. DROPPERS—by the average price *per koku*—as fixed by Mr. DROPPERS—and showed that the result could not be reconciled with his estimate of the ratio between the land tax and the net yield of rice. But now Mr. DROPPERS turns round upon us, and says:—"I have very little faith in the wholesale method of multiplying crops by average prices to arrive at the burden of the land tax." Is it then right to divide the total tax by the average price *per koku* in order to obtain the number of *koku*, yet wrong to multiply the number of *koku* by the average price in order to obtain the total tax? We cannot pretend to observe such capricious rules of arithmetic. Nor does it seem to us that much can be gained by continuing the discussion on its present lines. Mr. DROPPERS enunciates an average figure, 25 per cent., as representing the portion of the net crop of rice which the Japanese farmer has to pay in the form of land tax. He is very positive as to his own correctness, and he does not hesitate to employ statistics and strike averages for the purpose of his own arguments. But when others do so he reminds them that statistics stand in the superlative degree of "lies," and that "in nearly all economic statistics two and two do not make four." He takes us now to the oral evidence of farmers themselves, and says that if they be asked which they would prefer, a tax of 25 per cent. in kind of the net crop or the present money payment, they would choose the former. We like statistics better than such testimony, but that is

a matter of opinion. It does not appear that an agreement will be reached at present, and until some fuller data are forthcoming, we shall content ourselves with congratulating Mr. DROPPERS on his pertinacity in standing to his guns whether they be loaded with ball-cartridge statistics of his own or blank-ammunition statistics of his opponents.

There is just one point, however, concerning which we must enter a protest. We said that the actual revenue derived from the land-tax is less than 39 million *yen*. That statement Mr. DROPPERS denounces as "a bad case of personal equation," and supports his denunciation by declaring that "the average annual proceeds from the national land-tax for the last ten years are certainly above 40 million *yen*." Now we should very readily accept this figure but for one fact which seems to have escaped Mr. DROPPERS' attention, namely, that in August, 1889, a considerable reduction in the amount of the land tax was made by the Government. The total taxable value of the land throughout the empire was in that year diminished, by Imperial Ordinance, to the extent of 130 million *yen* in round numbers, the consequent reduction of the annual revenue from land tax being 3½ million *yen*. In the face of such a fact, what is the use of talking of "the average annual proceeds from the national land tax for the last ten years"? How can any accurate or just idea of the present burden of the agricultural classes be formed by indiscriminately lumping together the figures for eight years prior to the above important modification with the figures for two years subsequent to it? We have never heard of such a method of calculation, and if our ignorance of it be in truth "a bad case of personal equation," the worse our case becomes, the better pleased we shall be. Writing in 1892, we take things as they are in 1892, and not as they were in the times preceding a large and permanent measure of land-tax reform now three years old. The annual revenue from land tax since that reform came into operation has been less than 39 million *yen*. Earlier figures may be historically interesting, but are out of date for present purposes.

PROFESSIONAL COURTESIES TO DR. F. N. OTIS.

ONE very pleasant feature of the intercourse of Japan with foreign countries, is the welcome given to some of the men of science who visit these shores, by their confrères among the Japanese, of whom none perhaps are more cordial and enthusiastic in the treatment of their foreign guests than the members of the medical profession. The hearty welcome given recently to three eminent foreign scientists by their medical brethren of the Capital, has added to the good feeling of those of that profession on both sides

of the world, and probably will not soon be forgotten by the immediate recipients themselves. A little while ago Dr. ERNEST HART, editor of the *British Medical Journal*, and Mrs. HART visited Japan, and were most brilliantly entertained. Last summer, Dr. HIRSCHBERG, a noted German oculist, spent a few weeks in this country, and was feted everywhere by the medical profession, especially by the German speaking portion, some of whom had been his own pupils in Berlin. More recently Japan received a visit from Dr. F. N. OTIS, for 30 years a professor in the College of Physicians and Surgeons of New York, and a specialist of wide reputation. He was shown unusual courtesies. Entertained at the famous Maple Club, he also lectured by invitation before several most distinguished medical audiences in the Capital. At the Red Cross, Charity, and Army Hospitals he received a warm welcome and gave interesting demonstrations at the two last institutions. Among the large number present at the Maple Club to entertain the visitor, were Court Physicians, the Surgeons-General of the Army and Navy, medical members of the Diet, the Directors of the Sanitary Bureau and the Medical Department of the University, and many other prominent members of the profession. Out of compliment to Dr. OTIS and in appreciation of the value of the special instruments invented by him, the Surgeon-General of the Army has ordered a Tokyo manufacturer to supply the surgeons of the army with these instruments. Japan may be justly proud of her progress in medicine, and of her medical profession. She can boast of such men in the past as SUGITA and UDAGAWA, whose patient industry and perseverance revealed to their countrymen the mysteries of the human frame, and furnished a store of knowledge concerning it then hidden deep in difficult Western languages; while in the present, men like MATSUMOTO, TAKAKI, ISHIGURO, HASHIMOTO, SATO, INOUE, and others have made their mark abroad as well as at home. To such students as these Japan owes not a little, for they were among the first to recognise, in the practical teaching of Western science, what others recognised in religion and the arts, that their country had much to learn from abroad, and that only by the speedy appropriation of these stores of knowledge could true progress be made. In the welcome given to Dr. and Mrs. ERNEST HART, Dr. HIRSCHBERG, and Dr. OTIS, there has been something more than a mere return for civilities received by Japanese abroad, and those who know the history of Japanese medicine and the spirit of the profession, will recognise in this a graceful acknowledgment of the debt the East owes to the West and the determination of the Japanese for the sake of humanity and the honour of their nature to add, at least something, to the store of knowledge from which they have themselves received so much.

FUNERAL OF COUNT YAMADA.

THE remains of Count YAMADA, having been carried to Tokyo from the place of his untimely death, were interred on Thursday afternoon in the cemetery of *Gokoku-ji*, a well known Buddhist temple, which stands in the Otowa suburb of the capital. We have already spoken of the great concourse of statesmen and nobles that assembled at Shimbashi station to receive the body when it arrived on the 15th instant, and have also described how Viscount HIGASHIZONO, representing the EMPEROR, and Mr. SANNOMIYA, Vice-Grand Master of Ceremonies, representing the EMPEROR and EMPRESS, proceeded to the residence of the deceased on that day, to offer the Imperial condolences. It remains now to note that on the 16th instant Viscount AYANOKOJI, a Chamberlain, was commissioned by the SOVEREIGN to transmit to the relatives of the Count a sum of five thousand *yen*, by way of contribution to the funeral expenses, together with a quantity of white silk. The Chamberlain was also the bearer of the following gracious document, signed by HIS MAJESTY:—

In early days the deceased bewailed the decadence of the Imperial House and brought resolute courage to the assistance of the great work of the Restoration. He showed zeal in the compilation of the laws, and displayed high merit by his loyal services. But before reaching middle life, and when we hoped to receive further assistance from him, we learn with pain not to be assuaged that he has suddenly been cut off. We despatch our messenger with a mortuary offering and to assist at his obsequies.

The obsequies were not conducted as a State Funeral, after the method observed in the cases of Princes IWAKURA and SANJO. Neither was the Count buried with the official pomp appertaining to the rank so long held by him as a Cabinet Minister. The public recognition extended to his funeral was in accordance with the office actually filled by him at the time of his death, namely, that of a Privy Councillor. Moreover, the ceremony differed from those to which we have been accustomed in the cases of high functionaries, since it was conducted, not according to Shinto, but according to Buddhist rites. This departure from the usual custom is understood to have been made in deference to the wishes of the mother of the deceased, who survives him. The aged lady is a devout Buddhist, and it was believed that deference to her desires on this last occasion would be most consistent with the filial affection for which the Count had always been conspicuous. Mr. OTANI KOSEN, Chief Abbot of the Western Hongwan Temple and the greatest Buddhist dignitary in Japan, had come from Kyoto to perform the burial service, and nothing could exceed the impressive dignity of his mien. It was out of the question to think of receiving the great concourse of friends and officials at the Count's residence. The chief body of the mourners were therefore invited to assemble at the temple, where the grounds and

buildings were allotted, so as to afford independent accommodation for the different sections of those attending. Thus the Daishi temple was reserved for Ministers of State and members of the Corps Diplomatique; Imperial mortuary chapel for persons of *Chokunin* and *Sonin* rank; the Library, for nobles, members of the Diet, and chief priests; the school for Shinto and Buddhist priests of lower grades and for the general body of mourners, while tents erected in front of the main building served for students and faculties of law schools and others. Owing to these arrangements and to the efficient manner of carrying them out there was no confusion, although the crowd seemed at first too large to admit of orderly disposal. At 1 p.m. the procession started from the house of the deceased. Doubtless owing to the very short distance that separated the residence from the temple, the cortège, instead of proceeding direct, made a considerable *détour*, finally reaching its destination by Andōzaka and Takehaya-cho. At the head marched a battalion of troops, and after them a large number of lantern-bearers, robed in white and carrying plain white lanterns fastened to the tops of poles. These were followed by an army of over two hundred flower-carriers, shouldering huge bouquets of natural and artificial flowers, each bouquet bearing on a white streamer the name of the friend by whom it had been sent. Among these names those of several foreigners were noticeable. The next element of the procession was about a dozen bird-cages of various sizes, some containing quite a multitude of birds, others only two or three. These were for the purposes of the beautiful Buddhist *hojo* rite, which prescribes the release from captivity of a number of living things beside the grave when the body is lowered into its last resting place. The Chief Abbot followed in a coach, accompanied by four priests, who, like himself, wore vestments of magnificent brocade. The carriage of the deceased came next, with it being a number of servants dressed in white, these, in turn, being followed at some interval by an ample banner with the legend:—"Coffin of the late YAMADA, member of the Privy Council, Lieutenant-General, First Rank of the Second Grade, Count." Thereafter marched a band of musicians, preceding an array of priests carrying censers, and after these came the decorations of the deceased, among them foreign Orders of high classes. The coffin which occupied the next place in the procession, was of perfectly plain, milk-white wood, on a bier of similar material, relieved only by richly chased gilt mountings. It was carried by fifty men in white, and followed by the chief mourner, and adopted son, and by a great conclave of relations and friends. At the temple the service consisted of the reading of the ritual, after which the chief Abbot de-

livered an eloquent and dignified address, setting forth the services of the deceased and the distinctions gained by him. The chief mourner and the relatives, and after them the representatives of the EMPEROR and EMPRESS, the Ministers of State, the Members of the Corps Diplomatique, and the most prominent friends, then performed the ceremony of laying a flake of *Kyara* incense on the censer before the catafalque, the rites within the temple being thus brought to an end, and the general public dispersing.

THE KUMAMOTO TROUBLES.

WE publish elsewhere a very interesting letter from our Kumamoto correspondent on the subject of the alleged anti-Christian action of the Governor of that Prefecture. Our correspondent states a clear and suggestive case. It is evident that under the circumstances of extreme political tension which exist in the prefecture, equilibrium may be disturbed by a very trivial event, and a series of such events, all capable of being perverted into materials for campaign purposes, unfortunately occurred within a brief interval and at a critical time in Kumamoto. These things are past, however, and though, as a matter of historical justice, it is interesting and important to determine the truth, what strikes us chiefly in connection with the matter is the danger that threatens the reputation of Christian propaganda in Japan if it allows itself to be associated with the designs of political intriguers. It was precisely such a misfortune that befell the creed of the West in mediæval times in this country, with the result that not only did Christianity itself become an object of fierce national hatred, but the whole question of Japan's foreign relations fell under its shadow, and for centuries the term *bateren* (padre) was employed as a synonym for an unscrupulous and aggressive alien. We find it impossible to suppose that official doings in Kumamoto were absolutely above the reproach of some bias in this instance. The present Minister of State for Home Affairs, Count INOUE, a man of exceptional insight and fearless judgment, evidently did not hold Governor MATSUDAIRA entirely blameless of indiscretion, though declining to admit that anything like open censure, still less removal, was called for by the circumstances. But it becomes a delicate problem to determine whether the prominent Japanese Christians in the capital who took up the matter so vigorously, pushing it not only by means of newspaper articles, but also by direct appeals to Cabinet Ministers, did not err on the side of over-zeal. Christian propagandists cannot move too circumspectly in Japan at the present juncture. There is not the scintilla of occasion to precipitate crises or seek the crown of martyrdom. It has often happened elsewhere that the preacher of the

Original from

creed of love and charity finds himself in the presence of paganism so revolting to all his instincts and principles that no course offers except to take his life in his hands, and seek, by every method, however militant, to substitute the civilization of JESUS for the barbarism of demonolatry. But nothing of the kind is called for in Japan. The preacher of Christianity has here to deal with civilization of a most refined and picturesque type, and with a creed which in many respects stands on a plane only a little below his own. He must approach the nation through its intellect, not by means of object lessons that appeal to the grosser senses. There is no despotism here for which he can substitute the reign of the Nazarene's liberality; there are no idolatrous savageries beside which the mercy of the martyr Saviour may be placed in strong relief. On the other hand, the nation's moral attitude towards the Christian gospel is undoubtedly one of either keen interest, strong curiosity, or decided hostility, and the fate of his creed being among the problems about which acute feelings centre, any false step may place him in a position of embarrassment and discredit. The spread of stalwart convictions invariably involves some clashing of opinions, and may even lead, as it has done in the West, to such a blunting of the sense of proportion that the pettiest unessentials are magnified into vital principles, and the scripture which an omniscient Being is supposed to have given us, is torn into microscopic fragments so that it may be adapted to the varied patterns of warring sects. But unsightly as all this may be, the discriminating section of humanity recognises that such results indicate simply a high fever of inquiry and an extreme sensitiveness of conscience. Men may fight about their ideas of the shadows and side-lights of truth, but the aim of the contest with all alike is the vindication of truth. It becomes, however, a different matter when religion is employed as a political weapon, and when its issues are twisted into means of working injustice or serving the ends of common ambition. Such a danger attends all problems of conspicuous dimensions in Japan to-day. Christian Propagandists are bound by every dictate of discretion to avoid it. The credit of their creed is in their keeping, and it is by them that an account must ultimately be rendered. They have no business to provoke passions against the indulgence of which they themselves preach, nor have they any right to endanger their cause by suffering it to be associated with purely mundane interests. We entertain no doubt that the leaders of the Christian movement understand these things very thoroughly, and are anxious to walk with perfect circumspection. But the best intentions are not always carried out, and we greatly question whether the agitation fomented on the Christian side about this

Kumamoto affair, and the designs of parliamentary action attributed to the Christians in connection with it, may not work mischief to the cause.

NEW CODES AND OLD CUSTOMS.

IV.

WE may take now two important titles which occupy some 50 Articles in the Code and some 30 pages in Part II. of "Private Law in Old Japan,"—Ordinary Leases (*Bail*) and Perpetual Leases (*Emphytéose*). Some of the most important topics regarding the relation of landlord are treated with more or less fullness in the records of customary law, and a few comparisons are possible. In the first place, by the old (and in part still prevailing custom) the tenant was required to give a surety. This by the Code the landlord can still require; but unless he stipulates for a surety, the tenant may enter and occupy without being obliged to give one. The surety system of old days was a complicated one, uniting the whole community in strict bonds of mutual responsibility. The landlord was responsible for his tenant, the 5-men company for each member, the *chonai* (or members of each block) for every householder, the *cho* officials for the people, and so on up to the top. This was a part of the Government policy; and while it was consistently and effectively carried out, it was nevertheless a bit of feudal life which could not survive the downfall of feudalism. It is a mistake to suppose that the general requirement of a surety for a tenant in former times was motivated by the landlord's wish to secure the payment of rent; the chief object was to get some one on whom the landlord could fall back if he was brought to book for the tenant's misconduct. If the tenant by evil doings got himself into Court, the landlord too must accompany him to the threshold of justice. At one time the landlords found a sly way out of their difficulties by evicting the tenant as soon as any action was brought against him by a third person; but the Courts soon detected this, and forbade the bringing of such suits for eviction till after the previous suit was ended. We dwell on this point because it is as good an example as any of the changes that feudalism's disappearance has wrought, of the complex circumstances to be considered, and of the frequent suitability of a Western rule to the modified conditions of to-day in Japan.

The landlord, of course, can declare the tenancy at an end on default in payment of the rent by the tenant. This is the rule of the Code and of old custom equally. The Code requires the rent to be paid, if in money, monthly; if in kind, at least not before the crop is ripe. But the former rule applies only in the absence of local usage to the contrary (Art. 138), and thus the wide variety of customs on this point is very pro-

perly left untouched. Where a destruction of crops takes away the tenant's means of paying rent, the Code obliges the landlord to accept a proportionately reduced rent, provided the loss reaches one-third of the whole crop. There are in the records of customs only two or three notices of a rule of this sort; but there can be no doubt to any one familiar with Japanese institutions, that the custom was an universal one, with a greater or less degree of leniency to tenants according to the temper of the people. In some districts a minimum extent of loss was fixed on, and the new Code, in embodying the old custom, has wisely established a minimum proportion to mark the beginning of the tenant's right; for any loss less than that he must trust to the clemency of the landlord. It is again fortunate for Japan that the French law has inspired the new Code, for, as Irish tenants know to their cost, the law of England does not consider the tenant so leniently. Ever since *Taverner's Case* in 35 Henry VIII. (where a man hired land and a flock of sheep, and when the sheep were all destroyed by a natural calamity he was forced to continue paying hire for them), the rigorous rule has been that no disaster, however inevitable, excuses the tenant from paying rent. When one reflects that in agricultural leases rent is in effect merely a share of the produce, it seems a decided failure of justice to admit no reduction of rent where crops are destroyed by natural calamities. The Continental law has always taken the contrary view, and here it is in complete harmony with Japanese practice. The landlord is bound, under the new Code, to make all repairs except those of mats, paper, fixtures (*tategu*) and paint, and to keep clean wells, ditches, and aqueducts; but in all cases local usage is to prevail over these rules (Art. 128). Local usage, however, is not likely to conflict much with them. In Rikuzen *kuni*, for example, "the lessee of a house usually repairs the mats and wooden fixtures (*tategu*), and the lessor repairs the roof and the like." The usual phrase is "the landlord repairs roof, walls, and outside erections, while the tenant repairs interior fixtures and mats." There are but two records on the point of cleaning wells, etc., and they recite exactly contradictory rules; so that as far as appears no harm has been done by choosing one of the alternatives as the general rule in the absence of custom,—the alternative, too, which seems more natural and just.

Whether the tenant or the landlord shall pay the taxes depends, under the Code, on the terms of the contract; but, in the absence of a stipulation, the burden is the landlord's. In Old Japan the rule was the same, the general custom being for the landlord to pay, except where the parties agreed to the contrary or a special form of tenancy threw the burden on the tenant. In some cases (for example, where

a mortgagee leased the land back to the mortgagor, taking rent instead of interest) it was strictly forbidden that the tenant should pay the taxes, for otherwise he was subject to a double burden, and he was generally in no situation to protest. The TOKUGAWA Courts were engaged in a constant struggle to prevent oppression after this fashion by money lenders; and it is satisfactory to see that the traditional policy of the country has been perpetuated in this Code; for Art. 125 of Book IV. (*Suretyship*) provides that "the mortgagee is liable for all taxes and other annual charges."

The subject of the use to which the tenant may put the land is one of importance, especially in agricultural leases. The Code has it that "the lessee may make erections and plantations at his discretion, unless they involve changes in the existing erections or plantations." There is not much on this point among the recorded customs, but what there is corresponds substantially to this rule. In Ugo *kuni*, it is said, "if the lessee wishes to make a new door or window or roof-projection, the consent of the lessor is required." In Echū *kuni*, "in order to change the use of the land or to cut down forests, the lessee must obtain the lessor's consent." The consequence of the misuse of the land, according to the Code, is that the landlord has the privilege of terminating the lease; and this was a rule of Old Japan also. "In case of cultivated land the lessor may retake possession if the lessee injures the land or fails to keep it manured;" "the lessor may retake possession if the tenant fails to pay rent or injures the land;" this is the usual way of expressing it. The same right accrues to the lessor, under the Code, where the lessee of cultivated land paying rent in kind assigns or sub-lets to another without the lessor's consent, (the assignment or sub-letting being otherwise permissible unless the contrary is required by contract or by usage). In the records of customs it appeared that the practice varied. In some districts consent was necessary, in others not; the number being about equally divided. However, even where the transfer was allowable without consent, the original lessee seems generally to have been regarded as still liable, either primarily or as surety, for the rent; and this rule is perpetuated in the Code. The latter, however, makes clear an exception not brought out in the records of customs that the liability of the original lessee ceases, if there has been, not merely consent, but a renewal of the lease with the new lessee, who is thus accepted as a substitute.

In regard to the termination of the lease, the Code lays down (Arts. 145-151) some reasonable rules for the period of notice necessary in case no term has been agreed on, the general principle being that the term is to be taken as that on the basis of which the rent is reckoned,

and that the notice given should be equal to a third or a smaller fraction of the term. These rules probably come as near the present ideas of fairness as any rules could; but it is specially provided that they are to apply only when there is no local usage on the point. Moreover, when the lease would come to an end, either upon such a notice or through a rescission of which the lessor has reserved the privilege, while a crop is growing and before it is gathered, the tenant has the right to gather the crop. Says the record for Buzen and Iki *kuni*: "After the seed has been sown, the tenant cannot be evicted before the harvest;" and this humane rule, since it prevailed in the South-west, where the cultivator was lower in the community than elsewhere, may be taken as a fairly general one. New Code and old custom thus come in line again on this topic.

V.

WE have now examined the points of comparison in the provisions governing what is perhaps the most important of all in the field of property, the relation of landlord and tenant. We may look next at a form of occupation of less consequence but perhaps of more interest because of its peculiarity,—that variation of tenancy known in Roman Law as *Emphyteusis*, in the Low Countries as *Beklem-regt*, in Portugal as *Aforamento*, and in Japan as *yei-kosaku* or *maga-kosaku*; while in English the term is wanting because the institution is, and we may best take the literal translation of the Japanese word (much the most natural of the four) and call it a "perpetual tenancy." The incidents of this form of tenancy, peculiar to it in all countries are: fixity of rent, perpetual occupation as long as rent is paid, and the privilege of using the land more freely than an ordinary tenant, with (usually) the power of alienation without consent of the landlord. Whether or not it represents a form of holding economically beneficial to the country is a point on which economists would perhaps disagree; and each nation must decide this for itself. But at any rate as an institution it is apparently being crowded out of life by the circumstances of modern civilization. It began, alike in Rome and in Japan, in part by the letting of public lands to those who would reclaim them, the perpetuity of tenancy being necessary in order to encourage the expenditure of labour required, and in part by transactions between private persons, either where the land-owner needed to raise money and, giving up his land, received it back in perpetual tenancy, or where he wished a regular income from his land and put it out to lease in this manner. Curiously enough, in Portugal and in Japan alike, the monasteries seem to have made special use of this arrangement. But it now survives in only a few corners of Europe. Like the English copy-

hold (its nearest English analogue) it has practically died out. The new Japanese Code has taken account of the necessities of the time, and provides, *first*, that no *emphyteusis* (*yei-shaku*, perpetual lease) shall be created for a longer term than 50 years; *second*, that leases for a fixed period longer than this, in existence at the time when the Code takes effect, shall remain valid; and, *third*, that perpetual or indefinite leases already in existence shall be extinguished (presumably by purchase of the reversion by the tenant and transformation of his lease into complete ownership) in some suitable manner to be ultimately provided for. The first provision is in harmony with the times: the second is a dictate of common justice: the third is a matter of economic policy with which we need not here concern ourselves. It may be noted, however, that a custom to this effect existed in Hoki *kuni*, where the tenant could buy in the reversion at four-tenths of the price at which the land was offered to others.

The regulation of these tenancies by the Code is in the line of a much-needed uniformity and harmony of customs. A reference to the chapter of "Private Law in Old Japan" on "Letting and Hiring" will show that there are a great number of varying forms of this tenancy, and a chief difficulty will be the practical determination of the status of individual tenants. The complete form appears to have existed in parts of the following *kuni*: Settsu, Iga, Mikawa, Totomi, Kadzusa, Shimotsuke, Rikuchu, Uzen, Echizen, Echū, Echigo, Sado, Tamba, Hoki, Harima, Higo, Buzen, and Hyuga; while more or less indefinite customs in favour of a perpetuity are also found elsewhere. Certain general features may be discerned. In the first place, the tenant pays the taxes. This the Code provides for in Art. 166. Next, the landlord cannot terminate the relation so long as rent is paid and the land is not injured. This again is found in the Code, with the lenient provision that the non-payment of rent must occur three years in succession. The Code appears not to authorize the transfer of such leases by the tenant, where rent is paid in kind, without consent of the landlord,—a provision seemingly reasonable (for in the relation between the parties the personality of the tenant is important), but opposed to the preponderance of custom. In two *kuni* the consent is said to be necessary; in four, unnecessary; while in another, the consent is not required, but (neutralizing this) the original tenant is in any case liable for rent. Under the circumstances the legislators seem fairly to have been entitled to choose for themselves. The same remark applies to the term required to constitute a perpetual lease. The number of years varies in different regions, ranging from 2 to 50, the most common number being 10 or 20. The Code fixes upon 30,—an exercise of dis-

cretion which in the existing conflict of customs must be judged upon economic rather than legal grounds.

In most of the *huni* the rights of perpetual lease arose in part through the reclamation of waste land, and the regulation of this part of the subject depends upon the public land laws already in force.

A general feature of emphyteusis in Europe is fixity of rent. This is scarcely touched upon in these records of Japanese customs; it is mentioned in but a single passage. But without that feature this form of tenancy loses most of its advantages, and it is not to be doubted that it prevailed generally throughout the country. The Code of course sanctions it. The special rights of use possessed by a perpetual tenant are clearly enunciated in the Code, in general terms; but the records of customs give us little or no light on the subject. There is nothing in the provisions of the Code which is inconsistent with the general nature of the tenancy, and it is obvious that there ought to exist some statement of the mutual relations of the parties. A safeguard is established, however, by requiring (Art. 157) these rules to apply only in the absence of special agreement between the parties, and such agreement may of course be construed according to the custom of the locality.

We now pass to the next topic on which the records of custom afford us points of comparison,—that of Servitudes in Land.

CORRESPONDENCE.

THE ASCENT OF FUJI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with much interest your note on "Ascents of Fujiyama in Snow" given in your issue of Nov. 9th.

Palmas qui meruit ferat, for I should be extremely sorry for any 'claim' to be made on behalf of Mr. Fordham and myself as having been the first to ascend Fuji over its winter snows if others had already done so.

We were not, however, at the time aware of any previous winter ascent being duly recorded, as we thought would naturally have been the case had one been actually made. A summer rarely passes without some orthodox ascent of Fuji being chronicled in the local press, but so far as we know none had ever been made public of a snow climb, which we concluded would have been of sufficient general interest to call for mention.

All references to climbing Fuji either imply or actually state that it can only be done in the summer time, whereas had any winter ascent been known to have taken place, some reference to it might naturally be expected.

So high an authority as "Murray" does not notice such, and the last edition of that valuable work states that "the ascent can only be made between (approximately) the 15th July and 10th September."

As you remark, when speaking of the first snow ascent which you know to have been made, there is no special difficulty about it. And neither Mr. Fordham nor myself looked upon it as a 'feat,' the climb being no more, as far as technical difficulties are concerned, than equal to an average third rate Alpine ascent. But we found it interesting on account of the pleasure and novelty it afforded.

As to there being "very little doubt that the 'feat' had time and again been performed by Japanese," I venture respectfully to differ. Guides I have taken at various times from Murayama, Gotsamba, and Subashiri have all declared both

that it never had been, and never could be done, and those we employed last May all turned back, flatly refusing to proceed a step further, when the lower edge of the snow was reached. At the inn at Murayama, kept by the descendant of the "line of hereditary Shinto priests of the mountain" (*vide* Murray, 2nd ed. p. 114), I made careful enquiries last year, and the idea of climbing the mountain over the winter snows was treated as too absurd to be entertained, and I was told it was an impossibility.

Still, though the expedition is one by no means hazardous or of particular difficulty, I am sure that all your readers would be genuinely interested to hear an account of the actual first ascent in question, of which you have personal knowledge, and of them none will be more interested than

Your obedient servant,

WALTER WESTON.

Kobe, November 12th, 1892.

[Of course we are well aware that the claim advanced on behalf of Messrs. Weston and Fordham was made in perfect good faith. For the rest, it matters very little who first climbed the mountain in snow. The excellent account—from Mr. Weston's pen, we presume—in the *Pall Mall Gazette* might almost have been written with reference to the trip of 1890.—Ed. J.M.]

THE CHARGE AT BALACLAVA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A brief account of the charge of "The Light Brigade," from the pen of "Colonel Shakespear," may be of interest to your readers:—

"The charge of 'The Light Brigade' on the 25th of October, 1854, is still a household memory with us, though thirty-five years have slipped by. Maude's Horse Artillery, with me second in command, opened fire about daylight, and held its ground until the ammunition was exhausted, when it retired a short distance down the hill, where it remained for a time screened from the Russian fire, with the hope of giving confidence to some wavering Turks. Maude was seriously wounded by a Russian shell bursting near his horse, and there were also several casualties amongst the officers, men, horses, and gun-wheels. Some of our field batteries soon arrived and continued the cannonade. In the course of an hour or so our two brigades of Cavalry and Horse Artillery formed columns under the heights of the Sebastopol Plateau, when suddenly about 5,000 Russian Cavalry in line, with the columns in support, poured down the grass slope, and got a crushing defeat by the gallant charge of our splendid 'Heavy Brigade' of Cavalry, under General Scarlett. In the pause that followed I deemed it most desirable to learn what the enemy might be doing, so I mounted a baggage pony, as the horse that had carried me since early morn had been wounded by the splinter of a shell, and rode him to near the crest of the ridge forming our side of the now famed valley, where I tethered him to a tent-peg, and crept through the long grass until my telescope cautioned: 'Beware, the brushwood hills opposite are full of guns, and down the valley troops by the thousand.' Captain Charteris, one of Lord Lucan's aides-de-camp, rode by, but as he did not see me I hailed him with that information, when he replied, 'The Light Brigade is ordered to attack down the valley,' and while we were speaking it appeared advancing and deploying at the trot and canter. It was then, of course, too late for a warning from us, so at the utmost pace of the pony I got back to the guns, and brought them up at full gallop and placed them over the ridge, where they might most effectively aid 'The Light Brigade' in its inevitable retreat. At that moment Lord Cardigan reined his horse, and told me what had happened, while he pointed to a long rent in his cherry-coloured overalls made by a Cossack lancer, who had otherwise missed his aim—others rode or ran up to us. Amongst the last was Captain Godfrey Morgan, 17th Lancers, now Lord Tredegar, who having had his horse killed and helmet gone walked, sword in hand, up to me, and speaking as coolly as on parade, remarked, 'I say, Shakespear, is not this an awful business. What shall I do?' My reply was, 'Quick, jump on a gun limber and go to the rear with us or to the front for action, when you may help to fight a gun.' We must not forget the valley from the 93rd Highlanders, that emptied many Russian saddles near the entrance to Balacava, nor the charge of the French cavalry on the enemy's artillery in the brushwood hills, as they, being mounted on white horses, were very conspicuous. Sights and impressions on a field of battle are rarely forgotten. Even now, I fancy I see Nolan and his horse lying dead on the grass, like many others. Of my friend Charteris, Lord Wemyss's brother, I have to relate a remarkable instance of evil foreboding. While out together for a quiet ride on the previous evening, we saw signs of the morrow's storm, when his gloomily persisted in

saying, "He would not live through it." "Well," I said, "we have often been under fire together and are still here. Why should not the same recur?" However, Fate ordains, and Charteris was killed by a round-shot as I parted from him on the ridge, and my gunners buried him where found. Lord Byron's words are true of battle:—

By Heaven 'tis a splendid sight to see!

The casualties in "The Six Hundred" were:—Officers 21; men, 257; horses, 335.

The above is but a very brief account of that ever memorable event, but it is short and to the point.

I am, Sir, your obedient servant,

IQUIQUE.

November 14th, 1892.

THE LAND TAX.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—While perfectly willing to agree with you that the object of this discussion is "to arrive at truth and not to win a controversial victory," I cannot help feeling that there is a large element of "personal equation," or something like it, in your editorial reply to my second letter. I therefore beg a little more space to clear up finally one or two points.

I have very little faith in the wholesale method of multiplying crops by average prices to arrive at the burden of the land tax. If cautiously used such figures may be useful, but otherwise they are little better than a rough guess, and far more dangerous since they have an appearance of scientific exactness. For instance, you take my figures, viz. 27,894,500 *koku* of net crop at *yen* 5.2 per *koku*; the latter price, however, is not the average price of the farmer, but the average price in the rice exchanges of Japan. Sometimes the difference between the price in the exchanges and that at the farmers' godowns is considerable. I will not give figures, but in parts of the country I know the difference to be as great as one *yen* per *koku*. I have also higher figures, but I cannot verify them. The element of freight, etc., must be counted in, and this we know, is pretty heavy in parts of Japan. In the arithmetic of the customs, said Swift, two and two do not make four, and the same observation applies to nearly all economic statistics. Friction, in the calculation of the burden of a tax, is an important factor. The following test as to whether the land tax requires 25 per cent. of the net crop is, I believe, a good one: Put the question to a farmer whether he would prefer to give up 25 per cent. of his net crop of rice, as a tax in kind, to the collector of the national land tax, or pay his present money tax? I have often asked this question of intelligent farmers and in nearly every case the answer is that the present money tax is a heavier burden. This is no demonstration, I know, as I have asked the question of only a limited number of farmers; but these were so certain that the substitution I propose would be a lighter burden, that I remain convinced of the moderation of my figures.

I see no difficulty in my statement that rice land has paid on the average thirty million *yen* annually. I have not the figures for each year, but Rathgen makes precisely the same statement that I do, namely, that rice land on the average pays thirty millions out of a total land tax of forty millions. The precise figures for the two years 1881-1882 and 1887-88 are given as follows:—

	1881-2.	1887-8.
	<i>Yen.</i>	<i>Yen.</i>
National land tax	43,900,000	41,540,000
Tax from rice land	39,755,000	39,555,000
Tax from dry land	7,643,000	6,791,000
Tax from building land (ken)	2,618,000	2,667,000
Tax from building land (cities)	881,000	775,000
Tax from other lands	849,000	714,000

I am perfectly willing that my figures should be scrutinized if they fail to give a correct impression. I put the average proceeds from the land tax at 40,000,000 *yen*, when, you say, the actual revenue is less than 39,000,000. This is, in my opinion, a bad case of "personal equation." The average annual proceeds from the national land tax for the last ten years, including 1890-91 and 1891-92, are certainly above 40,000,000 *yen*. I have not the average for the proceeds of the tax on rice land for the last ten years, but I think there is no doubt that thirty million *yen* is correct.

There is a great difference in the purpose for which figures are used. I built no argument upon the last figures quoted, but used them simply as an illustration to indicate the enormous importance of rice land, as a factor in Japanese taxation. On the contrary, you base an elaborate argument upon your figures and consequently I have a right to scrutinize them as carefully as possible.

Yours respectfully,

GARRET DROPPERS.

P.S.—Since the above was written Mr. Zumoto

Original from

UNIVERSITY OF ILLINOIS AT
URBANA-CHAMPAIGN

has again given a reply which I am bound to say is more unfair or at least fuller of misunderstandings than the former one. In his first letter, Mr. Zumoto thought my "ideas on the subject of the Japanese land tax seem to be not a little confused" because I had not taken the recent rise of price into consideration. When I explained that I was perfectly aware of this rise of price, but that I was speaking of the *average* burden of the land tax, Mr. Zumoto's charges fell to the ground, and so far as I can see he had nothing more to say. He now adds that I charge him with limiting his calculations only to the space of a few years. On the contrary, I only explained that I would have been wrong in doing so. Life is too short to answer such misconceptions.

Mr. Zumoto, in calculating the average price of rice, begins with the year 1875, instead of 1884 as I do, and he adds:—"It will be found that Professor Droppers has been very sagacious in shutting his eyes to the years immediately before and after the particular time selected by him." Mr. Zumoto is unfortunate in his choice of phrases. I carefully explained why I adopted this particular period, and if Mr. Zumoto does not like the period I chose he should attack my reasons and not lay it to my sagacity. The years before 1884 were the interval (as I explained in my first letter) in which the farmers' taxes were paid in depreciated paper,—an abnormal condition of things, and one which finally resulted in putting the farmer in a worse condition than ever. It was during these years that the farmer ran into debt so easily. While the depreciated paper lasted, however, I said explicitly in my first letter that the farmers' taxes were very light. Language can go no farther in making my meaning clear. If Mr. Zumoto considers the years of the depreciated paper money to be a normal period, all I can say in reply is that he differs from the common run of economists. During the American Civil War a similar condition of things existed, and the currency price of gold frequently averaged more than 200 per cent. premium. The price of any article was correspondingly high, sugar for instance selling at 30 cents per pound. Would it be an evidence of "sagacity" to omit these years in calculating average prices in the United States during a series of years?

Mr. Zumoto gives the average price for the year 1890 as yen 8.15 per *boku*. The high price of this year was in a great measure due to destructive floods. Now, in such an event, the taxes are not collected during the year from the owners of flooded rice-land but are spread over a number of years during which they must be paid up. I mention this, not to point out any mistake in Mr. Zumoto's calculations, but merely to show how difficult it is to get a fair average of the burden of the land tax.

At some future time I hope to give accurate figures for the burden of the tax in Gumma Ken and Nagano Ken. In both of these prefectures I know of land owned by men who are perfectly familiar with the agriculture of Japan, which has not averaged 6 per cent. profit or rent to the owners. There are no debts on the land and the men are held to be good managers. On inquiring, I found that these districts were valued somewhat higher than other parts of Japan. If Mr. Zumoto is certain that I am mistaken in supposing that they are over-valued, so much the worse for his argument.

G.D.

PATENTS.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—Occasionally I see in the *Mail* statements of the number of patents granted during a certain month, the numbers ranging from 1,000 to 2,000.

The official *Tokai Nenkan* for the year 23 of *Meiji* gives as the number of patents for the preceding period of 15 years only 131. And these are all for very small things. Does the word patents in your paper mean the *Sembai Tokkyo* of the official statistics? Is it possible that Japan can rival the U.S. in the number of patents annually?

Sincerely yours,
J. H. DE FOREST.
Sendai, November 14th, 1892.

[The figures referred to are taken from the Official *Gazette* and are supposed to be supplied from the Patents Bureau.—E.S.J.M.]

THE STUFF THAT DREAMS ARE MADE OF.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—Few more delightful things have been written by Mr. R. L. Stevenson than that in which he acknowledges his indebtedness to the "brownies," those good-natured elves of Scottish legend, who hover round the bedside of the sleeper. *Dr. Jekyll and Mr. Hyde* had all the weirdness of a dream, and therefore it was not altogether a surprise to find that the brownies had actively collaborated with Mr. Stevenson in the production

of that unique masterpiece. Doubtless, dreams deserve the scant courtesy they receive at the hands of most men; but it is an interesting question whether, if cultivated in Mr. Stevenson's manner, both pleasure and profit might not be derived from them. My own experience—in a limited way—has been quite successful. Only last night my brownies achieved the wonderful feat of condensing the events of one day of my life (the day before) into a single Church service! And this is the more remarkable because I have not been (I am ashamed to confess) in a church for almost two decades. First, let me relate their handiwork, and then I will show you how logically they set about it. Well, I was in Church, the usual service was being held, and Mr. Sim of Kobe was presiding at the organ. While Mr. Irwine, in the pulpit, was looking up some reference, I happened to glance behind, and there saw a number of the congregation looking intently at something in their hands. Suddenly the midday gun was heard, when they adjusted their watches and put them in their pockets again. At this moment, taking advantage of the pause in the service, an elderly man arose near me, and began in the style of the itinerant preacher to offer up "a few words." Catching the eye of the clergyman, I winked, as much as to say this had better be stopped. The allusion was caught, he turned round to Mr. Sim, asked him to play the Doxology (I believe), and the service was soon brought to an end. So far the dream, which you will say is not particularly striking. But now to show the *modus operandi* of the brownies. I had had, in the forenoon, a long discussion with a friend on religion and the Churches in which the subject of music largely entered. Later on I had been reading an account of sports in Kobe, with especial reference to Mr. Sim, the noted athlete of that port. I may mention that I never met that gentleman, and would not know him from Adam if I did, but it was necessary for my brownies to have an organist, and what more natural than that they should select him, whom I had been reading of as a "good all-round man." They represented him as a somewhat tall, spare, dapper man, with little black, mutton-chop whiskers, which, I hope is a fair portrait of the gentleman, though it is not my *beau ideal* of an athlete. Then the pause just before the gun at noon is in the most natural order of events in our daily lives. The "bore" and the way he was disposed of, formed the counterpart of a private episode that occurred later in the day.

Psychologically, the dream is not devoid of interesting features. One is that in dreamland the ego is generally unconscious of its own physical defects. I am so short-sighted that it would be impossible for me to catch a man's eye half-a-dozen yards away, yet in all my dreams perfectly normal sight is with me. It is in Wilkie Collins' *Man and Wife* (if I remember rightly) that one of the characters loses his sight by the action of nitrate of silver upon it, but in his dreams he is never conscious of his loss. Observe, this curious fact applies only to those who have been deprived of a faculty they once possessed, and not to those who received their infirmities at birth. Another interesting feature in dreams is the absence of noise which accompanies all natural phenomena, such as the collapse of houses in an earthquake, collisions at sea, etc. It could not well be otherwise, of course, for the simple reason that external noise of any kind would awaken the dreamer. It is the mental eye, so to speak, which alone acts in the mystic land of dreams. I have no doubt that when the midday gun sounded in my dream, there was some external familiar noise—not sufficient to awake me—like the sudden clanging of a door or shutter, which assisted the brownies in the working out of their comedietta.

Yours very truly,

M.

Tokyo, November 15th, 1892.

THE ALLEGED RELIGIOUS QUESTION IN KUMAMOTO.

(FROM OUR OWN CORRESPONDENT.)

Kumamoto, November 7th.
Your correspondent felt considerable surprise at reading the editorial comments of the *Japan Mail* on the alleged violation of the Constitution by the Governor of Kumamoto. A timely letter upon the facts in the case would, perhaps, have changed the views of the editor, or at least impelled him to delay judgment. But a timely letter it was not in your correspondent's power to send,—firstly, because at the time of the incidents over which so much needless fuss has been made in Tokyo, he was absent from the city; and secondly, because it is almost impossible to unravel in a short time the extraordinary tissue of exaggerations and falsehoods which political passions spin thickly over the smallest occurrences that can be utilized

for party purposes. In a general way, I do not hesitate to assure you that news from Kumamoto,—whatever credit it may obtain in Tokyo—should be received by the *Mail*, not simply *cum grano salis*, but *cum maximo grano salis*. And with these preliminary observations, I proceed to declare:—

(1.) No boy was expelled from any Kyushu school for reading the Bible.

(2.) No violation of the Constitution was committed in word, thought, or deed, by Governor Matsudaira.

(3.) The alleged Anti-Christianism of Governor Matsudaira is a political lie—invented by the political party opposed to him—totally indifferent to religious questions in themselves, but cunning to use them as weapons against its real or imaginary enemies.

To any one having the faintest ghost of an idea about the political situation in Kumamoto, the reported declaration of the Minister for Education, that a Governor must not even allow himself to be suspected of what Governor Matsudaira was charged with, must seem rather extreme. Indeed, if insisted upon, such a policy would place any Governor at the mercy of his enemies. When facts for suspicion are not ready to hand they are invented; and the religious question is one of the best to raise against an official, as those who raise it can generally bring it to bear with considerable foreign pressure behind it. Its success in the case of the present Governor of Kumamoto, will doubtless cause it to be resuscitated in various prefectures at regular intervals, until public common-sense recognizes it as a played out scarecrow, and relegates it to that political graveyard whose sexton is Ridicule.

Judging from the comments published in Tokyo and Yokohama, there seems to be an idea abroad that Kumamoto is a place full of Anti-Christian sentiment. The facts are that throughout a large part of Kyushu, and particularly in Kumamoto, Christianity is quite strong—much stronger than in most parts of the Main Island,—outside of its three greatest Cities. There are a large number of Christian Schools, and there are probably few large public schools in which there is not at least one Christian among the teachers. The religion of the teacher is never made a matter of comment: he is selected for his capacity, not for his religion. There are perhaps no large schools in Kyushu in which there are not a few Christian pupils. Their faith is never considered by their comrades or by their teachers: their admission to the school depends entirely upon their ability to pass the requisite examination. Neither a Christian teacher nor a Christian pupil can possibly manage to make himself an honest martyr for religion, however zealous he may be in that direction. The days of honest martyrdom are dead, and even political chicanery cannot revive them. The student may fill his house with Bibles if he likes, and the teacher may attend a Sunday-school if he can find one. Nobody cares a single *rin* what either believes. But if the student reads his Bible zealously in the school-room during the hour of geometry or algebra, or if the teacher preaches about the inspiration of Moses during the time at which he is paid to teach vulgar fractions, the former may be expelled for idling his time, and the latter for violating the laws relating to the secularization of the schools. The boy may claim to have suffered for his faith, the teacher may raise the cry of persecution; but they cannot prove themselves anything better than fools. However, there will be politicians to declare them martyrs, and to utilize their cases in the newspapers for an assault upon the Governor in the name of the Constitution.

The first yell about the religious question and Governor Matsudaira was raised last spring, when a teacher was expelled by his orders from the Eigo-Gakko, a Christian School,—under gubernatorial control, and regarded as an institution preparatory to the ordinary Middle School. The offence was the utterance (as a teacher) of sentiments opposed to national loyalty and to the tenour of the Imperial Words on Education. That as a Christian, the Japanese teacher in question might hold the views expressed, nobody questioned. But that, while acting as a teacher, he should publicly preach them, was a direct violation of educational regulations. He raised the cry of persecution, and succeeded with the aid of the political newspapers opposed to the Governor, in making his howl heard as Tokyo. And although the just action of the Governor in the matter was fully recognized, the interest excited by this move on the religious question suggested the efficacy of further assaults with the same weapons.

Two incidents at Yatsushiro afforded the next opportunities for evoking the religious question. Curiously enough it was first raised by the conservatives, the party in favour of the Governor. A school boy, throwing missiles at a sparrow,

struck a picture of the Emperor hanging in the school-house; and out of this accident (by none regretted more than the boy), local politicians evolved a nightmare. The boy was a Christian, they said, and had defaced the picture through fanaticism. The story reaching Kumamoto, was exaggerated by one of the leading papers into a happening that really inflamed anti-Christian feeling. None could have read the account without anger or disgust. It was a magnificent piece of writing; but not one word of it was true. The Governor was called upon to use energetic measures. He tried to investigate the case, and found no case existed. The boy was pardoned, and returned to the school from which the outcry had driven him away. Then the Governor was abused by the other party for want of patriotism.

The second Yatsushiro incident was the expulsion of a head-master of the Shōgakkō, not for religion at all, but for using his influence to get a certain candidate elected.—I don't know of what party. At all events, there was no religious motive for his expulsion; but the motive was invented to serve occasion.

These incidents, however, provoked less general interest on the religious question than the affair at the Shōgakkō in Yamaga (Yamaga is about seven *ri* from Kumamoto). Three Christian boys, during the absence of the teachers, entered a part of the building where they had no business to be during leisure hours, opened the organ, and performed a sort of service, singing Christian hymns. The act in itself was only a breach of discipline (for the boys were too young to see the question from a more serious point of view); but it was an unfortunate one. Politicians at once took advantage of it: a cry was raised that the educational laws were violated, that the masters allowed religious services in the school. The boys were expelled. Then the other side tried to make martyrs of them. Martyrs two of them did not want to be. They begged pardon for their fault, and were re-admitted. The third boy seems to have been too much "martyrized,"—so that his re-admission will prove, at least for the present, more difficult. Thus even children are made the victims of political hatred, and accused of sentiments and aims of which their age alone should prove them utterly incapable.

The manner in which the school-question was being used by both political parties prompted Governor Matsudaira to make a number of addresses upon the subject throughout the Ken. He spoke in a number of places, and spoke strongly, warning schoolmasters to abstain from anything which could be interpreted as evidence of religious prejudice or political bias in their teaching or their capacity as teachers. Needless to say, his opponents watched zealously for every word they could interpret to his disadvantage. Shortly, there appeared the charge, vehemently denied by the Governor, that he had spoken against Christianity as a religion. The papers which made the charge took no shorthand report of the Governor's words, and obtained their information from the hearsay of their own partisans. The word used by the Governor, I am informed, was *shukyo*, a word equally applicable to Buddhist or Christian or other dogmas; and it was used in view of the events I have referred to, and so understood by those who had no wiles to pull. Nothing could have been further from the Governor's thoughts than an anti-Christian campaign. His whole aim has been to avoid the religious question, to leave to opportunity for its utilization in politics; and his efforts in this direction have resulted only in raising the religious question against him. That it could have been raised in Kyushu as nowhere else, is simply because of the religious element. To your correspondent all this seems to indicate that the foreign religion will be hereafter utilized as much as possible in politics for purposes totally foreign to all religion. The paper which started the cry against the Governor was the *Kiushu-Fiyu-Shimbun*. The statement of none of the Kumamoto papers, however, can be relied on while politics remain as they are.

LETTER FROM LONDON.

(FROM OUR OWN CORRESPONDENT.)

London, October 7th.

After a comparatively brief illness Lord Tennyson passed away yesterday morning. For some hours before his death it was fully expected by the medical attendants that the Laureate's life was drawing to a close, and he may be said to have died a perfectly natural death from old age. Sir Andrew Clark, who was in attendance during the last hours of the Poet's life, thus describes the end:—"Lord Tennyson has had a gloriously beautiful

death. In all my experience I have never witnessed anything more glorious. There were no artificial lights in the chamber and all was in darkness save for the silvery light of the moon at its full. The soft beams of light fell upon the bed and played upon the features of the dying poet like a halo of Rembrandt."

Lord Tennyson was the third son of the Rev. C. G. Tennyson, Rector of a small village in Lincolnshire. He was born in 1809, the same year in which Mr. Gladstone and the late Mr. Darwin were born. The future Laureate commenced to write verse at a very early age, his first published work being "Poems by Two Brothers," which appeared in 1827, in which his brother Charles took part. In 1828 Alfred Tennyson was entered at Trinity College Cambridge, and while there, although he seems to have aspired to no special academic distinction, he must have made a comprehensive study of the old classic writers as evinced by such classical themes as *Ulysses*, *Tithonus*, and the *Lotos Eaters*. Before leaving his Alma Mater Tennyson was successful in winning the Chancellor's prize for English, and his composition entitled "Timbuctoo" shows promise of his future achievements. In 1830 he published a volume which even at the present time is regarded as a most interesting production—"Poems, chiefly Lyrical." In 1833 further volumes were launched, and "The Palace of Art," "Eoone," and "The Lady of Shalott" are among pieces which then saw the light. "In Memoriam" took shape about 1842, while the poet was mourning the death of his old college friend Arthur Hallam, but was not published until 1850. In this year Mr. Tennyson succeeded to the Laureateship vacant on the death of Wordsworth. He was made a peer by Mr. Gladstone in 1884, but latterly he has been regarded more as a conservative. Perhaps few men of the present day will be mourned as will the late Poet Laureate, and although thoroughly broad in all his ideas he was essentially an Englishman and an English poet.

At a meeting of Liverymen of the City of London convened at Guildhall this week to elect a Lord Mayor for the ensuing year, a somewhat exciting scene was witnessed. Alderman Knill, who stood next on the list of eligible aldermen, is a Roman Catholic, and, in reply to questions, stated that he himself would not, if elected, attend the services at the Church of England, but his deputy would. Several anti-Popery speeches were made by Liverymen and one even drew an imaginary picture of the re-kindling of the Smithfield fires and the protestant martyrs frizzling at the stakes. Eventually, however, the Aldermen elected Alderman Knill to the office, amid shouts of "No Popery" and the strains of "Rule Britannia."

As the cold weather advances the cholera epidemic on the Continent is slowly but surely dying a natural death. At Hamburg, Antwerp, Berlin, and Paris the disease may be fairly said to have done its worst, but a slight spread is reported from Budapest, where a comparatively large number of deaths has been recorded during the present week. No fresh cases have occurred in England, and we may be said to have practically escaped the ravages of the epidemic.

The Brompton Mystery, to which I referred in my last letter, has had a further tragic development by the suicide of Dr. Heron, who after unsuccessfully trying to poison himself with morphia, ended his life by cutting his throat. After attending the inquest on the body of his late mistress, Ruby Russell, the Doctor, having shaved off his moustache, took a room in a private hotel in Craven-street, Strand, where, in spite of his altered appearance, from which it would seem that he wished to disguise his identity, he entered his correct name in the visitors' book. Attention was attracted to his room by his non appearance at meals, and when the officials at length becoming alarmed summoned the police to break open the door the unfortunate man was found lying dead on the floor in a pool of blood. From marks of blood being found in front of the dressing table, together with the fact that the throat was cut in two places, it is presumed that the doctor, after taking the morphia, stood before the looking glass and drew the razor across his throat. The wound, however, was not deep enough to have the desired effect, and it was then that the deceased, who seems to have been determined to accomplish his purpose, placed some sheets and pillows on the floor, and having laid himself in position upon them, again drew the razor across his throat, this time with terrific force, and severed the carotid artery. In a letter which Dr. Heron addressed to the Coroner he stated that since there could be no doubt but that Ruby Russell's death was not due to natural causes, and owing to the unfortunate circumstances attending the death of his wife in Jamaica, suspicion would naturally attach itself to him in this case. Further on he said: "Now I am alone, it is out of the question I should go through any more horrors

for the paltry privilege of existence." The Coroner addressing the jury who brought in a verdict that the deceased doctor committed suicide while of unsound mind, stated that from the evidence that had come before him there was no suspicion that Dr. Heron poisoned the young lady with whom he was living, or his former wife. So ended a tale of love and death.

The trial of six prisoners indicted for conspiracy to defraud in connection with a number of so-called Literary and Artistic Societies, which lasted several days, was concluded last week, before the Common Serjeant at the Old Bailey. The prisoners, who included a Baronet, Sir Gilbert Edward Campbell, and an ex-Common Councillor of the city of London, James S. Tomkins, have for some years been engaged in forming bogus societies for publishing authors' manuscripts and for disposing of artists' productions. Their *modus operandi* seems to have been to engage offices in the first instance, by giving each other's names as references, and then to issue a plausible prospectus of a Society said to be founded almost on philanthropic principles for the express purpose of assisting struggling authors and artists, Sir Gilbert Campbell's name figuring prominently in the list of Directors. As the subscriptions came, in response to the bait, they seem to have been shared pretty equally by the promoters. In one society with which these enterprising gentlemen were connected, a special inducement to membership was offered by the privilege of fellows being able to wear a hood and gown by paying an additional fee of four guineas. In the evidence it was elicited that the offices of the societies were latterly besieged by disappointed authors who were unable either to get their M.S.S. back or any satisfactory replies to their repeated enquiries. Among these a clergyman would be rubbing shoulders with a baker, a barrister with a coachman, and it was said that one old lady brought her knitting and hunch and remained in close attendance at the office door for over a month. With the exception of receiving and acknowledging subscriptions, no business seems to have been transacted by these societies, and probably owing to the information supplied by disappointed "fellows," the swindle was brought to light some months ago in the columns of *Truth*. Finally, the Public Prosecutor stepped in, and after a somewhat lengthy trial, sentences ranging from eight years to 4 months were passed upon the miscreants.

A somewhat extraordinary will forgery case was heard during the present session of the Central Criminal Court. The leading rôle was played by Miss Margaret Smith, who at the death of a Mr. Park, in whose employ she had been as governess, forged a deed purporting to be the last will and testament of the deceased gentleman. This alleged will provided that Smith should receive £30,000 in the event of her marrying Mr. Park's son, or failing marriage, £20,000. Miss Smith is now entering on a term of 10 years' penal servitude.

An International Boat Race took place yesterday between Eight-oared crews of the London Rowing Club and the Union des Sociétés Françaises de Sports Athlétiques on the Seine, and, contrary to general expectation, resulted in an easy victory for the Frenchmen. The course was an admirable one of just two miles, starting at Audéy about twenty miles from Paris. The signal being given, the Londoners shot away at forty strokes against the Frenchmen's thirty nine. In spite, however, of their slower stroke the latter soon gained ground with surprising rapidity. In five minutes there was half a length of daylight between the boats. At this point the Londoners dropped their stroke to thirty-six, and the Frenchmen were pulling thirty-four. A spurt from James, the London stroke, was promptly answered by Cusin the Frenchman, who drew his crew still farther away. From here to the finish, the Englishmen gradually worked their stroke up to thirty-nine, and although they managed to gain a little, the effort came much too late to be of any avail. The Frenchmen, who appeared to be in magnificent form, kept up a steady even pace and sailed in comfortable winners by a length and a half. Although, of course, the crew that was beaten was by no means a champion English crew, and was not up to the standard of the crew that rowed for London in 1890, yet there is no question but that it was a good average crew composed of experienced oarsmen.

Although there have been a number of cycling records created during the present season, in athletics the old times have invariably held their own. At Stamford Bridge Grounds, however, last week, the 1,000 yards record was broken by E. C. Bredin, who covered the ground in 1 min. 11 4-5 sec. On the same day, also, an even greater performance was accomplished by Sid Thomas, of Romford, who ran five miles in 24 min. 53 3-5 sec. thus breaking the record by 2-5 sec.

GRADES AND SALARIES OF HIGH OFFICIALS.

IMPERIAL ORDINANCE.

We hereby sanction the Law relating to the Grades and Salaries of High Officials.

(Imperial Sign Manual.)
(Great Seal.)

(Dated) the 12th day of the 11th month of the 25 year of Meiji.

(Countersigned) Count ITO HIROBUMI,
Minister President of State.

ORDINANCE No. 96.

Law relating to the Grades and Salaries of High Officials.

GRADE AND APPOINTMENT.

Art. I.—Except those appointed by the Sovereign in person, the grades of high officials shall be divided into nine classes. Those appointed by the Sovereign in person, and the first and the second grades shall be of *chokunin* rank; and from the third to the ninth grade shall be of *sonin* rank.

Art. II.—The commission for an official of *chokunin* rank, appointed by the Sovereign in person, shall be signed with the Imperial sign manual, stamped with the Great Seal, and countersigned by the Minister President of State or by a Minister of State of the foremost rank.

Art. III.—With the exception of officials appointed by the Sovereign in person, the commission for any official of *chokunin* rank shall bear the Great Seal, and the Minister President of State shall issue it.

Art. IV.—The appointment of officials of *sonin* rank shall be recommended by the Minister President of State. In case such officials belong to a particular Department, the Minister of that Department shall recommend them through the Minister President of State.

Art. V.—The commission of an official of *sonin* rank shall bear the Seal of the Cabinet, and be issued by the Minister President of State.

Art. VI.—The grades of high officials shall be determined by the table of grades for the Civil and Military Services, appended to the present Ordinance.

Should any new office be hereafter established, or existing office altered or abolished, the circumstance shall be regarded as constituting an amendment of the present table of grades.

In the Organisation of the Government, if an official holds an additional position as acting for another, and such position has no fixed grade, his grade shall be determined in accordance with that attaching to his original post.

Art. VII.—In the case of an official appointed for the first time to *sonin* rank, his grade shall be below the sixth.

When an official of *sonin* rank has retired from his post and is re-appointed, his grade on re-appointment shall be below that previously held by him.

Art. VIII.—Except in cases where the process of promotion is expressly provided, no official of *sonin* rank shall be promoted before he shall have served three full years in his last post.

SALARIES.

Art. IX.—The salaries for high officials shall be determined as follow, except those for which special provision have been made:—

CABINET.

Minister President of State yen 9,600

OFFICIALS ATTACHED TO THE CABINET.

Chief Secretary of the Cabinet yen 3,500

Directors of Bureaus in the Cabinet, Salary-table No. 1.

Secretaries } Salary-table No. 2.

Private Secretaries of the Minister President of State } No. 2.

Auditors in the Pension Bureau 1st 1,400

BOARD OF DECORATIONS.

President of the Board yen 4,000

Vice-President of the Board yen 3,000

Secretaries 1st 2,400

LEGISLATIVE BUREAU.

Director of the Bureau yen 4,000

Directors of Sections yen 3,000

Councillors Salary-table No. 2.

DEPARTMENTS.

Ministers of State yen 6,000

Vice-Ministers of State yen 4,000

Directors of Bureaux Salary-table No. 1.

Councillors } Salary-table No. 2.

Private Secretaries } No. 2.

Secretaries } No. 2.

Translators in the Foreign Office... } Salary-table No. 3.

Manager of the Police Bureau yen 1,800

Accountants in the Financial Department..... } Salary-table No. 2.

Comptrollers-General in the Financial Department..... } No. 2.

School-Inspectors in the Educational Department..... } Salary-table No. 3.

Judges of the Patents Bureau yen 1,200

Examiners of the Patents Bureau..... } Salary-table for Engineers.

Inspectors of Communications yen 1,000

Fimukwan in the Department of Communication, Salary-table No. 3.

Art. X.—With the exception of those otherwise fixed, all salaries of high officials shall be determined by the present Ordinance.

Salaries of officers of the Army and Navy shall be determined elsewhere.

Art. XI.—In the case of an office the emoluments of which vary according to the grade of the holder, such emoluments shall be paid in accordance with the salary-table for high officials determined in the present Ordinance.

Art. XII.—When the Grade of Officials eligible for a certain office is subdivided into ranks, it shall be competent for the head of the Department to determine the emoluments according to the nature of the work, within the prescribed limits.

Art. XIII.—When a high official dies, whether during his tenure of office or after retirement, one-third of his annual salary shall be given to his family. The term "family" shall have the same meaning as that provided in the Law relating to Pensions for the family of Deceased Officials.

In the case of an official who holds a life office, the above gratuity shall be given only when he dies during his tenure of office.

Art. XIV.—Annual salaries shall be divided into twelve parts, and one part shall be paid every month.

Art. XV.—All salaries, whether of newly appointed officials, or of officials whose emoluments are increased or decreased, shall be calculated from the day after the promulgation of the present Ordinance.

Art. XVI.—In case of allowances granted on account of *hishoku*, *kakwan*, *taikwan*, *taishoku*, or death, the annual salary shall be calculated by the month, and the rate per month shall be taken.

Art. XVII.—When a retired or dismissed official discharges the public function of handing over the duties of the office or adjusting the remaining business, in accordance with a special order, he shall receive during that period the salary attached to the office.

Art. XVIII.—In the case of any person who does not discharge official functions for more than 90 days owing to ill-health, or for more than 30 days owing to private affairs, half of his annual salary shall be deducted. But this provision shall not apply to cases of wounds received or illness contracted in the discharge of official duties, or to cases of mourning and resting by special order of the Emperor.

Art. XIX.—Detailed regulations for the payment of salaries shall be determined by the Minister of State for Finance.

ADDITIONAL RULES.

Art. XX.—The present Ordinance shall become operative on and after the 20th day of the 11th month of the 25th year of Meiji. But the provisions of Art. XIV shall be enforced from the 1st month of the 26th year of Meiji.

Art. XXI.—The law relating to the appointment and Emoluments of High Officials, promulgated as Imperial Ordinance No. 82 in the 24th year of Meiji, and the Tables of Grades of High Officials in the Civil and Military Services, promulgated as Imperial Ordinance No. 215, shall cease to be operative on the day when the present Ordinance goes into force. All other Imperial Ordinances relating to Salaries, such as Salary-tables No. 1, No. 2, and No. 3, promulgated as Imperial Ordinance No. 82 of the 24th year of Meiji, shall be replaced by the new salary-tables appended to the present Ordinance.

Art. XXII.—In the case of an official actually in office, who does not receive any new commission on the day when the present Ordinance becomes operative, it shall be assumed that his grade, as previously determined by Imperial Ordinance No. 215, promulgated in the 24th year, has not undergone any change.

In the case of a Judge or Public Procurator who does not receive a new commission on the day when the present Ordinance becomes operative, his grade shall be considered fixed in accordance with the amount of salary he receives under the Law relating to salaries for High Officials.

YOKOHAMA AUTUMN ATHLETIC MEETING.

The autumn Athletic meeting of the Yokohama Cricket and Athletic Club came off on the Club grounds on Saturday afternoon. The weather was gray and chill, the "cold snap" of the early morning have reduced the temperature considerably. Under the circumstances great coats, and heavy wraps and furs for the ladies, were more than agreeable—they were in fact the most needful necessities of the hour. A large number of ladies visited the grounds during the afternoon and added considerably to the success of the function. The Committee of Management were: Mr. H. C. Litchfield, Judge; Mr. J. Dodds, Starter; Mr. J. F. Pinn, Time-keeper, as officials; and as general committee Messrs. J. P. Mollison, K. F. Crawford, G. W. Barton, E. R. Morris, A. S. Bremner, R. de B. Layard, D. McNeil, W. D. S. Edwards, J. Eylon, Jr., and F. E. White. Each and all worked with a will and the ball was kept rolling well up to time. J. Eylon, jun., again proved himself to be a thorough athlete and his victories were very popular. The Pole Jump was a long drawn out contest, but in the end Philip won at 7 feet, 11 inches. The Hurdle Race resulted in a dead heat, Eylon catching Crouch on the tape. The Walking Match witnessed a close finish, and the Quarter of a Mile a game struggle for second position. The Ladies' Purse, which fell to Eylon, was presented to him by Miss Willcox who in a pretty little speech, assured the athletes around her that the ladies of Yokohama took a keen interest in all forms of manly sport and nothing pleased them better than to be present at such a meeting. Miss Willcox was presented, amid rousing cheers, with a lovely bouquet of flowers as a slight memento of the occasion. The prizes at the close were gracefully distributed by Mrs. Brooke Hyde-Pearson, and again the cheers rang out loud and long when White called for an acknowledgment of her kindness, and for the ladies. The town Band was in attendance. Details:—

100 YARDS. (1ST HEAT).

W. W. S. Edwards, scratch 1

G. Crouch, 1 yard 2

C. V. Schmidt, 3 yards..... 3

Won easily; three ran. Time, 11 secs.

2ND HEAT.

J. Eylon, jun., scratch 1

A. G. Watt, 4 yards 2

Eylon ran clean away from Watt from the start; two ran. Time, 11 secs.

FINAL HEAT.

J. Eylon, jun., scratch 1

W. D. S. Edwards, scratch 2

The scratch men ran together till half way down, then Eylon burst away, and won easily by three yards. A close race for second place Edward getting home by a foot in front of Crouch. Time, 10½ secs.

PUTTING THE SHOT.

G. Philip, hcp., 9 inches, 30½ ft. 1

G. Fenton, hcp., 15 inches, 28½ ft. 2

Five entries. The competition was close all through.

LONG JUMP.

W. D. S. Edwards, hcp., 12 inches, 19.3.

Four entries, Eylon cleared 19 feet from scratch.

HURDLE RACE.—120 YARDS (10 FLIGHTS).

1ST HEAT.

G. Crouch, hcp., 8 yards 1

R. Abenheim, hcp., 7 yards..... 2

Four started. A close finish between the first men. Morris and Schmidt carried their timber to earth. Time, 18½ secs.

2ND HEAT.

J. Eylon, jun., scratch 1

F. H. Abbey, hcp., 10 yards 2

Four again started. Barton, the limit man, quickly gave up, leaving it to Abbey and Bent to fight for second place, Eylon having secured the premier position almost at the start. Time, 19 secs.

FINAL HEAT.

G. Crouch hcp., 8 yards 1

J. Eylon, jun., scratch 1

Crouch lead off and kept to the front the whole way down. He cleared the last hurdle first, but losing his balance slightly was caught on the tape by Eylon. Time, 18½ secs.

BOYS' RACE, UNDER 3.—(220 YARDS).

Carst hcp., 7 yards..... 1

G. Wheeler 2

Eight ran. Time, 30 secs.

HIGH JUMP.

J. Eytou, jun., 5ft. 1m. 1
Three entries. Eytou had an easy task to dispose of his competitors, both stopping at 4 feet 6 inches.

LADIES' PURSE. (1/4 Mile).

J. Eytou, jun., scratch 1
G. Crouch, hcp., 10 yards 2
L. Pollard, 15 yards 3

Eight started out of the fifteen entries. Barton led up to the corner when he gave place to Pollard. Pollard maintained his position until entering the straight where Eytou collared him; Eytou gradually increased the distance and finally won easily. Crouch beat Pollard on the post for second place. Time, 55 1/2 secs.

POLE JUMP.

G. Philip, allows 2in., 7ft. 11m. 1
Five started and all cleared the six feet mark. Abbey and Watt remained till 7 feet 9 inches had been cleared, but then they stopped.

BOYS' RACE (OVER 13), 220 YARDS.

G. Allcock 1
R. Sakamoto 2
Five started, but only three came in, the others being left at the post. Time, 25 1/2 secs.

HALF MILE RACE.

G. W. Barton, hcp., 35 yards 1
G. Hood, hcp., 15 yards 2
L. Pollard, hcp., 10 yards 3
Mendelson, the scratch man, was completely out, classed among his four other competitors. Barton kept his lead right up to the finish, the fight for second place falling to Hood and Pollard. Pollard, who conceded 5 yards to Hood, caught him up in the second round. Coming down the straight Hood spurred, catching Pollard on the tape. Time, 2.20.

SACK RACE.

E. R. Morriss 1
P. Morriss 2
Six started. E. R. Morriss ran away from the start and won easily.

WALKING RACE (1 MILE).

G. Fenton, hcp., 5 sec. 1
J. Archer, hcp., 25 sec. 2
Archer started with 25 secs. in hand, E. R. Morriss and D. McNeill being the scratch men. No alteration took place in the first round, but in the second McNeill got away from Morriss, and in the third passed A. B. Smith who had to seconds start. McNeill before the round was finished, had struggled into second place but soon gave up altogether; Morriss and Smith followed. Just before reaching the straight for home Fenton passed Archer and the struggle ended in his landing first prize a yard to the good. Time, gm. 15secs.

IMPERIAL RAILWAY DEPARTMENT.

ANNUAL REPORT OF THE IMPERIAL RAILWAY DEPARTMENT FOR THE 24TH FISCAL YEAR OF MEIJI, APRIL 1891 TO MARCH 1892.

In continuation of the annual report for the previous fiscal year, the following report is now made on the general condition of works undertaken during the year beginning with April, 1891, and ending at the close of March, 1892, and on the principal features in connection with financial affairs during that period. The division and order of headings in the present report are modelled after the last annual report, and are as follow:—

1. General condition of works on different lines:—
Karuzawa-Nagatsu Section.
Tokyo-Kobe Section.
2. Finance—Capital Account.
3. General Condition of Traffic.
4. Finance—Revenue Account.
5. General Condition of works on the Nippon Railway Company's lines carried out under the supervision of this Department.
6. Private Railway lines.

APPENDIX.

Table No. 1.—Detailed statement of Expenditure on Capital Account.

Table No. 2.—Detailed statement of Receipts and Expenditures on Revenue Account.

Table No. 3.—General Balance-sheet.

Table No. 4.—Detailed Statement of Capital Accounts of the Nippon Railway Company, including those of the Ryomo, Mito, and Koku Railway Companies.

Table No. 5.—Actual quantity of Rolling Stock in use at the end of the 24th fiscal year.

Table No. 6.—Statistics of Passenger Traffic.

Table No. 7.—Statistics of Goods Traffic. With total Train Mileages.

Table No. 8.—List of Deaths and Injuries

among passengers, staff, and others in the different sections during the 24th fiscal year.

Table No. 9.—List of Casualties and Accidents in connection with the running of trains on the different sections during the 24th fiscal year.

Table No. 10.—Comparative table of the earnings, expenditures, &c., of the Nippon and twelve other Railway Companies.

GENERAL CONDITION OF WORKS ON DIFFERENT LINES.

The chief works during the year under review were the construction of the new railway over the Usui Pass between Yokogawa and Karuzawa, and supplementary works prosecuted in making good the damages to the road, bridges, &c., on the line through the provinces of Owari and Mino, wrought by the great earthquake of October last. Other works consisted principally of ordinary repairing works.

A review of the main features of these undertakings will now be proceeded with:—

YOKOGAWA-KARUZAWA SECTION.

Construction of the Usui Line:—The works on this line were begun at the close of the preceding fiscal year. Although the line is but 6 miles 77 chains in length, the fact that, as stated in the report for the previous fiscal year, it is laid over a most wild district, has necessitated engineering works of no ordinary nature, rocky hills having to be cut away and ravines filled in, extremely steep gradients introduced, and as many as twenty-five different places within this short distance having had to be pierced by tunnels. Tunnelling works were begun in June with the tunnel No. 25; all the other tunnels, with the exception of No. 10, which is situated at the mid-way passing place for the up and down trains, and therefore requires special arrangements, were taken in hand during the months of July and August.

Thanks to the fact of the line being located along the public roadway and the latter having thereby afforded ample means of transportation and distribution, no dearth in the supply of material has been experienced at the places where the works were being carried on, and the progress made in all the undertakings has exceeded the anticipations formed at the beginning.

Tunnels.—These number 25, as above stated; and their aggregate length measures 14,618.72 feet. Eight-tenths of excavations and two-tenths of the lining with brick have been completed.

Bridges.—The experience gained from the practical illustrations of the effects of earthquake phenomena on bridgework, during the great earthquake of the Owari and Mino provinces, being availed of, some alteration of the designs for the brick arches and piers of the bridges on this railway was necessitated. This fact, together with the extreme coldness of the climate in the district during the winter, prevented bridge construction from making such progress as it might otherwise have done. However, at the date up to which this report extends, the works were well in hand; and 1 bridge and 7 culverts, and also six-tenths of the work of making drains, were already completed.

Of rail-laying, 1 mile 15 chains of rails have been laid on the main line and sidings. Also 1 mile 74 chains of temporary lines, consisting of a line from Karuzawa station to a brick factory at Shiozawa, and several other short lines for facilitating the transportation of material, have been laid out.

Earthworks.—Eight-tenths of the cuttings and embankments have been completed, and over six-tenths of the works for the diversion of roads and rivers and the erection of stone walls for the prevention of landslips were finished.

Buildings.—Forty-three buildings, consisting of offices of the construction department, quarters for the staff, workshops, &c., covering in aggregate an area of 885 *tsubo*, have been put up within the station grounds at Yokogawa and Karuzawa and at other places along the line. The whole of these buildings, with only one exception are temporary structures.

TOKYO-KOBE SECTION.

Works for repairing the damages caused by the great earthquake.—The line between Hamamatsu and Maibara suffered greatly from the tremendous earthquake which occurred on the 28th of October last year. The railway embankments within this district sank at 45 different places, and some of the greater depressions measured over 13 feet in depth. The ground was cracked at innumerable places, and the rails were shaken out of position to the extent of being forced, at many places, to assume a serpentine shape. Sixty-three bridges, including the large bridges over the Kiso, Nagara, and Ibi rivers, and the wing walls of 41 culverts were wrecked. The abutments of many of these bridges were split right through, and in some cases the piers were demolished and the superstructure overthrown into

the rivers. The buildings at all the intervening stations suffered to a greater or less extent; some were totally crushed, others were left in inclining positions, and none escaped scathless. Indeed, the destruction wrought by this earthquake, particularly between Atsuta and Ogaki, was so appalling as to be indescribable.

The traffic between Hamamatsu and Maibara having been brought, on this account, to a sudden standstill, no time was lost in making the necessary distribution of the staff, and the work of rendering the railway servicable by repairing the damages, both to the road and the bridges, was vigorously proceeded with. Rough buildings were put up to serve for the time being the purposes of those which were destroyed, and such portions of the line as had been sufficiently repaired to admit of the resumption of traffic were opened at short intervals as the works progressed. However, the speedy resumption of traffic over the portion of the line between the Kiso and the Ibi-gawa was not possible, for both of the important bridges spanning these wide rivers, as well as other large bridges situated in the interval, had sustained damages which precluded their expeditious restoration. Before the work of repairing or reconstruction proper could be taken in hand, the actual nature of the injuries sustained had to be ascertained by removing the enormous piles of brick forming the piers and abutments, and while this preliminary work was going on, the weighty superstructures had to be kept in position by means of temporary supports. In the case of the Nagara-gawa bridge, the cast iron piles upon which the girders rested were demolished, and their entire reconstruction was unavoidable. Brick piers over well foundations of the same material were adopted to replace the broken piles. The positions of the piers had to be shifted, which necessitated the provision of an additional span of 60 feet girders. When the erection of the new piers was completed, the 200 feet girders which had been overthrown into the river had to be restored in position on them. It has been found that in carrying out reconstruction works of this kind, the difficulties to be surmounted amount to as much again as those usually met in the undertaking of new works. However, taking the different works as a whole, nine-tenths of them may be said to have been finished by the beginning of March. The traffic on the section between the Kiso-gawa and Gifu Stations was opened on the 12th of that month, and the reconstruction of the Nagara-gawa bridge, which had been pushed forward with the utmost rapidity was completed on the 30th of the same month. As the rebuilding of the Stations at Nagoya and Kiyosu was the only work remaining unfinished at that date, it may be stated that, with these trifling exceptions, the repairs of the earthquake damages were brought to a conclusion within the space of five months. Under these circumstances the resumption of through traffic between Tokyo and Kobe may shortly be expected.

The principal works done may be summarized as follows:—Earthworks for the repairing of embankments, 15,730 *tsubo*; Masonry for repairing stone walls, over 1,000 *tsubo*; Sods laid on embankments, 2,500 *tsubo*; Temporary railway lines laid, 28 chains 30 links; Bridges of all sizes, the piers and abutments of which were reconstructed, 35; Wing-walls of bridges and culverts repaired, 207; Culverts reconstructed, 5; Buildings reconstructed or repaired, 34, with the aggregate area of 2,262 *tsubo*.

The Taketoyo and the Tsuruga lines likewise suffered from the effects of the Earthquake; embankments crumbled down, and bridges, culverts, wing-walls, and the station and other buildings were injured more or less. The traffic on the Taketoyo line was suspended. The necessary repairs were conducted with all possible speed, and the line was in a condition to be reopened by the 21st of December.

The ordinary construction works undertaken in the Tokyo-Kobe Section consisted of the completion of the flood-openings between Ogaki and Tarui, which had remained over from the previous fiscal year; making new stations at Anjo and Yasu; laying down sidings at different stations, the aggregate lengths of which amounted to 4 miles 27 chains and 70 links; erection of 5 new passenger pass-over bridges; erecting, and removing 107 buildings, the aggregate area covered by them being 3,139 *tsubo*; and repairing 18,178 *tsubo* of embankments.

The foregoing is a brief enumeration of the principal construction works done; some other works were executed, but as they consisted of the usual minor repairs attendant upon the maintenance of the lines, they may be passed over.

On the Taketoyo line, the reconstruction of the three temporary bridges which remained over from the previous fiscal year completed. With regard to the Tsuruga, Yokosuka, and Yokogawa lines no

works were attended to beyond the customary small repairs.

KARUIZAWA-NAOETSU SECTION.

A severe down-pour of rain accompanied with high winds prevailed in the province of Shinano during several days in July and caused the rivers to rise. The Susobana and Torii-gawa over flowed their banks and the buildings and fences of the Nagano Station being thereby considerably damaged. Between Toyono and Kashiwabara, lower down the same streams, in addition to the occurrence of two landslips on the line, eight-tenths of 14 embankments, the height of which ranged from 10 to 40 feet, were washed away. Very extensive damages were also sustained by stone walls for the prevention of landslips and inroads of water. Unprecedented destruction attended this flood, and the traffic was suspended. A temporary diverted line was laid down, and by otherwise hastening the necessary repairs to allow the passage of trains, resumption of traffic was effected in the course of two weeks. In making good the ravages by this inundation 14,000 *tsubo* of earthwork on embankments, and 7,672 *tsubo* of masonry on stone walls were required. Besides common minor repairs, the construction of a siding of 5 chains 14 links at the Shinonoi Station and the completing of the extension of the line for a distance of 55 chains from the Naoetsu Station to the landing place on the sea shore, begun during the previous year, were the only works carried into execution during the year under review.

CAPITAL ACCOUNT.

The railway fund granted by the Government from the first establishment of railways (March 1870) up to the close of the last fiscal year (end of March 1891) amounted to yen 34,971,702. The increment of the railway capital during the year under review is as follows:—

	Yen.
Amount of the Construction Expenditures of the Tokaido and Naoetsu Lines, brought over from the 23rd fiscal year and received from the Treasury during the year under review	2,548
Amount received from the Treasury during the year under review for the Construction of the Usui Mountain Railway	1,297,107
Amount expended during the year under review on Supplementary works of open lines defrayed from the Revenue, in accordance with the Regulations for Government Railway Finances	313,170

Total Yen 1,612,825

This sum added to the amount of the Capital at the close of the previous fiscal year, gives yen 36,584,527. Now, by deducting from this total yen 1,409, which represents the amount realized by the sale of certain properties and returned to the Treasury, by capital written off, and by material procured for supplementary works and subsequently transferred to the Stores Account, a balance of yen 36,583,118 is obtained, which is the aggregate Railway Capital at the close of the year under review (24th Fiscal year).

The amount of the Fixed Capital at the beginning of the year under review stood at yen 32,745,991. The sum of yen 322,193, comprising expenditures on construction works of the previous year, brought over to the year under review, expenditures on supplementary railway works, and of stores, the accounts of which have been adjusted, has since been added. The total of the above amounts—yen 33,068,184—represents the aggregate Fixed Railway Capital at the close of the year under review.

The details of the adjusted accounts of the above are as follow:—

1. TOKAIDO LINE.—Tokyo-Kobe Section, Ofuna-Yokosuka Section, Obu-Taketo Section, Maibara-Tsuruga Section: the construction expenditures for which were defrayed from the old funds for the promotion of industries (*Kogyō hi* and *Kigyō hi*) or from grants in accordance with the old and new Regulations for Railway Finances:—

	Yen.
Amount of Fixed Capital at the close of the last fiscal year	29,024,787
Amount of Fixed Capital reduced during the year under review:	
Property Sold	890
Transfers made to the Stores Account	18,037
Capital written off ...	122
Balance	29,005,738
Amount of Fixed Capital increased during the year under review:	
Issues from the Treasury	1,955

Issues from the Supplementary Works Fund

Stores, the accounts of which were adjusted	279,245	306,064
24,864		

The amount of Fixed Capital at the close of the year under review.

Total 29,311,802

2. TAKASAKI NAOETSU LINE.—Takasaki-Yokogawa Section and Kariizawa-Naoetsu Section, the construction expenditures of which were defrayed in accordance with the old and new Regulations for Railway Finances:—

Amount of Fixed Capital at close of the last fiscal year

Amount of Fixed Capital reduced during the year under review

Property sold

Capital written off ...

Balance

Amount of Fixed Capital increased during the year under review

Issues from the Treasury

Issues from the Supplementary Works Fund

Stores, the accounts of which were adjusted

Amount of Fixed Capital at the close of the year under review

Total

Aggregate Fixed Capital for all lines:—

Amount of Fixed Capital at the close of the previous fiscal year

Amount of Fixed Capital reduced during the year under review:—

Paid into the Treasury

Transfers made to the Stores account

Capital written off

Balance

Amount of Fixed Capital increased during the year under review:

Issues from the Treasury

Issues from the Supplementary Works Fund

Stores, the accounts of which were adjusted...

The aggregate amount of Fixed Capital at the close of the year under review

Besides the above amount there is a further sum of Railway Fund, the Working Fund inclusive, of yen 3,514,934 which cannot be included in the Fixed Capital account. The details of this fund are as follow:—

Amount of Usui Mountain Railway Construction Expenditures, the accounts of which have been adjusted.

Adjusted during the previous fiscal year

Adjusted during the year under review...

Amount of Construction Stores

Cash under charge of construction paymasters ...

Working Fund (this fund being included in the Revenues, its details are given in the Revenue Account)

Total

This amount added to the amount of the Fixed Capital at the close of the year under review will coincide with the aggregate amount of the Gross Railway Capital at the same period, above given, namely, yen 36,583,118.

In the following table the Railway Construction expenditures, amounting to yen 33,068,184 is analyzed under various heads, and the average amount of the expenditures per mile under each head, with the ratio they bear to the aggregate

amount at the close of the year under review are given and a comparison made with those of the previous fiscal year:—

Items.	Average Amount per mile on open lines, End of End of 23rd fiscal year.	End of End of 24th fiscal year.	Percentages of aggregate amount, End of End of 23rd fiscal year.	End of End of 24th fiscal year.
Preliminary Surveys.....	508	508	.0085	.0086
Superintending and Engineering	1,297	1,500	.0236	.0219
Right of way	2,995	2,977	.0498	.0501
Earthworks	20,347	20,178	.1781	.1788
Bridges (including culverts)	15,532	15,449	.2351	.2300
Tunnels	4,418	4,418	.0736	.0745
Permanent way (including drain-pipes, fences, boundary posts, and telegraphs)	9,918	9,581	.1658	.1661
Stations	3,141	3,043	.0523	.0512
Transportation (including construction trains) ..	1,451	1,451	.0248	.0244
Wharves	305	305	.0034	.0034
Locomotives	2,924	2,821	.0487	.0485
Other rolling stock	3,271	3,271	.054	.0538
Buildings	679	619	.0113	.0109
Shops and Machinery	2,344	1,266	.0404	.0213
Construction plant	323	314	.0050	.0050
General charges	1,005	1,005	.0168	.0169
Total	60,013	59,430	1.0000	1.0000

From the above it will be seen that the average cost per mile at the close of the year under review was yen 60,015, which, when compared with that of the previous year, shows an average increase of yen 585 per mile. The items showing the most marked increase are Earthworks, Bridges, Tunnels, Stations, Rolling Stock, and Shops.

In the following table the average cost per mile, at the close of the year of the different sections of the lines in operation is compared and given:—

Total length of open lines	Miles.	Average Cost per mile, yen.
551		60,015
Details.	Miles.	Average Cost per mile, yen.
1. Tokyo-Yokohama Section	18	162,865
(Double line, construction begun April, 1870, completed September, 1872.)		
2. Kobe-Otsu Section	58	137,693
(1 mile double; construction begun November, 1870, completed September, 1879.)		
3. Tsuruga-Ogaki Section	49	71,021
(Construction begun May, 1880, completed July, 1884.)		
4. Takasaki-Naoetsu Section	110	34,149
(Usui-toge excepted; construction begun October, 1884 completed December, 1888.)		
5. Yokohama-Ogaki Section	258	49,942
(22 miles double line; construction begun August, 1885, completed April, 1889.)		
6. Ofuna-Yokosuka Section	10	41,339
(Construction begun January, 1888, completed July, 1889.)		
7. Otsu-Nagahama Section	48	33,660
(Construction begun February, 1888, completed July, 1889.)		
Double line between Oyama and Numazu	11	15,617
(Being a portion of the Yokohama-Ogaki Section; construction begun February, 1890, completed March, 1891.)		

The foregoing railways were already in a state of completion in the previous fiscal year. The general augmentation of the expenditures on all the lines which has since taken place is attributable to the increase of, and improvements made on, various railway properties, as necessitated by the requirements of the traffic.

The amount issued by the Treasury on account of the Construction Expenditures of the Yokogawa-Kariizawa Section (Usui-toge) in previous fiscal year was yen 47,726; the issues made for the same purpose during the year under review were yen 1,297,107. The total of these sums viz. yen 1,344,833, represents the aggregate issues from the Treasury on this account up to the close of the year, and of this latter amount the accounts for yen 1,173,320 were adjusted by that date, by far the greater part of the adjustments having been made during the year under review. The details of these Expenditures are given in Table No 1 at the end of this report. The surplus from the Issues, namely yen 155,167, which remained at the close of the year under review, was carried over to the next year. This sum, added to yen 500,000, the 25th fiscal year's appropriation for these Expenditures, gives a total of yen 655,167, which represents the last installment of the funds to be issued from the Treasury for the Construction Expenditures of the Yokogawa-Kariizawa section.

While the sum of yen 313,170 has, during the year under review, been expended on supplementary works on open lines for the necessary improve-

ment and increase of the railway property, strict economy has been observed in the working expenses—expenses for the maintenance of the way, locomotive power, management of the traffic, &c.—in order to compensate as far as possible these Expenditures on supplementary works. It should, however, be borne in mind that supplementary Expenditures are incurred in order to maintain the thorough efficiency of the property by supplementing any deficiencies that might exist, and are therefore of a nature quite different from those incurred in the operation of railways; the latter become extinct, while the former not only reduce unproductive expenditures, but enhance the value of the property and develop the productive power of the capital invested.

In the following table the amount of the Gross and Fixed Railway Capital at the close of each fiscal year from the 10th is compared with the mileages of lines in operation, and the average cost per mile in respect of the aggregate and fixed capitals is given. (The construction expenditures of the Usui mountain railway are not included, because that line has not yet been opened):—

Fiscal year.	Amount of Aggregate Capital at the close of each year.	Amount of Fixed Capital at the close of each year.	Percentage of Fixed Capital to Aggregate Capital.	Miles in operation.	Per mile of open lines.	Amount of Aggregate Capital.	Amount of Fixed Capital.
Yen.	Yen.	Per cent.	Miles.	Yen.	Yen.	Yen.	Yen.
Before 10th	17,895,844	14,971,665	83.7	143	125,076	104,697	
10th	21,134,859	17,879,959	84.6	300	203,124	159,599	
11th	26,284,857	23,447,633	89.2	445	197,285	92,683	
12th	35,917,017	28,639,343	85.3	446	74,868	64,198	
13th	34,447,633	31,618,348	91.8	551	64,518	57,374	
14th	34,477,703	32,745,021	95.0	551	63,470	59,430	
15th	36,583,128	33,066,184	90.4	552	66,394	60,915	

The proportional decrease of the amount of the Fixed Capital as compared with the amount of the Gross Capital, and the increase of the amount per mile of the Gross Capital at the close of the year under review, noticeable in the above table, are due to the fact that expenditures of over yen 1,340,000 on the Usui-to-ge line construction works though included in the adjusted accounts, have been excluded from the columns of Fixed Capital, because of the line not being yet opened to traffic, and therefore earning no revenue.

The detailed statement of construction expenses at the close of the year under review will be found in Table No. 1.

GENERAL CONDITION OF TRAFFIC.

TRAFFIC RECEIPTS AND THE CAUSES OF THEIR VARIATION.—The Tokyo-Kobe, Takasaki-Yokogawa and Karuizawa-Naotsu Sections being taken together, the number of Passengers during the year shows an increase of 4.6 per cent. over that of the previous fiscal year, the Passenger receipts a decrease of 5 per cent., and the average mileage per passenger, a decrease of 9 per cent. The amount of Goods traffic shows an increase of 20 per cent.; the Goods receipts also show an increase of 6 per cent., and the average mileage per ton shows a decrease of 1.5 per cent. The details of these variations and their causes, in each of the above sections, are as follow:—

THE TOKYO-KOBE SECTION.—The Passenger Traffic during the year under review, as compared with that of the previous year, showed in number an increase of 4.4 per cent.; and in receipts a decrease of 5.7 per cent. This result is attributable to the fact of passenger mileage having been longer in the previous year, and the receipts therefrom having been proportionally greater. The shortening of the passenger mileage in the year under review was owing to the traffic in the provinces of Owari and Mino being for a long while cut off by the consequences of the great earthquake. In the Goods Traffic, while an increase of 22 per cent. took place in tonnage, the increase in the receipts amounted to only 6.5 per cent. This result, likewise, is to a greater or less extent attributable to the earthquake damages. The receipts for ordinary freight were 7.7 per cent less than the earnings under that head during the previous year, but a marked increase having taken place in the Waggon-load freight and the Goods carried by special contract, a general result of 6.5 per cent. in favour of the freight earnings of the year under review was obtained.

TAKASAKI-YOKOGAWA SECTION.—The Passenger Traffic compared with the previous year showed an increase of 7 per cent. in numbers and 8.5 per cent. in receipts. These results are attributable to the fact that railway operations not having been obstructed by floods or other causes, an increase took place in the average passenger mileage and also in the number of First and the Second Class passengers, these passengers aggregating 27 per cent. above the previous year. The Goods Traffic was increased by 12 per cent. in tonnage and by 24.6 per cent. in receipts; results attributable to the gradual increase of the use of railways by the public as a means of transportation.

KARUIZAWA-NAOETSU SECTION.—The Passenger Traffic increased by 5.9 per cent. in numbers and by 2.1 per cent. in receipts. The Goods Traffic also increased 7 per cent. in tonnage and 4 per cent. in receipts. These results, having been obtained in the face of the facts that the traffic over a portion of the line was at one time suspended altogether and afterwards worked for a while by a reduced number of trains, clearly show that railway business is gradually developing in those parts of the country.

ALTERATIONS IN THE TRAIN SERVICE.—An alteration of the Train Service of the Shimbashi-Kobe Railway and its branches was made on the 1st of May, 1891. The service between Shimbashi and Hamamatsu and between Ofuna and Yokosuka was again altered on the 11th of October of last year. From the 16th of last March an extra passenger train was added to the service between Takasaki and Yokogawa for the convenience of the public.

OPENING NEW STATIONS, ETC.—New Stations for conducting both passenger and goods business were opened at Yasu between Kusatsu and Hachiman, and at Anjo between Kariya and Okazaki on the 16th of June, 1891. The line from Naotsu to the sea-coast was rendered available for traffic of goods, weighing over 1,000 *kin*, from the 10th of September 1891. Goods' business was begun at the Oyama Station on the 20th of September, 1891, at the Sano Station on the 11th December, the same year, and at the Ofuna station on the 1st of March, 1892.

PRINCIPAL CASUALTIES IN CONNECTION WITH THE RUNNING OF TRAINS.—On the Tokyo-Kobe line, owing to the effects of the great earthquake, the traffic of the Section between Nagoya and Maibara on and the whole of the Taketoyo Branch became suspended. Portions of the interrupted lines were reopened and the traffic resumed on dates as follows:—From Maibara to Tarui, 30th October; from Tarui to Ogaki, 3rd November; from Ogazaki to Nagoya, 5th November; from Nagoya to Kisogawa, 20th December; and the Taketoyo branch, 21st December. The reopening of the portion of the line between Kisogawa and Ogaki was not effected up to the close of the year under review; but, it took place very shortly afterwards—on the 16th of last April—and the through traffic was thereby resumed.

KARUIZAWA-NAOETSU SECTION.—In July, 1891, owing to a heavy fall of rain in Shinano, the rivers in the Nagano district overflowed their banks and did much damage to the embankments and the line generally, causing total suspension of the traffic between Nagano and Kashiwabara for the space of two weeks, from the 21st of July to the 3rd of August; and in the meanwhile the service between Kashiwabara and Naotsu had to be reduced to three trains per day. The entire resumption of the traffic between Karuizawa and Naotsu was effected on the 15th of August.

The snow-fall in Echigo was comparatively limited in amount during last winter, and the interruptions of the traffic from that cause were proportionally less. The reduction of the service between Nagano and Naotsu to three trains per day lasted only from the 25th of January to the 24th of February.

TAKASAKI-YOKOGAWA SECTION.—No casualties occurred requiring notice.

The statements of train-mileages, casualties connected with the running of trains, deaths, injuries, &c., will be found in Tables from No. 6 to 9 inclusive, at the end of this report.

REVENUE ACCOUNT.

The mileage of railways open during the year under review was 551 miles, and was therefore the same as it stood at the close of the previous fiscal year. The great Owari and Mino earthquake of last October, however, cut off the traffic between Nagoya and Maibara and between Obu and Taketoyo in the Tokyo-Kobe system; and a portion between Kisogawa and Ogaki was kept suspended for nearly half a year. Furthermore, the heavy rainfall of last July, which inundated the country about Nagano and Kashiwabara on the Karuizawa-Naotsu line, damaged the railway to the extent of causing stoppage of the traffic over that district. The average operating mileage was from these causes reduced to 539 miles. The Revenue and working expenses alike, have been affected by the great earthquake in the most marked manner. While the former declined considerably on the one hand, the latter was greatly increased on the other; the consequence being an inordinate curtailment of the Net Profit compared with the previous year. The Revenue was diminished by yen 103,663 and the increase of the working expenses amounted to the large sum of yen 425,626. The average operating mileage, as compared with the mileage of open railways, was reduced by 12 miles.

The amounts and proportions of the Revenue, Working Expenses, and Net Profit for the year are as follow:—

	YEN.
Revenue	4,110,141
Working Expenses	2,426,900
Net Profit	1,683,241

The proportion of the Working Expenses to the Revenue is slightly above 59 per cent., and compared with that of the previous fiscal year shows an increase of slightly over 11 per cent.

In the following table the average revenue and working expenses per day and the same per mile of lines in operation of the different sections for the year are given and compared with those of the previous fiscal year:—

Sections.	Average amount of Revenue and Working Expenses per Day.				Average amount of Revenue and Working Expenses per Mile.			
	24th fiscal year.	23rd fiscal year.	24th fiscal year.	23rd fiscal year.	24th fiscal year.	23rd fiscal year.	24th fiscal year.	23rd fiscal year.
Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.
Tokyo-Kobe Section	9,497	9,805	5,478	4,553				
Ofuna-Yokosuka Section	161	165	64	60				
Obu-Taketoyo Section	43	49	65	50				
Maibara-Tsuruga Section	303	338	107	154				
Takasaki-Yokogawa Section	850	883	207	170				
Karuizawa-Naotsu Section	995	969	759	494				
Total average	11,330	11,545	6,631	5,483				
Sections.	Average amount of Revenue and Working Expenses per Mile.				Average amount of Revenue and Working Expenses per Mile.			
	24th fiscal year.	23rd fiscal year.	24th fiscal year.	23rd fiscal year.	24th fiscal year.	23rd fiscal year.	24th fiscal year.	23rd fiscal year.
Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.	Yen.
Tokyo-Kobe Section	9,417	9,518	5,449	4,449				
Ofuna-Yokosuka Section	1,842	2,867	2,336	2,290				
Obu-Taketoyo Section	1,413	2,360	2,158	1,398				
Maibara-Tsuruga Section	2,693	3,744	1,492	1,708				
Takasaki-Yokogawa Section	5,098	4,586	1,177	1,460				
Karuizawa-Naotsu Section	4,004	3,844	3,013	1,961				
Total average	7,615	7,775	4,593	3,659				

It will be seen from the above tables that a very marked decline in the Revenue of the Tokyo-Kobe Section occurred during the year under review, and that the Revenue of the Obu-Taketoyo and Maibara-Tsuruga sections also fell off, though to a less degree. These results are attributable, either directly or indirectly to the earthquake, for the Revenues of lines in the districts which were not affected by it have been more or less augmented, although the Ofuna-Yokosuka section might be considered as an exception, for, by a strange coincidence, its earnings amounted to exactly the same as those of the previous fiscal year. The general increase of the Working Expenses is attributable to many causes; but the expenditures incurred in restoring railway property destroyed by the earthquake, which amounted to yen 324,907, contributed the greatest share, followed by yen 29,796 expended in repairing the damages by floods about Nagano. The Takasaki-Yokogawa, the only section which shows favourable results in this respect, owes the fact to its having escaped, during the year under review, damages from floods such as it sustained in the previous fiscal year.

Attention may here be drawn to the statement made in last year's report of the differences which exist between the mode of rendering accounts of the Revenues and Expenditures as prescribed by the Law relating to the Finances of Government Works and Government Railways, and the modes employed by the Railway Department, the latter being based upon a system of accounts which has been in observance by the Department for many years past.*

The amount of money remitted to the National Treasury as the Net Railway Earnings for the year under review, and forming a part of the revenues from government works and properties, was yen 1,419,611, the details of which are as follow:—

	YEN.
Railway Net Profit	1,683,241
Revenues receivable and the cost of office furniture, &c. (the sums payable on the same being deducted) which are included by the new accounts among the adjusted amounts; but excluded therefrom by the old accounts. (This item is termed below "the disparity between the new and old accounts.")	49,540
Total	1,732,781
Expenditures on supplementary works on open Railways, defrayed from the earnings, in accordance with the provisions of the Railway Finance Regulations	313,170
Amount of remittance to the National Treasury as the Railway Net Profit Balance	1,419,611

As stated in the part treating of the capital account, the working fund is amalgamated and ac-

* These different methods of accounts are called the *Uke-harai* (receiving and paying) and *Tsuyo-Kanjo* (works accounts). For the sake of convenience, they will be termed new and old accounts respectively.

counted for with the Revenues and Expenditures in the Revenue Account, the details of which are as follows:—

	YEN.	YEN.
Working fund	2,000,000	
Operating Receipts	4,110,141	
Disparity between the new and old accounts	49,540	

Total 6,159,681

	YEN.	YEN.
Amount at deposit at the close of the year under review		2,030,388
Amount belonging to the Working Fund carried over to the next fiscal year	545,287	
Amount carried over to the next fiscal year to meet sums payable ...	65,490	610,777

Balance 1,419,611

The last balance represents the sum remitted to the National Treasury as the amount of Net Railway Earnings for the year.

The foregoing are the results as worked out in accordance with the new regulations. But since the division of items and the system of accounts generally employed in previous years are here retained, in order to facilitate comparison of the progress made by the operation of railways, the sum of yen 1,683,241 is taken as the net profit in this statement.

The sum of yen 4,110,141, the gross revenue for the year, is divided under three heads of Passenger, Goods, and Miscellaneous receipts, and the ratio each bears to the total for this and the last fiscal year, is as follows:—

	Amount for the year under review.	Amount for the last fiscal year.	Percentage of the total revenue.	24th fiscal year.	23rd fiscal year.
Passengers	3,179,873	3,395,442	77.4	78.5	
Goods	824,056	767,967	20.0	18.2	
Miscellaneous	106,212	140,395	2.6	3.3	

Total.....4,110,141 4,213,804 100 100.

It will be seen from the above table that there was a decrease of over yen 120,000 in the Passenger receipts; whilst the Goods receipts increased by over yen 50,000. The causes of these variations in the earnings are treated in the portion of this report dealing with the general condition of the traffic.

The decrease of the Miscellaneous receipts may be accounted for by there not having been, during the year under review, such a large amount of extraordinary income under this head as there was in the previous fiscal year.

In the following table the aggregate Working Expenditure, during the year under review, namely yen 2,426,900, is divided under the four heads of Maintenance of permanent way, Locomotive, Traffic, and general expenses, and the ratio these bear to the Revenue and Working Expenditure is given for this and the previous year.

	Amount for the year under review.	Amount for the last fiscal year.	Ratio of the respective expenses to the revenue and working expenses.	24th Fiscal Year.	23rd Fiscal Year.
Maintenance	1,013,591	686,957	41.8	24.6	34.3
Locomotive	866,687	822,410	35.7	21.1	41.1
Traffic	377,383	353,220	15.5	9.2	17.7
General	169,439	138,986	7.0	4.1	6.9

Total...2,426,900 2,001,273 100.0 59.0 100.0 47.5

Note.—The figures on the right side in the columns of percentages give the percentage of Working Expenses; those on the left percentages of Revenue.

It will be noticed from the above table that a general increase over the figures of the previous year has taken place in all branches of expenditures. Maintenance expenditures owe their increment to the expenses incurred in repairing the damages caused by the earthquake; Lo-

comotive expenditures to increase of running mileage; Traffic expenditures to the same cause, and also to the extra outlay incurred in the discharge of business owing to the communication by the line having been cut off at different places by the earthquake, and owing also to the separate supervision which had in consequence to be established at various localities. The increase in the general expenditures is attributable to a change of accounting method rendered desirable by the relations between the organization of the department and the division of the fixed expenditures, namely, that the expenses of construction trains, the general expenses of the traffic department, and the expenses of maintaining and repairing of buildings, which were hitherto chargeable in appropriate proportion to the Maintenance, Locomotive, and Traffic expenditures respectively, are charged wholly to the General expenditures in the year under review.

The different heads of the receipts and expenditures in the revenue account of the last three years, divided by their appropriate divisors, give results as shown in the following tables:—

RECEIPTS.

Fiscal year.	Average mileage in operation.	Receipts per average mile in operation.			
		Passenger	Goods	Miscellaneous	Total.
24th fiscal year	539	5,899	1,529	197	7,625
23rd fiscal year	542	6,099	1,417	259	7,775
22nd fiscal year	528	5,746	1,282	115	6,143

	Maintenance Locomotive		Traffic General	
	Expenses.	Expenses.	Expenses.	Expenses.
Average for the three years.	1,416	.247	8,541	2.865

The details of the Receipts and Expenditures of the Revenue Account for the various sections will be found in Table No. 2.

The net profits of the year under review, yen 1,683,241, compared with the aggregate amount of the capital, yen 36,583,118 and the total of the finally adjusted amount of the same, or Fixed Capital, yen 34,241,504, give the following ratios for this year, those of the three previous years being also given for comparison:—

Fiscal Year.	Net profits compared with Gross Capital.	Net profits compared with Fixed Capital.
24th fiscal year	4.6	4.9
23rd fiscal year	6.3	6.8
22nd fiscal year	6.1	6.7
21st fiscal year	4	4.6

The main cause of the decrease of the percentage of the Net Profit was the great earthquake, which, as already described, tended to increase the expenditures on the one hand and to decrease the receipts on the other. However, there was another cause which contributed in no slight measure to the same result. The expenditures on the Utsu-Toge railway works, in course of construction during the year under review, amounted in all to yen 1,343,773; of this sum accounts for yen 1,173,320 having been adjusted, were transferred to Capital. But as the line was not in operation no returns were obtained for this increased amount of capital. Were this adjusted amount excluded from the capital account, the Net Profit would have been 4.8 per cent. of the Gross Capital, and 5.1 per cent. of the Fixed Capital.

In the following table the annual increase of the capital and of the gross receipts is compared, and the annual increase of the mileage in operation and the percentages are given, to show the relation between the Capital and the Revenue for this last and the three previous fiscal years:—

Fiscal Year.	Increase of miles in operation.	Increase of gross receipts.	Proportion of increase of capital.	Proportion of increase of gross receipts.
24th fiscal year ...	9	2,612,436	4.6	103,663*
23rd fiscal year ...	9	534,259	1.5	442,174
22nd fiscal year ...	103	1,056,666	1.9	7,457,819
21st fiscal year ...	101	715,675	27.0	64,936

The sum of yen 1,419,611 remitted to the National Treasury as the net earnings for the year is 3.9 per cent. of the gross capital and 4.1 per cent. of the Fixed capital.

The General Balance Sheet of the Capital and Revenue Accounts at the close of the year will be found in Table No. 3.

GENERAL CONDITION OF WORKS ON THE NIPPON RAILWAY COMPANY'S LINES, CARRIED OUT UNDER THE SUPERVISION OF THIS DEPARTMENT.

Though the condition of the construction works on the Nippon Railway Company's lines for the year has already been dealt with as usual in two semi-annual reports, the main features will here be recapitulated.

The fifth Section of this Company's main line—between Morioka and Aomori—was opened on the 1st of September, 1891, which made the length of the Company's railways—the main line and the branches—in operation 549 miles.

As with the finishing of the Fifth Section all the railways projected by the company were completed, the whole of the works and business of the Company, which had till then been under the supervision of the Railway Department, were transferred, without reserve, to it on the 31st of March, 1892.

The Company had by that date become fully equipped with rolling stock and plant sufficient for all present requirements; and the few temporary bridges that remained in the Fifth Section, which required to be replaced by permanent structures—work which could be carried out without interfering with the traffic—was not considered of importance sufficient to deter the consummation of the transfer.

The expenditure on construction account of the Nippon, Ryomo, Mito, and Koku Railway Companies, from the commencement to the end of the year, is here given:—

Aggregate expenditure on construction account from the commencement of the works to the end of last fiscal year	19,852,318
Do. during the year under review	1,074,935

Total.....20,926,353

Details:—

Adjusted amount yen 20,200,171.	
1st Section { Shinagawa-Maebashi } ...	2,902,685
2nd Section { Ueno-Akabane } ...	2,267,861
3rd Section { Omiya-Shirakawa } ...	2,513,356
4th Section { Sendai-Morioka } ...	3,844,113
5th Section { Morioka-Aomori } ...	5,432,260
Nikko Line { Utsunomiya-Nikko } ...	401,546
Ryomo Line { Oyama-Kiryu } ...	1,297,964
Mito Line { Oyama-Mito } ...	816,611
Koku Line { Shinjuku-Hachioji } ...	723,575
Unadjusted amount and floating fund ...	726,182
Amount for which construction officers are responsible	220,987
Materials in Store	505,195

The amount adjusted from the beginning of the works to the end of the last fiscal year was yen 18,444,698 and the amount adjusted during the year under review was yen 1,755,473. The total of these sums, yen 20,200,172, represents the aggregate adjusted capital at the end of the year.

The total mileage of open lines at the close of the previous year was 537 miles, constructed at the cost of yen 14,767,911; during the year under review the Morioka-Aomori Section, of 127 miles in length and costing yen 5,432,260, was opened.

Comparing now the cost of construction with the mileage in operation, we find:—

	Miles.	Cost per Mile.
Length of lines in operation	664	30,422

Amount at deposit at the close of the year under review 2,030,388

Amount belonging to the Working Fund carried over to the next fiscal year..... 545,287

Amount carried over to the next fiscal year to meet sums payable ... 65,490

Balance 1,419,611

The last balance represents the sum remitted to the National Treasury as the amount of Net Railway Earnings for the year.

The foregoing are the results as worked out in accordance with the new regulations. But since the division of items and the system of accounts generally employed in previous years are here retained, in order to facilitate comparison of the progress made by the operation of railways, the sum of yen 1,683,241 is taken as the net profit in this statement.

The sum of yen 4,110,141, the gross revenue for the year, is divided under three heads of Passenger, Goods, and Miscellaneous receipts, and the ratio each bears to the total for this and the last fiscal year, is as follows:—

Amount for the year under review. Amount for the last fiscal year. Percentage of the different receipts to the total revenue.

Passengers 3,179,873 3,305,442 77.4 78.5

Goods 824,056 767,967 20.0 18.2

Miscellaneous 106,212 140,395 2.6 3.3

Total.....4,110,141 4,213,804 100 100.

It will be seen from the above table that there was a decrease of over yen 120,000 in the Passenger receipts; whilst the Goods receipts increased by over yen 50,000. The causes of these variations in the earnings are treated in the portion of this report dealing with the general condition of the traffic.

The decrease of the Miscellaneous receipts may be accounted for by there not having been, during the year under review, such a large amount of extraordinary income under this head as there was in the previous fiscal year.

In the following table the aggregate Working Expenditure, during the year under review, namely yen 2,426,900, is divided under the four heads of Maintenance of permanent way, Locomotive, Traffic, and general expenses, and the ratio these bear to the Revenue and Working Expenditure is given for this and the previous year.

Amount for the year under review. Amount for the last fiscal year. Ratio of the respective expenses to the revenue and working expenses.

Maintenance 1,013,591 686,657 41.8 24.6

Locomotive..... 866,687 822,410 35.7 21.1

Traffic 377,383 353,220 15.5 9.2

General..... 169,239 138,986 7.0 4.1

Total... 2,426,900 2,001,273 100.0 59.0

Note.—The figures on the right side in the columns of percentages give the percentage of Working Expenses; those on the left percentages of Revenue.

It will be noticed from the above table that a general increase over the figures of the previous year has taken place in all branches of expenditures. Maintenance expenditures owe their increment to the expenses incurred in repairing the damages caused by the earthquake; Lo-

comotive expenditures to increase of running mileage; Traffic expenditures to the same cause, and also to the extra outlay incurred in the discharge of business owing to the communication by the line having been cut off at different places by the earthquake, and owing also to the separate supervision which had in consequence to be established at various localities. The increase in the general expenditures is attributable to a change of accounting method rendered desirable by the relations between the organization of the department and the division of the fixed expenditures, namely, that the expenses of construction trains, the general expenses of the traffic department, and the expenses of maintaining and repairing of buildings, which were hitherto chargeable in appropriate proportion to the Maintenance, Locomotive, and Traffic expenditures respectively, are charged wholly to the General expenditures in the year under review.

The different heads of the receipts and expenditures in the revenue account of the last three years, divided by their appropriate divisors, give results as shown in the following tables:—

RECEIPTS.

Fiscal year.	Average mileage in operation.	Receipts per average mile in operation.			
		Passenger	Goods	Miscellaneous	Total.
	Miles.	Yen.	Yen.	Yen.	Yen.
24th fiscal year	539	5,899	1,529	197	7,625
23rd fiscal year	542	6,099	1,417	259	7,775
22nd fiscal year	528	5,746	1,282	115	6,143

Average for 3 years 5,916 1,410 191 7,517

23rd fiscal year... 4,213,804 8.382 6,215,077 2.236

22nd fiscal year... 3,771,630 8.019 5,435,047 3.917

Average for the three years. 1,416 .247 8,541 2.865

The details of the Receipts and Expenditures of the Revenue Account for the various sections will be found in Table No. 2.

The net profits of the year under review, yen 1,683,241, compared with the aggregate amount of the capital, yen 36,583,118 and the total of the finally adjusted amount of the same, or Fixed Capital, yen 34,241,504, give the following ratios for this year, those of the three previous years being also given for comparison:—

Fiscal Years. Net profits compared with Gross Capital. Net profits compared with Fixed capital.

24th fiscal year 4.6 4.9

23rd fiscal year 6.3 6.8

22nd fiscal year 6.1 6.7

21st fiscal year 4. 4.6

The main cause of the decrease of the percentage of the Net Profit was the great earthquake, which, as already described, tended to increase the expenditures on the one hand and to decrease the receipts on the other. However, there was another cause which contributed in no slight measure to the same result. The expenditures on the Usui-Toge railway works, in course of construction during the year under review, amounted in all to yen 1,343,773; of this sum accounts for yen 1,173,320 having been adjusted, were transferred to Capital. But as the line was not in operation no returns were obtained for this increased amount of capital. Were this adjusted amount excluded from the capital account, the Net Profit would have been 4.8 per cent. of the Gross Capital, and 5.1 per cent. of the Fixed Capital.

In the following table the annual increase of the capital and of the gross receipts is compared, and the annual increase of the mileage in operation and the percentages are given, to show the relation between the Capital and the Revenue for this last and the three previous fiscal years:—

Fiscal Year. Increase of mileage in operation. Increase of gross receipts. Proportion of increase of capital.

24th fiscal year... 0 2,612,426 4.6 103,663 3.4 11.2

23rd fiscal year... 9 524,000 1.5 44,174 11.7 12.0

22nd fiscal year... 103 1,056,006 10.0 2,457,819 69.0 10.9

21st fiscal year... 201 71,061,175 27.0 64,696 26.0 6.9

Note.—Decrease.

The sum of yen 1,419,611 remitted to the National Treasury as the net earnings for the year is 3.9 per cent. of the gross capital and 4.1 per cent. of the Fixed capital.

The General Balance Sheet of the Capital and Revenue Accounts at the close of the year will be found in Table No. 3.

GENERAL CONDITION OF WORKS ON THE NIPPON RAILWAY COMPANY'S LINES, CARRIED OUT UNDER THE SUPERVISION OF THIS DEPARTMENT.

Though the condition of the construction works on the Nippon Railway Company's lines for the year has already been dealt with as usual in two semi-annual reports, the main features will here be recapitulated.

The fifth Section of this Company's main line—between Morioka and Aomori—was opened on the 1st of September, 1891, which made the length of the Company's railways—the main line and the branches—in operation 549 miles.

As with the finishing of the Fifth Section all the railways projected by the company were completed, the whole of the works and business of the Company, which had till then been under the supervision of the Railway Department, were transferred, without reserve, to it on the 31st of March, 1892.

The Company had by that date become fully equipped with rolling stock and plant sufficient for all present requirements; and the few temporary bridges that remained in the Fifth Section, which required to be replaced by permanent structures—work which could be carried out without interfering with the traffic—was not considered of importance sufficient to deter the consummation of the transfer.

The expenditure on construction account of the Nippon, Ryomo, Mito, and Koku Railway Companies, from the commencement to the end of the year, is here given:—

Aggregate expenditure on construction yen.

Mito Line 43 18,991

Koku Line 23 31,460

A detailed statement of the cost of construction of these lines will be found in table No. 4.

PRIVATE RAILWAY LINES.

The Mito Railway Company having come to an arrangement with the Nippon Railway Company, made an application for permission to sell their line to the latter Company. The permission was granted in June 1891; and, on the 1st of March 1892, the railway, with all other properties attached to it, was made over to the Nippon

Company, the latter assuming control of the working of the Mito line from that date.

Having duly received sanction to do so in October, 1891, the Kōbu Railway Company separated itself from the Nippon Railway Company, which had till then directed its workings, on the 1st of November of the same year, and began from that date to control the affairs of its railway independently.

The Hokuriku Railway Company, to which a Provisional Charter was granted in 1889, notified last December the abandonment of its projected line.

Private railways for which charters were made, and "railway companies" new lines which were completed and opened during the year under review, are as follows:—

Charters granted to:—

The Iyo Railway.

Office—Matsuyama, Ehime ken.
Charter—Granted 23rd July, 1891.
Capital—Yen 130,000.
Line—Mitsu to Takahama and Sotogawa to Hiraigawara.

Length—6 miles 2 chains.
Period of Construction—18 months.
Applications for charters have been made by:

The Kōbu Railway Company.

Office—Tokyo.
Provisional charter—Granted 13th July, 1889.
Line—Shinjuku to Misakicho.
Length—4 miles 20 chains.

The Nanwa Railway Company:—

Office—Goshō-machi, Nara ken.
Provisional Charter—Granted 18th February, 1891.
Capital—Yen 500,000.
Line—Takata to Gojyo.
Length of line—16 miles 40 chains.

The Kawagoe Railway Company:—

Office—Tokorozawa, Saitama ken.
Provisional Charter—Granted 11 April, 1891.
Capital—Yen 300,000.
Line—Kokubunji to Kawagoe.
Length of line—18 miles 20 chains.

The Ōme Railway Company:—

Office—Ōme, Kanagawa ken.
Provisional Charter—Granted 16 Sep., 1891.
Capital—Yen 100,000.
Line—Ōme to Tachikawa.
Length of line 13 miles 7 chains.

The Searo Railway Company.

Office—Hyocho, Hokkaido.
Capital—Yen 200,000.
Line—Hyocho to Atosato.
Length—26 miles 50 chains.

The following railways have been opened for traffic:—

The Nippon Railway Company.
Miles Date of opening.

Moroka-Aomori 126.72.....1st Sept. 1891.
The Sanyo Railway Company.
Okayama-Kurashiki.....9.74.....25th April, 1891.
Kurashiki-Kasaoka 17.39.....14th July, 1891.
Kasaoka-Fukuyama 8.70.....11th Sept., 1891.
Fukuyama-Onomichi.....12.22.....3rd Nov., 1891.

Total.....48.45

The Kyushu Railway Company.

Moji-Kurosaki..... 14.40.....1st April, 1891.
Kurume-Takase 34.10.....1st April, 1891.
Takase-Kumamoto 17.30.....1st July, 1891.

* Mileages of the portions of the lines on which traffic was suspended by damages multiplied by the number of days they remained unavailable and deducting the sum thus obtained from the total average operating mileage for the year gives this result.

† Number of vehicles multiplied by the number of days they were employed.

‡ Inclusive of the Yokogawa Line.

Note 1.—Total train mileage is the sum of one-half of the mixed-train mileage added to the passenger train mileage.

Note 2.—In calculating vehicles the number of carriages in use at the close of each month have been taken as the number employed during each succeeding month.

Correction:—Yokohama Line:—In the last year's Report the total passenger mileage on this line was given as 5,449,619. This has been found incorrect, 4,394,908 being the actual mileage for that year as rectified above. The necessary corrections in the Average number of passengers per mile, to Average number of passengers per carriage mile, the Average mileage per passenger, and the average receipts per passenger mile, have likewise been made.

AGGREGATE TRAIN MILEAGES:—Continued from Table No. 7.

Passenger train mileage.....	Miles	—	—	—	2,007,522	1,895,774	171,748
Goods train mileage.....	Miles	17,688	29,159	* 11,471	713,035	613,475	99,560
Mixed train mileage.....	Miles	259,345	258,219	1,126	521,743	411,022	110,721
Total		277,033	287,378	* 10,345	3,302,300	2,920,271	382,029

* Mileages of the portions of lines over which traffic was suspended by damages multiplied by the number of days they remained unavailable and deducting the sum thus obtained from the total average operating mileage, gives this result.

† Number of vehicles multiplied by the number of days they were employed.

‡ Yokogawa Line inclusive.

Note 1. The total train mileage is the sum of one half of the mixed-train mileage added to the goods-train mileage.

Note 2. In calculating the vehicles the number of waggons in use at the close of each month have been taken as the number employed during each succeeding month.

TABLE NO. 8. LIST OF DEATHS AND INJURIES AMONG PASSENGERS, STAFF, AND OTHERS IN THE DIFFERENT SECTIONS DURING THE 24TH FISCAL YEAR.

NOTE.—Under the head of "accidental" are recorded deaths and injuries arising from unforeseen occurrences. Thus the one death recorded in the column for Passengers is a case of a sudden termination of the life of a passenger who had been suffering from *hahke*.

Under "Negligence" are those arising from personal carelessness.

Under "Suicide" are cases with clear proofs of premeditated self-destruction.

TABLE NO. 9. LIST OF CASUALTIES AND ACCIDENTS IN CONNECTION WITH THE TRAFFIC IN THE DIFFERENT SECTIONS DURING THE 24TH FISCAL YEAR.

Sections.	Derailments.			Collisions.			Failures.	Obstructions to the road and trains.		Trains Delayed.	Trains Stopped.	Violators of Railway Regulations.

NOTE.—By "Derailments" and "Collisions" are meant vehicles getting off the track or colliding with each other by negligence on the part of Pointsmen, Steam being in excess, &c.

By "Failures," vehicles becoming disabled by over-heating of the axles, parts of machinery breaking or giving away, &c., is meant.

Obstructions to the road and trains mean impediments on the lines caused by storms, &c., or by persons wilfully placing stones, wood, &c., on them.

Delays of the trains, are interruption of their working brought about by these obstructions; the stoppages result from same causes.

Violators of Railway Regulations mean passengers who over-ride their station and fail to pay their fare, and those who otherwise act contrary to the Railway Regulations.

TABLE No. 10.

Items.

Operating mileage at the close of the fiscal year Miles
 Average operating mileage for the year Miles
 Amount of Capital at the close of the fiscal year Yen
 Amount of paid-up Capital at the close of the fiscal year Yen
 Amount of Debt at the close of the fiscal year Yen
 Amount of Construction Expenditure at the close of the fiscal year Yen
 Amount of Unadjusted Construction Expenditure at the close of the fiscal year Yen

Amount of Traffic receipts for the year Yen
 Amount of Miscellaneous receipts for the year Yen
 Amount of Working Expenditures for the year Yen
 Amount of Net receipts for the year Yen
 Rates of Dividends paid Per cent.
 Ratio of the Net profit to the paid-up Capital Per cent.
 Average Earnings per mile Yen
 Average Working Expenditures per mile Yen
 Number of passengers carried Persons
 Passenger receipts Yen
 Amount of Goods carried Tons
 Goods receipts Yen
 Total Train Mileages Miles

 Total Train Mileages Miles

1.—Under "Unadjusted Expenditures" are included such items as Materials in Store, Monies abroad, Provisional Payments, &c., eventually to come under Construction Expenditures, but which could not yet be considered as such. 2.—The "Working Expenses" above given have been taken from the amounts placed under that heading in the respective reports of the different Companies. It should, however, be noted that the method of accounting in these companies is not uniform; whilst all other Companies include the Expenses of the head office in the Working Expenses, the Nippon, Mito, Kōbu and Chikugo Railway Companies do not do so; and the Osaka Railway Company includes the interest on its debts among the Working Expenses. 3.—Dividends: The dividends of the Nippon Railway Company were made up from the Net Earnings of the Company added to the subsidy guaranteeing interest on Capital received from the Government; those of the Sanyo Railway Company from its net earnings and the Construction subsidy from the Government, those of the Kyushu Railway Company from its gross receipts and a portion of the Construction subsidy; those of the Hokkaido Railway Company from the net earnings of both the Railway and the Coal Mines. 4.—The Sanyo Railway Company having omitted the train mileage in its semi-annual Report for the latter half of the 24th fiscal year, the same can only be approximately given. 5.—The rate of the dividend of the Hankan Railway not being clear is omitted. 6.—The Mito Railway Company did not complete its report for the 24th fiscal year. 7.—The two year's workings of the Hokkaido Railway are not compared because the first fiscal year was short of 12 months, whilst the second extended over 15 months. 8.—The Chikugo Railway having been opened in August, 1891, the above shows the results of the working for the space of only 8 months.

† Milesages in this line are given in miles and tenths of miles.

IN THE TOKYO COURT OF APPEAL.

MOURLYAN, HEIMANN AND CO. V. THE GOVERNOR
OF KANAGAWA-KEN—THE KEROSENE OIL CASE.

Appellant—Arthur H. GROOM, Manager of MOURLYAN HEIMANN & CO., Export and Import Merchants, 35, Foreign Settlement, Yokohama.

OKAMURA TERUHIKO, Counsel for Appellants.
HARADA KEIGO, Counsel for Appellants.

Respondent—UTSUMI TADAKATSU, Governor of Kanagawa Ken.

TAKAHASHI SUTEROKU, Counsel for Respondent.

KOIDE RIUTARO, Counsel for Respondent.

On the 29th ultimo the above case was heard before Mr. Hasegawa Takashi, Chief Judge; and Messrs. Takaya Tsunetaro, Hirose Gigei, Hirada Kosaburo, and Mayeda Kokai, Assistant Judges. The Appellants were represented by Messrs. Okamura Teruhiro and Harada Keigo, and the Respondent by Messrs. Takahashi Suteroku, and Koide Riutaro. The Court opened at 1.30 p.m.

Counsel for Appellants—As the judgment delivered in the Yokohama Local Court on the 23rd May, 1892, is considered improper, the appellants pray the Court to reverse that judgment, and to order respondent to pay an indemnity of 81,455.37 yen, as well as the costs of the Court from the 19th November, 1891, to the date of the settlement of the present suit.

Counsel for Respondent—I pray the Court to dismiss the appeal, and to make the appellants responsible for the costs of the Court.

The Judge asked Counsel for appellants to state the facts of the case.

Counsel for Appellants—The appellants have been engaged in the kerosene oil trade ever since 1888, and during May, 1890, and February, 1891, they imported 203,525 cases of kerosene oil per *Anglo-American*, *Milverton*, and *Calypto*. Now, in accordance with the provisions in the Treaties with Foreign Powers, the Japanese Government promulgated Regulations for the Storage of Explosives, in 1877. By these Regulations it is forbidden that any explosive articles imported into Yokohama be stored in a private godown; they must be placed in the Nakamura Warehouse controlled by the Kanagawa Kencho. Kerosene oil is included in the list of explosives. The appellants, in obedience to the Regulations, stored 129,792 cases of kerosene oil, imported by the above three ships, in the official store-house, as soon as the oil had been landed at the Hatoba. Now, in accordance with the Regulations, when the appellants desired to obtain delivery of the oil, they had to present a delivery order to the officials appointed to control the store-house, and the latter are required to deliver only the number of cases mentioned on the delivery order. In the event of the appellants concluding a sale to a Japanese merchant, and receiving money from the latter, they had to prepare a delivery order and hand it to the purchaser for presentation to the warehouse officials. In November of last year, the appellants discovered that 43,476 cases, which should have been remaining from the total deposited by them in the warehouse, were lost. It was their custom to keep accounts of the sales effected, and these accounts showed that the above number of cases ought to be still in the warehouse. When the appellants investigated the affair, they found that the cases had been stolen by Shiu Kit-ching, a Chinese godown-keeper in their employ, and by Alai, Akew, and some other Chinamen. Shiu Kit-ching, as I have said, was a godown-keeper, and the other Chinamen were under him. Their sole business was to take care of the godown. The method adopted by them in obtaining the oil was this:—They procured forms of delivery orders from the Kencho. These they filled in and signed themselves, and then affixed to them the stamp of the firm without the knowledge of the appellants. The orders thus fabricated they carried to the officials in charge of the warehouse, and the latter, regarding the orders as *bona fide*, delivered the number of cases mentioned on them. Sometimes the appellants handed delivery orders to these Chinamen, but the latter destroyed them, and made out fresh orders in their place. On the other hand, as appellants received the money for the number of cases of oil which they supposed had been sold—such money being paid out of the proceeds of the fraud—they had no means of ascertaining what was going on. At last, however, all the oil deposited was exhausted, and discovery then became inevitable. Thereupon the appellants called in the chief culprit, and questioned him, when he made confession in the above sense. The appellants thereupon communicated the fact to the Chinese Consul, and the latter at once summoned Shiu Kit-ching, and examined him, eliciting the

same confession. Now, when the oil was deposited, the warehouse officials handed to the appellants a warrant, the method of procedure being that when it was desired to withdraw a certain number of cases, the warrant must be handed in together with a delivery order. The warrants were kept by the appellants, but the Chinese took them and returned them to the Kencho. We have had an opportunity of inspecting some of these warrants now in the possession of the Kencho. If they be examined, the portions handed to the Chinese can be ascertained. Some of the delivery orders were signed in pencil, yet, without regard to such an irregularity, the officials delivered the oil. Orders so signed have been seen by one of the clerks of the appellants' firm who went with his brother to inspect the documents in the keeping of the Kencho. The appellants therefore request that these documents be produced by the respondent. In short, the complaint of the appellants is that the respondent, by his own negligence, carelessly delivered to the Chinamen goods which, in necessary compliance with the Regulations, had been stored in the warehouse of the respondent. The Regulations require that no delivery shall be made without due presentation of a delivery order signed by the owner of the goods. It is not pretended that there was any wrong intention on the part of the warehouse officials, but since they carelessly regarded the Chinese as proper representatives of the firm, and delivered goods to them, the loss must be borne by the respondent. Therefore the present suit has been instituted.

The Judge—How about the amount of damage? By what process did you estimate the exact amount?

Counsel for Appellants—It is minutely stated in the account book presented by the appellants.

The Judge—How was the price estimated?

Counsel for Appellants—It was determined by the selling price as contracted for.

The Judge—Then do you mean that the goods were not sold as agreed?

Counsel for Appellants—Yes. Moreover, if the fees required for storage be added, the total damage amounts to over eighty thousand yen. That amount we demand.

Counsel for Respondent—It is difficult to understand on what precise grounds the appellants demand an indemnity in respect of the delivery of some forty thousand cases of kerosene. The respondent, as the counsel for the appellants has stated, receives explosives into the warehouse controlled by him. Not merely explosives belonging to appellants firm but also explosives the property of a number of others. The amount deposited by the appellants was not so small as forty thousand cases. We have it on the authority of the counsel for the appellants himself that the number of cases imported by the *Anglo American* and other vessels and deposited in the Warehouse, amounted to over one hundred and thirty thousand. The respondent does not deny that a large number of cases were received by him from the appellants. But both in receiving and delivering such goods there are provisions to be observed as prescribed by the Regulations, and the respondent acted in strict conformity with those provisions. He had been in the habit of receiving the goods from the appellant's firm for some ten years. In depositing goods, the appellants have had to present to the warehouse an application, accompanied by a statement of the number of the cases to be stored. When the respondent receives such goods he issues a warrant, on the face of which the number of the cases deposited is recorded. This warrant is the proof that the goods have been received. When the whole number of cases shown on a warrant are withdrawn, the warrant has to be returned to the warehouse officials in exchange for the goods. But when a portion only of the cases is withdrawn, the warrant has to be presented, and the official records upon it the number of cases delivered. For instance, if out of 10,600 cases shown on the warrant, 2,000 are delivered, then the words "8,600 cases remain" are endorsed on the warrant. This procedure, expressly provided in the Regulations, the warehouse officials have always observed strictly. It had been the custom that applications for depositing goods were brought by an employé of the appellants' firm, and that delivery orders also were signed by an employé, stamped with the stamp of the firm, and presented with the warrant. Such being the common practice, the respondent delivered the goods whenever a delivery order was presented with the warrant. The respondent, therefore, does not know which deliveries are considered wrong, or on account of which deliveries the appellants demand an indemnity. He acknowledges that he received a great number of cases of oil from the appellants, but claims they were all delivered in strict accordance with the prescribed Regulations, and that there was no negligence on his side.

Another Counsel for Respondent—The sum of the matter is that the appellants allege that they never gave any power of attorney to the Chinese, and that therefore it was negligence on the part of the respondent to deliver the goods in exchange for delivery orders signed by Chinese. Hence they demand an indemnity. But the Kencho began to receive kerosene oil from the appellants some 10 years ago. During that long period, though applications for depositing goods ought to be signed by the firm, it was customary for them to be signed by a clerk. The appellants now argue that documents signed by a European employé were *bona fide*, whereas those signed by a Chinaman were not. But many of the original applications for deposit were signed by a Chinaman, therefore it was natural for the respondent to consider that delivery orders signed by the same Chinaman were *bona fide*.

The Judge—I notice that the appellants allege the total number of cases imported by the *Anglo-American* and other ships, and deposited in the warehouse, to have been over one hundred and twenty thousand. But the counsel for respondent states it to have been over one hundred and thirty thousand. Which is the correct number? The appellants' number is 129,792 only.

Counsel for Respondent—One hundred and thirty thousand is sufficiently correct.

The Judge—Am I to understand, then, that it is not certain whether the number was 120,000 or 130,000? On how many occasions was the oil received?

Counsel for Respondent—That I do not know. Though the number of ships was three, some cases of oil were sold at once on landing. If any change was made in the place of storing the oil the warrant must have been rewritten.

The Judge—Can you not tell how many applications were there?

Counsel for Respondent—No, not now.

The Judge—But have not you kept the documents?

Counsel for Respondent—No, some of them were destroyed.

The Judge—Then is this statement correct—"The respondent received a number of cases of kerosene oil imported by three ships on various and several occasions, but the storage applications are not preserved now?"

Counsel for Respondent—The applications are not completely preserved, therefore they cannot be produced.

The Judge—Are those documents all signed by representatives of the firm?

Counsel for Respondent—Yes, all.

The Judge—It is alleged that some of them were signed by Chinese. Can you produce any such?

Counsel for Respondent—Yes.

Counsel for Appellants—Counsel for respondent just now explained the process of depositing and delivering goods. I desire to make a statement for the Courts' consideration. Counsel for respondent said that the Kencho issues a warrant, and whenever the warrant is presented the goods are delivered. That sounds as if no importance were attached to the delivery orders. But as the delivery orders are of equal importance with the warrants, it is essential that both documents be produced. Goods have to be delivered when a delivery order is presented. The delivery order must be signed by the owner of the goods, and the same rule applies to the warrant. That is to say, delivery is made when a delivery order signed by the owner of the goods is presented, but not otherwise. It must not be supposed that when a man comes to ask for delivery, the official in charge at once hands him the required goods without even looking at the signature on the order. In a word, the delivery order is most important. It is also alleged that Chinamen have often discharged these functions. The appellants believe that on some occasions the Chinese sought and obtained delivery of oil even though no actual transaction of sale had been made. But as the Chinese paid in certain sums of money to the firm, the latter could not know whether sales had been made or not. In point of fact, rumour having been circulated that the Chinese were guilty of dishonest practices, not only the appellants' firm but all the foreign firms in Yokohama make it a rule never to entrust to Chinamen any power to sign documents. This fact I believe to be known to the Kencho also.

The Judge—Is there no further argument?

Counsel for Respondent—There are many instances in which, say, 2,000 out of 10,000 cases were drawn out originally on the signature of the Chinese, and the remaining 8,000 cases are admitted by the appellants to have been delivered on proper signatures. Surely they ought to have been able to discover that 2,000 cases had been fraudulently obtained by the Chinese at the outset?

The Judge—Is there any disagreement as to the amount of indemnity?

Original from

Counsel for Respondent—Certainly there is. The Judge—Then we shall confine ourselves to investigating the origin at facts of the matter at present.

Counsel for Respondent—Counsel for appellants has stated that it is the common custom of Yokohama never to allow any Chinaman to sign a document. But I declare that there is no such custom.

Counsel for Respondent—May I ask what is meant by the ruling which the Bench has just made.

The Judge—It is necessary in the first place to ascertain whether any damage has been caused, and, if that be proved, then to determine what the damage amounts to. Thus the latter question must be postponed for future consideration.

Counsel for Appellants—I wish to make an application to the Court. Counsel for respondent has declared that warrants and delivery orders become invalid as soon as they are returned to the Kencho, and are therefore regarded as waste paper. But when a clerk of the appellants' firm originally went to the Kencho to inspect those documents, the official declared that they should be produced in the event of the question being brought before the Court. It would appear, however, that they consider the production of the documents disadvantageous to their case, for they have refused to produce them. Just now one of the counsel for respondent said that though the documents are in existence, it is impossible to produce them all as some are destroyed. In other words, he admitted that a certain portion is still in the Kencho. I requested the Court below to order the production of these documents, but the defendant refused to produce them on the ground that they were unnecessary, and the Court declined to grant our application. I now apply that the respondent be obliged to produce all the warrants and delivery orders relating to the kerosene oil imported by the *Anglo American* and other ships.

The Judge—You must state plainly what documents you require to be produced.

Counsel for Appellants—What I desire to have are the applications for depositing the goods imported by the *Anglo American*, *Milverton*, and another ship; together with the warrants and the delivery orders.

The Judge—For what do you require these documents?

Counsel for Appellants—If the appellants cannot refer to them, they are unable to state exactly what number of cases of kerosene oil are in question. It is true that they have copies, but the copies do not make it very clear at what dates and in what quantities the oil was delivered. We desire to ascertain these facts precisely, as they have an important bearing on our case. Counsel for respondent has said that some of the documents are preserved, but that the respondent cannot produce them.

The Judge—But have you any copies?

Counsel for Appellants—Yes, we have copies which state the dates and the number of cases.

The Judge—If the Kencho refuse to produce the documents, can you produce your copies?

Counsel for Appellants—Yes. But the respondent does not recognize them.

Counsel for Respondent—As the documents become waste-paper on the completion of the transactions, some of them only may be kept, while others are destroyed. We decline to produce them, because we should thereby be acknowledging a general responsibility for such documents, whereas in other cases besides the present they have been regarded as waste-paper.

Another Counsel for Respondent—If the appellants declare that such and such deliveries were wrong, the respondent can produce the documents to prove the contrary; but if they apply for the production of all the documents for the purpose of examining them with the view of finding some error, we cannot comply with the application.

The Judge—Do you say that you are willing to produce a portion of the documents? Your statements do not appear to be consistent, and I have difficulty in understanding them. If you claim to be under no legal obligation to produce the documents, that is a plain plea. But you must declare whether or no you possess any documents over and above those you have already presented.

Counsel for Respondent—Unless the appellants indicate clearly which and which deliveries were illegal, we cannot produce any documents.

Another Counsel for Respondent—We are under no legal obligation to produce the documents. If a question be asked as to what we have done with the documents, we can reply simply that we have destroyed them.

Counsel for Appellants—The respondent has stated that there was a larger number of cases imported by the three ships than we have claimed. I beg to state that document No. 5 of those now

before the Court was copied from the original in the Kencho.

The Judge—Are there any translated numbers in the document?

Counsel for Appellants—No, the numbers were written from the first in figures. For instance, out of the number of cases imported by the *Anglo American*, and deposited in the warehouse, 69 were delivered to Akew, employee of the appellants' firm, on his own signature. We should like to see the delivery order for that number.

The Judge—Were all these copies made at the Kencho?

Counsel for Appellants—Yes. We considered it necessary to produce all the warrants, applications for storage, and delivery orders.

Counsel for Respondent—I ask to be informed which deliveries are said to have been wrongfully made. The document contains some 150,000 cases, but no mention is made of the particular deliveries that are considered illegal. We acknowledged in the Lower Court that we made some deliveries on the strength of delivery orders signed by Chinese, and we therefore fail to see that any necessity exists to produce the documents now.

Counsel for Appellants—Originally the appellants intended to demand an indemnity for the whole quantity. But when they carefully calculated, they found that they had received money for some portions. Hence they demand indemnity for the actual loss only.

The Judge—Do you then mean that for a portion of the wrongfully delivered cases the money was paid, and that consequently, you do not demand indemnity for that portion.

Counsel for Appellants—Exactly so. Counsel for respondent denies that there was any legal obligation to produce the documents. But I desire to refer to Art. 346 of the Code of Civil Procedure, where it is expressly provided that when a suitor desirous of producing evidence, finds that a document which he wishes to use is in a Government office or in the hands of the officials of a Government office, he can apply the Court to require such Government office or officials to produce the document.

The Judge—But Art. 346 does not refer to the party to a suit. It has reference simply to a government office or officials.

Counsel for Appellants—Then I ask permission to base my application on Art. 350, second clause, and on Art. 339. Art. 339 says that when the Court deems that the fact to be verified by a document is essential, while the other party admits that he is in possession of such document, or makes no reply to the application for its production, then the Court may issue an order for the production of such a document, as a ruling on a point of evidence. Again, in Art. 340, it is provided that when a party to a suit is a Government office, a certificate from the chief of that office declaring that the required document is not preserved in his office, or that he is unable to say where it is kept, shall be substituted for the proposed evidence, and the Court shall fix an appropriate period for the production of such certificate. Relying on these provisions, we request the Court to order the production of such a certificate. And since the respondent has acknowledged that some of the documents relating to the oil are preserved, we trust such documents will be produced.

Counsel for Respondent—The respondent is not under a legal obligation to produce any document, according to the express provisions of the parts of the Code relating to the presentation of written evidence. Counsel for appellants has requested the Court to order the production of certain documents, under the provisions of Arts. 339 and 340, but we deny that we are under any obligation to comply with the demand. All the articles quoted must be interpreted jointly. They cannot be applied piecemeal.

The Judge—We shall consider the subject maturely. The Court will adjourn for a quarter of an hour.

The Court resumed its sitting at 2.50 p.m.

The Judge—The application of the appellants for the production of three kinds of documents in the hands of the respondent is not acceded to. The Court cannot issue an order in the sense desired by the appellants, since the latter cannot show sufficient cause.

Counsel for Appellants (presenting exhibit No. 1)—The number mentioned in this document is the total number of cases deposited by the appellants.

The Judge—I see by this that the total number is put at 32,074 cases. Do you say that this is the total number deposited?

Counsel for Appellants—The two lots together make that number. It is the total quantity imported by the appellants since 1888. But the number of cases concerned in the present suit is mentioned in the third page from the last. The

object of presenting that document is to show the total number of cases deposited.

The Judge—Exhibit No. 1 shows the total number of cases imported by the *Anglo American*. Were they all deposited in the store-house?

Counsel for Appellants—Yes. The numbers shown were all deposited.

The Judge—Exhibit No. 1 A records the total number of cases, but I do not see that any statement is made as to the number actually stored.

Counsel for Appellants—It is recorded at the end of the document. All cases mentioned in that document represent the actual number deposited, no cases sold at the landing place being included.

The Judge—Was the number mentioned in this document ascertained from the books of the firm?

Counsel for Appellants—No. We went to the Kencho, and requested an official to show the records, and our request being granted, we copied out the documents.

The Judge—That is to say that the number of cases mentioned here is the total number of cases deposited by the appellants, which number is some 120,000, being the same number as that mentioned in the petition presented when carrying the case to appeal.

Counsel for Appellants—Yes.

The Judge—What is Exhibit No. 2?

Counsel for Appellants—Exhibit No. 2 requires a somewhat lengthy explanation.

The Judge—If it relates to the question of price, will you defer it for future consideration?

Counsel for Appellants—But if the accounts are not cited the number of cases cannot be ascertained. Exhibit No. 2 contains the contracts for sale.

The Judge—Are they all contracts for sale?

Counsel for Appellants—Yes.

The Judge—What evidence do those contracts for sale furnish?

Counsel for Appellants—If the question of indemnity be deferred, the minute accounts of our firm can be ascertained therein. I will subsequently speak of the detailed account, but if you will look at it you will see from it the number of cases.

The Judge—From this Exhibit, No. 2, the accounts have been compiled, have they? Then this is the source from which the detailed accounts have been compiled, is it not?

Counsel for Appellants—The detailed account is divided into upper and lower parts. The former is compiled from this Exhibit.

The Judge—What is next?

Counsel for Appellants—This is the monthly record; and in it are entered the number of cases sold, as well as the number of cases imported. There is a cross in pencil, and between that mark and the end, where another cross is drawn, is comprised the number mentioned in exhibit No. 3.

The Judge—Is this the same, then, as the translated daily account book?

Counsel for Appellants—Yes.

The Judge—What is it presented for?

Counsel for Appellants—If that document be compared with the contracts, it will be seen what contracts were made, and how much money was received.

The Judge—Is the money received in advance?

Counsel for Appellants—No. That is to say, some of the money is paid in advance. The money so paid in is not included in the losses for which indemnity is now sought.

The Judge—Does this account, then, show the money received?

Counsel for Appellants—Yes.

The Judge—You have just said that the account is divided into two parts. For what purpose is such a division made?

Counsel for Appellants—The upper and lower divisions together make the total account. For instance, in the first page an aggregate of 17,000 cases is entered as the number making the total. A detailed account is appended.

The Judge—What does this mean, "Contract for sale, 4th November, 1889; Shin Kitchin, 10,000 cases," and under it the entry, "Money received?"

Counsel for Appellants—Such an entry shows that the money was received. If you will look a little further you will find, for instance, "So many cases to Isshiya on the 7th June, 1890." And under it "On the 6th November so much money was received." Such an entry shows that the number of cases contracted for was 10,977, on account of which so much money only was received.

The Judge—Do you then intend to assert that the number of cases for which no money is paid is the number stolen by the Chinese?

Counsel for Appellants—Exactly so. Exhibits No. 2 and 3 show the whole account. We contracted with Isshiya for 1,975 cases, but how many cases of that total were delivered is unknown. At all events, the money received by the firm is the amount entered in the document.

The Judge—Do you then affirm that the portions

for which you received no money were stolen by the Chinese?

Counsel for Appellants—As the total number of cases contracted for was actually delivered, the whole of the money ought to have been received. But since a portion was not forthcoming, we conclude that the oil was stolen by the Chinese.

The Judge—I find here that the numbers of cases contracted for by Isshiya are over 1,900 and 7,765; but in the other book 5,646 cases alone are entered. In that instance you claim, I presume, that 5,646 cases may have been delivered, but that the remainder were stolen by the Chinese. Is that so?

Counsel for Appellants—Yes.

The Judge—What is next?

Counsel for Appellants—We come now to Exhibit No. 4. It is a transcript of a confession made by Su Ketsai and Shin Kitchin, Chinese godown keepers. At first they were examined by us, but they did not tell us the truth. Therefore they were taken to the Chinese Consulate, and there they confessed that they had forged delivery orders and received the kerosene.

The Judge—Is there anything else?

Counsel for Appellants—This document is in evidence. It shows the nature of the delivery order, as copied from the originals in the Kencho by Edwards, clerk of the Appellants' firm.

The Judge—Are these all delivery orders?

Counsel for Appellants—Yes. You will see that among them some do not bear the name of the firm, while some are signed in pencil, and in various kinds of pencil at that, and others have the name of the firm but no signature of a representative. We produce them to show that the respondent was extremely careless.

The Judge—Is the object of these copies to show the number of cases and the dates of their delivery?

Counsel for Appellants—Yes.

The Judge—Are they all signed by Chinese?

Counsel for Appellants—Yes. In the very end on the right hand side the translation is written. It will further be seen that some have not the stamp of the firm.

The Judge—Do you mean that some are only signed by the Chinese? I see no translation here. Are there no more?

Counsel for Appellants—No more.

The Judge—I will now hear counsel for respondent. What about Exhibit No. 1?

Counsel for Respondent—With regard to that document, the number of cases shown as imported by the *Anglo-American* is correct. But the number imported by the *Milberton* is incorrect: The Kencho received 64,312 cases. The number of cases received per *Calypto* is also different; the number was 1,254. These are flagrant discrepancies.

The Judge—How about Exhibit No. 2?

Counsel for Respondent—We do not accept it.

The Judge—How about Exhibit No. 3?

Counsel for Respondent—That again we do not accept.

The Judge—Do you mean that it is not correct?

Counsel for Respondent—Certainly.

The Judge—How about Exhibit No. 4?

Counsel for Respondent—We admit that something of the kind took place, but we do not admit the accuracy of the facts there set forth.

The Judge—How about Exhibit No. 5?

Counsel for Respondent—We do not accept it either.

The Judge—But the document was copied from records at the Kencho.

Counsel for Respondent—It is true that a person came to the Kencho, but whether he copied the records correctly or not we do not know. We do not accept his transcript.

The Judge—Do you mean that there are some mistakes in the total numbers?

Counsel for Respondent—Our records contain different numbers. The whole number of cases deposited is different, and there are mistakes as to the deliveries.

The Judge—Do you mean that the numbers differ?

Counsel for Respondent—Yes, the number of cases is wrong. Moreover, as we fail to see for what portion exactly an indemnity is demanded, we cannot accept the document.

The Judge—Is that all you have to say?

Counsel for Respondent—Yes.

The Judge—Is there no excess in the numbers?

Counsel for Respondent—We cannot tell until we compare them.

The Judge—Counsel for Appellants spoke about the signature on delivery orders. I should like to hear you on that point.

Counsel for Respondent—We cannot distinguish those particular orders either.

Junior Counsel for Respondent—We acknowledge that some of the delivery orders were signed by Chinese; but whether there are any such in

the lot now before the Court, we cannot tell till they are compared.

The Judge—What are the documents presented by the respondent?

Counsel for Respondent—The Exhibit No. 1 contains applications for deposit signed by Akew. They prove that a Chinaman often deposited goods over his own signature.

The Judge—Have they any direct concern with the present case?

Counsel for Respondent—Yes. We have any number of such orders, but those in the Exhibit relate to the present suit only.

The Judge—Do you then mean to say that on occasions covered by the present suit a Chinaman named Akew signed applications for deposit?

Counsel for Respondent—Yes.

The Judge—What is next?

Counsel for Respondent—The second Exhibit is a warrant which indicates how many cases are deposited. Unless this warrant be produced, no goods are delivered. Therefore it is a most important document.

The Judge—Has the number of kerosene oil cases mentioned in it any direct connection with the present suit?

Counsel for Respondent—Yes. You will see there the name of the last ship by which the oil was imported.

The Judge—What is next?

Counsel for Respondent—The next two Exhibits, Nos. 3 and 4, must be examined together. They are delivery orders. They show that many different persons signed the orders.

The Judge—Are there any orders signed by Chinese?

Counsel for Respondent—Yes. Speaking briefly, these exhibits show that deliveries were customarily made to employees of the firm.

The Judge—What is next?

Counsel for Respondent—The next Exhibit, No. 5, is to show that the respondent often delivered goods to Chinese on their signature, without any signature by the appellant firm. It proves that there is no such practice as the alleged non-delivery of goods on the authority of delivery-orders signed by Chinese alone.

The Judge—By what process was the fact that the Chinese stole the money ascertained?

Counsel for Respondent—By instituting a suit in the Chinese Consulate.

The Judge—Is this document No. 6 a despatch from the Consul?

Counsel for Respondent—Yes. A translation is appended.

The Judge—Does it show that the Chinese stole the money?

Counsel for Respondent—Yes. According to it, some 70,000 dollars were stolen. They stole the money and have to bear the consequences.

The Judge—What is next?

Counsel for Respondent—Exhibit No. 7 is presented to-day for the first time. It shows, in the case of some warrants, that a Chinaman signed them originally, and received a portion of the goods referred to; and that then a duly authorized European signed the same warrant afterwards. In one instance a Chinese applied for delivery of 400 cases over his own signature on the 2nd March; and then, on the 2nd of June, Edwards obtained delivery of 25 cases. The first delivery had been regularly recorded on the warrant. This proves that the appellants' firm acknowledged the propriety of deliveries made on the order of a Chinese.

The Judge—How can you tell that the delivery made to the Chinese was known to the subsequent signatory?

Counsel for Respondent—On the back of the warrant the fact of 400 cases having been delivered to a Chinese is recorded; and then the fact that 25 cases more were delivered from the same lot on the 2nd of June. If the Chinaman had stolen these 400 cases, the number remaining would have been short, but since the *bond fides* of the former delivery is acknowledged, it is plain that no deficiency existed.

The Judge—Do you then mean that, since the respondent entered the number of cases delivered on the warrant and carried it away with him, he must have known if any cases were missing?

Counsel for Respondent—Exactly so.

The Judge—Is that the process followed in depositing and delivering goods?

Counsel for Respondent—No. But we raise no question on that point.

The Judge—What has the counsel for the appellants to say?

Counsel for Appellants—I have not yet received Exhibit No. 7.

The Judge—I see no translation of the documents produced by the respondent, though that is necessary in a Japanese Court.

Counsel for Respondent—I shall present translations the day after to-morrow.

Counsel for Appellants—We do not accept Exhibit No. 1 of the respondent.

The Judge—But on that Exhibit, No. 1, I find the stamp of Messrs. Mourilyan, Heimann & Co. How do you explain that?

Counsel for Appellants—That is an india-rubber stamp which can be used by any one.

The Judge—Can any one use it?

Counsel for Appellants—Yes. Consequently it establishes nothing.

The Judge—Do you then mean to say that you do not know whether the document is genuine or not?

Counsel for Appellants—Yes.

The Judge—What about Exhibit No. 2?

Counsel for Appellants—That we accept.

The Judge—Exhibit No. 3?

Counsel for Appellants—No.

The Judge—Do the remarks made about the stamp on No. 1 apply to the stamp on this also?

Counsel for Appellants—Yes.

The Judge—What about Exhibit No. 4?

Counsel for Appellants—The first three pages we accept.

The Judge—Do you mean that you accept those signed by Europeans and Americans only?

Counsel for Appellants—Exactly so.

The Judge—What about the next?

Counsel for Appellants—We do not accept No. 5.

The Judge—And No. 6?

Counsel for Appellants—We do not accept it. I should like to look at it. (The Judge hands down the document.) I see there is a stamp on the front page, but no stamp at the end. Will you ask whether this is the original document?

The Judge (to Counsel for Respondent)—Is this the original reply you received from the Chinese Consul, which you have just read out?

Counsel for Respondent—The appended document is the one that came from the Consulate.

The Judge—A translation of the original was apparently sent to the Governor of Kanagawa Ken by the Consul, but what about the other document appended?

Counsel for Respondent—It is a translation.

The Judge—There is no such document.

Counsel for Respondent—Here is a translation. Will you look at it? (Presents a document.)

The Judge—I see in it that the Governor of Kanagawa Ken received this copy of the document from Su Ketsai. Is that so?

Counsel for Appellants—A copy of the document was presented by him, but whether that is the copy or not the appellants cannot say.

The Judge—Do you mean to say that although some document was undoubtedly presented, you are unable to tell whether this is the identical one or not?

Counsel for Appellants—Exactly so.

The Judge—What about Exhibit No. 7?

Counsel for Appellants—We do not accept the first page, but the second and third pages we accept.

The Judge—Is there no more evidence on either side?

Counsel for Appellants—We desire to call Messrs. Middleton, Edwards, and Cruickshank as witnesses who were examined in the Lower Court. With regard to the Regulations relating to Explosives, I presume that they are known to the Bench and that it is not necessary to hand them in.

The Judge—Do you mean that the appellants conduct their business in accordance with these Regulations?

Counsel for Appellants—Yes. In accordance with Arts. 8, 9, 11, and 12. The forms used are A and C.

Counsel for Respondent—I have nothing more to say of any special importance, but I desire information on the following points. First, I understood Counsel for Appellants to state that the warrants were stolen by the Chinese. Is that so?

The Judge—Counsel for respondent says that he understands Counsel for Appellants to state that the warrants were stolen by the Chinese, who presented them to the Kencho. Is that so?

Counsel for Appellants—Certainly not. If the proceedings in the Lower Court be examined, the facts will be plain.

The Judge—But I see that you have stated they were stolen by the Chinese.

Counsel for Appellants—If there is any such statement it is an error. As I said originally, the warrants are kept in the firm's safe; but when any portion of the goods are required, the warrant is given to the Chinese to be used, and kept by him subsequently.

Counsel for Respondent—The next question is whether it is true that the appellants have never demanded any delivery of kerosene oil imported by the *Anglo-American*.

The Judge—What does Counsel for appellants answer?

Counsel for Appellants—No, that is not so. The Counsel associated with me has already explained that the Chinese brought a certain sum of money on account of that oil.

The Judge—If you admit that any parts of the oil were demanded, simply answer, "yes."

Counsel for Appellants—Yes.

Counsel for Respondent—But that is not plain. What I want to know is whether the firm gave proper delivery orders, and whether the Chinese destroyed them, and made new ones instead. Or whether the Chinese prepared delivery orders wholly without the knowledge of the firm?

The Judge—Counsel for respondent wishes to know whether or not the appellants' firm ever demanded delivery of any of the kerosene imported by the *Anglo-American*.

Counsel for Appellants—We demanded some.

The Judge—You say you demanded some deliveries. Did the appellants or their properly authorized agent sign those orders?

Counsel for Appellants—When the firm applied for any delivery, a proper delivery order was prepared.

The Judge—Did the firm prepare proper delivery orders when applying for the delivery of the kerosene imported by the *Anglo-American*?

Counsel for Appellants—There are some only, but the respondent considers them all *bond fide*.

The Judge—I understand that the firm issued proper delivery orders when seeking delivery of the kerosene imported by the *Anglo-American*. But now can you tell whether those proper delivery orders were taken to the Kencho, or were destroyed by the Chinese?

Counsel for Appellants—The whole of the oil was not delivered, and on that account the present suit is instituted.

The Judge—This is not what I want to know. My question is, whether you received any of the kerosene on proper delivery orders or not?

Counsel for Appellants—Your question refers to the delivery of the whole, but the appellants issued proper delivery orders for a portion only.

The Judge—Very well. I understand now.

Counsel for Respondent—Are those proper delivery orders included in Exhibit No. 3, or were they prepared elsewhere? Not Exhibit No. 3, I mean No. 5.

The Judge—Exhibit No. 5 is a total account. Do you ask whether the proper delivery orders are included in it or not?

Counsel for Respondent—Yes. I want to know the exact number of cases imported by the *Anglo-American*.

The Judge—Counsel for respondent asks whether the properly delivered cases are included in the number of cases not received, as shown in Exhibit No. 5?

Counsel for Appellants—We do not dispute that point. We cannot tell.

Counsel for Respondent—You may not be able to state the exact number, but can you not state approximately what number was received by the firm?

Counsel for Appellants—The appellants have recorded only the number of cases lost, in bringing the present suit.

The Judge—Then was the remainder properly delivered?

Counsel for Appellants—Yes. But we do not know whether the numbers are recorded in the Kencho.

Junior Counsel for Appellants—We might ask questions here one by one, but as the necessary questions were asked by us and replied to by the respondent in the lower court, the answers then given will suffice for present purposes.

The Judge—Then Counsel for Appellants had better plead first.

Counsel for Appellants—Before pleading we desire the Respondent to state the nature of the explosive Regulations, and what obligation the Kencho is under in respect of the Warehouse. As we have already stated, the appellants are compelled by Regulations to store their own goods in the Warehouse of the Government. The Regulations having been obeyed by us, the Government ought to be held responsible for the deposited goods. We ask you to note the provisions contained in the Regulations very carefully. The present suit concerns the wrongful delivery of goods to a third person; that is, to a person to whom no delivery ought to have been made. Delivery orders are most important affairs. How ought they to be prepared? The owner of the goods must sign his name and affix his stamp. If you will look at this application for depositing goods, you will see that the form A contains these words; "We hereby apply to deposit in the Government's Warehouse the undermentioned goods imported by us in the . . . on . . . day . . . month from . . ." and "The above . . . cases were passed through the Custom House on . . ."

day . . . month . . . year." Then, at the end, "You are requested to deliver these goods only upon an order from the undersigned . . ." Thus only by an order of the depositor should the goods be delivered. Thence it follows that the applicant for storage must sign his name to a delivery order. In short, the above processes, as expressly provided in the Regulations, must be observed in obtaining delivery. Unless these steps were regularly followed, no goods should have been delivered to the appellants. But the respondent says that he did not consider the delivery order particularly important in view of the fact that he had issued a warrant. He implies that any person who brings the warrant is entitled to obtain delivery of the goods. Such a view is assuredly not right. So long as these provisions relating to delivery orders stand in the Regulations they must be observed. It is obviously improper to assert that the Warehouse officials need not care who has signed a delivery order so long as the warrant is presented. If an unknown name be written on an order, would they still deliver the goods? Assuredly not. Hence the delivery order is a vital document. The Kencho made the Regulations themselves, and yet, according to their argument, one portion of the Regulations need not be observed, and so long as the warrant is produced the goods may be delivered to any person. The Regulations being thus held in very small account, it is not surprising that mistakes like those for which we now demand indemnity should occur.

CHESSE.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 43.

- | | |
|---------------------------------|--------------------------------|
| WHITE. | BLACK. |
| 1—K to K 6 | 1—B checks |
| 2—B x B (mate) | 1—Any other move of that B |
| 2—R mates at R 4 | 1—Kt checks, or any other move |
| 2—Kt x Kt on, or to, B 4 (mate) | 1—Any move of R |
| 2—Q mates at K R 8 | 1—Any move of B (on K 8) |
| 2—Q mates at R sq. | |

Correct solutions received from Omega, J.D., Scacchi, J.W.E., W.H.S., Omicron, & Digamma. Additional correct solution of No. 42 received from Ed. B.

PROBLEM No. 45.

By J. MENZIES.

BLACK.

White to play and mate in three moves.

The home journals contain but little interesting news, all great contests apparently being postponed till the customary winter season. We should be getting some interesting match games by incoming mails.

We take the following game and notes from the *Illustrated London News* of 1st October.

CHESSE IN THE CITY.

Game played at the City of London Chess Club between Messrs. A. CURNOCK and A. J. MAAS.

(Sicilian Defence.)

- | | |
|--------------------|-----------------|
| WHITE. (Mr. C.) | BLACK. (Mr. M.) |
| 1—P to K 4th | 1—P to Q B 4th |
| 2—Kt to K B 3rd | 2—P to K 3rd |
| 3—P to Q 4th | 3—P takes P |
| 4—Kt takes P | 4—Kt to K B 3rd |
| 5—Kt to Q B 3rd | 5—Kt to B 3rd |
| 6—K Kt to Kt 5th | 6—P to Q R 3rd |
| 7—Kt to Q 6th (ch) | 7—B takes Kt |
| 8—Q takes B | |

The opening has been somewhat tame, and White gains no advantage by this exchange.

- | | |
|----------------|---------------------|
| 9—Q to Q sq | 8—Q to K 2nd |
| 10—B to Q 3rd | 9—P to Q 4th |
| 11—B takes P | 10—P takes P |
| 12—Kt takes Kt | 11—Kt takes B |
| 13—Kt to Q 2nd | 12—Q to Kt 5th (ch) |

Kt to B 3rd certainly seems a more natural move, and we cannot think the Kt is now judiciously posted.

- | | |
|-----------------|-----------------|
| 14—Castles | 13—Castles |
| 15—P to Q B 3rd | 14—R to Q sq |
| 16—Q to B 2nd | 15—Q to K 2nd |
| 17—Kt to K 4th | 16—Kt to K 4th |
| 18—B to B 4th | 17—B to Q 2nd |
| 19—B to Kt 3rd | 18—Kt to Kt 3rd |

B to Q 6th once, and if then Q to R 5th, B to Kt 3rd gains important time. If Black play Q to K sq, he obviously loses the exchange by B to B 5th, followed by Kt to Q 6th.

- | | |
|----------------|---------------|
| 20—B to Q 6th | 19—P to K 4th |
| 21—Kt to B 5th | 20—Q to R 5th |
| 22—Q R to Q sq | 21—B to K 3rd |

This is fatal, but he has no really good move. If B to Kt 3rd, Q to K and wins a piece, as Q takes Kt, and P to K 5th is threatened.

- | | |
|--------------|--------------|
| 23—R takes R | 22—R takes B |
| 23—B takes P | 23—B takes P |
- An excellent move, against which there is no satisfactory reply, for if he takes the B he is mated, and if he does not he loses the game.

- | | |
|----------------|---------------------|
| 24—R to Q 4th | 24—Q to R 6th |
| 25—R to Q 3rd | 25—B to B 6th |
| 26—R takes B | 26—Q takes R |
| 27—Q to Q 3rd | 27—Q to B 3rd |
| 28—Q to K 3rd | 28—P to K 4th |
| 29—P to Kt 4th | 29—Kt to B 5th |
| 30—P to B 3rd | 30—Q to Kt 3rd (ch) |
| 31—K to B 2nd | 31—K to Kt 7th (ch) |
| 32—K to K sq | 32—Q takes K R P |
| 33—R to Kt sq | 33—R to Q sq |

White resigns.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL,"]

London, November 12th.

The final report of the Committee of the Mercantile Bank has appeared, and a large proportion of the shareholders support their scheme, which is a subscription of new capital, a satisfactory enquiry having shown that reconstruction is preferable to liquidation.

London, November 14th.

There will probably be an extra Session of Congress for the purpose of dealing with the Tariff Question shortly after Mr. Cleveland's installation. It is also stated as probable that the Democrats will control both Houses.

London, November 15th.

The French Government has resolved to prosecute the Managers of the Panama Canal works for breach of trust and fraud.

The condition of affairs in London has necessitated the starting of relief works for the unemployed.

London, October 25th.

The bill for the increase to the German Army comprises biennial service for the infantry. The measure is said to be necessary in consequence of the additions now being made to the armaments of France and Russia.

London, October 26th.

The German press of all shades of opinion, except the ultra conservative, oppose the new Army Bill.

London, October 28th.

At a meeting held in Manchester in favour of international bimetalism, it was resolved to favour the proposal for the reopening of the mints of the world by the various Governments and the unchecked coinage of gold and silver bullion; also, to urge the British Government to co-operate with the International Monetary Conference. On the passing of this resolution, the Right Hon. A. J. Balfour, who was present at the meeting, said the contention that it was impossible to fix an international ratio between gold and silver was simply economic heresy; it would be impossible to maintain in Great Britain an ever appreciating standard and, for the Straits and India, it would be almost crushing. Great Britain, Mr. Balfour said, wants a sound instrument in exchange for the bimetallic solution which would be both possible and adequate.

PASSENGERS.

ARRIVED.

Per French steamer *Natal*, from Marseilles via ports:—Messrs. Conil, F. Varenne, Doi, H. Ishiy, Mukai, Blockhuys, Leon Savatier, J. Wood, A. S. Hay, Lepin, Verge, Le Galloch Pierre, Apere Victor, Cam, Clenn, Bomel, Cleon, Miss Bryne, Miss Gearing, Mr. Valdenaire, and Mr. Fanter in cabin.
 Per Japanese steamer *Sendai Maru*, from Kobe:—22 passengers in steerage.
 Per Japanese steamer *Yamashiro Maru*, from Ujina:—17 passengers in steerage and 1,058 emigrants.
 Per British steamer *Oceanic*, from San Francisco via Honolulu:—Mr. C. H. Hill, Mr. M. K. Kato, Lieut. Alex. McCracken, Mr. F. G. Lenx, Mr. Shigeru Matsuda, Miss J. D. Humpstone, Mr. Worth Brown, Miss A. E. Duffield, Miss A. Buzzell, Miss Hattie Benedict, Miss Lucy E. Case, Rev. Geo. Allchin, Mrs. Allchin, Mr. Florence Allchin, Miss Stanley Allchin, Miss Marion Allchin, Rev. J. L. Atkinson, Mrs. Atkinson, Mr. Ilse Atkinson, Miss Vesta Atkinson, Mr. James D. Atkinson, Mr. W. H. Correll, Mrs. M. K. Ballagh, Mrs. Jane E. Little, Mr. F. M. Hawley, Hon. Shen Wonn, Mr. L. M. Conwell, Mr. Wm. Knight, Mr. Wells Valentine, and Mrs. Valentine in cabin, For Hongkong: Rev. S. B. Partridge, Mrs. Partridge, Rev. Geo. Whitman, Mrs. Whitman, Mr. J. M. Kelly, Rev. C. H. Reeves, Mrs. Reeves,

Mr. Fong Won, Mr. Chow Lon, Miss Ostrom, and Mr. W. H. Wallace in cabin. For Shanghai: Miss Caroline Chittenden, Miss Lillian Cobb, and Mr. Henry Edgar in cabin.

Per British steamer *Victoria*, from Hongkong via ports:—Commander Marshall, Mrs. Marshall, Mr. W. A. Main, Dr. Riggs, Mr. Crosswaithe, Mr. Walsh, Mr. Wheen, Mr. Gibbens, Mrs. Gibbens, Miss Gibbens, Mrs. Rogers, and Mr. A. J. H. Carlill in cabin.

Per Japanese steamer *Milke Maru*, from Kobe:—Messrs. Julian, Robinson, Eyler, and Kawamoto in cabin; 11 passengers in steerage. For Otaru and Hakodate: 13 passengers in steerage.

Per Japanese steamer *Hiogo Maru*, from Kobe:—Lord Cecil Mannors and Mr. Savill in cabin; Mr. K. Muno and Mr. Go Kuso in second class, and 16 passengers in steerage.

Per British steamer *Belgie*, from Hongkong via Macao:—Captain J. W. Lee in cabin. For San Francisco: Mr. and Mrs. A. M. Easton, Mr. C. A. Schmuck, and Mr. A. M. Gardner in cabin; Messrs. Jno. Oston, C. H. Andros, and F. W. Shields in second class.

Per Japanese steamer *Kobe Maru*, from Shanghai and ports:—Mr. and Mrs. Akiyama, Mrs. Mann, Miss Vincent, Mrs. J. T. Harrison and 2 children, Miss Proctor, Mr. E. Whitall, Mr. and Mrs. Akaha, Mr. G. Sasaki, Mr. and Mrs. Kawakami and child, Mr. Morioka, Mr. and Mrs. Nomura and child, Mr. Shimano, Mr. J. M. Maitland, Captain Steedman, and Mrs. Michinaga in cabin; Mrs. Iyura, Mrs. Inokuchi, Mrs. Kadooka, Mr. and Mrs. Hoashi, Messrs. Yasushima, Kawamura, Kumoto, Jimin, Hon San Gue, Fujisaki, Fukagawa, T. Fukagawa, Yamaguchi, Miyatsuka, and J. Jackson in second class, and 67 passengers in steerage. For San Francisco: Mr. T. A. Hester, Mr. J. T. Arundel, Rev. A. H. Locke and child, Mrs. Hody and 1 children, and Rev. and Mrs. E. Morgan and 3 children in cabin.

DEPARTED.

Per British steamer *Empress of China*, for Vancouver, B.C.:—Mr. Adams, Miss Brooks, Mr. Codman, Mr. Crisp, Mr. and Mrs. J. Douglas, Mr. A. M. A. Evans, Frau von Fallot, son, and 2 daughters, Mr. and Mrs. D. Galbraith, Mrs. Gillman, Messrs. Orlando Harley, F. E. Hughes, Higginbotham, Leaf, L. Millard, B. K. Miller, Jun., Moffatt, Rev. and Mrs. McAlpine and 2 children, Mr. J. Newcome, Mr. Noucher, Mr. Hy. D. Pierce, Master Douglas Pierce, Mrs. D'Arcy Paul, Mrs. Randolph, Miss Riley, Mr. Richardson, Mr. W. W. Rockhill, Miss Scidmore, Messrs. Sargent, A. T. Souza, Taft, P. K. Thompson, and G. Turner in cabin; Mrs. Bond and 2 children, Messrs. C. Fukata, M. Jaspersen, Michaeloffski, and Tomita in second class.

Per British steamer *Oceanic*, for Hongkong:—Messrs. H. W. Slade, J. Manuk, G. L. Duncan, G. Meynell, Samuel Morris, J. E. Rhoades, P. Lee, and F. M. Hawley in cabin.

Per Japanese steamer *Saikio Maru*, for Shanghai and ports:—Miss C. Chittenden, Miss Emma Lyons, Mrs. T. Hayashi, Mr. and Mrs. Kabayama, Rev. and Mrs. J. L. Atkinson, Misses and Master Atkinson, Mr. Henry Edgar, Lieut. McCracken, Messrs. Shen Wonn, W. H. Carrell, Barnes, U. Soma, Diack, Cabeldu, and Rev. and Mrs. Jeffery and child in cabin; Mrs. R. Numai, Mrs. Y. Yamada, and Mr. K. Sugamura in second class, and 203 passengers in steerage.

Per British steamer *Belgie*, for San Francisco:—Mr. J. T. Arundel, Mr. M. Baggallay, Mr. G. W. Bramhall, Mrs. M. C. Crozier, Mr. and Mrs. Easton, Mr. W. M. Gardner, Mrs. Hadly and 2 children, Dr. J. Harris, Mr. F. A. Hester, Mr. J. Jacobson, Dr. Jaeger, Mr. H. G. Julian, Rev. A. H. Locke and child, Mr. G. E. Moore, Rev. and Mrs. E. Morgan and 3 children, Dr. and Mrs. Otis, Miss Otis, Dr. A. C. H. Russell, Mr. C. A. Schmuck, Mr. and Mrs. H. King Sturdie, Mr. A. Wasberg, Mrs. Warnecke, and Mrs. Yazawa in cabin.

REPORTS.

The Japanese steamer *Sagami Maru*, Captain Pender, reports:—Left Otaru the 9th November at 1 p.m.; had light variable winds to moderate and fresh N.W. and S.W. breeze with clear weather to Okushiri Light, which was passed at 11.30 p.m.; thence to Shirakami, which was passed at 5.30 a.m. on the 10th, moderate southerly breeze and fine, clear weather; thence to port light easterly breezes. Arriving at Hakodate the 11th at 8.30 a.m. and left at noon; had strong to fresh N.W. breeze with heavy snow squalls to Shiriyasaki, which was passed at 3.30 p.m.; thence to port from fresh westerly breezes to light variable. Arriving at Oginohama the 12th at 10.35 a.m. and left the same day at 6.30 p.m.; had gentle N.W. breeze and fine weather to Inuboye, which was passed at 9 a.m. on the 13th; thence to Noshima light breeze and fine weather; thence to port gentle N.E. winds and fine, clear weather. Arriving at Yokohama the 13th November at 11 p.m.

The British steamer *Oceanic*, Captain Smith, reports:—Left San Francisco the 25th October at 4.13 p.m. and Honolulu the 1st November at 8.56 p.m.; experienced moderate and fine weather the whole passage. Arrived at Yokohama the 14th November at 2.26 a.m. making the passage from San Francisco in 18 days, 9 hours, and 9 minutes.

The British steamer *Belgia*, Captain Walker, reports:—Left Hongkong and Macao the 11th November. Arrived at Yokohama the 17th November at 11.30 a.m. Passage from Hongkong, 6 days, 3 hours, and 53 minutes. Had strong N.E. monsoon from Macao to 100 miles east of Turnabout; thence to port moderate variable winds and sea.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 11th November at 3.30 p.m. Arrived at Nagasaki the 13th at 6.30 p.m. and left again the following day at 6 p.m. Arrived at Shimonoseki the 15th at 8 a.m. and left the same day. Arrived at Kobe the 16th at 2 p.m. and left the 17th at 1 p.m. Arriving at Yokohama the 18th November at 3.30 p.m. Experienced fresh N.E. winds and fine, cloudy weather to Nagasaki; thence to Kobe had light to moderate northerly winds and fine, clear weather, moderate easterly winds and cloudy weather to Rock Island. overcast rainy weather thence to arrival.

LATEST COMMERCIAL.

IMPORTS.

No transactions of note in Cotton Piece Goods or Woollens; but market remains firm at quotations. Yarns, however, have been enquired for on receipt of news of a smart rise in Manchester compelled with a fall in silver, and prices are up.

Holders are strong at the advance owing to small stocks, and early "futures" are receiving the attention of buyers, who are offering good prices for desirable descriptions.

Pig Iron, No. 3	1.25 to 1.30

KEROSENE.

Since our last, the steamer *Exo* has arrived with 70,000 cases Russian Oil. Demand for this class has increased, and full prices are now being paid. Market closes firm with upward tendency.

QUOTATIONS.

Chester	\$1.75 to 1.77½
Connet	1.72½ to 1.75½
Devco	1.67½ to 1.70
Russian Anchor	1.70 to 1.72½
Russian Moon	1.67½ to 1.70

SUGAR.

Arrivals of Browns have caused a further reduction in prices, and stocks to-day show an increase over last week, standing at 38,500 piculs unsold. Market closes weak. Java and Penang Whites, however, have improved in prices, being 10 to 15 cents up on last quotation, but not a great deal of business doing.

	PER PICUL.
Brown Takao	—
Brown Manila	\$4.40 to 4.50
Brown Daitong	3.65 to 3.70
Brown Canton	3.80 to 3.90
White Java and Penang	5.90 to 6.00
White Refined	5.55 to 7.90

EXPORTS.

RAW SILK.

Our last was dated the 11th instant. Since then settlements on this market amount to 628 piculs, divided thus:—*Filatures*, 200 piculs; *Re-reels*, 34 piculs; *Kakeda*, 394 piculs. There has been no direct export this week, so that the total business is comprised in the above figures.

The market has been quiet; at the same time some business has been done every day. Failing to find good quality in *Filatures* and *Re-reels*, buyers have turned their attention to *Kakeda*, in which class some important purchases have been made, prices hardening a little at the close. The principal purchases seem to have been made again for the American market; some few parcels of fine-size *Filatures* for Europe have been taken into godown, and while writing there is a prospect of further business in this direction.

Arrivals are now falling off both in quantity and quality, and the available supplies to-day are less than they were this day last year. Again we have to note an absence of high grades, a very large proportion of the present stock being of common and inferior quality.

Exchange has continued to decline and now stands at the lowest point ever known. This is in favour of exporters, or perhaps we should rather say of the Japanese producers.

There have been two shipping opportunities since we last wrote, the English mail steamer *Ancona* on the 12th instant taking only 50 bales for Europe. The Northern Pacific steamer *Victoria*, which left port on the 15th, had 286 bales for the New York trade. These departures bring the present export figures up to 26,504 piculs, against

21,631 piculs last year and 8,068 piculs in the same date in 1890.

Hanks.—Nothing whatever to be said; position unchanged; prices nominally a little lower, but absolutely nothing doing.

Filatures.—These are nominal for the best grades, really prime quality not existing. For second choice, there is a slight reduction in quotations, but when quality is taken into account, silks are no cheaper than they were a month ago. Several settlements have been made for Europe in *Oshu* and *Mino* sorts at prices ranging from \$840 to \$860 per picul. Lower qualities have been done at \$300 and \$780 and even at \$760. For the United States nothing has been done beyond one parcel of *Shunmeisha* at \$850. *Tokosha* brought the same price, but buyers generally complain that they cannot find silk good enough for their requirements. Many parcels have been taken in during the week but rejected on inspection.

Re-reels.—A very small business, not more than 35 piculs having passed the scales. There is the same trouble in this class—bad quality. Sellers are willing to unload such silks as they have at cheaper prices; but this does not tempt buyers, who still continue to ask for good quality.

Kakeda.—As we pointed out some two or three weeks ago, there are still some good silks remaining in this department at prices which seem relatively cheap when compared with *Filatures* and *Re-reels*. Buyers have at last operated, taking about 400 piculs, at full rates; in fact, there is an increase of \$10.00 on the week, and at closing prices are firm, \$750 having been paid for one *Bacupi*.

Oshu.—No business at all; prices quite nominal. Holders are getting a little uneasy and would like to sell, but there seems to be no demand.

Export Raw Silk Tables to 18th Nov., 1892:—

	Season 1890-1891.	1891-92.	1890-91.
	Bales.	Bales.	Bales.
Europe	9,389	7,294	2,336
America	16,685	13,805	5,515
Total	{Bales 26,075	21,099	7,851
	{Piculs 26,504	21,631	8,068
Settlements and Direct	28,800	23,200	8,400
Export from 1st July	9,700	16,500	17,300
Stock, 18th November	38,500	39,700	25,700

WASTE SILK.

More business in this branch, settlements amounting to 1,300 piculs, divided thus: *Cocoons*, 28 piculs; *Noshi*, 112 piculs; *Kibiso*, 1,075 piculs; *Sundries*, 85 piculs.

Prices are again easier without much quotable change. Sellers are anxious to be moving, but will not give way in price. It is probable that they must do so ere long, as the big stock of 18,000 piculs presses heavily upon them.

The English mail steamer *Ancona*, on the 12th instant, carried 355 bales Waste and Cocoons for Europe. No other departures during the week, and the present export figures are 12,741 piculs, against 9,453 piculs last year and 9,746 piculs at the same date in 1890.

Pierced Cocoons.—A small business at previous rates. The present stock consists of medium and inferior quality which will, no doubt, be cleared off at low prices.

Noshi.—Only moderate transactions, holders being too strong in their demands. Among the sales were *Filature* at \$130 and \$140; *Zaguri*,

\$95; Foshu, \$70, with a small parcel of Shinshu at \$97.

Kibiso.—A large business, all descriptions sharing in the demand. *Filatures* have been done heavily at prices ranging from \$110 to \$90. There have also been large purchases in *Curties*, prices ranging between \$30 and \$40, according to quality. Some parcels of *Zaguri* have been taken at \$50.

Mawata.—Nothing new in this class; no business; no arrivals; small stock.

Neri.—Supplies are now coming in freely and some business has been done, holders meeting the market to some extent. The bulk of the stock, however, is of inferior quality, full of dirt and chrysalis.

1Y.

THE GREATEST WONDER OF MODERN TIMES
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out 1 quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 22d, 1890.

MATURED IN SHERRY CASKS.

A LUXURY IN PURE SCOTCH WHISKIES.

The letters B O S are the Name, Brand, and Registered Trade Mark of this Matchless OLD SCOTCH WHISKY.

B O S

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them unique and univalued.

B O S Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate.—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

B O S is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of B O S.

Correspondence invited from Firms who desire to handle our Whiskies.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOV. 26TH, 1892.

SUMMARY OF NEWS.

THE *Chishima Kan* left Shanghai on the 22nd inst. for Kobe.

H.I.H. PRINCE KITASHIRAKAWA proceeded to Dzushi on the 21st inst.

PRINCE SHIMADZU, of Kagoshima, arrived in the capital on the 18th inst.

THE *Matushima Kan* has been attached to the Japanese Standing Squadron.

COUNT MATSUKATA, ex-Minister President, will, it is expected, visit the World's Fair.

MR. KONO, Minister of State for Education, is at present confined to his residence through illness.

MR. AKITARA, newly appointed President of the Yokohama Local Court, attended business on the 21st inst.

MR. TSUJI handed in his resignation of the post of Vice-Minister of the Educational Department to the Minister of State for Education on Saturday last.

COUNT KURODA, Minister of State for Communications, gave a banquet on the 19th inst. at his official residence to the members of the Railway Council.

THE Japanese Consul General at Fusan, Korea, reports that an epidemic of rinderpest has broken out in the port and there are signs of a further spread.

THE Rules for Japanese students sent abroad by the Educational Department were promulgated on the 22nd instant by Imperial Ordinance No. 102.

MR. NAKAJIMA NOBUYUKI, new Japanese Minister to Italy, and Mr. Alessandro Paternostro, a foreign judicial adviser of the Japanese Government, were admitted to an Imperial audience

on the 18th instant at 10 a.m. They afterwards, as well as Mrs. Nakajima and Mrs. Paternostro, were received in audience by the Empress.

A MEETING of the Cabinet was held on the 22nd inst. at the official residence of Count Ito, and was attended by Counts Kuroda, Yamagata, Oyama, Inouye, and Goto, Viscount Niire, and Mr. Watanabe. Various projected Government Bills were discussed.

PRINCE MORI gave a garden party at his residence at Takanawa, Shiba, Tokyo, on the afternoon of Saturday last, to which Counts Ito, Inouye, Yamada, and a number of other distinguished natives of Yamaguchi Prefecture were invited.

EARLY on the morning of the 14th inst. an outbreak of fire took place at Akemi-mura in the South Tsuru District of Yamanashi Prefecture. The flames were confined to the building where the fire originated, but one fireman was suffocated by the smoke.

AN earthquake was felt in the capital on the 21st instant, at 10h. 37m. 53s. p.m. The duration was 2½ secs, and the direction from S.E. to N.W., the maximum horizontal motion being 0.07 millimetre in 0.3 second, and the maximum vertical motion 0.2 millimetre in 0.2 second. The shock was sharp.

A REPORT of the Tokyo News Agency says that Mr. Kubota, Chief Commissioner of General School Affairs, will be appointed to succeed Mr. Tsuji in his position of Vice-Minister of the Educational Department, the latter being promoted Privy Councillor, and Mr. Takane, President of the Higher Normal School, will take the post at present occupied by Mr. Kubota. Professor Kato, President of the Imperial University, will be made Privy Councillor, his place being given to Mr. Hamano, Chief Commissioner of Special School Affairs, who will be succeeded by Prof. Kikuchi Dairoku, Director of the College of Science.

THEIR Imperial Highnesses Prince Arisugawa Taruhito and Kanin Kotahito, as well as Viscount Niire, Minister of State for the Navy; Marquis Tokudajiri, Grand Chamberlain; Vice-Admiral Nakamura, Commandant of the Kure Admiralty Station; Vice-Admiral Akamatsu, Commandant of the Yokosuka Admiralty Station; Vice-Admiral Hayashi, Commandant of the Sasebo Admiralty Station; Mr. Shirane, Chief Commissioner of the Imperial Treasury Bureau; Vice-Admiral Arichi, Commander-in-Chief of the Japanese Standing Squadron; and Mr. Yamaguchi, Chief Commissioner of the Palace Superintendence Bureau, dined with the Emperor on the 19th inst. at the Palace.

THE Premier and Countess Ito gave a Ministerial dinner on the evening of the 21st inst. at their residence at Nagatacho. Among the guests were Count Kuroda, Minister for Communications, Count Oyama, Minister for War, Count Goto, Minister for Agriculture and Commerce; Viscount Niire, Minister for the Navy; Mr. Mutsu, Minister for Foreign Affairs, Marquis Nabeshima, Grand Master of Ceremonies; Marquis Hachisuka, President of the Upper House; Count Toda; Mr. Sannomiya, Vice-Grand Master of Services to the Empress, with their ladies, Count Inouye, Minister for Home Affairs, Viscount Hijikata, Minister for the Imperial Household; Mr. Kono, Minister for Education; Mr. Watanabe, Minister for Finance; Mr. Hoshi, President of the Lower House; Mr. Nagasaki, Private Secretary of

the Minister for the Imperial Household; and Mr. Inouye, Councillor of the Foreign Department and several foreign gentlemen, including the Ministers for Mexico and the United States and their wives, the Italian, Spanish, Chinese, Hawaiian, Dutch, Belgian, Korean, French, Russian, German, British, and Austrian representatives.

THE Governor of Kanagawa issued a prohibition order on the 16th inst. relating to the rinderpest. The order is as follows:—Cows, oxen, and sheep, their flesh or hides, which have been despatched from or passed through Tokyo and Osaka Cities, and Hyogo, Oita, and Fukuoka, Prefectures are prohibited from entering Kanagawa Prefecture. Any person who imports cattle from localities not mentioned above must report the matter to the Police Authorities. Should any cattle die within the district, the owner or owners must report the fact to the Police Authorities, and present a certificate from a veterinary surgeon. The authorities alone can grant permission to inter the remains, or allow of the use of the body as material for manufactures. Every offender against the order is liable to a fine ranging from *yen 2* to *yen 5*.

A GENERAL assembly of the Igaku Kyokai (Italian Society) was held on the 17th inst. at the residence of H.I.H. Prince Arisugawa Taruhito, superintendent of the Society, at Kasumigaseki. After the election of two Managers, the reading of the reports on the proceedings for the past year took place, and a speech was delivered by Mr. Alessandro Paternostro. Prince Arisugawa then gave an address, to which Marquis Tokugawa, Vice-President of the society, replied. Amongst those present were Viscount Hijikata, Minister for the Imperial Household; Viscount Sano, a Privy Councillor; Viscount Nabeshima, Superintendent of the Board of Ceremonies; Viscount Yamao; the Italian Minister, the Italian Consul, Mr. Watanabe Koki, and Mr. Matsuoka Koku.

THERE is not much to place on record in the Import trade, higher prices and limited stocks having curtailed operations in both Yarns and Piece-goods, while Woollens are extremely quiet generally, the only noticeable activity in this department being a fair demand for fancy Flannels. In the Metal market there is very little moving, and, holders being strong, buyers only take what is absolutely needed for immediate use. Owners of Kerosene are very stiff, and make no concessions, in fact higher rates for Russian Oil have been paid, while all brands are firmly held. The Silk trade continues fairly active, and no quotable change in prices can be set down. Holders continue strong, and the general tone of the market is firm. The complaint about assortment becomes more accentuated as the year draws to a close, especially in sorts suitable for the American market. In the finer sizes there are better qualities to select from, but these are firmly held, and as supplies do not roll in in abundance holders of good silk do not push business. In Waste Silk more has been done, the trade for the week amounting to close upon 2,000 piculs, but a very heavy stock still remains. The transactions put through have been due to a certain extent to small concessions made to the ideas of value entertained by buyers, and an extension of this movement would doubtless lead to further business. There is nothing to report in Tea. Exchange has fluctuated slightly, during which it reached the lowest point ever touched, but there are indications of firmness at the close following a slight improvement in the price of silver on London.

EDITORIAL NOTES.

CABINET AND CONSTITUTION.

We observe that the *Kobe Herald* also maintains the view that Her Britannic Majesty's Chargé d'Affaires has acted indiscreetly in extending to his nationals the prohibitions of the new Game Regulations. With the Regulations themselves our Southern contemporary, as might have been anticipated from its generally moderate attitude, finds no fault whatever. On the contrary, it considers that they "deserve the loyal respect of all foreign sportsmen." Its difficulty is entirely connected with the contingency that the manner of issuing the Regulations may turn out to have been unconstitutional. We speak of this as a "contingency," but the *Kobe Herald* entertains no doubt whatever on the subject. It adopts the language of absolute conviction:—

"The new Game Laws were issued by the present Government as an Imperial Ordinance, and inasmuch as the new Regulations alter and amend those previously in force, they are unquestionably invalid and unconstitutional, and this Her Majesty's Chargé d'Affaires should have known. It is clearly and unmistakably laid down in the Constitution that 'no Ordinance shall in any way alter any of the existing laws' (the italics are our own). The new Game Regulations, promulgated by an Imperial Ordinance, did alter an existing law, and their unconstitutionality is therefore beyond question. In view of this, we cannot but consider it distinctly unfortunate that the British Representative in Tokyo should have been so ready to endorse the ill-advised action of the Government.

Stated in this manner the proposition looks forcible. But the whole argument is marred by one fatal blemish, namely, that our contemporary begs the very question lying at the root of the affair. It speaks of the former Game Regulations as a "law." Now if that were true, if it could be shown that the regulations recently replaced were really a "law," then there would be no manner of doubt that the issue of the recent ordinance was distinctly unconstitutional. But surely it ought to occur to the *Kobe Herald*, and to other journals writing in the above strain, that the framers of the Constitution were not likely to commit the blunder of deliberately violating one of its plainest provisions. There is not the slightest question that the Government would be committing a gross breach of the Constitution did it attempt to alter, by means of an Ordinance, the terms of an existing law. To suppose that Count Ito and the members of his Cabinet do not know this, is to form a singularly low estimate of their perspicacity. But the point is that, according to the view of the Cabinet and its legal advisers—and among the latter, be it observed, are some eminent foreign jurists—Game Regulations do not belong to the domain of "law" at all; that is to say, they are not to be included in the category of legislative measures concerning the enactment or modification of which the consent of the Diet is an essential Constitutional preliminary. To show how curiously our Kobe contemporary has missed the kernel of the whole problem, and how unfortunately rash are its charges of deliberately unconstitutional procedure against Count Ito and his colleagues, let us quote one or two extracts from this same Count Ito's "Commentaries" on the Constitution:—

Should the Government make use of the power of issuing Emergency Ordinances as a pretext for avoiding the public deliberations of the Diet, or for destroying any existing law, the provisions of the Constitution would become dead letters, having no significance whatever, and would be far from serving as a bulwark for the protection of the people.

Of course there is no question in the present case of an Emergency Ordinance, but we chose this extract because it conveys a forcible idea of the strength of Count Ito's views as to the necessity of consulting the Diet prior to the issue or alteration of any "law." Yet another quotation may be given with advantage. Speaking of the difference between "laws," which cannot be enacted or altered without the Diet's consent, and Ordinances, which may be issued without any reference to the Diet, Count Ito says:—

What comes within the sphere of law and what within that of Ordinance, differ according to the condition of the political development of each country. These limits ought to be ascertained for each country by reference to its constitutional history. But there

are definite cases of limitation: first, when a given matter is required to be embodied in a law by an express provision of the Constitution; and secondly, in case of the modification of a law, in which case nothing but law can effect the modification. Such is the universal practice of constitutional countries.

Thus Count Ito lays down as indisputably unconstitutional the very procedure which thoughtless critics now charge him with deliberately adopting, namely, modifying law by an Ordinance. Of one thing we may be quite certain, namely, that the question whether Game Regulations of the kind just issued come within the sphere of Law, or whether they belong to that of Ordinance, received the mature deliberation of the present Cabinet Ministers as well as of their legal advisers, and inasmuch as these statesmen and experts constitute a body of persons better qualified than any others in the empire to determine such a question, we are inclined to regard as somewhat rash, to use no stronger term, the *Kobe Herald's* unqualified declaration that the Game Regulations are "unquestionably invalid and unconstitutional" and that "Her Majesty's Chargé d'Affaires should have known it."

But, in truth, the most singular feature of the criticisms penned against the Chargé d'Affaires is the notion that a British Representative could possibly concern himself about the constitutionality or unconstitutionality of an act of the Japanese Government. He is accredited not to the Diet, but to the Sovereign of the country, and when the Emperor and his Ministers take a certain step, it would be an incredible and unpardonable interference on the part of any Foreign Representative to constitute himself, directly or indirectly, judge of the constitutionality of that step. Need we say that no one of the Foreign Representatives has thought for an instant of meddling so unwarrantably in Japan's internal politics? They have unanimously accepted the legality of the Regulations, and unanimously taken measures to extend the prohibitions of the Ordinance to their nationals, thus bringing its privileges also within their reach. The procedure prescribed under such circumstances by Her Majesty's Orders in Council places the British methods more prominently *en evidence* than is the case with any other Power. Hence, it seems to have been thoughtlessly assumed that British subjects alone have been brought within the purview of the new Regulations. That is altogether an error, though not comparable with the really wonderful misconception that any Foreign Representative could have taken the course which Her Majesty's Chargé d'Affaires is so boldly censured for not adopting.

SHOOTING LICENSES.

We observe that the *Hyogo News* continues to be much excited about "the deep pitch dug by the Japanese Ministers" to entrap Her Britannic Majesty's Chargé d'Affaires, and about the stupendous fact that the unsuspecting Chargé has "fallen into it." Our disturbed contemporary thinks that the way to avoid this catastrophe would have been for Mr. de Bunsen "merely to notify his nationals that such an Ordinance had been issued by the Japanese Authorities, and not to have rushed needlessly into legislation." Of course there is interest in the enunciation of such a view, because it affords a measure of the really remarkable simplicity that exists in some quarters about ordinary and often practised diplomatic processes. Her Britannic Majesty's Representative is unfortunately under the obligation of complying with the orders issued from time to time by his Sovereign. Were he entirely free, it is possible, though scarcely conceivable, that he might take upon himself the responsibility of following the American example by requiring his nationals to observe a Japanese law in its entirety, *qua* Japanese law. That consummation would probably shatter the last fragments of composure remaining to the *Hyogo News*, yet it is precisely what the *Hyogo News* itself recommends. For if the British Chargé d'Affaires "merely notified" his nationals that such and such an Ordinance had been issued, he would either be indulging

in a meaningless futility, or intimating that the provisions of the Ordinance were binding, *in toto*, on British subjects. It is not the habit of British officials to play practical jokes or to ignore Orders in Council in the discharge of their legislative functions. Her Majesty's Chargé d'Affaires has to choose between one of two courses in dealing with an Ordinance of the kind under consideration. He must either make its prohibitions binding on his nationals by following the procedure which the Order in Council prescribes, that is to say, by re-enactment, and by the notification of such penalties as may seem proper; or he must ignore the Ordinance altogether. The half-way house in which, according to the *Hyogo News*, he might have taken refuge instead of leaping into the "deep ditch" where he now lies prostrate, has no existence outside our contemporary's heated imagination. As a means of not "rushing needlessly into legislation," such a notification could scarcely achieve its purpose, since in reality it would mean rushing into legislation on far more radical principles than Her Majesty's Government sanctions, or than Her Majesty's Representative has actually followed.

That excessive zeal against which the great French diplomatist warned all beginners has plunged the *Hyogo News* into a stormy tea-pot. It has been metaphorically rending its vesture and piling ashes on its head over a corpse of its own slaying. The new Game Regulations are regarded by it as "the first of a formidable series" of laws destined to play dreadful havoc with the liberties and rights of foreign residents generally. But the new Game Regulations are not binding upon anyone unless he voluntarily submits himself to their provisions by taking out a licence to shoot, or unless he wishes to indulge in poaching, or the pursuit of cockyly birds. No foreigner has primarily any right to shoot game on Japanese territory. But Japan, having enacted regulations creating that right for everyone who submits to their prohibitions, intimated her willingness to extend the right to foreigners if they, too, agreed to observe the prohibitions. Thereupon Her Majesty's Representative availed himself of this offer in the interests of his nationals. Had he not done so, the privilege of shooting could not have been enjoyed by them. That is all. Nobody is hurt. Nobody is brought under Japanese laws. We are all just where we were before. The *Hyogo News* alone gashes itself before the altar of its own particular Baal, but for all its animated gymnastics the political firmament remains as serene as ever.

As to the question of preserving game, we observe that our contemporary is sadly befogged. Our recommendation is that foreign sportsmen should preserve areas sufficiently large to secure good sport. To this the *Hyogo News* replies!—"Shades of Saul and all the false prophets! What will the *Mail* suggest next? Again and again it has declaimed against foreigners owning land outside the Settlements, and here it coolly suggests the appropriation of hundreds of acres to afford them pastime." Now, in the first place, it would have been difficult to pen a grosser falsehood than to say that we have "again and again declaimed against foreigners owning land outside the Settlements." The truth is that we have again and again declaimed in exactly the opposite sense. In frequent articles we have pointed out the utter unreason of the crusade carried on by certain Japanese against allowing foreigners to own land in the interior; in frequent articles we have pointed out that the vicarious system of ownership now practised by a few foreigners is in every sense highly beneficial to the Japanese; and in frequent articles we have pointed out that without resorting to inquisitorial methods entirely unconstitutional in the Japan of to-day, it would be impossible for the Japanese Authorities to put a stop to the practice of that vicarious system. In short, this journal has been a conspicuous defender of extra-settlement foreign ownership, as it is, and a conspicuous advocate

of universal foreign ownership as denounced by Mr. Oi Kentaro and his disciples. Therefore, we say that it would be impossible to pen a grosser falsehood than to assert that we have "again and again declaimed against foreigners owing land outside the Settlements."

In the second place, although the feverish condition of the *Hyogo News* must greatly interfere with its powers of discernment, we imagine that it should still be able to distinguish between preserving the game on a given area and "appropriating" that area. There are some rudimentary truths which ordinary folks may reasonably be expected to know, and among them is the axiom that a man need not own land in order to have the privilege of shooting game on it. Even assuming preliminary ignorance of this baby fact on the part of our keen contemporary, the Notification of H.B.M.'s Representative ought to have enlightened it. For it is there laid down that no British subject shall pursue game "within a private preserve, unless with the consent of the person to whom the permission to establish it has been granted." Need we point out that this prohibition constructively establishes the right of any British subject to pursue game within a private preserve with the consent of the preserver? And need we point out that there is such a thing as buying the consent of the preserver? And need we point out that from buying the consent of the preserver, to buying his action as a preserver, there is but a very trifling step? Nothing in the shape of "appropriating" land, or of any other illegal proceeding, need take place. We do not doubt that these representations will elicit from our polished contemporary another discharge of the brilliant and relevant euphemisms now so familiar. We shall be called "a hireling;" shall be charged with "seeking to bring every foreigner under Japanese judicial jurisdiction;" shall be accused of saying the thing that we know to be untrue, and shall be represented as adopting an entirely hostile attitude towards our nationals. But these controversial delicacies are only fringe employed to drape the coffin of a defunct cause. We do not quarrel with them. They are becoming and characteristic. If there exists among the foreign community any gallery so verdant as to derive serious entertainment from journalistic antics such as the *Hyogo News* has of late been performing, let the tumbling go on by all means. Space for the scrap of carpet and the string of bells need not be grudged.

THE "KOKUMIN-NO-TOMO" AND THEET DI.

THE *Kokumin-no-Tomo* agrees with the Progressionist organs in condemning the politicians of the Popular Party who are beginning to regard with disgust the programme of desperate opposition inaugurated and maintained by the followers of Count Okuma. These practical politicians are ridiculed by the Tokyo periodical as being too prone to be satisfied with a partial realization of their aims. The *Kokumin* is, however, very cautious in its criticisms of the moderate politicians. It refrains from naming any particular political body, and confines its observations to the vague and generic term, Popular Party. It observes that between the Popular Party in the Diet and the public outside, there exists a gulf which is daily widening. The sentiments of the public, as expressed through the columns of the non-official press, are entirely in favour of the manly programme originally adopted by the Popular party. But of late the opposition members of the Diet have changed a great deal for the worse, being now very indifferent about the prosecution of the strong policy of former days. The progressive portion of the press calls for radical reforms in the Government, but the Popular party in the Diet is contented with half-hearted and superficial measures. Should things continue in this state for any length of time, the Tokyo periodical fears that the issue may possibly be the formation of a separate Popular party outside the walls of the Diet. Indeed, such a contingency presented itself, we are told, at the time of the second session of the Diet, when the friends of the

Min-to thought it necessary to organize an independent combination outside the Diet in order to stimulate their parliamentary representatives to hold by their original plan of uncompromising opposition to the Government. Is it not a shame, asks our contemporary, for the Popular members of the Diet to alienate the hearts of their friends so far as to necessitate the formation of a new Popular party? It recommends the revision of the Law of Election, so that fresh spirits may be enabled to find seats in the Diet. To their presence alone does the *Kokumin* seem to look for the regeneration of the Diet.

* * *

In another article, the same periodical discusses the position of the so called Civil Party *vis-à-vis* the Military Party. At present the former enjoy complete ascendancy in the Government; but the *Kokumin* believes that the latter is now secretly revolving plans for recovering its former power. It is therefore thought necessary for the Civil Party, while it retains the upper hand, to take all possible measures of defence against any surprise from the side of the Military Party. The latter is of course at variance with the Popular Party, but its immediate object of attack is the Civil Party. The aim of the Military Party, in our contemporary's opinion, is to embarrass the Cabinet so as to compel it to yield its place to the leaders of the National Union. This is evident from the outspoken manner in which these politicians have recently been criticizing the policy of the Ministry. The Cabinet is advised in the first place to sever its connection with the National Unionists; secondly, to unite with the opponents of the Military Party, viz. the Popular Party; and thirdly, to purge its ranks of all adherents of the Military Party. The *Kokumin* seems to think that the only effective defence for the Cabinet against the machinations of the Military Party consists in adopting the programme of the Popular Party in its entirety. In other words, all the unreasonable reforms advocated by the most thoroughgoing of the Opposition will have to be swallowed by the Cabinet before its position can be secured against its Military antagonists. What is required is only courage and decision. "Surrender yourselves to the Popular Party and you will be safe." Such, in effect, is the advice given to the Cabinet by the warmest friend of the Progressionists. The leaders of the present Cabinet are in the pleasant position of being invited to repose in the bosoms of two parties, of both which are supposed to be ready to tear not only it but also each other to pieces.

THE EXTENSION OF THE NAVY.

COUNT ITAGAKI, President of the Radical Party, publishes a leader in his organ, the *Yiyo*, over his own signature. He referred to this leader in his speech delivered at the general meeting. It consequently has much interest, not only as coming from the pen of the Count himself, but also as representing the policy of the *Yiyo-to* on this important subject. The Count divides his theme into three heads; first, the natural features of Japan; secondly, the existing condition of the Empire; and thirdly, the economical circumstances of the nation. As to the first, he says that Japan being an empire surrounded by sea, an invader must come by water. It is therefore essential that the Navy be strengthened in the very forefront of all preparations for national defence. The military organization is now nearly completed, there being over 200,000 men ready for immediate service, with an additional 200,000 forming the reserves. The Military problem will, in fact, be completely solved by 1895, without much further expense, the only outlay required being on account of improved arms and the construction of fortresses. The Government's proposal is to build fortresses in Tokyo Bay, at Shimonoseki, in the Strait between Kii and Awaji, in the Strait between Aki and Iyo, in Naruto Strait, at Sasebo, and at Kure. The total number of fortresses projected is over 20, and among them those in the first three places have been commenced. To complete the works in the whole seven places an aggregate sum

of 35,750,000 yen was originally needed, and the Government asks for the remaining 29,720,90 yen to be appropriated gradually from 1892. It is a very large amount. No resources from which it can be drawn have yet been found, and, moreover, the works will take a long time to complete. When they are completed, will the national defence be perfect? By no means. Hokkaido and other islands are still wholly without protection. Further, the Government proposes that the Navy be increased to at least 120,000 tons, and as there are about 50,000 tons already in the country, it follows that 70,000 tons have to be bought or built. For this purpose a sum of 58,550,000 yen is need. Such is the programme of the Government, yet they have not carried their estimate for torpedo boats beyond the construction of two in five years, which is the proportion for a fleet of only 6,750 tons. Is not that a time-serving project? Beyond question the State policy of Japan must be to extend foreign commerce, and to develop emigration and colonization. For these purposes an increase of the naval forces is absolutely necessary. But to carry out such a great undertaking a stable and long continued policy is essential, whereas, hitherto no such policy has been followed. In the years immediately succeeding the Restoration, Administrative officials were still inexperienced, and consequently their action need not be severely criticised. But in 1881 the Government formed the plan of constructing three men-of-war annually; so that the country should possess 60 war-vessels in twenty years. In the following year the plan was changed, and it was proposed to build 48 war-vessels in eight years; at a cost of 3,000,000 yen. Again in 1885, the question was taken into consideration, and in the following year Government Bonds were issued for the purpose. But the funds thus obtained were devoted solely to repairs and to constructing naval stations, and by 1888 the whole had been spent. All these changes are due to the want of a permanently fixed policy. Again, if the Government desires to accomplish any great undertaking on behalf of the nation and with the help of the people, the policy contemplated must be made known publicly. Turning now to the natural features of the empire, we find that it is completely surrounded by sea, and consequently that unless fortresses are constructed all round the coast, they cannot render effective service. Hence, from this point of view, the projects of the Government are very unsuitable. A country like Japan has to use her army for defence. The former therefore, must be under the control of the local administration and the latter under that of the central. In the Army, the establishment of volunteer corps is absolutely necessary. The Navy has to protect the whole coast instead of guarding important points alone, and must therefore be a moveable force. This general policy, then, being determined, the various steps necessary for carrying it out must be carefully considered, otherwise there will be waste of money. In pursuance of the above scheme of defence, the construction of a few large men-of-war is much more serviceable than that of a large number of small vessels. Some fortresses, such as those in Tokyo Bay and in the Strait between Kii and Awaji, are necessary, but other places ought to be defended by the Navy.

In dealing with the second part of the subject, the writer says that Great Britain and France are maritime nations of the first order, and Italy, Russia, and Germany of the second. Japan must be content to take her place in the second, but if she attains the leading position in the East, she can compete there with the first-rank Powers of Europe. Great Britain possesses a Fleet of over 1,000,000 tons, but her Eastern Squadron does not exceed 90,000 tons, and includes only one vessel of the size of 8,400 tons. China possesses 64,000 tons; but the *Tingyuen* and *Chenyuen* alone are over 7,400 tons. No nation in the East possesses a vessel of the size of 10,000 tons. Russia is constructing an iron ship of 10,150 tons in the Black Sea, but it is not to be stationed in the East. The Russian Navy aggregates over

Original from

290,000 tons, but as it has many places to defend, only a portion of it can be collected in the Eastern Seas. Now if Japan constructs about 6 iron vessels of 10,000 tons each and a few cruisers and torpedo boats, she will have 150,000 tons of shipping, including her present squadron.

Turning, in the third place, to the state of affairs in the world, Count Itagaki sees Russia and England disputing about the eastern question, and anticipates that when the crisis comes, there will be a storm in the East. In that day, Japan's only hope of preserving her tranquillity in the midst of the belligerents, lies in her Navy. Affairs in the Orient, the Count thinks, are rapidly drawing near to a crisis, for Russia will have completed the Siberian Railways, and America opened the Nicaragua Canal in a few years, so that communication with Europe and America will be suddenly facilitated. Hence no time should be lost in augmenting the Navy. Further, the function of a fleet is not merely to engage in war, but also to protect maritime commerce and navigation, during times of peace, and to educate a spirit of emigration and colonization. The extension of the navy does not stop at an increase of the number of ships, but includes also the proper education of sailors and officers. It is not necessary to wait ten long years to accomplish these things. We have already over 720 graduates of the Naval College, and there are 118 students now in training; so that if the college organization be extended a little, we shall soon have a number of able officers. With regard to the practical training of these officials, they ought to be sent in ships along the coasts of China, Korea, Vladivostok, Singapore, Australia and the neighbourhood. It is not necessary for them to travel beyond those seas.

Lastly, with regard to the economical circumstances of the country, the project of the Government involves an outlay of 58,000,000 yen for the construction of 70,000 tons of ships. But the *Fiyu-to's* estimate is that a sum of 50,000,000 yen should amply suffice for building 100,000 tons. If the programme is to be completed in 10 years by contract with some European ship-builders, an annual payment of 5,000,000 yen will suffice. That amount can be afforded, according to Count Itagaki, considering that the exports have largely increased of late years, and that when the treaties are revised, and the customs tariff is altered, an additional 500,000,000 yen at least may be collected in the form of duties. If again, sericulture be encouraged, and arrangements be made for the direct export of silk, a further sum of about five or six million yen may be realized annually. The cotton industry has developed so greatly within the last few years, that not only is the import of cotton manufactures has greatly diminished, but Japan may soon be in a position to export large quantities. Again, when navigation is extended, the profits of the maritime carrying trade, hitherto monopolized by foreigners, will come into the pockets of Japanese. In view of all these sources of income, an annual expense of 5,000,000 yen for the construction of men-of-war will not derange the finances of the country. Further, when the organization of the Naval Department is reconstructed, and the expense of naval stations reduced, the present appropriation will at once show a surplus of 1,000,000 yen, and by suspending some of the not very urgent undertakings now in hand or contemplated, the remaining four millions can be obtained without waiting for any special access of revenue. The method to be adopted for achieving this object will be made clear by a Representation which the *Fiyu-to* members intend to present to the Diet.

THE "NICHU NICHU" ON COUNT ITAGAKI'S LEADING ARTICLES.

COUNT ITAGAKI has indicated the most urgent need of the time when he says that whereas the organization of the Army is nearly completed, the Navy, though really of more importance, is still in a backward state. We endorse his strong attack on the vacillating policy hitherto pursued

towards the Navy. For it is undeniable that the policy of the Government has been very indeterminate. Further, we have nothing to say against the necessity of building men-of-war, educating officers, and giving them practical experience; and we praise the Count for his proposition to increase the tonnage of our men-of-war to 150,000 tons. But we fear that his scheme is on slightly too large a scale, considering the immense outlay it would entail. The abolition of naval stations as advocated by him will undoubtedly serve as a plank for his Party's future platform, but in a country like ours, with such an extensive coast line, naval stations are absolutely indispensable. Moreover, the proposal for a disbursement of 5,000,000 yen annually is based upon careless calculations. The Count does not clearly state the source from which the money should be obtained, or allude to the cost of maintaining the increased fleet. We shall discuss these points hereafter. Here we content ourselves with saying that on the whole, his attack on the uncertain policy of the Government is praiseworthy, as also is the trouble he has taken to ascertain the circumstances of outer nations and to base his argument on it. In conclusion, the *Nichu Nichu* notes a striking difference between the views of Count Okuma and Count Itagaki. The former is reported to have said to a certain member of the Diet, representing Ehime prefecture, that the United States require no Navy, as its foreign policy is so wonderfully well conducted. But the latter gives an accurate account of how the United States Government proposed to construct 94 war vessels in 14 years, and how the work was commenced two years ago. The cleverest men may sometimes be guilty of carelessness, as Count Okuma has in this instance.

The *Choya Shimbun* has begun to criticize the same article, but as its comments are still incomplete, we defer their publication.

COUNT OKUMA ON HOKKAIDO.

THE *Nippon* publishes Count's Okuma's opinion on Hokkaido. It runs as follows:—"The question of Hokkaido was brought to public notice several years ago, but since that time success has not been reported in the case of so much as a single enterprise inaugurated there. The Government has spent some 50,000,000 yen on the island during the *Meiji* era; yet the total population of the place is only 400,000, about half of whom were already dwelling there at the time of the Restoration, and the remaining 200,000 include colonial troops and prisoners sent there from the interior. It is astonishing that progress should have been so slow, and that nothing should have been accomplished despite the expenditure of such great sums and in so long a period. The *Meiji* Government never stinted its appropriations on account of the island. A Governor was appointed; governmental offices were erected; colonial troops were despatched, and prisons were constructed. The public, too, recognizes Hokkaido to be the northern gate of the Empire, and deems its defence of vital importance. The climate and the soil are both good, and in fertile districts fine crops can be obtained without any troublesome cultivation. In short, all the conditions are most favourable. Yet, upon such an island a sum of 50,000,000 yen has been spent, and a period of 25 years has elapsed, without anything remarkable having been accomplished. What is the reason? The population of the main island is increasing annually, and owing to the rapidly spreading use of machines, a large number of the people, unable to find manual employment, suffer from the want of daily necessities, and emigrate largely to foreign countries. How does it happen that so few of them emigrate to Hokkaido? I think the reason is simply this, that the success of industrial enterprise depends primarily on men and only secondarily on capital. People who talk of Hokkaido always begin by referring to capital. But that is the stale argument of common-place politicians. In considering the issue of a battle,

if the forces engaged are pretty equal in all respects, it is well to count their respective numbers. But if the generals on either side are courageous and experienced, and if the soldiers under them are picked men, there is no fear of defeat even though they be arithmetically weak. Were capital alone relied on, and no choice of men made, Hokkaido would remain as it is for ever. Look at Belgium, the United States, or Germany. Did they attain greatness by money? Not at all. They were originally poor and insignificant, but their spirit, roused in poverty and suffering, pushed them to the attainment of their present positions. All great enterprises are subject to the same principle, and the extremely slow progress of Hokkaido is to be traced to this cause. I think both Count Ito and Count Inouye appreciate the reason; but if self-interest be allowed to affect their treatment of the question, success can never crown their efforts. A statesman can commit no greater blunder than to listen to the dictates of self-interest. If the Government intends to open up Hokkaido honestly, we shall see a marked improvement within a year."

THE GOVERNOR OF IBARAKI PREFECTURE.

MR. ISHII SHOICHIRO, Governor of Ibaraki Prefecture, has resigned. The *Mainichi Shimbun*, asking the reason of his sudden resignation, says:—"Is it because he is not a Satsuma man? Probably not. Is it then because of his interference in the elections? Certainly not! What then is the real reason? It is his indifferent treatment of the soldiers in the last military review, when the latter were so indignant that they went to remonstrate with Mr. Ishii, but failed to find him?" The *Mainichi* does not approve of his want of consideration towards military men, but thinks it curious that his resignation or dismissal has been so quickly effected simply because some 600 soldiers were dissatisfied, while in the case of Saitama Prefecture, where over a million of inhabitants expressed their indignation against him and the Chief Police Inspector, and many a petition was presented to the Minister of Home Affairs, no result has yet been attained. The *Mainichi* has apparently forgotten that the petitioners in the latter case were supporters of the Popular Party, and that their grievance against the Governor of Saitama Prefecture was based on his failure to assist their Party in the general elections. We ourselves believe that the resignation of Mr. Ishii is not due to the reason assigned by the *Mainichi*, but that it is caused by ill-health. At all events there is no talk of his dismissal. "Resignation at his own request" is the formula employed.

A DARING PARACHUTIST.

LEO HERNANDEZ, who to the usual excitement attendant on parachute descents from a great height, adds the sensational feature that his performance is intended to show how easily a city or a fleet might be destroyed on a dark night by explosives dropped from the clouds, has failed once in an attempted ascent in Hong-kong owing to the conflagration of his balloon, happily before it had begun to rise from *terra firma*. But of the man's doings in Sydney an account is published which shows how singularly callous to peril these performers are capable of becoming:—"On Thursday night Leo left the Exhibition grounds in a balloon, from which he was to make a parachute descent when he had reached the height of four thousand feet. To beguile the tedium of his upward journey, the aeronaut played some more or less startling pranks on the trapeze. Whilst he was performing his evolutions he saw that the red signal lights which illuminated his balloon had fired the parachute. The least hesitation must have resulted in his death, but with nerve worthy of an incomparably nobler occasion he climbed the parachute ropes and extinguished the flames which had broken out 32 feet above him. That done he descended again, cut the ropes, and landed in Hodelle Street, narrowly escaping impalement on the steeple of the Methodist Church at the corner of Perry Street. The intrepid adventurer landed on a roof, from which

Original from

firemen who had seen the burning parachute rescued him. The extraordinary feature of the episode is that Leo's whole concern seems to have been for his parachute, which burst into flames once more as the breeze fanned the embers of the fire he had extinguished. We are not surprised to hear that the firemen were unable to enter into his humour."

MR. O'CONNOR IN HONGKONG.

It has been urged journalistically against the British mercantile communities of China that while complaining bitterly of the supposed perfectoriness of their Representatives in Peking, they do not themselves show, on every occasion, as much zeal as might be reasonably expected. This countercharge has been advanced against them especially in connection with the Telegraphic Convention recently signed between the Russian Minister in Peking and the Director-General of Chinese Customs. The Hongkong Chamber of Commerce, however, did not fail to bring the matter to the notice of Mr. O'Connor, the new British Minister to China, on the occasion of his passing through the colony at the beginning of this month *en route* for his post. They said that "the mercantile community, long saddled with a two-dollar-per-word rate between China and Europe, a rate imposed and kept up by an agreement between the Great Northern and the Eastern Extension Telegraph Companies, had been waiting impatiently for the day when the Chinese, connecting their lines with the Russian land-lines, would be able to give a much cheaper word rate. They could do it easily and profitably, but the new convention rivetted the fetters for ten years to come." The President of the Chamber handed to Mr. O'Connor a copy of a memorial and petition presented by the Chamber in 1891 to Her Majesty the Queen on the subject, together with the reply "promising that no such Convention should be ratified." The memorial, he explained, "embodied the merchants' whole case," and as such is the fact we reproduce, from the columns of the *Hongkong Daily Press*, the most important clauses of it:—

6.—Your Petitioners most humbly represent to Your Majesty that the successful conduct of their commercial operations depends in these days, very largely, on telegraphic communication, and that it is essential that that communication be regular, effective, and cheap, and that as many different lines of communication be opened and kept open as possible.

Your Petitioners are now in communication with Europe by means of two separate telegraphic lines, one in the hands of "The Eastern Telegraph Company" and "The Eastern Extension, Australian, and China Telegraph Company, Limited," starting from Shanghai in the Empire of China and passing South by Foochow, Hongkong, Saigon, and Singapore to Australia and British India; the other, under the management of a Danish Corporation, "The Great Northern Telegraph Company," going North from Hongkong via Amoy, Shanghai, Nagasaki (in Japan), and Vladivostok (in Siberia).

Your Petitioners can only communicate with America, by telegraph, through Europe.

7.—Your Petitioners have not derived from the existence of these two separate and independent lines of telegraphic communication all the advantages that they ought to have obtained, because since the year 1875, or thereabouts, the above-mentioned companies have, to the great injury of trade, been working in combination and have by agreement between themselves established and maintained a rate of two dollars or over six shillings a word between Hongkong and Europe, and a proportionately higher rate from other ports and places in China and Japan, and have refused to reduce that rate, in spite of the vast increase in the number of messages transmitted over their lines, and of the many improvements in the means of sending and recording messages and in telegraphy generally.

8.—For many years past your Petitioners have anticipated important and valuable additions to their means of telegraphic communication with Europe, by the completion and opening of lines in the hands of the Chinese Government connecting all parts of the Chinese Empire with the lines of the Russian Government at Kiachta on the north-western frontier of China, and through them with the general European system, and by the entrance of China into the Union created by the International Telegraphic Convention of the 10th July, 1875.

Your Petitioners are also looking forward to the early connection of the Chinese lines with the British Indian System through Burma, and to the possibility of a cable from San Francisco or from your Majesty's Colony of Vancouver, and seeking a landing place on the shores of the Chinese Empire.

9.—The connection of the Chinese lines with the lines of the Russian Government at Kiachta would open for your Petitioners the most direct line with Europe, and the cheapest. Telegraphic rates on the Russian lines are phenomenally low, and the Chinese lines, wherever they come into competition with the lines of the existing cable companies, as in the south through Annam and Tonkin in connection with the French lines, charge less than one half the rate per word now charged over the same distances by the Great Northern and Eastern Extension Companies.

10.—Your Petitioners are well assured that if the Chinese lines are connected with those of the Russian Government at Kiachta and are thrown freely open to the public unhampered by any secret convention or agreement with the competing companies already named, the cost of a telegram to Europe from China or Japan would be at once considerably reduced, to the immense gain of Your Majesty's subjects, to the great advantage of British trade in the East, and to the profit and advantage of Your Majesty's friend and ally the Emperor of China and his subjects.

11.—But unfortunately, as Your Majesty and Your Majesty's Ministers are aware, a Convention between the Chinese Government, the Great Northern Telegraph Company, and the Eastern Extension Telegraph Company has been entered into and signed as far back as August, 1887, by which the Chinese Government bound itself, subject to the approval of Your Majesty's Government and of the Imperial Government of Russia, to charge, over its lines to Kiachta, a fixed sum of \$2 per word on all messages to Europe, and not except with the consent of the Companies to reduce or alter that rate. The Chinese Government further bound itself to maintain that rate until the year 1903, and to apply it over any line whatever that might in the meanwhile be opened, whether through British Burma with India and Europe or through America by any cable that may be laid.

12.—That convention has not yet been made public, and your Petitioners speak with all deference when they submit to Your Majesty that that convention is publicly stated and believed to contain a provision establishing a differential rate largely in favour of Russian subjects in China sending messages over the Chinese lines to Europe, and therefore in violation of the provisions of existing treaties securing for Your Majesty's subjects in China rights and privileges equal to those granted to the subjects of any other nation.

It is further stated and believed publicly that the said Convention secures to the existing Companies, the Great Northern and the Eastern Extension, the monopoly of all messages despatched from Shanghai, Amoy, Foochow, and Hongkong, by far the larger and more important portion of the traffic, and that in which Your Majesty's subjects are most largely interested.

13.—If the Chinese lines, when completed, were thrown open freely to the public unhampered by this or any similar convention, the greater portion of the traffic from the above-named ports would flow naturally to the Chinese lines as the most direct, to the very great gain of the Chinese Government.

14.—Your Petitioners most humbly thank Your Majesty for having refused your assent to the convention and to any modification of it, and for Your Majesty's most gracious assurance, through your Ministers in the Commons' House of Parliament, that no consent will be given to the convention without full consideration of all the interests involved and without consultation with the representatives of British commerce.

15.—Your Petitioners most respectfully represent to Your Majesty that the ratification of the convention of the 10th August, 1887, between the Chinese Government and the companies hereinbefore mentioned, would be a serious injury to the future of telegraphic communication in China and throughout the world, would seriously hamper trade and especially the trade of Your Majesty's subjects in the East, and would be, they humbly conceive and represent, in breach, if not of the precise words, certainly of the spirit of the International Telegraphic Convention, entered into by Your Most Gracious Majesty at St. Petersburg the 10/22 of July, 1875, and especially of clause 19 of that convention.

16.—Your Petitioners beg further most respectfully to represent that the continued existence of the Convention, the subject of this petition, and of the negotiations for its approval or modification, is an impediment to all improvement in telegraphic communication between the East and Europe, and in particular prevents the Chinese Government from completing its telegraphic system and connecting it with the general network of telegraphic communication throughout the world via Kiachta.

Your Petitioners therefore most humbly pray Your Majesty—

1.—To refuse your assent to the Convention or to any modification of it.

2.—To represent to the Imperial Chinese Government, through Your Majesty's Minister at Peking, that any such convention would be in violation of the spirit of existing treaties.

3.—To represent, further, to the Chinese Government that to enter into any such convention would be detrimental to their own best interests.

4.—To move His Imperial Majesty the Emperor of China to put an end definitely to the convention as having failed to attain Your Majesty's assent.

5.—To move His Imperial Majesty to join the International Telegraphic Convention and connect the Chinese lines with the general European system.

6.—To move Governments, parties to the Inter-

national Telegraphic Convention of 1875, having representatives at Peking, to instruct their minister to co-operate with Your Majesty's Minister to the same end.

And Your Majesty's obedient and dutiful servants will ever pray.

The Chamber's general remarks to Mr. O'Connor were most complimentary. "We have the utmost confidence," said their chairman, the Hon. T. A. Whitehead, "in you, in your knowledge and experience, and in your activity, energy, and zeal, and we say with Lord Salisbury that your appointment is a guarantee that in future our commercial interests will be amply safeguarded and protected. We promise Your Excellency every information, assistance, and support that we can give, and the best support that perhaps we can give is our assured confidence that, however things may look, you are working for our best interests, and for the best interests of Great Britain." Mr. O'Connor, in his reply, made the following reference to Sir Harry Parkes:—"The allusion to my old chief and illustrious countryman, Sir Harry Parkes, is particularly grateful to me, and I beg to assure you that I shall be very proud if I can during the period of my tenure of office as H. M.'s Minister at Peking, walk in his footsteps. After twenty-five years' experience of diplomacy I can honestly say that I have never known a more upright, conscientious, able public servant, and certainly you will bear me out in saying that no one could combine a greater desire to unite the interests of the powerful empire of China with those of the United Kingdom." But amid all this exchange of pleasant amenities, the new Minister did not fail to remind his hearers that a British Representative in China cannot always adopt his policy to the precise requirements and wishes of the mercantile communities. "If at any time," he said, "I am not able entirely to partake of your views, or if there should be divergence of opinion between the standpoint of H.M.'s Minister at Peking and the Hongkong Chamber of Commerce, pray believe that I am nevertheless inspired by the same feelings as you are, and that any divergencies of action or opinion are owing to the fact that the general interests of the Empire have to prevail at times over local opinions, rather than that I have other desires at heart than those which tend to cement the good relations between H.M. Government and the Imperial Government of China, and which make towards the development of the trade and prosperity of Great Britain."

PATERNAL METHODS AND THEIR SEQUEL.

HERE is a comical instance of the happenings that distinguish Chinese officialdom:—"The Provincial Judge of Foochow on his way home a few days ago observed four beggars knocking with their sticks on the door of a shop and demanding cash. He immediately had his chair put down and ordered his retainers to arrest the beggars, who half an hour afterwards received 250 blows each and were put in cangues. This action gave great satisfaction to the shop-keepers, but alas! a little later in the day the *yamen* runners and the *lipao* called and demanded 6,000 cash each as remuneration for ridding them of the beggars and there was nothing for it but to submit. From what we have learnt of the new Viceroy we are quite sure that he would discountenance any such squeezing, but he will probably never know anything about it."

THE END OF THE COOLIE STRIKE AT KOBE.

THOUGH the police did not yesterday, says the *Kobe Chronicle* of the 22nd inst., relax any of the precautions taken, it would seem that the strike is at an end, so far at least as interference with the free labourers is concerned. Yesterday Messrs. Nickel were able without any difficulty to work cargo on all the vessels of which they had the stevedoring, and secured, in addition to the numbers of free labourers who offered themselves here, a body of 80 or 100 men from Osaka, who all wore a red cloth round their heads as a badge of distinction. One or two policemen went with each battalion of men going off to the ships, and

though there were not a few sampans with strikers hovering about, there was not the slightest attempt at interference. Later on in the day the foreigners who worked the *Benledi* on Saturday were again employed. As the day wore on, fewer and fewer of the uniformed strikers were seen, and many of them are believed to have discarded the uniform in an endeavour to secure work as free labourers. When the men who had been working on the ships came back in the evening the Bund was almost deserted, and they were paid off and dispersed with a total absence of excitement. Not a little of the credit of this satisfactory state of things is due to the Japanese police, who since Saturday have acted with much firmness, without unnecessarily exciting the antipathies of the strikers.

THE NATIONAL UNIONISTS.

THE above association held a general meeting on the 20th instant, for the purpose of determining its organization and policy. The *Yiyu*, a Radical organ, and a bitter enemy of the association, now reports that the association is likely to dissolve altogether, for the following reasons:—When the Party was organized, Messrs. Watanabe Koki, Sone Arasuke, and other of its promoters, intended to unite all the members of the *Chuo Koshobu*. But some members of the latter opposed the idea of organizing any political association, and it was therefore found impossible to carry out the project last session. After the Diet had been prorogued, the promoters held a general meeting, when some warm debates as to the nature of the association took place. Certain members were still against the project of forming a political club, and at last they decided to call it a social organization. But as this might hurt the feelings of others who desired to make it a political club, they resolved to advocate certain political measures, as the reduction of administrative expenditures, treaty revision, freedom of speech and so forth, thus becoming a nominally social organization with political purposes. In fact, the agreement to form only a social club became a mere fiction. But now, once again, the same question has come upon the *tapis*, and the association can no longer avoid assuming a plain character and adopting a fixed policy. It is stated that the leaders intend to preserve the original name of social club, and to organize a new department for the purpose of discussing political affairs. Viewed from behind the curtain, continues the *Yiyu*, there are in fact three parties. The first favours a political programme, the second a social, and the last both. The first consists of the members of the Kumamoto Kokken-ha, and others known as politicians. They argue that the National Unionists should be made into a great political party, and should seek to obtain control of the Administration. The second section are strongly opposed to this. They desire to devote themselves solely to the development of national commerce and industry as well as to encouraging popular education. This party consists of so called "practical men" and members of the Diet who have no political interest. The leaders of the third section are anxious to maintain the name of a social club and to apply their strength occasionally to the solution of political problems. The Committee commissioned to compile a draft declaration of policy, together with a large number of influential members of the party, are said to be in favour of the third project. Thus, judging from present conditions, there is little doubt that the association will split into two—the second and the third sections mentioned above, joining together and the first standing aloof. Count Saigo and Viscount Shinagawa will join the former, whereupon the latter will probably ask these leaders to give up their heads, but as Saigo and Shinagawa seem to have no intention of fulfilling their sanguinary pledges, the trouble will doubtless end without bloodshed.

The *Kokkai* too reports the above news, and says that it will be well to divide the political members from the non-political. Judging

from the past proceedings of the Association, however, though it may be called a social club, it is unquestionably a political league. The present intention is to separate the political members, the remainder devoting their energies to education and practical affairs. In effect, the two will probably be found working together though their names be different. The *Kokkai* asks why they do not organize a political party plainly and squarely, with Count Saigo and Viscount Shinagawa as leaders, instead of continuing in their present nondescript state.

The members of the National Union held a general meeting in the court-yard of their head office in Shiba Park on the 20th instant. Over a thousand people assembled. Count Saigo took the chair, and delivered a short speech, stating the object of the meeting. Mr. Maki Bokushin then rose, and read out a great number of congratulatory letters and telegrams, after which a report was presented setting forth various events connected with the recent history of the Union. Mr. Arai Go made a statement of the incidents that occurred on Count Saigo's political tours in the north-eastern provinces; and Mr. Wada Hikiojiro performed the same office with reference to Viscount Shinagawa's tour in the south-western provinces. Mr. Wada then read out the Rules of the Association. They ran as follows:—

RULES OF THE NATIONAL UNION.

For the purpose of increasing the prosperity of the nation and developing the wealth of its people, a number of persons have formed themselves into an association under the name of the National Union (*Kokumin Kyokai*). Their purpose is the mutual exchange of knowledge by discussing the affairs of the nation with a view to its welfare.

Art. 1.—The business premises of the Union shall be established in Shiba Park Tokyo.

Art. 2.—There shall be one President, one Vice-President, and three Managers, to control the affairs of the Union.

The Managers shall be elected from the members of the Standing Committee.

Art. 3.—Fifty members to form a Standing Committee shall be elected from among the special members, and the term of service for them shall be one year. In addition to these, three members shall be elected for the same Committee from among the local special members, and these latter members shall be entitled to be present at the ordinary conferences.

Art. 4.—The members of the Standing Committee shall superintend the enforcement of resolutions adopted at General Meetings, and shall prepare Bills to be presented to General Meetings.

Art. 5.—Managers may, at their discretion, appoint not more than two clerks from among the members, and may entrust to them the management of affairs relating to communications, printing, and so forth.

Art. 6.—Clerks and employees shall receive appropriate salaries, which shall be determined by the Standing Committee.

Art. 7.—Any person desiring to become a member of the Union, must be recommended by two members, and must obtain the consent of the Standing Committee.

Art. 8.—The members of the Union shall pay subscriptions monthly, to defray expenses.

For the sake of convenience any member may pay the subscriptions for half a year or a year in advance.

Art. 9.—The members of the Union shall be divided into three kinds, viz. Ordinary, Special, and Honorary.

Each ordinary member shall pay 1 yen per annum, and each special member 50 sen per month. But a special member who does not require the publications of the Union need not pay any subscription. Any person who contributes over 30 yen in money or articles, or any person whose membership is considered advantageous to the Union, may, by resolution of the Standing Committee, be elected an Honorary member.

Art. 10.—Any person desiring to withdraw from the Union shall notify his intention in the office and obtain its consent.

Art. 11.—Any members of the Union who are considered to have impaired its honour, or acted in a manner detrimental to its interests, shall be expelled from the Union by a resolution of the Standing Committee.

Art. 12.—A General Meeting shall be held in Tokyo once every year for the purpose of reporting the events of the year, receiving and passing the accounts of the Union, re-electing the members of the Standing Committee, and passing resolutions on important matters with reference to the Union. The date of such General Meeting shall be determined by resolution of the Standing Committee.

Art. 13.—Should the Standing Committee consider any event of sufficient importance to call for the decision of a General Meeting, or should a question presented by not less than thirty members seem to the Standing Committee to call for general discussion, a Special General Meeting shall be convened.

Art. 14.—The meetings of the Standing Committee shall be held once every month.

But should any important question present itself, a special meeting shall be held.

Art. 15.—Unless there are more than 50 members present at a General Meeting, and more than 10 at a meeting of the Standing Committee, no resolution passed shall be valid.

Art. 16.—Réunions shall be organized at least once a month, and members shall converse together, or engage in lectures to deliver lectures.

Art. 17.—A monthly periodical shall be published in the office, and distributed among the members of the Union.

Art. 18.—The present rules may be amended by a resolution of a general meeting.

In accordance with the provisions of the second of these Rules, Count Saigo was elected as President, Viscount Shinagawa as Vice-President, and Messrs. Watanabe Koki, Maki Bokushin, and Shirai Yempei as Managers. Twenty-nine members of the Standing Committee were also elected. Mr. Furusho called for three cheers each for the President and Vice-President, and Mr. Sato Shozo spoke on the advisability of organizing a political association in addition to the Union, Viscount Shinagawa also reading, on behalf of Count Saigo and himself, a statement of the policy of the Union. Finally, Count Saigo proposed three cheers each for the Emperor, the Empress, and the Crown Prince, and the meeting closed at 4.30 p.m.

The account of these proceedings does not confirm the predictions recently uttered by the Opposition press to the effect that the general meeting of the National Union would be followed almost immediately by a split in the camp. We do not ourselves believe for one instant in the possibility of establishing and maintaining cohesion among a number of men who have no purpose stronger than "the mutual exchange of knowledge." But it is easy to appreciate the difficulty under which the National Unionists labour in the presence of two facts; first, that the present Cabinet will not ally itself with any party professing a political programme, and secondly, that the idea of not supporting, to say nothing of openly opposing, the Government, is intolerable to the great majority of the Unionists. During the present inchoate era of Japanese political history many of these curious incidents will doubtless be seen. A party which comes together really for the purpose of discharging all the functions usually contemplated by political associations, and which seeks to hold together by openly eschewing those functions, cannot be regarded as a very stable anomaly. But the National Unionists must be supposed to have understood all this when they formed their association. Doubtless they have a programme of their own which the general public can only vaguely conjecture.

RAILWAY ACCIDENT.

THE Tokyo News Agency reports that on the 20th instant, the train from Kobe to Tokyo, which ought to have reached Shimbashi at 11.50 p.m., met with an accident between Kakegawa and Fukuuroi. The account given is very brief and not easy to understand, as it states, in the first place, that the engine broke down, and in the second, that the train left the line. At all events, nobody suffered any injury. A special train despatched from Shizuoka took up the passengers, so that considerable delay was the only serious consequence, the passengers not reaching Tokyo until 8.30 the following morning.

Our own information does not tally with the above. What really happened, we believe was that one of the tubes of the engine burst, an accident which might possibly have been repaired on the spot had the officials of the train shown themselves more helpful. There was no derailment, however. A relief engine was sent from Shizuoka, but by the time of its arrival at the place of the accident, the sections were blocked, and the train was, of course, unable to pass. It was accordingly determined to await the arrival of the next up-train, and send forward the passengers by it, the result being that they did not reach Tokyo until the following morning.

THE YELLOW RIVER FLOODS.

WE alluded in a former issue, to the fact that the Yellow River had once more burst its banks and flooded a vast district. From particulars now furnished by the Rev. Ed. Nickalls, who writes to the *North China Daily News* from Shantung, it appears that the inundation was both deeper and more extensive than that of 1889, which created such a sensation and led to such generous donations of money from both Chinese and

foreigners. Despite the magnitude of the over-flow, however, the distress entailed is thought likely to be much less than it was in the former year, inasmuch as the millet stands everywhere well above the water, and could consequently be harvested. Still the calamity has assuredly been most bitter. Mr. Nickails records the opinion of the people that if one half of the money granted by the Emperor were devoted to works for controlling the Yellow River, destructive floods would be few and far between. Indeed, he represents that strong discontent prevails everywhere against the Government, and that officialdom is cordially hated. But such feelings are only too common in seasons of great distress. It is at all events re-assuring to know that the disaster will not entail suffering so widespread as might have been anticipated, and that the result most dreaded, namely, impossibility of sowing the autumn wheat, turns out to be only a dread.

POLITICAL SPEECHES.

A GRAND political meeting of the *Yiyu-to* was held on Friday last in the Kinkikan, in Kanda. By 1 p.m. there had assembled considerably over 3,000 people. The first speaker was Mr. Hatashita, who enlarged upon various administrative scandals during recent days. He enumerated them in detail, including among them the gambling in judicial circles, the barristers examination affair, and the text books business. Mr. Kanomori followed with an attack on the policy of the Ito Cabinet. Mr. Nakano announced the tactics of the *Yiyu-to* in the next session of the Diet, and made a strongly worded reference to Viscount Shinagawa's alleged confession of governmental interference in the general elections, at which point he was suspended. Mr. Tatekawa then criticised the Game Regulations on constitutional grounds; Mr. Kato Heishiro explained the policy of the *Yiyu-to*, and Mr. Mizoguchi declared that Count Ito had either forgotten to publish the policy of the Government, or was afraid of being attacked by the public. If his silence were owing to the latter cause, he ought to adopt the policy of the *Yiyu-to*. This speaker also was suspended. Mr. Suzuki Manjiro dwelt on mismanagement in educational matters. He produced a copy of an illustrated reader, and pointing at a picture of three crows picking up seed on the ground, said: "I should change these birds into officials, and instead of seeds place coins in the field, when the picture would illustrate the present state of the Government." He was suspended. Mr. Noguki Kei explained the state of affairs in Saitama Prefecture, and said that very soon the Prefectural Assembly would be dissolved, and the people would be plunged into fighting and bloodshed; if Confucius were recording the event, he would attribute it to Count Inouye, who has delayed the dismissal of the Governor. He was suspended. Mr. Hoshi Toru delivered a long speech on Responsible Cabinets. He said that the object of establishing the Diet was to maintain harmony between the Government and the people, but the result in this country had been quite the opposite, the reason being that the nation was tired of a Cabinet organized by clan statesmen, and desired to see a responsible government. He argued that the reason of the country's foreign policy remaining unsettled was because Ministers of State were so busily engaged in internal affairs that they had no time to devote energy to such matters. Judging from that point of view, the organization of a Responsible Cabinet was absolutely necessary. Suddenly the police ordered the suspension of Mr. Hoshi's speech, and the meeting was closed at 6 p.m. There were numbers of policemen present, but no disturbance of any kind took place among the audience.

ELECTION DISPUTE.

At the last general election competition was carried to such lengths that in some provinces there was much bloodshed. Kochi Prefecture was notably bad. From the second election district of that Prefecture two members were to be returned, and Messrs. Kataoka Kenkichi,

and Hayashi Yuzo, ex-Radical members of the Diet, stood as candidates against Messrs. Kataoka Chokuton and Yasuoka Yukichi, Pro-Government candidates. After much disturbance and bloodshed, the latter were declared elected, and Mr. Kataoka Chokuton subsequently distinguished himself by delivering a long speech against the Representation about official interference. The unsuccessful candidates held that they had been defeated by illegal methods, and instituted proceedings in the Law Courts. The case was dismissed in the Osaka Court of Appeal, so the plaintiffs carried it to the Supreme Court. The Supreme Court has reversed the decision of the Osaka tribunal, and sent the case for trial in the Nagoya Court of Appeal. The following is the text of the Supreme Court's judgment:—

JUDGMENT.
KATAOKA KENKICHI } Appellants.
HAYASHI YUZO }
NISHIHARA SEITO } Counsel for
NAKAJIMA MATAGORO } Appellants.
KATAOKA CHIKUON } Respondents.
YASUOKA YUKICHI }
KAKIZAKI KINZO } Counsel for
FUKUSHIMA YOZABURO } Respondents.

The Appellants pray that the decision of the Osaka Court of Appeal delivered on the 22nd June 1892, in a suit relating to the validity of an election in which the parties to the suit were candidates, be reversed, and the respondents pray that the appeal be dismissed.

DECISION.

The Court reverses the decision of the lower tribunal, and orders that the case be referred to the Nagoya Court of Appeal for re-hearing.

REASONS.

In the pleadings of the Appellants, it was contended that the lock and key of a ballot-box controlled by the Headman of Moroki Division were not of the kind prescribed by the Law of Election, and to prove the statement an exhibit marked No. 18 A was presented. But the Osaka Court rejected the exhibit, and ruled that the statement was only verbal, and that no evidence to support it was forthcoming. This ruling the appellants declare to have been contrary to law. Now the allegation as to the lock and key was advanced by the appellants as supplementary evidence against the respondents, and since the Osaka Court considered it one of the most important charges, the Court ought to have carefully investigated the exhibit referred to, and should have furnished a clear explanation in rejecting it. But on examining the report of the proceedings, it appears that although there were several certificates to support Exhibit No. 18 A, the Court did not even break their seals. It is undoubtedly within the right of Judges to accept or reject any evidence produced, but it is illegal to disregard documents, and declare a statement to be simply verbal and unsupported. If the Exhibit in question can be considered to be included in the term used in the judgment viz.—"The Exhibit re marked A, etc." no exception can be taken. But the reasons assigned had reference simply to irregularity in counting the number of votes, and therefore no allusion to the second exhibit seems to have been made. The Court therefore decides the case as above stated.

Since the decision of the former Court is reversed on the above ground, it is not necessary to state reasons with regard to other clauses in the judgment of the Osaka tribunal.

(Signed.)—NAMURA TAIZO, Chief Judge.
TA-KI KIN, Judge.
MASUDO BUNJI, Judge.
OKAMURA TANEZO, Judge.
TAIZU HARUZO, Judge.
KUSUGI NAOICHI, Judge.
KODAMA JUNICHIRO, Judge.

(Dated) 12th November 1892.

POLITICAL PARTIES.

THE near approach of the meeting of the Diet invests the movements of political parties and associations with particular interest. It is scarcely necessary to repeat a fact of which our readers are already very cognizant, namely, that the present state of political parties in Japan is one of great vacillation and division, and that, hanging from the skirts of the large associations supposed to be either hostile or friendly to the Cabinet, there are a number of minor bodies, the movements of which are as uncertain as their composition is various. One of these coteries goes by the appellation of the Tameike Club, because its place of meeting is in a building in the Tameike region of Tokyo. The fact of its undefined colour is pretty clearly indicated by its members' choice not to call themselves by any name more distinctive than that of their district of meeting, but none the less they were originally regarded as Government supporters, their nucleus consisted of Messrs. Seki Naohiko, Inagaki Shimesu, and others who had always been credited with anti-Minto proclivities. The attitude which the Club would assume towards the great question of last session, namely, the question of official interference in the general elections, formed a subject of interesting speculation and remained for a considerable time in

doubt, but at the crucial moment of division the members of the Club, one and all, voted against the Government. It was of course asserted at the time that the Club followed men, not principles, and that the Kiushu representatives, who swayed its councils, had joined the Opposition chiefly, if not entirely, because the leader of Kiushu politics, Mr. Mutsu, no longer held a portfolio. But there is no occasion to have recourse to such an interpretation of motives. Many men of independent opinion, and many men originally disposed to support the Government, found it impossible to obey their proclivities in connection with this question of interference in elections, and we happen to know certainly that before the personal ties between the Tameike Club and the Cabinet had been in any way loosened, the leading members of the Club were persuaded that undue official interference had been exercised in the election, and that it would be their duty to support a vote of censure. Since then little has been heard of the Club, but it now comes before the public again in consequence of a split in the camp which has led to its dissolution. The Club held a meeting in the Tameike Hall on the 21st instant, when several of the members, as Messrs. Nishikawa Toshinobu, Sasaki Zenyemon, Kawagoye Sumumu, and Yamaguchi Kyosaku, declared their resolve not to work any longer with Messrs. Sasada and Ito. It being impossible, however, to remove the names of these last mentioned members from the roll of the Club, merely on the ground of a divergence of view, a proposition to dissolve the club was made and carried. The expectation is that the majority of the members will form themselves into a new association with a different name but the same political objects.

THE CIVIL AND COMMERCIAL CODES.

ON the 24th instant the *Official Gazette* contained an Imperial Ordinance announcing that His Majesty the Emperor has sanctioned the Bill passed by the Diet last session, for the postponement, until January 1st, 1896, of the operation of the new Civil and Commercial Codes; with the supplementary provision, added by the Diet at the last moment, namely, that the object of postponement being revision, any parts of the Codes of which the revision may have been effected at an earlier date, may be at once put into operation. We confess that the issue of this Ordinance surprises us. Our belief was that the Imperial sanction would be finally withheld, and that the Government would introduce a Bill in the next session of the Diet, providing for the postponement of only such portions as stand admittedly in need of revision. It has probably been concluded, however, that the success of such a measure would have been doubtful, while the additional celerity gained by it could not be considerable. Hence the original Bill, as passed by the Diet, is accepted in its entirety, and the Administration will doubtless take steps to carry on the work of revision with the utmost expedition.

In respect of actual procedure, no exception can be taken to the Government's action. The Constitution itself contains no provision as to the manner of extending Imperial sanction to a Bill. But the 32nd Article of the Law of the Houses says:—"A Bill which, after having been passed by both Houses of the Diet and presented to the Emperor, may receive His Sanction, shall be promulgated before the next session of the Diet." Hence the Government is strictly within its rights in devoting to the consideration of a Bill which has passed the Diet, whatever portion of the interval between two Sessions may be found convenient. On the other hand, this promulgation of Imperial Sanction at the very eleventh hour, in the case of a measure of such great importance and which has been so long under public discussion, will certainly be made the basis of a charge of vacillation against the Cabinet. We have seen what an outcry was raised when the Government recently appointed a Committee to consider the possibility of dividing the Codes,

and carrying out portions at once while deferring the operation of the remainder until revision could be effected. The Opposition claimed that such a step amounted to an insult, since it seemed to attach greater weight to the decision of a Committee than to the deliberations of the two Houses of the Diet. The criticism was very natural, but, as we pointed out at the time, there was no evidence that the Government intended to be influenced in its treatment of the Bill by the Committee's opinion. The Committee's report has not been published, but is generally understood to have been a declaration that certain portions of the Codes might, without inconvenience, be separated for purposes of immediate application. If, then, the Government ever entertained any idea of being guided by the Committee's advice, it has evidently abandoned that idea, since the Bill now receives sanction in its entirety. Nevertheless, it is much to be regretted, on account of the Cabinet's reputation for rapid judgment, that the Imperial Sanction was not given two months ago. *Bis dat qui cito dat.* The Opposition will attach comparatively small value to a concession made at the eleventh hour, and will claim that they forced the Government to accept a Bill against which the Cabinet would have rebelled had there been any hope of successful resistance.

SMOKING IN RAILWAY CARRIAGES.

COMPLAINTS, echoed in the correspondence columns of this journal and of a local contemporary, have been formulated about the laxity shown by the Railway Officials in enforcing the regulation against promiscuous smoking in first and second class carriages. Undoubtedly so long as the regulation exists and is posted up in the carriages, it ought to be observed. Many passengers object to tobacco smoke, and have a right to claim exemption from the nuisance when travelling by train. But it should be remembered by persons disposed to grow choleric and even abusive about this matter, that the Japanese have never regarded tobacco smoke as foreigners regard it. No Japanese lady ever thought of objecting to the smell of a pipe until foreigners introduced the notion. If she did not smoke herself, some of the female inmates of the house assuredly did, and it would never have occurred to her under any circumstances to protest against smoking in a sitting-room, a bed-room, a railway carriage, or anywhere else. It is not fair, therefore, to denounce Japanese men as "bores," if they fail to recognise any obligation to consult the tobacco-smoke antipathies of ladies in a railway carriage. The fact is that an ordinary Japanese traveller has no conception of the foreign lady's peculiarities as to tobacco, and is innocent of any rude intention when he lights up and smokes without concern for a fellow-passenger's convenience.

THE CHINESE IN AMERICA.

THE enterprising Chinese who would fain have made arrangements to present to visitors at the World's Fair at Chicago an object lesson in Celestial histrionics, have met with a fatal rebuff. "Acting Secretary Spaulding," we read in an American exchange, "has declined to permit 200 Chinese actors to enter this country for the purpose of presenting Chinese plays in a theatre to be erected near the entrance of the World's Fair in Chicago. In doing so he says: 'The enterprise described appears to be purely a commercial one, and has no official connection with the World's Columbian Exposition. The law would exclude such persons unless they present at the time of their landing certificates from the Chinese Government identifying them as persons entitled to enter the United States in accordance with the provisions of section 6 of the Act of May 6, 1882, as amended by the Act approved July 5, 1884.'"

THE EXPORT OF RICE.

OWING to the high price of rice, there has been a much smaller export of this staple from Kobe this year than usual. The *Yiji Shimpō*, writ-

ing on the subject, says that the export of rice to Hamburg was almost solely in the hands of Mr. E. B. Watson, previous to his failure, while the export to other parts of the world has been conducted by Messrs. Samuel Samuel and Co., Messrs. Raspe and Co., and by some Japanese firms. It appears that Messrs. Samuel Samuel and Co. entered into preliminary arrangements with Mr. Watson to succeed him in the rice exporting business to Hamburg, but for some reason no shipments to that port have been made by the firm. Mr. Watson, in the hope of again starting in business, has gone to Hamburg to arrange matters. Meanwhile, Mr. Martin Burchard, Honorary Japanese Consul at Hamburg, has communicated with the Mitsui Bussan Kaisha advising them to open up business with Hamburg.

STUDENTS FOR STUDY ABROAD.

THE *Official Gazette* publishes an Imperial Ordinance relating to the despatch of students to Europe and America for purposes of study. The provisions of the Ordinance run as follows:—

Art. I.—When, in the opinion of the Minister of State for Education, it appears specially necessary to send students abroad for purposes of scientific or technical study, he shall be competent to make a selection from among the graduates or instructors of schools directly under the control of the Department of Education, and to send abroad the persons so selected.

Art. II.—The number of students or others sent abroad under the above provision by the Department of Education, shall not exceed twenty-two at a time.

Art. III.—It shall be competent for the Minister of State for Education to decide what subjects of investigation shall be taken up by students sent abroad, what countries they shall be sent to, and for what terms of years they shall remain abroad.

Art. IV.—The allowance made by the Department of State for Education for the support of a student studying abroad, shall not exceed one hundred and eighty pounds sterling (English) yearly, and the travelling expenses shall be calculated according to the lowest scale given in the Regulations for Expenses of Travelling Abroad. Provided that under special circumstances, or when a student is sent from place to place for purposes of study, a suitable allowance for expenses of maintenance, in addition to the allowance prescribed above, may be made; but such additional allowance shall not exceed one hundred and fifty pounds sterling (English), annually, during the term of such travel; nor shall any allowance for travelling expenses be made when a student is thus despatched from place to place.

Art. V.—In the case of Instructors of Schools under the direct control of the Department of State for Education, who are sent abroad for purposes of study, the salary received by them as Instructors shall cease to be payable from the day of their departure from, until the day of their return to, Japan. Provided that, under special circumstance, they may be granted an allowance not to exceed one-third of such salary.

Art. VI.—Students or Instructors sent abroad for purposes of study under the above provisions, shall not be at liberty to resign any office to which they are appointed by the Minister of State for Education, during a period of twice the number of years spent studying abroad, such period to reckon from the day of their return to Japan.

Appended Clause.—During the 25th and 26th of Meiji only, the allowance mentioned in the first clause of the fourth article may be at the rate of not more than 1,070 yen, and the allowance mentioned in the second clause of the same article shall not exceed 1,000 yen.

POLITICAL PARTIES IN THE DIET.

NOW that we are on the eve of the Fourth Session of the Diet, and that the political opinions of the members are pretty well settled, some of the vernacular journals seem to consider it possible to predict pretty confidently the attitudes of the various parties and coteries, always excepting a few opportunists who may at any moment turn their backs on the party which they are now pledged to support. The *Kokkai*, a nominally independent journal, records its opinion of the state of affairs as follows:—

THE JIYU-TO.

The Radical Party has over 90 members in the House. It has undergone little change, though during last session many rumours were spread about the conduct of members returned from eastern provinces. These have now formed a new Party under the name of the Eastern Radical Party (*Toyo Jiyu-to*). Moreover, by the result of a law-suit, Mr. Uyeda Nofu has replaced Mr. Tanikawa Hisatada, and by election Mr. Sugiura Hiromasa has succeeded Mr. Nitta

Jinzayemon. Hence, though there is no alteration in the numerical strength of the Party, its members are now believed to be all steadfast men, unlikely to show any vacillation in the coming session. It is reported that one or two new members will join the Party. If so, it will command over 90 votes in the House, which is considerably more than any other body can claim.

THE "KAISHIN-TO."

The next most influential party is the Progressionist. It has only 39 members in the Diet. Its number has been increased by one only since last session, but its implacable spirit and the debating ability of its members give it great weight. The nature of its attitude may easily be inferred from the list of Bills which it proposes to present next session. As long as the policies of the *Jiyu-to* and the *Kaishin-to* do not seriously clash, their union against the Government will be as firm as ever. This forecast derives strength from the existence of a party calling itself the Independent Popular Party, the members of which are always ready to smoothe away little differences between the *Jiyu-to* and the *Kaishin-to*.

THE "DOKURITSU MIN-TO."

The Independent Popular Party consisted at first of Messrs. Suzuki, Nakamura, Kawashima, and two or three others only. But when Mr. Kusumoto joined it, many a member followed him, and the Party now possesses an appreciable following, and several others have expressed their intention of supporting it. Its promoters declare their resolve is to have no associate who does not think exactly as they do. The least divergence of opinion is to be followed by separation from the dissentients. So rigid a platform does not seem to afford space for much more than 15 or 16 members in the House, but it seems to be thought that a large number of so-called "independents" are willing to support the *Dokuritsu Min-to*; for example, the followers of Mr. Abei, and the Wakayama Club.

THE WAKAYAMA CLUB.

The members returned from Wakayama Prefecture supported the Popular Party in the last session. But after Mr. Matsui returned to the Cabinet, rumours began to be circulated about them, as they are supposed to be followers of his. It is now believed, however, that they will support the Popular Party as before. People ask why do they not join with the Independent Popular Party, but it is evident that they have to exercise great caution as to some questions, for instance, the question of official interference in the general elections. If the Popular Party intends simply to declare that the Government, has been guilty of mismanagement, and to urge the Cabinet to dismiss or punish certain local officials who made themselves conspicuous by interference, the Wakayama Club will support the Popular Party as before. But if the latter pushes the question further, and attempts to pass a resolution of want of confidence in the Cabinet, the members of the Wakayama Club will vote against it, as their chief is in the Cabinet. Under such circumstances they stand apart, though they only possess 5 members in all. However, they are expected to support the Popular Party on the question of the Budget and in opposing certain other governmental projects.

THE ABEI CLUB.

The followers of Mr. Abei Hankon were spoken of as being 70 per cent. Popular Party and 30 per cent. Pro-government last session. In the coming session, it is understood that they will not support the Popular Party entirely, though they have promised to vote for nearly all the Bills which the latter intends to present. They are particularly zealous in their opposition to the proposal of mixed residence in the interior, but they number only five or six members in the House.

TOYO "JIYU-TO," OR EASTERN RADICALS.

This association is not large enough to be called a party, yet, under the leadership of Mr.

Oi Kentaro, it seems to deserve the next place on the list. It possesses only three members in the House. Nominally separated from the *Yiyu-to*, they will in reality support it, seeking only to go farther than it is prepared to go. One or two other members are closely connected with the Eastern Radicals, though they do not openly admit the fact. Messrs. Morimoto Tokichirō and Ugai Ikujiro may be included in this last category.

THE "MUSHOZOKU-HA."

The last supporters of the Popular Party are the so-called Independents. Among them about 5 or 6 belong to the Popular Party, but since the Tameike Club was dissolved, they do not acknowledge allegiance to any association. Nevertheless some of them will doubtless support the Popular Party as before. Thus the maximum aggregate strength of the Popular Party is 162, giving it a majority in the whole House. The following table shows how the total is composed:—

1. The Radical Party.....	90
2. The Progressionists	39
3. The Independent Popular Party	15 or 16
4. The Wakayama Club	5
5. The Abei Club	5 or 6
6. The Eastern Radical Party	3
7. The Independents	5 or 6

Total162

THE PRO-GOVERNMENT PARTY.

If the Pro-Government members of last session may be described by the same nomenclature under existing circumstances, the *Kokumin Seisha*, otherwise called the *Kokumin Kyokai*, must be placed at the top of the list.

THE "KOKUMIN SEISHA."

The National Union possesses over 60 members in the House, and among them nearly one half belong to the Kiushu Political Party. Hence, every project of the Union is virtually controlled by the Kiushu members. Mr. Sone Arasuke nominally heads the Party on account of his connection with the President and his position, yet his real influence is far below that of Messrs. Sassa and Furusho. Since the Kiushu members number nearly one half, and the others are controlled by them, the whole can follow the same route without disagreement.

THE "CHUO KOSHO-KAI."

The Central Conference Association was originally composed of the *Kyodo-Kai*, *Kinki-Dantai*, *Chugoku Dantai*, and *Hokuriku Dantai*. Nearly all its former members joined the National Union, but over 20 of them still remain independent. There is a rumour at present that the *Chugoku Dantai* and the *Hokuriku Dantai* contemplate organizing a new Party. The *Chuo Kosho-Kai* includes one or two real independents, who will vote for the Government or the Opposition according to the nature of a measure, but the rest will undoubtedly support the National Union.

THE "DHUGOKU DANTAI."

The above name is given to the followers of Mr. Inouye Kakugoro and Mr. Nishi Kiichi. The former is supported by 4 or 5 members returned from Hiroshima Prefecture. This coterie does not always approve the policy of the National Union, but seven or eight out of every ten of its associates are certainly friendly to the Union, and may confidently be expected to vote with it on all important questions.

THE "TAMEIKE-HA."

The Tameike Club has dissolved, but several of its former members, supported by some others, intend to organize a new association, and will publish their programme in a few days. They prefer to call themselves independents, but their sympathies are entirely with the National Union. The Club will have about 10 members when reorganized.

THE "MUSHOZOKU."

Among the Independents there are about 30 members opposed to the policy of the Popular

Party, who will fight against it next session. Moreover, we have the followers of Mr. Ohigashi, and some members who left the Radical Party last session. Their policy is still unannounced. If the number of members actually belonging to the National Union, and those of other political organizations which have a close connection with the Union, be added together, they aggregate over 130, as the following table will show:—

The National Union	over 60
The Central Conference Association	over 20
The Chugoku Union	8 or 9
The Tameike Club	over 10
The Independents	over 30

Total over 130

THE NATIONAL UNION.

SIXTY-FIVE members of the House of Representatives belonging to the National Union met on the 23rd instant, and decided to form a Members' Club. They elected a number of Sub-Committees to examine the following measures:—

Transfer of Prison Expenditures to the charges of the Treasury	Mr. Hirabayashi Kulei and two others.
Management of Forests.....	Mr. Asakura Chikatane and two others.
Investigation of Cost of establishing a Steel Foundry	Mr. Sone Arasuke and three others.
Examination of the Policy of opening up Hokkaido	Mr. Maki Bokushin and three others.
The Game Regulations.....	Mr. Furusho Yoshikado and three others.
Bill for amending the Law of Registration	Mr. Ooka Ikuzo and five others.
Organization of Law Courts	Mr. Motoda Hajime and two others.
Laying of Submarine Cables	Mr. Oshima Shin and two others.
Bills for amending the Newspaper Regulations; the Public Meeting and Political Association Regulations; the Publications; and the Copyright Regulations	Mr. Watanabe Koki and two others.

In addition to the above, it was resolved to subsequently appoint Committees for the purpose of examining the questions of direct and indirect taxation, the promotion of the silk industry, the improvement of agriculture, the amendment of the export tax regulations and various others.

MAJOR FUKUSHIMA.

We learn from the *Yiyu Shinbun* that private messages have been received in the capital from Major Fukushima to the effect that he arrived at Semipalatinsk on the 1st of September. The Major was then about entering Mongolian territory, and after traversing the desert of Gobi, will go as far as Koulon, from which place he will cross again the border into Siberia and endeavour to reach Vladivostok via the Siberian steppes and Irkutsk. He has to travel through almost unexplored regions from Semipalatinsk to Irkutsk—the distance being about 2,000 miles. Some of these districts have never been visited by Europeans. He is probably journeying through these districts now, and as his arrival at Irkutsk cannot be expected before the beginning of next month, no further intelligence will come to hand before that time.

MARINE COURT OF ENQUIRY.

A COURT of Enquiry into the cause of the collision between the *Feima* and *Hangchow* was concluded at the British Consulate General, Shanghai, on the 17th inst. when Mr. Scott, read the finding of the Court as follows:—
"The *Feima* was an iron vessel of 778 tons registered tonnage, official No. 72804, built at Antwerp in 1874 and belonging to the port of Shanghai. It appears from the evidence given before this Court that she sailed from Shanghai on November 8th, 1892, bound for Chefoo with a general cargo and a crew of 29 hands as well as 62 passengers. The Court, having regard to the circumstances above stated, finds as follows:—That the British steamer *Feima* was run

into and eventually sunk by the British steamer *Hangchow*. The Court is of opinion that the collision was caused entirely by the default of the British steamer *Hangchow*, and those on board in navigating her. The Court finds that the British steamer *Feima* was pursuing a proper course; that the master was on the bridge attending to his duties and that a proper look-out was being kept. The Court finds that the master of the British steamer *Hangchow* was on the bridge attending to his duties, being perfectly aware of his responsibility, and that he committed a grave error of judgment in crowding or pressing too closely on the leading British steamer *Feima* at such a speed that a collision ensued for which he, the master of the British steamship *Hangchow*, is entirely responsible, and we adjudge him to be severely reprimanded. The Court finds that the officers, engineers, and crews of both vessels appear to have conducted themselves properly and used their utmost exertions to save lives and property, and no lives were lost. The expenses of this Court, fixed at £8.16.8, are approved."

COUNT SAIGO AND VISCOUNT SHINAGAWA.

THE Declaration of Policy made by Count Saigo and Viscount Shinagawa at the general meeting of the National Union ran as follows:—

In accordance with the statement of motives of our association, published some months ago, we, who had similar sympathies, hoped to co-operate together by exchanging our knowledge and discussing the affairs of the country, so as to promote the prosperity of the empire and increase the welfare of its people; as well as to further our own mutual interests. We accordingly compiled provisional regulations, and organized a social club. Thenceforth we often assembled in this office to discuss our future policy, and we made tours in the east and west for the purpose of publishing our purpose. The affairs of the association have now been almost settled, so we hold this general meeting to determine our programme. Among our members some advocate the organization of a political party, and are in favour of taking part in the political affairs of the country. We, however, will be satisfied if the members direct their investigations to such subjects as education, commerce, or any matter relating to the economy of the country, with the object of correcting and improving the national characteristics, and stimulating enterprise.

In accordance with its original object, the association will extend its scheme, so as to collect all the faithful and patriotic people of the country and bring them together in the localities at meetings where, in friendly conversation, knowledge and experience in matter of law, economy, education, commerce, statistics and so forth, shall be exchanged. Thus we hope to gather knowledge of the world, and apply it to our social and economical problems, to the end that not only shall every member enjoy freedom, but also the whole people of the country, whether they belong to any party or not, shall discharge their duties efficiently on account of the State and profitably on their own account. So shall the general prosperity of the empire be attained and its resources fully developed. We thus openly declare our policy to those assembled here to-day, and make the object of this general meeting known to you all.

Nothing could well be more colourless than this programme. Count Saigo and Viscount Shinagawa are plainly determined to stand aloof ostensibly from politics, so as not to clash with the declarations of the leader of the present Cabinet; that the Government must remain free from all association with political parties. The question of the day in Japan is Party Cabinets. The *Yiyu-to* and the *Kathin-to* are in favour of them; the older statesmen of the *Meiji* era and their supporters are opposed to them. A Cabinet relying on the support of an openly organized political party is as much a party Cabinet as a Cabinet which acknowledges itself liable to be driven out of office by the vote of a hostile majority in the House of Representatives. It is exceedingly difficult, if not impossible, for any association to hold together with a purpose that dictates united political action and a programme that denies any such intention.

THE WRECK OF THE "FEIMA."

We mentioned, says the *N.C. Daily News*, that the *Kobe Maru* had run into the wreck of the *Feima* on Friday evening. A representative of this paper went down to Woosung on Saturday morning and while some distance from the wreck noticed that the rake of her funnel was forward instead of aft, and that the mainmast was broken short off. A closer inspection showed that the funnel and casing had been torn away on the after side, and the funnel itself was somewhat and pierced, the hole

being on the after side. The vessel had moved slightly, apparently from the blow, so that she had a little less port list and her bow was raised a little, her stern sunk proportionately, and her head canted round also slightly. When the *Kobe Maru* struck the wreck, she cut right through the port side abaft of the funnel for about fifteen feet, that is more than half-way through the hull, and into the boiler. At low water the starboard side of the deck for nearly the whole length of the vessel is out of water. As the *Kobe* was drawing something like 15 feet, the injury inflicted must be very serious. The divers at work getting the cargo out, and Mr. Wilson, one of them, had only just come up out of the after hold when the *Kobe Maru* crashed into the *Feima*. A hole has been cut in the deck forward on the starboard side and natives with boat-hooks are engaged recovering cargo by this means. With regard to the *Kobe* she was backed out of the hole she had made and then anchored to ascertain the extent of her own injuries, but as it was found she was making very little water, she proceeded on her voyage. On Saturday afternoon Captain Roberts, having been able to ascertain the extent of the damage inflicted by the *Kobe Maru*, decided to abandon all attempts to raise the vessel, but will continue the salvage of the cargo. The *Feima* was built of iron at Antwerp in 1873, and was originally called the *Watergens*. Her dimensions are 232 ft. 6 in. long, 26 ft. 7 in. beam, 13 ft. 8 in. depth of hold, and 773 tons gross register. Her engines of 90 h.p. nom. were constructed by J. Readhead and Son, South Shields.

POLITICAL FIGHTING IN KAGOSHIMA.

The politicians of Kagoshima appear to have been indulging in a free fight, but under what circumstances or owing to what proximate cause we do not learn. A telegram from Kagoshima, dated 10 p.m. on the 22nd instant, says that, on the 16th instant, a collision occurred between partisans of the Popular Party and partisans of the pro-official Party at a place called Yujuku, the result being that a total of ten persons were wounded. On the following day, at Makurashi, a member of the Popular Party, fighting with one of the *Ri-to*, received a cut which penetrated his lungs and is likely to prove fatal. The telegram, which is despatched to the *Yomiuri Shimbun*, a *Kaishin-to* organ, adds that the police took no measures to arrest the wounded man's assailant, but contented themselves with giving information to the Public Procurator. We are accustomed, however, to hear these charges freely levelled against the police by Opposition journals and political agitators, on all possible occasions, and they have begun to lose both novelty and interest.

THE SUGAR INDUSTRY IN OSHIMA.

The annual production of brown sugar in the Island of Oshima manufactured from sweet potatoes exceeds 150,000 bags. According to the *Shogyo Shimpō*, Mr. Sakano, an expert of the Agricultural and Commercial Department, is reported to have estimated that if the method of sweet potato cultivation be improved, Oshima is capable of turning out about double the quantity of sugar it does at present. With this object he went to Oshima, early this month, and is now busily engaged in suggesting various reforms in the sugar industry. Mr. Sakano proposes to commence his experiment of making refined sugar out of brown next month, and if the case succeeds he will advise the sugar manufacturers of Osaka and Oshima to establish a big refinery. Mr. Furubata, Director of the Osaka 79th National Bank, who takes much interest in the sugar trade, went to Oshima with Mr. Sakano to inspect the actual condition of the industry, and will do his best to encourage it on his return.

THE "BOKHARA."

The discovery of Mrs. Cuniffy's body in Makung harbour with her child tied to her breast, says the *N.C. Daily News*, reopens the question, which has troubled many who have not talked of the matter out of respect of

the survivors, what was done for the women on the *Bokhara*? The first impression was that the steamer broke up instantly, and all who did not happen to be on deck were drowned at once. But the evidence at the Court of Enquiry shows that land was seen "some minutes" before the *Bokhara* struck. Mrs. Cuniffy evidently had time to tie her child securely to herself, and if she and the other women had been brought on deck as soon as land was seen, would they not have had as good a chance of being washed ashore alive as those who were saved?

THE "NORMA."

The British sealing vessel *Norma*, Captain Davis, which left Yokohama in July last for sealing in northern waters, has returned to that port. The *Mainichi Shimbun* says:—"When the *Norma* was engaged in sealing off Chishima within the licensed limit of the Hakodate Marine Products Company, she was discovered by one of the latter's vessels, and compelled to move on, from whence she went into Russian waters and narrowly escaped seizure by a Russian man-of-war. She then proceeded to an island called Sutan, and while preparing firewood she attracted the attention of the Headman of the island. This official immediately reported the matter to the Captain of the *Chishima Kan*, which happened to be at anchor in Chishima at the time, and requested him to order the departure of the vessel, which the man-of-war Captain did. After leaving the island the *Norma* was engaged in hunting outside the territorial limit. But, naturally, under these unfavourable circumstances, the catch was very small, being only 103 skins."

THE "JIYU-TO" AGAINST THE "KAISHIN-TO."

SOME words used by Mr. Shimada Saburo in a speech delivered at the Koseikan on the 21st instant, aroused the indignation of the *Jiyu-to*; and they despatched Messrs. Ishizuka and Komabayashi, two of their Managers, to the office of the *Kaishin-to* on Wednesday last to seek an explanation. But as Mr. Shimada had already left the place, they explained the object of their visit to two or three prominent members of the Party, and requested them to communicate it to Mr. Shimada. About 11 p.m. on the same day, Mr. Shimada sent a reply to the effect that he had never employed any language injurious to the *Jiyu-to*, but had simply said that among the members of the *Kaishin-to* there are some who, reposing confidence in the present Cabinet, desire to support whatever new projects the Government may propose; and that as the *Jiyu-to* is such a large body, some of its members also might entertain similar views. But he had not spoken with the slightest intention of criticizing the *Jiyu-to*. Further, in reply to questions asked by the Radicals, a member of the *Kaishin-to* who visited the *Jiyu-to* office said that, since the programme of the *Jiyu-to* had been published, the *Kaishin-to* found no cause of disagreement, and inasmuch as the policy of the *Kaishin-to* also admits the necessity of increasing the Navy and so forth, Mr. Shimada could not have meant to attack the *Jiyu-to*. On the following day, the Managers reported the above reply to the members of the *Jiyu-to* in conclave, but the latter declared that the answer was vague and unsatisfactory. The Managers were accordingly despatched once more to Mr. Shimada. The *Kaishin-to* leader again explained that he had never for a moment intended to attack the *Jiyu-to*, and the deputies returned with this message. But the *Jiyu-to* members were still dissatisfied. They said that two of their reporters, present when Mr. Shimada spoke, had both heard him attack the Radical Party, and others in the audience bore the same testimony. Therefore they were determined to investigate the question more thoroughly. Thus the dispute remained unsettled. Some one then proposed that though an arrangement had been made for a general assembly of the Popular Party on Friday, the Radicals should abstain from meeting the Progressionists until the dispute had been arranged. This proposal was

opposed, however, on the ground that the projected assembly was not limited to members of the *Jiyu-to* and *Kaishin-to* alone, and therefore it ought not to be abandoned. The latter view was approved and adopted. It is stated that Count Itagaki also was very indignant at Mr. Shimada's speech, and declared himself unwilling to sit in the same room with either Mr. Shimada or any other member of the *Kaishin-to*. It looks as though these two Parties had seen the last day of their union, unless indeed the tie of opposition to the Government should draw them together once again for the purpose of a common campaign.

* * *

The social gathering of the Popular Party, alluded to above, took place in the Nakamura on Thursday last at 5 p.m. The hour originally fixed was 1 p.m., but owing to the dispute between the *Jiyu-to* and the *Kaishin-to* the members of the former arrived very late. When all were seated, Mr. Suzuki Shigetsu, acting as Manager, delivered a short speech thanking the members for coming together, and Mr. Hatashita Kumano reported that the number of members of the Diet assembled was:—

<i>Jiyu-to</i>	65
<i>Kaishin-to</i>	29
Domestic Club	18
Independents	9

Total

He also stated that 27 members of the *Jiyu-to*, 8 of the *Kaishin-to*, and 1 Independent were absent. Mr. Hoshi Toru then rose, and having apologised for his late arrival, said:—

GENTLEMEN,—Before the present social meeting commences, I wish to speak a word or two. Mr. Shimada Saburo, a distinguished member of the *Kaishin-to*, alluded contemptuously to the policy of the *Jiyu-to* in a speech delivered by him in the Koseikan a few days ago. The members of the *Jiyu-to* were indignant, and a negotiation was at once commenced. But no settlement has yet been reached. Pending a satisfactory explanation, no member of the *Jiyu-to* is willing to sit in the same room with the members of the *Kaishin-to* as friends. But the assembly to-day consists of the whole Popular Party; in other words, of all the members of the Diet opposed to the Government. A number of those present do not belong to the *Kaishin-to*, and as we are unwilling to cause these friends any annoyance, we have come, though rather late, so I trust you will excuse us.

Mr. Suzuki, the Manager, thereupon rose and said that Mr. Hoshi's statement simply referred to a trifling disagreement between the *Jiyu-to* and the *Kaishin-to*, and that as it had nothing whatever to do with the Popular Party, he hoped that it would not interfere with the friendly character of the meeting. Dinner was then served, and the members seemed to enjoy themselves thoroughly. At the close they gave three vehement cheers for the Popular Party. The meeting broke up shortly after 7 p.m.

RELEASE OF MILLER.

WE observe that Miller has been released at Singapore. His arrest by the Straits Settlements Police was made originally at the instance of the United States Authorities, Miller being an alleged fugitive from the consequences of a crime committed in Kobe. It is conjectured by the journals which announce the release that some informality in the warrant probably prevented the man's detention, but it seems to us that the result is attributable to another cause. The language of the Order in Council of June 26th, 1879, under the provisions of which alone such an arrest could have been made, says that if requisition is made to the Governor of the Straits Settlements by any Foreign State, in the case of which the Extradition Act of 1870 does not for the time being apply, or by any person recognised by him as an authorized Minister or Officer, Consul or Vice-Consul of such State, for the surrender of a fugitive criminal of such State, the Governor may issue a warrant for the arrest of the fugitive. If this provision stood alone, the legality of Miller's arrest would have been unquestionable. But elsewhere in the same Order, we find that the purposes of the Order,

the term a "fugitive criminal of a Foreign State" is defined to mean "a person accused of any such crime as aforesaid"—the nature of crimes in respect of which extradition may be practised is, of course, limited—"committed within the jurisdiction of that State;" and still further on it is declared that the words "within the jurisdiction of a Foreign State" shall be held to mean "every colony, dependency, and constituent part of such State." It is plain that Kobe, a place within the empire of Japan, cannot be considered either a colony, a dependency, or a constituent part of the United States, and consequently the Governor of Singapore was not competent, under the express terms of the Order in Council, to cause the arrest of Miller or to detain him in custody. We have very little doubt that the man's release was in consequence of these considerations.

ASSAULT ON A MEMBER OF THE DIET.

THE opening day of the fourth session of the Diet was marked by an unfortunate incident. At 8.20 a.m., as Mr. Minaye, a member of the House of Representatives, was on his way to the Diet buildings and had reached the corner of the court house in Fujimicho, Kojimachi district, a man ran up to his *jinrikisha* from behind, and struck him on the shoulder with a sheathed sword, about 2½ feet long. The sword not having been drawn, no wound was inflicted. Mr. Minaye leaped from the *jinrikisha* and took to his heels, but tripped and fell, whereupon his assailant again struck him with the sheathed weapon. Still uninjured, Mr. Minaye ran ten or twelve yards further, but was soon overtaken, and seeing that the blade of his pursuer was now bare, he held up his arm to protect himself, receiving a wound about two inches long. The *soshi* was seized almost immediately and marched off by the police, and Mr. Minaye, re-entering his *jinrikisha*, drove home and had his wound dressed. It proved a slight affair, and will cause no special inconvenience.

This affair seems to have had its origin in the extraordinary incident which occurred on the 16th inst. at Mr. Minaye's residence. On the morning of that day Mr. Kojima Tsuneki, a *shisoku* of Ibaraki Prefecture, who holds the position of Manager of the Chuo-dantai, an association of *soshi*, proceeded to the house of Mr. Minaye and asked for an interview. The man on duty at the vestibule was Goto Ichitaro, himself a Manager of another *soshi* association, the Seinen Gidan. Goto told the visitor that Mr. Minaye was not at home, and asked what was his business, but Kojima said that he had come by appointment and that his business could not be transacted with any one but Mr. Minaye himself. Goto thereupon cried out:—"You must be the fellow that took money from the *Kaishin-to*. I'll do for you," and drawing a sword sprang upon Kojima, cutting him over the head. Kojima, being unarmed, ran away bleeding, and the police arrested Goto, who now lies in prison. The *soshi*, who assaulted Mr. Minaye yesterday morning, is said to have been influenced by a desire to avenge Kojima's injury. He was at all events a member of the Chuo-dantai, of which Kojima is manager.

AN INCIDENT IN TOKYO.

YESTERDAY morning, His Majesty the Emperor left the Palace at 9 a.m. and proceeded to visit the Artillery College. The usual preparations were made by the police along the route. It happened that just about the time when the Imperial carriage was about to pass, a foreign lady rode up, attended only by a groom on foot. The police called out to her to dismount. She reined her horse to the side of the street, but the police insisted, and the lady was finally compelled to dismount, being, of course, subjected to considerable inconvenience afterwards owing to the difficulty of re-mounting without any assistance save that of a groom holding the horse's head. This incident illustrates the contingencies of foreign residence in Tokyo. According to Western notions it is an excessive proceeding to require that a lady shall dismount

when the Sovereign passes. But since that is Japanese etiquette, foreigners living in Japan must of necessity comply with it. The only course is to avoid the route of Imperial Progresses as far as possible, or to go there on foot only. The fact of the Emperor's intention to proceed anywhere is generally announced beforehand in the *Official Gazette*, and folks in carriages or on horseback will do well to take note of the route likely to be followed.

OFFICIAL OPENING OF THE DIET.

WE were mistaken in reporting that the Emperor was to proceed to the Diet on the 25th instant for the purpose of opening it. The Diet assembled on that day, but the official opening had not been expected to take place until the 28th, Friday the 25th, and Saturday the 26th, being devoted to the preliminary business organization, namely, division into Sections, election of heads of managers of Sections and of Chairmen of the Houses and so forth. It is now announced that the official ceremony will take place on the 29th instant. This postponement of a day is attributed to a slight delay in the preparation of the Budget, which has to be placed in the hands of the members before the ceremony. Such, at least, is the reason assigned by the *Kokkai*. The Imperial Rescript fixing the date of official opening was issued yesterday, and invitations were, at the same time; sent to those who, although not included in the list of persons entitled to attend, are admitted by special favour. The Emperor is to leave the Palace at 10.30 a.m. for the purpose of performing the ceremony. All the arrangements are carefully mapped out and published, but as they do not differ in any way from the arrangements made on previous occasions, we need not describe them.

THE "HABUTAYE" MERCHANTS IN FUKUI.

It is stated by the *Shogyo Shimpō* that the *habutaye* merchants in Fukui are complaining of the treatment of their goods at the hands of No. 14 (the name of the company is not stated) Yokohama. The foreign firm having received complaints from abroad in regard to much of the *habutaye* which has been exported, were compelled at length to soak the material in hot water to detect the false weighting of the goods. The *habutaye* complained of is said to come from Kirizu, Ashikaga, and other districts, but Fukui manufacturers say that they have never sent out such degraded stuff, and that to treat their goods as spurious is not fair. The Fukui people say they will ask the firm in question to discontinue its method of treatment of Fukui goods, and if it does not, the Fukui men will decline to deal further with the firm.

THE NEW ORIENTAL BANK CORPORATION, LIMITED, IN LIQUIDATION.

UNDER date 25th instant, Mr. Bremner writes:—"I have the pleasure to transmit to you the following notification which the Liquidator informs me he has caused to be published in the home newspapers:—"The Liquidator of the New Oriental Bank Corporation wishes to acquaint the creditors that having regard to the wide ramifications of the Bank's operations, he is unable to arrange for the distribution of a dividend earlier than the middle of January next, prior to which time he can now say he will declare a dividend of 4s. in the £. He has thought it advisable not to await further realizations, but to hasten the division of the earliest receipts, and he trusts to be able next January to intimate that a second dividend of substantial amount will follow in three or four months. Nothing has so far occurred to vary his opinion expressed at the Creditors' Meeting some time since as to the probable result of the Liquidation. Anything like a close estimate cannot be made for many months to come."

RESIGNATION OF MR. TSUJI.

THE resignation of Mr. Tsuji, Vice-Minister of State for Education, is accepted, and as his successor Mr. Kubota Yuzuru, hitherto Chief of the Bureau of Ordinary School Affairs, is appointed. Mr. Tsuji is raised from the Second Class of the Third Grade to the First Class of

the same Grade. He has proved himself a most able and energetic official, a man of sound judgment and liberal views, and we trust that his retirement from office may be only temporary. Mr. Kubota has only twelve years service, the whole of which has been in the Educational Department. He occupied the position of a *Zokkwan* (employee) of that Department in 1880, and subsequently rose to be Chief Paymaster, a post from which he passed to the presidency of the Bureau of Ordinary School Affairs. He doubtless possesses considerable experience of educational matters.

W. B. HARMSTON'S BENEFIT.

MR. W. B. HARMSTON took his benefit last evening at the Public Hall. The audience was a fairly large one, but what it lacked in quantity it made up in enthusiasm; and was justified in doing so. The programme was good all through, and presented some delightful surprises in the songs of Little Ethel and Miss Minnie Ruby. Bob Love gave three capital songs, which were all encored. The dancing of Mdlle. Blonde was of course very charming to watch. The wonderful Feeley family went through an excellent series of pyramids, tumbling, duplicate ladders, and comicalities on chairs, and Mrs. Feeley performed various graceful evolutions upon the trapeze. The *bénéficiaire* took the title rôle in the last number of the programme—*Robert Macaire*—and played it to perfection, being well supported by Bertram (Geo. Harmston.) The company gives one more performance this evening in the Public Hall, and every one should make an effort to attend—their last in Japan—as without question the variety entertainment provided is the best we have seen for a very long time.

CHINA AND KOREA.

Two years after the event, the Chinese Government has permitted the publication of a document which the *Hongkong Daily Press* justly regards with much interest, namely a "Report of the Mission of Condolence to Korea in 1890." The incidents described in the Report convey a good object lesson as to the nature of the relationship which China steadily preserves between herself and the little Kingdom. Our colonial contemporary summarizes the Report thus:—

The Queen Dowager of Korea died on 4th June, 1890, at the age of 83. She was the actual great grandmother but, through the failure of intermediate heirs, the adoptive mother of the reigning sovereign; and the death of this royal dame furnished the Chinese Court with just the occasion they needed for displaying before the world their paternal relation to the little Court, to the maintenance of which they attached much practical importance.

Following the traditional usage between the two Sovereigns the demise of the old Queen Dowager was reported by the Royal to the Imperial Court, the mission dispatched to Peking by the regular land routes *via* Lungchow arriving at its destination on the 21st September, 1890. The Korean Envoys were received the following day with great ceremony in the Hall of the Board of Rites, where they prostrated themselves in handing to the Secretary of the Board the memorials they had brought from the Korean Capital. The memorial of the King is given verbatim, as also a much more lengthy petition presented by Hung Chung-yung, the leader of the mission. This latter document is very curious and is indeed a study in Oriental diplomacy. The ceremonial to be observed between China and Korea on the occasion of the death and burial of the Queen Dowager had excited much discussion in the peninsula. The Korean Court officials had been diligently coached both by Mr. Denny and other foreigners in the duty of throwing off their allegiance to China, and this kind of talk had grown so popular in Seoul that some of the more excitable of the native officials considered that what so many foreigners were telling them must have something in it; but when the crisis actually arrived when, if ever, a stand might be made, the Korean Government looked anxiously round among their various foreign advisers—which, mercenary and honorary, included nearly the whole foreign population of Korea—but none of them were able to furnish a scrap of assistance, or even of the commodity which had heretofore been so cheap, advice. The foreign partisans of Korean independence committed themselves to the most emphatic predictions to the effect that the Korean King would certainly perform no ceremony derogatory to his status as an independent sovereign, predictions, however, which were soon to be discredited by the event. What the Korean authorities tried to do was to prevent the usual Mission of Con-

dolence being sent from China, because the reception of such a mission would cause the greatest embarrassment in view of the many foreign witnesses who would observe it. The most strenuous exertions were accordingly made to dissuade the Chinese Court from sending any Mission; and the Korean case was embodied in the petition of Hung Chung-yung. He represented the poverty of the country, in consequence of recent famines, which would make it hard on Korea to sustain the reception expenses of a Mission, and urged that he himself would convey "with care and respect" the return message which His Imperial Majesty might deign to send to his loyal vassal, the King. But the Chinese were much too acute to be taken in by such specious arguments, and consequently, on the 7th October, the Board of Rites memorialised the Throne embodying the text of the Korean Envoy's petition, receiving the next day an Imperial Decree which settled the whole matter.

The Emperor recognizes the chronic poverty of Korea, in consequence of which the "vassal state" has received favours and courtesies in times past. He, however, declares that the usage of sending Envoys cannot be departed from, but in consideration for the impoverished condition of the King's country the burden will be lightened. The Mission will not, as heretofore, travel by land, but by sea; and in this way the expense of entertaining the expedition on the journey through the country will be saved, but as the mission "had a special significance as exhibiting the nature of our relations," no abatement could be made in any of the ceremonial observances. Accordingly, on the 15th October, the names of eligible officials were submitted to the Throne, and Hsu-chang and Chung-li were to convey the Emperor's condolence to the King of Korea. The arrangements for the journey of the two Imperial Commissioners are minutely detailed in the Report, and at every step they took on Korean soil from Chemulpo to the capital the duties of the King's officers, which were prescribed with exhaustive precision, are recorded as having been faithfully carried out in accordance with the programme laid down. Most important of course is the attitude of His Korean Majesty himself, and the reporter leaves nothing to the reader's imagination, but with tedious particularity chronicles every movement of the King's body. The long and short of the matter is that the King with the Crown Prince and military officers had to meet and welcome the Mission at a place appointed outside the city, which done, the King had to hurry back to the Palace by a shorter route than that followed by the Imperial procession so as to be ready to give the Royal reception to the Imperial Message of Condolence in the Chin Cong Hall in the Palace, where "a position in the centre passage of the Hall is assigned to the King at which he will perform the *ho-tow* with his face towards the north." At the banquet given by the King, His Majesty made two *ho-tow*: before the Senior and the Junior Commissioners, both courtesies being returned by these officials. The whole ceremonial lasted eight days, from the time of the arrival of the Commissioners in the harbour of Chemulpo to their re-embarkation there on the 14th November, 1890, and it was throughout of a most severe and elaborate character. "How admirable and satisfactory! and how glorious!" exclaims the enthusiastic scribe who chronicles the episode.

BICYCLE JOURNEY ACROSS ASIA.

A CORRESPONDENT of the *North China Daily News*, writing from Paoting Fu, gives the following account of a remarkable journey just completed by two American bicyclists:—

We were surprised yesterday, October 29th, by the sudden apparition of two American gentlemen travelling on bicycles overland from Tashkent, Russian Transcaspia. They are Messrs. Allen and Sachtleben, both of St. Louis, who on the day after graduation from college left for a pleasure ride that has been prolonged into a journey around the world. They have just accomplished what Mr. Stevens unsuccessfully attempted, the actual crossing of Central Asia by bicycles. Leaving Constantinople last autumn they proceeded by way of Teheran and Askabad to Merv, Bokhara, and Tashkent, where by the kindness of the Russian authorities, they were allowed to winter. It is needless to say that during their stay in Russian Turkestan they gathered much valuable information, of which the English public will be interested to learn. Leaving Tashkent in May they crossed to Kuldja in Illi, where they were delayed seven weeks, waiting for supplies by Russian post from Siberia.

They were strongly dissuaded at this point from attempting the journey across China, and were repeatedly assured that the attempt would cost them their lives. They left, however, in mid-summer, knowing no Chinese and carrying only such supplies of money and clothes as could be strapped to the handle bars of their machines. Their route was by way of Urumtsi to the border of the Gobi at Hami. They were twelve days in crossing the desert, the sand being firm enough for them to ride the greater part of the way. At Subchan they struck the western end of the Great Wall, the line of which they followed for nearly 400 miles to Lanchow. From this point they were obliged to strike south-east to Singan in Shensi, whence they have come by way of Pingyan and Tientsin to Paoting Fu. Continuing to Peking and Tientsin their journey across Asia is completed. The entire distance,

with the exception of the short stage across the Transcaspian desert, was made on their wheels.

They have been singularly free from accidents. Their bicycles, which are of the Safety pattern and cushion-tired, would have held out almost without breakage had not the hind wheel of one of them been kicked by a mule; two spokes were broken in this way; others followed until the rim itself succumbed, and when the machines were led into Paoting Fu, the injured wheel was useless. It is now undergoing repairs. They have been followed by mobs—chiefly good-humoured—ever since leaving Kuldja, but have only on two or three occasions been in actual danger. At these times the flooring of their chief opponent, and once or twice the show of the revolvers which they carried, but never used, was sufficient to bring them out safely. The officials showed them the greatest kindness, and through the Eastern province detailed a squad of cavalry, as a rule, for their escort, apparently rather as an honour than for protection. The magistrate of Subchan, through the kind offices of the resident Belgian customs official Ling *ta-jen*, furnished them with officially stamped squares of cloth to hang before the machine handles, bearing the words *Yu li men-jen*—travelling scholars—and telling to all and sundry their nationality and destination—somewhat as one fastens a tag upon a child consigned to distant friends. In no cases did the *literati* or officials show themselves unfriendly, and on one occasion when no barricading of the inn-doors sufficed to keep out the mob the bicycles were sent under guard to the governor's *yamen*, where they remained safely incarcerated until their owners were ready to proceed.

They have carried a Kodak camera throughout the journey, and have taken up to date more than 2,000 photographs which will be used to illustrate the forthcoming volume which, in this case, is sure to be of more than ordinary interest. Their success, where others have failed, has been due partly to the excellent credentials they were able to obtain from the Chinese minister to England and from the Russian Government, and still more to it a deserved triumph of the splendid pluck and determination with which the undertaking has been carried through.

Their plans for the future include the crossing of Japan, whither they proceed at once *ad* Shanghai, and of South America, or if the route is practicable, the southern portion of the United States. It should be said that they are travelling in the interest of no journal or literary syndicate, but for pleasure merely.

THE JIZENKAI.

An appeal has come to the Jizenkai for clothing for some of the old people left destitute by the earthquake. It is impossible with the funds at its command to supply the destitute of Yokohama even. Already the clothing provided in the summer has been given out to the neediest applicants. The old clothing kindly contributed by friends last year was made up into 1,300 garments and given to the poor. The supply being now exhausted, any contributions, however small, of worn clothing, will be gratefully received and at once made up and distributed among the most needy and deserving by the Jizenkai. Contributions may be sent to 221, Bluff.

THE DOKURITSU CLUB.

THE members of the *Dokuritsu* (Independent) Club, whose head-quarters are at Tameike, have arrived at certain resolutions, says the *Choya Shimbun*, as to the Bills which they will submit in the next session of the Diet. Their proposed measures are these:—first, the transfer of prison expenditures to the charge of the Treasury; and secondly, amendments of the Press, the Publication, the Public Meetings and Political Associations, and the Game, Regulations. This is a tolerably comprehensive programme for one small party in a session lasting only three months.

COUNT OKI.

THE resignation of the President of the Privy Council has at last become an accomplished fact. Tendered several days ago, it was sanctioned by the Emperor on the night of the 22nd instant, Count Oki being, on the same day, appointed a Lord in Waiting of the Incense Chamber, and honoured by an order that he shall continue to receive the official treatment appropriate to the post which he vacates, namely, the Presidency of the Privy Council. Nothing is yet known as to Count Oki's successor.

FOUNDING OF A JAPANESE VESSEL AT SEA.

A TELEGRAPHIC message despatched by the Shanghai Branch of the Mitsui Bussan Kaisha and received by the Head Office in Tokyo on the 16th inst., reports that the company's sailing vessel *Chihaya Maru*, which left Kuchinotsu,

on the 27th ult., with a cargo of 589 tons of coal for Shanghai, foundered near the Barlow Island during the night of the 10th inst. The crew, with the exception of one, were rescued by a foreign steamer, which took them on to Hongkong.

Barlow Island is low and flat, surrounded by a reef, and lies about one mile south of Loney Bluff, which forms a portion of Cape Duudas, the peninsular promontory on the eastern extreme of Quelpart.

THE CATTLE PLAGUE.

THE Government has been obliged to appropriate a sum from the First Reserve for the purpose of adopting drastic measures to check the cattle plague. What the precise nature of the measures may be, we are not in a position to state, but doubtless they are on the lines followed in Western countries in similar emergencies. An Imperial Ordinance published on the 18th instant, authorizes the appropriation of funds from the First Reserve, but nothing being said as to the amount, we infer that this important detail is left to be determined by the circumstances of the epidemic and the discretion of those required to deal with it.

M. PATERNOSTRO.

M. PATERNOSTRO, in consequence of his approaching departure from Japan, was received in audience by the Emperor on Saturday, and had the honour of being decorated with the Third Class Order of the Rising Sun. Subsequently M. and Madame Paternostro were granted an audience by the Empress. His Majesty, in very cordial terms, thanked the eminent Italian jurist for the excellent services rendered by him to Japan during the years of his residence here.

EARTHQUAKE.

AN earthquake occurred on Monday night, shortly after half-past ten. The shock, though not violent, was sufficiently strong to set lamps and pictures in motion, and the minor vibrations lasted a considerable time both before and after the principal movement. We learn that the shock was felt in Tokyo, and though of some severity was of short duration.

BURGLARY.

AN armed burglar broke into a watchmaker's shop in the Honmura-road, on Sunday night, and helping himself liberally to the stock, got away with a large number of watches. The police, however, were very soon on his track, and yesterday captured the man and recovered all the stolen property. He is said to be a former employé of the man he robbed.

GOVERNMENT DELEGATE.

MR. SUYEMATSU KENCHO, President of the Law Bureau, has been appointed a Government Delegate in the House of Representatives. Mr. Suyematsu will have the pleasure of appearing in a new character in an arena where he has already figured very conspicuously.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Keen attention is naturally devoted to the position of the Cabinet *vis-à-vis* the various political parties in the present session of the Diet. So far as the Cabinet is concerned, it is believed on all sides that it will maintain strict neutrality, and will abstain, as far as possible, from introducing new measures. The *Fiji Shimpō* distinguishes itself by perseverance in criticizing this inactive policy of the Government. It does not deny that such a policy may be of some use to soothe the wounded feelings of the Popular Party. But it reminds the Ministers that, apart from party politicians, there are throughout the country men of independent judgment whose good opinion ought by all means to be retained. The *Fiji* fears that, if the Cabinet remains inactive, the Popular Party may steal a march upon it by adopting a positive policy, as the *Fiyu-to* is already reported to have decided to do. Should the solution of the various national questions of

Original from

vital importance be left to the efforts of the Popular Party, the Government will one day find itself deserted by the independent educated section of the public. The Ministers of the Crown are consequently advised to devote themselves to the speedy solution of the question of Treaty Revision, the Korean problem, the extension of the carrying trade of the country, the colonization of Hokkaido, and so forth.

The position of the Radicals has now become tolerably clear. Their declared antagonism to the Government applies only to the section of the Cabinet believed to be under the control of clan influence. They will be found favourable towards the other section which they consider more or less free from the clan taint, namely, the section comprising Count Goto, Mr. Mutsu, and Mr. Kono, the Ministers of Agriculture and Commerce, of Foreign Affairs, and of Education respectively. It may have been a coincidence, but nevertheless it is an interesting circumstance, that the Radical leader, in his address at the recent meeting of his Party, insisted on the necessity of placing outside the sphere of party politics, questions relating to education, foreign affairs, industry, and the defence of the country. The positive policy of the *Yi-yu-to* is limited to these questions. The Radicals no doubt aim at overthrowing the so-called clan section of the Cabinet by giving support to the non-clan section. This is plainly indicated by an article in the *Yi-yu* which concludes thus:—"The present Cabinet, when compared to its militant predecessors, shows a certain amount of improvement. This is the reason why our Party has made some changes in its programme and has resolved to pursue a negative and a positive policy at the same moment. But we declare ourselves still opposed to the present Ministry, because improvement is limited only to a small portion of its body, and it is as a whole still clannish in its character. Our party is, however, fair and impartial; and, although we are opposed to the Cabinet as a whole, we shall be ready to give our support to such of its measures as may be deemed beneficial to the people and consistent with constitutional principles of Government."

The Progressionists are as uncompromising as ever in their opposition. The *Mainichi Shimbun* clearly states that the Administration must be thoroughly reformed before it can be entrusted with the carrying out of any new measure. Our contemporary evidently means more than it dares to express, for it borrows an analogy from the history of the latter days of the Tokugawa Government. The opponents of the Tokugawa Government knew very well that the country must be opened to foreign intercourse, but they thought it absolutely necessary first to pull down the rotten edifice of feudal Government before inaugurating a new epoch in the national history. Similarly, the Progressionist organ implies the necessity of demolishing the present Government and establishing a system of Party Cabinets before questions of every-day politics can be approached.

The Progressionist Party held its general meeting in Tokyo on the 10th instant. Writing on this topic, the *Mainichi Shimbun* says that, of the parties opposed to the Government, the Progressionists are most detested by the Authorities, the Radicals faring comparatively well in this respect. The Progressionist organ remarks that, at the time of the last general elections, local officials were instructed to assist Radicals against Progressionists, and Ministerialists against them both. "We are now," concludes our contemporary, "the principal targets of Ministerial attack, and it is time for our Party to stand forth and give battle to the enemy."

The National Union held a general meeting on the 20th instant, and as the result of the discussions then held, most of its members are now engaged in the organization of a political

party under the name of *Kokumin Seisha* (National Political Association). It should be observed that the National Union, though really a political body, professes to be a social association, and there has been talk of converting it in its entirety into a political party. But as several members object to such a step, it has become necessary to leave the National Union as it is, and create a new political body. It is reported that Viscount Shinagawa and Count Saigo, the leaders of the National Unionists, will not join the new political party. They probably prefer to pull the wires from behind the curtain. These two leaders, and several others who are said to follow their example, are condemned by the press for inconsistency, and are advised to join the *Kokumin Seisha*, if they aspire to the position of responsible politicians.

Besides the above mentioned three parties, namely the Radicals, the Progressionists, and the National Unionists, public attention is attracted by the steady expansion of a small body calling themselves the Independent Popular Party (*Dokuritsu Min-to*). Originally a little group comprising scarcely ten members of the House of Representatives, the association now numbers more than thirty. The leaders are Messrs. Kusumoto Masataka, Kawamura Jun, Nakamura Yaro, and Suzuki Shigetaro. Though upon the whole in sympathy with the Radicals and the Progressionists, they are not so thoroughgoing as the latter in their opposition to the Government. The Progressionist organs welcome them as allies, but are evidently not satisfied with their moderate programme. The *Nichi Nichi Shimbun* finds fault with a phrase in the programme adopted by the Independents. They state that one of their objects is to maintain the legislative power. Now, according to the principle of the Japanese Constitution, the legislative power is vested in the Emperor, the Diet being only allowed to participate in its exercise. How can any body of politicians maintain what they do not possess?

The members of the House of Representatives from the Province of Kii are just at present the subject of much talk in the capital. They are supposed to be under the control of Mr. Mutsu, Minister of State for Foreign Affairs. In the last session they steadily voted with the Popular party, but now that their supposed leader is in the Cabinet, their attitude is open to some doubt. The *Yi-yu* is inclined to believe that they will be found in the camp of the Popular party. It sees nothing anomalous in their being there, because, although their leader is a member of the Cabinet, the latter is pledged to a policy of neutrality towards all political parties. Should these members, however, turn Ministerialists, that would be, says our contemporary, a conclusive proof that the so-called neutral policy of the Cabinet is a mere pretext, for the members from Kii would not cast in their lot with the supporters of the Government unless strong pressure were brought to bear upon them through their leader; a convenient manner of reasoning.

The Law for the postponement of the operation of the Civil and the Commercial Codes having at last received Imperial sanction, was promulgated on the 24th instant. There is scarcely a paper not in favour of postponement. Indeed, this step of the Government, though taken tardily, has been universally welcomed. There are, of course, some sweeping reflections on the indecision and hesitation manifested by the Cabinet. The *Nichi Nichi Shimbun*, whose strong and independent language on this subject has been the cause of much surprise, indulges, like most of its contemporaries, in considerable ridicule of the vacillating conduct of the Cabinet, and then proceeds to censure the Ministers for their apparent neglect of prompt measures to set qualified machinery in motion for the revision of the Codes. The Ministers took three months to consider the question, and when they came to the conclusion that the Codes must be post-

poned, they must have also come to some definite conclusion as to the manner in which revision should be effected so as to adapt the new laws to the requirements of the country. The *Nichi Nichi* sincerely regrets that the Cabinet has not at once provided for the carrying out of a measure so urgent as revision. Firmly convinced of the absolute necessity of revision before putting the Codes in operation, our contemporary is not less firmly convinced of the importance of giving effect to these laws as quickly as possible.

The Hokkaido question receives increasing attention from metropolitan journals. It is reported that the Radicals are engaged in extensive investigations as to the actual state of things in Hokkaido, preparatory to drafting a motion for submission to the Diet mapping out the policy that should be followed in the colonization of the northern island. From what has thus far been written by the Radical and Progressionist organs, it appears that the two parties are in favour of placing Hokkaido upon exactly the same footing for administrative purposes as the rest of the country. The principal features of their scheme are the extension of the franchise to inhabitants of Hokkaido, and the establishment of Local Assemblies. The advocates of this change have evidently a keen eye to political interests, for they vie with each other in courting the good-will of the Hokkaido folks so as to insure the return of men of their own creed in case the proposition becomes a reality. Meanwhile, the Cabinet is strongly reminded by the *Nippon* of the vital importance of adopting some definite course of policy in Hokkaido. The administration of affairs there, during the past twenty and odd years, has been, in our contemporary's opinion, a great blot upon the fair name of the Meiji Government. Public opinion is thoroughly aroused on the subject, and the *Nippon* doubts not that it will be seriously discussed by the Diet and that the Cabinet will be asked to explain the policy it intends to pursue. Unless the legitimate queries of the Diet are met with satisfactory answers, Ministers are informed that they will find themselves in a very disgraceful situation, for failure to define their policy would be tantamount to a confession that they have no policy to define.

Count Oki's resignation in connection, it is stated, with the recent scandal in the Department of Education and the changes now taking place in the higher officials of that Department, are much commented on. Some papers go so far as to intimate to the Minister of Education that, unless the supposed abuses in the Department are dealt with in a thoroughgoing manner, the old proposition for the entire abolition of the Educational Department may again be revived in the Diet.

The *Nippon* has an interesting article on the importance of adopting a new national ceremonial costume. At present European evening dress and frock-coats are used by most people, but to enforce the adoption of these throughout the country would be not only improper but impracticable; for European garments are costly and their use in the Provinces is out of question. Moreover, Western garments are incongruous in Japanese houses. Another inconvenience in the present state of things is that on occasions of Shinto ritual, robes of an entirely different kind are prescribed; consequently the Japanese of to-day have to provide themselves, first, with European garments, secondly, with Japanese costumes for civil purposes, and, thirdly, with those for religious occasions. The *Nippon* asks that there be chosen some new form of ceremonial robes, which shall be used by both the rich and the poor, on civil as well as on religious occasions, and shall be in harmony with the conditions of Japanese domestic life. Our contemporary does not indicate any particular style, the working out of the details being as usual left to practical reformers. So soon as a suitable style is discovered, the *Nippon* recommends the Government to proclaim it by Ordinance.

Original from

THE KEROSENE CASE.

SINCE the privilege of appeal to the Supreme Court is not to be exercised by the plaintiffs in the kerosene oil case, recently tried by the Yokohama Local Court and subsequently carried to the Tokyo Court of Appeal—whose proceedings and judgment we have translated and published in full—it is permissible to comment on this interesting suit. The broad facts are that Messrs. MOURILYAN, HEIMANN & CO., British merchants trading in Yokohama, deposited a quantity of kerosene oil in the Government Warehouses at Nakamura, and that some forty-three thousand cases of the oil were subsequently withdrawn without the Firm's consent, and fraudulently sold, whereupon the Firm took action against the Warehouse Authorities to recover the amount of the loss. The persons who withdrew the oil were Chinese *employés* of the Firm. Consequently, the point to be determined was whether the Warehouse Officials were entitled to regard these Chinamen as duly authorized agents, qualified to represent their employers in such transactions. In order to arrive at a conclusion, it is necessary to consider the procedure which the Regulations prescribe for deposit and withdrawal. When a merchant desires to entrust kerosene to the safe keeping of the Warehouse, he is required to submit an application containing all particulars necessary for identification. Thereupon the goods are received, and in exchange for them a Warrant is handed to their owner, acknowledging their receipt and recapitulating the particulars of identification. The owner is thenceforward at liberty to withdraw the kerosene, either in whole or in parts, whenever he finds it convenient to do so. In withdrawing goods, the procedure is that an order for delivery has to be submitted, giving the exact quantity and description of the goods, and at the same time the Warrant mentioned above is also presented. The Warehouse Authorities receive and file the Delivery Order, and then proceed to enter upon the back of the Warrant the number of cases of oil delivered as well as the number of cases remaining in their custody. This done, the Warrant is handed back to the depositor, to be again presented with a fresh Delivery Order on the occasion of the next withdrawal. These steps are repeated until the whole of the kerosene is withdrawn, whereupon the Warrant is finally returned to the Warehouse Authorities. The latter thus retain, as evidence of the transaction, the Warrant, having the original quantity of oil entered on its face and the various withdrawals tabulated on its back, and the Delivery Orders referring to each withdrawal. All this procedure was duly followed in the case under consideration. It must, indeed, have been duly followed, for without a Delivery Order and without the Warrant, no delivery of oil is ever made

by the Warehouse Officials. The question hinged, therefore, not upon the validity of the procedure, but upon the qualifications of the persons who carried it out. These persons were Chinese *employés* of the Firm by whom the oil, or at any rate some part of it, had been deposited, and the Firm claimed, first, that, as a matter of fact, the Chinamen were not duly authorized agents; secondly, that, as a point of commercial custom, no Chinaman could have been a duly authorized agent; and thirdly that, under both aspects, the Warehouse Authorities were guilty of negligence in delivering oil to such persons. It will appear to a casual reader that no difficulty should exist in determining the first question, inasmuch as each Delivery Order has to be signed, and the person qualified to sign it ought to be as clearly defined and recognised as is the signatory of a bank cheque. Such, indeed, seems to be the intention of the Warehouse Regulations, for we find there a prescribed form of Application for Deposit, in which it is clearly stated by the firm depositing the goods that delivery shall be made only on their signature. But, unfortunately, the precision contemplated by this rule is not realized in practice, for it has become customary with firms depositing oil to entrust the signature of Deposit Applications to *employés* who possess no legal authorization to represent the Firm, the latter's stamp only being added. Thus the Warehouse Authorities are deprived of any definite guide in the important matter of signatures, and are naturally led to infer that if an *employé* possessing no legal authorization is permitted to sign a Deposit Application, an *employé* similarly unqualified may be allowed to sign a Delivery Order. Were it the hard and fast habit, as evidently intended by the Regulations, that Deposit Applications and Delivery Orders must bear the same signature, and that the signature must be that either of the Firm, or of its publicly authorized agent, no uncertainty could exist, nor would any irregularity be possible except in the event of deliberate forgery. But where agents not duly authorized are suffered to figure as depositors, the rigidity of the whole transaction is impaired, and proceedings that ought to be governed by strict rule become more or less discretionary. With regard to the second contention—namely, that Chinese *employés* are never trusted by foreign firms to transact such business, and that the Warehouse Authorities, cognisant of this, ought to have sought further assurance before delivering oil to any Chinaman—the point would be weighty had it been confirmed by the evidence of practice. But, on the contrary, proof was furnished that Delivery Orders signed by the very Chinamen concerned in this fraud had been recognised by the Firm as proper and in due form. Hence the contention that Chinamen were never authorized to act in such a capacity fell to the ground,

and, moreover, the case assumed this aspect, that the Warehouse Authorities were charged, not with failing to discriminate against all Chinamen, but with failing to discriminate between repeated acts of the same Chinamen. The plaintiffs, in short, stood in the position of contending that although the validity of some deliveries made to their Chinese *employés* was not disputed, other deliveries made to the same Chinamen under precisely similar circumstances and in accordance with identical procedure, were invalid.

It will easily be inferred from all this that considerable laxity had grown up in respect of these transactions of deposit and delivery. The practice was open to abuse, and the Chinamen abused it. Their plan of action seems to have been at once crafty and daring. Representing to the Firm that a sale of so and so many cases of kerosene had been effected, they would receive a Delivery Order for that amount together with the Storage Warrant. Having then forged a new Delivery Order for a much larger quantity, they would carry this, together with the Warrant, to the Warehouse. Apparently they had access to the Firm's India-rubber stamp, or possessed a facsimile, for the forged orders were always duly stamped. The Warehouse Officials suspected nothing. They had, in the first place, a duly stamped Delivery Order, signed by a Chinaman, it is true, but a Chinaman known to be in the employ of the Firm, and known to have previously signed such Orders; and in the second, they had the Warrant of Deposit, to them the most important document of all. Entering, then, on the back of the Warrant, the number of cases demanded, they delivered the oil and returned the Warrant. It was at this stage that the Chinese showed their daring. They knew that if the entries on the back of the Warrant were at any time scrutinized and compared with the books of the Firm, discovery must at once ensue. But they trusted that no such scrutiny would be made, and they were right. Time after time entries largely exceeding the number of cases for which the Firm had received payment and for which *bonâ fide* Delivery Orders had actually been given, were passed without any notice. If the Chinese had ever drawn out the whole quantity of kerosene covered by a Warrant, they would have been detected, for in that case the Warrant must have been returned to the Warehouse Authorities, and the Firm's attention would have been called to the closing of the transaction. But they were not so clumsy. Their frauds were always kept within the limits of each Warrant, and they were thus able to continue the deceit during a long period. Evidently there was considerable looseness of management and superintendence, and it is not easy to understand how any serious hope can have been entertained of recovering damages from the Warehouse

Authorities. The judgment of the Appeal Court is lucid and well reasoned, and that substantial justice is secured by it, there can, we think, be no question. With the contention that Chinese are never employed by foreigners in capacities of serious trust, which is, in effect, the significance of the local commercial custom alleged by the plaintiffs, the Judges deal shortly and sternly, and we cannot be at all surprised at their tone.

Whether the Warehouse Authorities have been justified in permitting the growth of the loose methods brought to light by the trial, and how far they could have interfered to prevent them, we do not propose to consider here. Allusion may be made, however, to one special feature of the case which has produced a bad impression on the foreign public. The Counsel for Messrs. MOURILYAN, HEIMANN and Co. asked the Court to order the Warehouse Authorities to produce all the documents relating to the various transactions, the Deposit Applications, the Warrants and the Delivery Orders. This the Warehouse Authorities declined to do. They based their refusal on two pleas: first, that they were under no obligation to have preserved the documents, and that, in point of fact, some of them had been destroyed; secondly, that though they were prepared to produce, as far as possible, the documents relating to any specific transaction which the plaintiffs indicated as having been improper, they declined to submit all the documents *en masse* for scrutiny by the plaintiffs with the object of detecting irregularities. In fact, they declined to afford any facilities for the construction of a case against themselves. The Court accepted these pleas, and refused to make any order for the production of the documents. We do not perceive that any other course was possible to the Judges. In the first place, had such an order been made, the Warehouse Authorities might have complied with it as fully or as incompletely as they pleased. They do not acknowledge any obligation to preserve documents relating to a closed transaction. They assert that so soon as the Warrant issued by them on receiving goods for storage returns to their possession, the original depositor of the goods ceases, *de facto*, to have any claims upon them; just as a Bank ceases to have any claim against the acceptor of a Bill of Exchange to whom that document has been duly handed on maturity and payment. In a word, their liability with respect to any transaction of deposit and withdrawal depends, they say, not upon documents which they can themselves show, but upon documents which the other side can show. Further, it is manifest that if a suitor carries into Court a general charge of irregularity against public agents, he cannot expect the Court to order that the Agents shall produce their books so as to enable him to discover exactly where the

irregularity has been. Therefore, the Court seems to have been justified in rejecting the application. But we think it distinctly regrettable that the documents were not produced. The relationship existing between the Warehouse Officials and Import Merchants differs essentially from that existing between ordinary traders. It is a relationship based on a mutual obligation to avert public peril. The importer, dealing in dangerous goods, is required by law, and readily consents, to store them in such a place and under such conditions as shall prevent them from menacing public security. The Warehouse Officials, on their side, act in the interests of general safety. They seek no advantage for themselves, but only to promote the benefit of the community. Hence it is their duty to adopt every possible means of guaranteeing a depositor against inconvenience or loss; and, if he suffers either, it is not less their duty to afford him every facility in obtaining redress. It is true that the production of the desired documents could not have materially affected the issue of the case. The plaintiffs had been allowed to copy them, and to obtain from them whatever evidence they furnished. Moreover, the main fact to be shown by the documents was that deliveries of kerosene had been made to Chinamen on their own signatures. But that fact was unreservedly admitted by the defendant. No documentary testimony was needed to establish it, and the Judgment of the Court shows that it was regarded as proved. Thus the defendant probably considered that his refusal to produce the documents could not in any way impede the course of justice. Such a view, however, ought to have dispelled his reluctance to comply with the plaintiffs' desire. If the documents contained nothing that could prejudice his own case or promote his opponents', why decline to put them in? Apparently there was an apprehension that to produce them would have been equivalent to a general acknowledgment of obligation to preserve all such documents, which would, of course, be intolerable. But this difficulty might easily have been surmounted by the manner of production. What is certain is that the defendant, by refusing to comply with the plaintiffs' application, alienated public sympathy, and suggested the impression that instead of coöperating to elucidate irregularities, the Warehouse Authorities were not unwilling to throw technical difficulties in the way.

THE OPINION OF A DAUGHTER OF EVE.

"Virginia," writing in the current issue of "Black and White," in the column devoted to "The Diary of a Daughter of Eve," says:—I stayed to dine with Julia and was delighted to note an unusual amount of flavour about her soup and sauces, and while congratulating her upon my approval of her presumably new cook, I learnt that it was Liebig who deserved my commendation. The despot who rules her kitchen has been pleased to recognise the virtues of the Liebig Company's Extract of Beef, has, indeed, taken to it with enthusiasm. She does not, of course, confess the secrets of her prison house, but when Julia pays her diurnal visits downstairs she observes the tell-tale jars with their unmistakable blue signatures across the labels.

THE PAINTINGS OF MR. A. PARSONS.

ON Tuesday and Wednesday the public of Tokyo enjoyed an unprecedented treat. Mr. ALFRED PARSONS, who has been in Japan since March last, and has devoted almost the whole period of his stay here to painting, announced that he should be at home in the Imperial Hotel on the afternoons of the above days to receive any visitors desirous of looking at his pictures. The invitation was taken advantage of by nearly the entire foreign community of Tokyo, but by very few Japanese, doubtless because, in the absence of any intimation in the vernacular press, the Japanese generally remained in ignorance of the opportunity. It was difficult to determine the exact number of pictures, for no attempt had been made to set them out one by one. They were merely laid in heaps on tables and settees. Large and small, however, there must have been from a hundred to a hundred and thirty, some, of course, not completely finished, and a few intended as studies for larger pictures, but the whole forming a collection sufficiently numerous to show that the artist must have utilized every moment of his stay in Japan, fine days and wet days alike. As to the quality of the pictures, there can be only one verdict. They are water-colours, but—and this is not their least noteworthy feature—the tones are so rich and solid that all the best characteristics of oils are suggested. How such results can be obtained with the water-colourist's palette, we are preplexed to conceive. The reputation acquired by Mr. PARSONS in Europe, especially as a painter of foliage and flower effects, is of the highest, but we venture to think that it will be greatly enhanced by these beautiful pictures. We do not, of course, mean to suggest that they display any new development of the artistic instinct and technical skill for which Mr. PARSONS is already famous; or that the foliage and flowers of Japan offer any novel varieties of colouring and bloom commanding special admiration. But it is nevertheless true that nature in Japan is seen under a distinctly different aspect from that which she presents in England. The atmosphere of this country, at times of crystalline clearness, at times of opalescent softness, but always free from Occidental brume, shows us the trees and flowers with a distinctness and at the same time tenderness scarcely known elsewhere. These exquisite qualities Mr. PARSONS has succeeded in reproducing with absolute fidelity, and though we have no means of estimating whether his efforts in Japan surpass those already made by him in Europe, we are persuaded that such effects of foliage, flower, and landscape as he is carrying away from these shores to the fortunate dilettanti of the West, will create a new and enthusiastic conception of the possibilities of this branch of art.

Nothing short of a consummate knowledge of values and faultless instinct as a colourist could enable an artist to do what Mr. PARSONS has done. Looking at his sketch books, where studies of English landscape are dashed in with such truth that one seems to smell the hawthorn and hear the lambs bleat in the sweet glades of the old country, and then turning to the lotus lakes, azalea slopes, and bamboo grooves of Japan, as he has succeeded in rendering them, one realizes immediately that entirely different palettes must have been used, and that the most delicately educated perception of relationships could alone have inspired this admirable precision of reproduction. We who live among the beauties of Japanese foliage and flowers, and are accustomed to see them perpetually under her skies of enchanting softness and delicate purity, do not perhaps realize fully what is meant by such a *tour de force* as Mr. PARSONS' perfect representations involve. But to the discriminating section of the public in the West, the pictures will open a new vista of delight. We speak, it will be observed, chiefly of foliage and flowers, because, although Mr. PARSONS' landscapes command no less admiration, his trees and blossoms stand on a plane of artistic achievement far above anything we have ever had the pleasure of seeing before in the same line. Our readers will perhaps expect us to justify this verdict by reference to various pictures in detail. It would be easy to set out upon such an undertaking, but difficult to bring it to a close. For there is not one of the paintings that deserves to be passed over in silence. We find that our notes, compiled with some hope of discrimination, contain admiring references to no less than fifty-two pictures, and are brought to an end not because the end was reached, but because it seemed still too far off. Yet, if it is necessary to particularize, we should be disposed to say that the bamboos, the azalea, the wistaria, the lotus, and the *higan-bana* of Japan never came to life on canvas until Mr. PARSONS' brush created them. The bamboo is to our thinking the gem of Japanese foliage—not the *madake*, with its straight head and somewhat emaciated leaves, but the *moso*, which bows with the most perfect grace under the weight of its own luxuriant yet marvelously delicate tresses, its stem showing such a combination of lusty verdure and pearly tenderness as can be seen on no other plant or tree of the forest. If other artists have attempted to depict the bamboo as nature shows it under a Japanese sky, their work has left no impression, whereas Mr. PARSONS' bamboos can never be forgotten. During the season of cherry bloom he seems to have found the weather too unpropitious to obtain many pictures of this flower so dearly loved in Japan, but it may well be that he avoided an object which, after

all, is somewhat hacknied. The cherry, however, is not without an occasional place in his paintings and nothing can exceed the beauty and fidelity of the rendering it receives. As for the flowers and leaves of the lotus, it is impossible to speak in terms too admiring of the extraordinary faithfulness and loveliness of their representations. There is one picture, of which the foreground only, a lotus lake, is finished. Every leaf and blossom in this exquisite painting has a character of its own. The mass of rich colour and tender green lives on the canvas, glowing in the crystal air and quivering in the breeze that shows us the broad leaves in a multitude of disturbed but always graceful forms. This, we believe, is to be taken as the study for a large picture, and if, as we cannot doubt, the same success is attained on broader canvas, the picture should make a sensation. Fujiyama, it need scarcely be said, exercises upon Mr. PARSONS the charm that it possesses for every artist. He has produced some delightful landscapes, with the peerless mountain in the distance, its loveliness inexpressibly enhanced by wonderfully faithful atmospheric effects, and by foregrounds of living foliage. In these pictures, and indeed in the whole series, there is conspicuously displayed one of the artist's strongest points, excellence of composition. The balance is as perfect as the harmony. It seems to us particularly interesting that an English artist should have come to Japan and challenged the Japanese on their own ground. Floral and foliage painting has always been admitted as a field in which the Japanese artist excels, but one need only glance at Mr. PARSONS' pictures to appreciate how enormously the Japanese painter's effects fall short of the potentialities offering to an artist who, to the highest gifts of colouring and fidelity, adds a thorough appreciation of values, an unerring instinct of composition, and a master's use of chiaroscuro. It has been to us a veritable treat to look at Mr. PARSONS' pictures, and to think that the beauties of Japanese foliage and flowers as seen in Japanese atmosphere are about to be transferred to the salons of Europe and America.

NEW CODES AND OLD CUSTOMS.

VI.

THE subject of Real Servitudes, as the French term goes, or Easements and Profits, in good old-fashioned law-English, is treated in "Private Law in Old Japan," Part V, under the head of "Lesser Rights connected with Land." This chapter includes a miscellaneous assortment of topics; and the original heading under which they appear (*tochimi sokusuru gimu*, obligations pertaining to land) is clearly a mere periphrase, indicating that, though the thing existed, there was no generic scientific conception of "servitude" or

"easement." The new-coined Code term is *chi-yeki* (land-uses). The sections of the collection of customs bear the titles "Boundaries," "Vicinage," "Sundry Servitudes," "Usufruct," "Temple Endowments," "Forests," "Pastures," "Ponds and Swamps," "Drains," "Ways," "Irrigation," and "Rivers"; and among these headings it is not always easy to trace the servitudes mentioned in the more orderly numeration of the Code.

The first servitude established by law is the Right of Access and Passage. This is of two sorts—the right to use neighbouring premises for the purpose of construction or repair of one's own; and the right to pass over neighbouring premises to the highway when one's own land is shut out from all other modes of egress. The former finds no recognition in the recorded customs; though our general knowledge of Japanese habits would indicate that there is no special disinclination to admit such a privilege. The latter is several times noted as recognized by custom, the term employed for such an *enclavé* being "pouch-land" (*fukuro-chi*). In Idzumi *kuni*, for instance, "where a plot of pouch-land exists, a passage must be made by which the occupant can have egress to the main street. The closing of such outlets has for generations been the subject of a prohibition, and the rule is still strictly observed by all." Here again, we cannot refrain from observing, the French law has proved more in harmony with the genius of the country, for, as every one knows, the cold and unbending rules of English law require the owner who finds himself *enclavé* to make the best he can of it, and does not require his neighbour to help him out of the fix. The only exception is that, where a grant of one parcel of land leaves it *enclavé*, the purchaser has a right to pass out over the remaining land of the grantor to the highway, if it is possible; this is also prescribed by the Code (Art. 223). The Code requires (Art. 220) that the neighbour whose land is thus made use of shall be given, first, an indemnity for plantations, etc., destroyed, if any, and, second, an annual rental for the use of the land. Of the first we find no express record in the customs, though it is its own justification. But the second, as a general principle, was well recognized, though the modes of application differed. Sometimes the shut-in owner must merely keep the passage in repair; sometimes a rent was to be paid; or perhaps another piece of land might be handed over in compensation. In place of these the Code establishes a uniform rule that a rental must be paid. But it is clear enough that there is nothing essentially new for the Japanese people in this section of the Code.

The next servitude is that of the Use of Water. This is one of the most difficult and delicate subjects to regulate, especially in a country like Japan, where agriculture lives by irrigation and where custom is so varied

and yet so powerful. The legislators have apparently had this in mind in drafting Art. 230, dealing with riparian rights. After referring to important provisions preceding, this article allows the Courts, where there are conflicting claims on the part of riparian owners, "to decide the controversy by taking into consideration the local usage and by harmonizing the requirements of household hygiene with the interests of agriculture and industry." This safeguard ought to satisfy the most exacting critic. It is given only for the rights of riparian proprietors; but it is easy to see that the other matters of the Section have been so carefully regulated as to produce no appreciable friction with existing ideas. Article 228, for instance, provides that "if the waters of a spring are necessary to the domestic uses of a *cho*, *son*, or hamlet, the proprietor of it is bound to allow the outgo of the portion not needed. . . . The *cho* or *son* must pay a compensation for the use of the water, unless it has already had the use gratuitously for 30 years." Now compare what is recorded of Yamato *kuni*. "This village makes use of the river-water for irrigation by filling its reservoir from the river in spring and autumn, when the villages further up, lying directly along the river, do not need it, and thus sufficient water is stored up for the remainder of the year. As a compensation they pay to the upper villages a tax for the use of the water, and also are responsible for some share of the expense of repairing and cleaning the aqueducts." A closer parallel could hardly be found; and the custom here recorded is alluded to in other regions as well. Take, again, Art. 226: "Owners may not so dispose their roofs or platforms in such a way that rain-water falls directly upon the adjacent premises." This coincides with a custom practically universal in Japan. In two places it is recorded that "if rain is shed upon the adjacent land, no objection can be made;" but in twenty places the express statement is made that houses must be so placed as to prevent the shedding of rain upon neighbours' land, and in still others a distance between houses is prescribed which would have the same effect. In Rikuzen *kuni*, "dwellings and storehouses are usually placed $1\frac{1}{2}$ feet from the next house, but further, if there would result any inconvenience to the neighbour by the shedding of rain from the roof; for every one is under an obligation to avoid causing annoyance in that way." Away in the other direction, in Buzen *kuni*, where "the boundary space must be such as to prevent the shedding of rain on adjoining premises," it is reported that "there is an instance in old times of a dispute, about a boundary which was determined by letting down a leaden plummet from the extremity of the eaves."

For Art. 224 similar parallels occur. "The proprietors of lower estates must receive the rain or spring water which

flows down from above naturally and without the aid of man." In Shinano *kuni*, "where A is an upper owner and B a lower, and continual rains cause a flow of water down over the land of B, he cannot object to this, as the upper owner has a right to have the water pass off thus." The same servitude is recorded of other regions. In Art. 234 a similar duty is imposed of giving passage to surplus waters draining off in the course of agriculture. The corresponding custom seems indicated in Echū *kuni*, where "the lower owner must receive the water flowing from the land of owners above; nor can he erect an embankment to set back the water upon the upper land." Other *kuni* have similar records.

One more parallel in this Section must suffice. In Art. 233 it is provided that "every proprietor having the right to use natural or artificial waters situated without his premises may require, on paying compensation, passage across intervening tenements, estates, etc." This provision finds corroborative notice in the records of customs as regards wells and other water-sources. In Shinano *kuni* (and elsewhere) "where there is on A's land a well which B has a prescriptive right to use, B may pass over the land of A to reach the well; but B must repair any injury caused by him to the road, and must replace any well instrument lost or injured." Again, in Kaga *kuni*, "where the source of a stream used for irrigation by village B lies in village A, the former hires the land of village A where the stream passes, paying the taxes and sundry charges. Sometimes, however, village A presents the land to village B, and the latter presents another in exchange to the former." The fundamental idea in Code and in custom is the same.

The third Section of this Code chapter describes the right of delimitation or fixing of boundaries. There is no corresponding customary record in the Asiatic Society's publication; but we happen to know that contests over boundaries were one of the most frequent subjects of judicial settlement, and that there was a most elaborate procedure for the determination of boundaries and their permanent establishments, all of which, with a tedious array of the forms of documents, notices, official reports, etc., may be seen by consulting the well-known treatise *Ochiboshu* ("Jottings from the Provinces").

A few provisions must now be noticed in the final sections relating to fencing, position of buildings, etc.

By Art. 245 the general rule is laid down that "every proprietor may enclose his premises to such a height and with such materials as he sees fit." But Art. 262 modifies this liberty by requiring that trees and bamboos of more than 3 *ken* (18 feet) in height shall not be placed nearer than 6 feet from the boundary; if of more than 1 *ken* (6 feet) in height, no nearer than 2 feet. Practically this restriction will affect

all agricultural land; for trees and bamboo stakes are there the only fence material that can be afforded. The object of this restriction is not made clear until we consult the records of customs, and here we find that one of the most marked and general characteristics of agricultural ethics in Japan is that the neighbour shall not by the shade of his trees or fences deprive adjoining crops of the necessary sunlight. This idea finds expression in usages manifold in their variety but at one in purpose. Houses, fences, trees,—the principle applies (though not in every place) to all. The cutting off of sunlight from an adjacent dwelling was generally reprehensible; while for cultivated land the principle is almost without exception. The minimum distance allowed for trees varied widely; sometimes it was 3 feet, sometimes 72 feet, —3, 6, 12, and 18 being most common. The height of the tree (which virtually means, in most cases, the fence) varied likewise, in some places 3 feet, in others, 15 feet. Sometimes special limitations are laid down for the southern side of the neighbour's estate, while the northern is left with little or none. Timber trees in some districts are specially restricted, mulberry bushes specially favoured in others. The slope of the land, too, may affect the height allowable. The Code lays down the general rule above-mentioned; but, as on former occasions, we find the legislators, with careful prevision, adjusting it to the habits of the people by declaring (Art. 263) that its rules on this point are not obligatory where a different usage obtains. For houses, the general principle that a sun-space should exist had in Old Japan crystallized into arbitrary rules as to the number of feet to be left between each dwelling-house and the boundary-line. This space varied from 6 inches to 6 feet, and a rehearsal of the details would be tedious. The Code arranges for these variations by providing that "every proprietor wishing to construct a building with materials other than brick or stone must leave between the building and the boundary line a space determined by local usage." The exception as to buildings of brick and stone finds its counterpart and its justification in the similar special favour given in the customary law to storehouses of all sorts.

The only remaining Code principle to notice is that which forbids a direct outlook on neighbouring premises from windows, balconies, or verandahs, unless the window, etc., stands back from the boundary line at least 3 feet, or unless a screen is erected (Arts. 258-9.) This servitude already finds a fairly general recognition in Japan. In three-fourths of the passages touching on the subject the custom is either that there shall be no overlooking windows or that such windows shall be screened. In the districts where this restriction is wanting the requisition of a space between houses seems to have

been regarded as sufficient protection to the neighbour, giving him an opportunity to erect screens if desired, and yet to retain a space for light. The Code has taken a medium course. A screen is required, as above related, for overlooking windows; but where the house stands back 3 feet from the line the restriction is removed. The object has been apparently to reconcile customs and secure convenience, and the situation is certainly one where all sections of the country could not be equally satisfied. It is obvious, of course, that so far as existing custom has sanctioned any practice inconsistent with the Code rule the doctrine of prescription preserves for every individual the privileges so obtained. This idea, by the way, is indicated in the customary law in a passage relating to Yamashiro *kuni*. "Where a window has existed since old times, a neighbour cannot claim to have it closed, even though it overlooks his land; but an overlooking window cannot be newly made without paying," etc. Here we have, in the oldest part of Japan, the first cousin of the familiar English doctrine of "ancient lights."

Space forbids us to enlarge on other tempting comparisons between Code and customs in this chapter on Servitudes. This chapter, perhaps not of chief importance to the larger interests of agriculture and industry (except as regards irrigation-rights), nevertheless touches the everyday life of the people more closely than any other chapter in the Book of Property. There were, too, in this portion of the Code more opportunities than in almost any other for imposing alien rules where fixed customs already existed. Yet we have seen that the ideas of Code and custom are substantially the same; that where latitude could be given, local varieties of usage have been allowed the freest play; and that where novelties or inflexible rules have been determined upon, the situation was such as amply to justify the exercise of legislative discretion.

VII.

OUTSIDE of topics connected more or less directly with property, we seldom find adequate material for comparison in the records now before us; and for this reason we pass over the topics of Book II., Part II. (Obligations), and take up a few of the more important chapters of Book III. (Acquisition of Property). For the chapters on Occupation and Accession we find as yet, in the "Private Law in Old Japan," no topics for comparison; though doubtless there will be among the later volumes of Legal Precedents. But we must note, in passing, the conflict of customs indicated upon a point of considerable consequence in a country so subject to floods. The process known to the civilians as Avulsion, or the tearing off of portions of land by flood and their removal to other estates, did not in the civil law transfer the owner-

ship of land so torn away. Now in Idzu *kuni*, we read, "if a piece of land on the west bank is broken off and becomes attached to the east bank, it is called 'river-bank land,' and remains the property of the village whence it came;" while in Echigo *kuni* "when in consequence of an overflow of the Shinano River there occurs an increase and diminution of land by a detachment of land in one place and an accretion in another, the owners of the detached land must bear the loss, and the benefit of the accretion goes to the owner of the land increased." Under these circumstances the legislators would perhaps have been justified in at once choosing the alternative that seemed to give greater justice; yet we cannot but agree with them in relegating the matter (as they have done in Art. 12) to a special law, to be enacted, presumably, after further investigation.

The titles which demand special attention are those of Sale and Mortgage.

A sale, says Art. 25, is complete upon an agreement being reached by the parties. For immovables (realty), however, a registration is necessary at the land-registry office. This, as has already been stated, is quite in harmony with an almost universal custom of Old Japan. Registration in some form or another seems to have been usual in all transfers of realty; and even in case of horses and other personalty the feudal lords frequently required the recording of transfers. When one considers what a large place the transaction of Sale occupies among those dealing with land, one realizes how important the fact of this harmony of Code and custom is in this particular relation. Imagine the state into which all England would be thrown to-day if a law of compulsory registration of land sales were imposed, and we can understand what it means to assert that the new Code is opposed to the customs of the people, and what it means to show that on the contrary the new Code, in so broad and radical a feature as this, finds itself in entire accord with the immemorial habits of the nation. It may be noted here that while the fees for registration are in America customarily paid (we believe) by the seller, the Japanese (and the French) custom has been (according to the Collection of Customs) for the buyer to undertake these. The Code (Art. 34) leaves it to the agreement of the parties; but in the absence of agreement divides the expense equally between them. In America the registration fee is fixed according to the number of documents; in Old Japan it was a percentage (*buichikin*) of the price paid, with various presents and feasts to the officials in addition. Under the Code the fee is regulated by the assessed value of the plot transferred. In the West the last method is impossible; but this country it is quite feasible, more just, and far more effective than the practice in Old Japan, which was always liable (as the Collection

of Customs mentions) to evasion by the parties.

Personalty, it seems, was usually transferred without record, as now, under the Code. The only restriction imposed by the latter is one similar in content to our Statute of Frauds. Under Art. 60 of Book V. (Proof) every sale must be evidenced by a writing of some sort, where the value at stake exceeds 50 *yen*. As regards this requirement of written evidence (there are of course a few exceptions which need not here be touched upon), it can hardly be adjudged an innovation. It may be asserted that there is no civilized country where resort is had more readily to writing as the embodiment of important transactions than in Japan. Custom has prescribed a very strict practice on this point, and this provision of the Code introduces no new thing. What is new is the fixing of a minimum amount, above which such evidence will be required. It is obvious, however, that the line must be drawn somewhere, as soon as the law lends a sanction to the requirement of writing. Comparing the limits recognized as proper by the experience of England, America, and the Continent, the figure 50 *yen* seems not an unfair one. In England the amount is £10. In the United States it varies from "any value," in Florida, to \$300, in Montana; but the usual amount is \$50.

In the articles dealing with earnest-money we find a coincidence of custom between Rome and Japan which is not merely interesting but even startling. Long ago, even before JUSTINIAN'S codification, the rule of Roman law was that, where earnest-money (*arra*) was given, the buyer, on withdrawing, forfeited the sum; the seller, on refusing to deliver, must restore double the earnest. This provision came down the ages and found a place in the Code of NAPOLEON. It gives one almost an uncanny feeling, in looking over these records of Japanese customs, taken down from the lips of men who had never heard of Rome or the French Code and had even (in most instances) never seen a foreigner, to find a dozen passages indicating that the identical rule of Roman law obtained in Old Japan. In Suruga *kuni*, for instance: "If the buyer repudiates a contract of sale, he loses the earnest-money; this they call 'losing the earnest.' If the seller repudiates, he must pay back double the amount of the earnest; this they call 'returning double the earnest.'" The name is sometimes "clinch-money" (*sashi-kin*), sometimes "contract-money" (*yakujo-kin*); but the rule is always the same. Doubtless we may persuade ourselves that it was natural enough to hit upon the same expedient even in communities so widely sundered. But this is not the first instance we have cited of a peculiar coincidence in ideas between Japanese and French traditional rules; and we cannot refrain from calling attention again to

the greater facilities which French law has offered in the task of giving scientific form to the legal principles established among the Japanese people.

The incidence of the risk of an article sold is perhaps one of the most important questions in the transaction of sale, and of course depends usually upon where the title to the article is at the time of loss. For a century the law of England and America has been that the title passes immediately on striking the bargain, unless special conditions are imposed. The old Roman law was that the title could not pass until delivery, a notion perhaps usual in a less advanced state of law, though the risk passed immediately to the buyer. The French law has gradually got away from this requirement towards the Anglo-American position (though in the new German Draft Code the policy of requiring delivery has prevailed); and by the Japanese Code (Book II., Art. 331, Book III., Art. 25) the title ordinarily passes at the time of the bargain and without delivery. Hence follows the rule of the Code (Book II., Art. 335) that the article (when specified) is from the time of the bargain at the risk of the buyer, where no condition has been imposed and where the seller has not specially undertaken the risk. The question is, How does this accord with existing Japanese notions? Here, as might be expected, we find a variation of custom. There are eight passages referring to the point in the records of customs. In four the risk is placed on the seller; in three on the buyer; and in one other it is determined in a peculiar manner, viz., according to the point reached on the journey by the vessel bearing the goods. Where the seller bears the risk, much must be allowed for the possibility that the parties conceived the sale as conditional, and therefore not yet consummated (as would often be the case where earnest money is given), and thus even under the Code the risk would be on the seller. What the general belief is among Japanese vendors and purchasers as to the incidence of the risk can thus not be clearly ascertained from these records of customs. In either case the prevailing custom in some sections will have to be sacrificed, and the legislators in making their choice of principles have put themselves in line with the general trend of modern French and English practice. We fancy that Japan will in this respect at least be no worse off than Germany would be under her new Draft Code, after rejecting the prevailing rule of buyer's risk and throwing the risk on the seller.

The chief obligations of the seller, according to the Code, are (1) to deliver, (2) to guarantee title, and (3) to warrant the absence of defects; and of the buyer, to pay at the time and place agreed. In the Collection of Customs we read that "in sales of personalty the seller must deliver the article, and must also guarantee its

genuineness; the buyer must pay at the time and place agreed on." As to the first obligation, the general custom in Japan was, as we might expect, to place it on the seller, as in the Code. This is the sense of the half-dozen passages touching on the point; though of course the parties might have agreed to the contrary. The second obligation, the guarantee of title, is not spoken of in the Collection of Customs. But we know that a covenant against eviction was long ago used in Japanese deeds of land, and there will be nothing new in the principle here given legal sanction. The Collection of Customs, however, mentions several times what corresponds to the English covenant against disturbance by the grantor or those claiming under him; it reads, "neither I nor my descendants may hereafter raise objection to this transfer." But this guarantee seems not to be required by the Code.

There is a third implied obligation on the seller, dealt with in the Code (Art. 94) among the causes for rescinding the sale. This is the warranty of freedom from radical defects. The sale is avoidable for non-apparent defects, irreparable and unknown to the buyer, if they affect substantially the usefulness or value of the article to the buyer. This general idea appears clearly in the Collection of Customs, though not so accurately defined as in the Code. In *Settsu kuni*, "payment may be refused where the realty or personalty is of a different nature from that contracted for, or where the quantity is different." (Deficiency of quantity is governed by Arts. 48-53 of the Code.) In *Idzumo kuni*, "when an article turns out to be not as contracted for, the buyer may refuse to take it, without forfeiting his earnest money." "Not as contracted for" is the rendering of "*gan* (spurious)—*so* (make)." Again, as indicated in the Code, "where the article is bought and delivery taken and cash paid down at the time, the buyer cannot complain that the article is not as contracted for, because it is due to his own short-sightedness." This is the traditional English doctrine of *caveat emptor*. Others of the less usual forms of sale found sanctioned and regulated in the Code are also testified to in the Collection of Customs. Take, for example, sale by auction. This is the proceeding prescribed in Art. 104 in case the owners of an indivisible thing cannot agree upon a division or sale. Now, in the first place, the auction was one of the commonest institutions of Old Japan. Under the form of a "secret-ticket sale" (that is with written bids) it was used in all parts and among all classes. Furthermore, it was used, among other purposes, in the very instance prescribed by the Code, as we learn in two or three passages. In *Kaga kuni*, "where a house or an article made with money contributed by a number of persons is to be sold, ordinary auction or secret-ticket sale is employed."

In *Shinano kuni*, "where there is to be a sale of something which belongs to several persons in common, secret ticket auction is employed." In *Sagami kuni*, "When * * * forest timber which is the common property of a village is to be sold, the sale is held by auction." Here, then, it is perfectly clear that the people will find their traditional procedure fall in exactly with that prescribed by the Code. Moreover, the auction sale is stated to have been employed for disposing of the effects of a bankrupt or of one whose property had been confiscated for crime; and from this it is but a slight transition to the auction sale on an execution by a bailiff, as employed in modern law. The whole idea of using sale by auction wherever conflicting interests are concerned and securities are needed for impartiality and fairness was evidently familiar in Old Japan.

It may be noted that the Japanese idea of what an auction implies coincides with that accepted in the West, i.e., the bid offered must be accepted, unless notice of a limit or of a liberty to withdraw has been given beforehand. In *Suwo kuni*, "notice is posted, 15 or 30 days beforehand, at the cross-roads or other place where people gather. Before the day appointed, the seller usually makes out a ticket naming a price, so that he need not sell below that price. This is called 'lowest-ticket.' When the tickets are opened, if none of them reach the price named, he may refuse to sell. But unless he makes out this ticket beforehand, he must sell to the highest bidder, no matter how low the figure." This custom is mentioned in almost every passage; except that in some regions the seller is allowed to retreat, where the bid does not meet his views, by paying a forfeit.

Another point which must be noticed is the elaborate provisions in the Code (Arts. 84-93) concerning the right of re-purchase reserved by the seller. These correspond to a practice little known in Anglo-American communities, but very common in a state of society like that prevailing in Japan and surviving even yet in Europe; it finds a recognition in the French Code, and even in the new Draft German Code under the heading *Wiederkaufsrecht* or option of re-purchase. Where family patrimony has descended in the same line for many generations, as in the rural districts of Japan, but the time finally comes when adverse circumstances compel a sacrifice of the estate in order to raise money, the step is reluctantly taken but in the persistent hope of some day regaining the estate the agreement is made that on re-payment of the price at some future date, determinate or indeterminate, the buyer shall restore the land to the original owner, the use of it in the meantime being regarded as a substitute for interest. The transaction is distinct from a pledge, and the sale is made, if possible, to some near relative, who will act in an accom-

modating spirit. We know of a transaction of this sort not long ago between two members of the old feudal nobility, both *kwassoku* now, one branch of the family having been forced to raise money by parting with its estates. In the pages of the customary records this practice meets the eye everywhere. Usually the transaction is known as "sale with the right to claim the return of the original property." Sometimes it is called a "sale with return if I have money within the term." Often it was in effect merely a mortgage; but the genuine sale was a frequent transaction. The Code has given full recognition to this custom. A limit has been placed, however, upon the time for which this privilege can continue. In old custom this period was often indefinite or even perpetual; sometimes it was as short as two years. The Code fixes it at five years for realty, and two years for personality. The conflict of custom requires that some uniform rule should be established; and there is no question that the conditions of modern life, as already felt in Japan, make it undesirable that property should be tied up for too long a time by the existence of such unexercised privileges. On the whole, the legislators have adopted a solution of the difficulty which must be counted among the possible and reasonable ones. The opposite policy is to place no restriction as to time—as in the German Draft Code (where a somewhat similar problem met the Commission). But it might have been better to allow the privilege of re-purchase to continue as made by the parties, while giving the present owner after the five years' period the right of calling upon the original owner to exercise his option at once or lose it. In another respect, also, the Japanese legislators have broken with a custom which could not possibly be endured under modern individualistic conditions. This is the option (mentioned once or twice in the customary records), existing for the members of a ward or village, of becoming the purchasers of any realty offered for sale by a member of the ward or village. For instance, in Idzumi *kuni*, in "towns, when a house is to be sold, and a person living in another block offers a fair price, the seller must first give notice to all the members of his own block; and if one of them is willing to buy at the price offered the sale must be made to him." In Echigo *kuni*, "if residence land is to be sold, the owner must first notify his company and the neighbours on each side, and if no one of them desires to buy, it may be sold to some other person of the same or perhaps another block." In one place the parties announce the intended sale "at every door in the ward, and inquire whether there is any one who will buy, at the price named in the deed-of-hand; if no acceptor is found" the sale proceeds. This is an interesting relic of an earlier form of society, which

must be left to the ethnologists to interpret. But we doubt if it now possesses the stringency, as a custom, that it had in the last generation, and certainly the Code of to-day could not afford to sanction it. So far as it still answers to a sentiment of the people, local public opinion will probably furnish a sufficient safeguard.

There are a few minor coincidences, which we have not space to notice, not fully enough recorded to justify generalizations, but sufficient to indicate that we may fairly rely on a much greater harmony between Code and custom than these records enable us actually to demonstrate. For instance, Art. 81 of the Code declares the principle that "if one of the parties [to a sale] fails to fulfill his obligations entirely or in part, * * * the other may demand the rescission of the contract, according to the rules," etc. In almost the same language, the report is made of Awaji *kuni*, after an emuneration of the parties' obligations, that "if either fails to perform, the other may refuse to perform on his part." Again, Art. 33 declares that the price, which is an essential part of a sale, may be determined by reference to the market rates, present or future, of similar merchandise. A custom to this effect is noted Settsu *kuni*, where, "when sales made by wholesale or commission houses, the price paid is the ruling price at time of delivery, whether or not an interval occurs between the date of the bargain and the date of the delivery."

VIII.

OF the remaining topics concerned with property the most important is that of Securities (*Garanties*), and among these stand foremost Pledge and Hypothecation. Pledges are in the Code of two sorts, pledges of personality (*gage* or *nantissement mobilier*) and of realty (*nantissement immobilier*).

For the first we have material for comparison on only a few leading points. The fundamental idea of the pledge is that the article shall be given into the possession of the creditor or of some third person for him. This the Code prescribes in Art. 102. The same notion of a pledge prevailed equally in Old Japan. The practice of depositing with a third person (for instance, a warehouseman) was not uncommon. In Suwo *kuni* "a pledge of rice may be made by delivering the rice to the lender and receiving the loan and a written receipt, or by depositing it in the public store-house and giving the creditor an instrument of debt indorsed by the headman in charge of the storehouse." No writing is necessary for the validity of the pledge, except so far as required by the general law, already spoken of, applying to transactions involving more than 50 *yen*. But it appears that in the majority of cases it has been customary to give a written receipt. By the Code the pledge is bound to give the care of a

"careful manager" (*bon administrateur*) to the article in his keeping; an expression which relieves him from losses not occurring through his negligence. By the customary rule the pledge was not liable for losses occurring by flood, fire, or theft, a rule which corresponds fairly to the more abstract principle of the Code.

On default at the end of the term the old custom did not require, in the case of personality, any resort to the Courts for the purpose of forfeiting the pledge or of realizing on it. The property, as a rule, became the pledgee's without qualification, except that sometimes the pledgor was allowed by custom to redeem as long as the article was still in the creditor's possession. But under the Code the creditor must apply to the Court either to order a sale or to declare the article forfeit to himself. This is a requirement of modern jurisprudence which is in itself highly necessary and is besides familiar to the Japanese in its application to realty, as we shall see.

The pledge of realty is something quite uncommon in modern Europe and America, and the chapter on this subject in the Code is unique in works of the kind. In Roman law its commonest form was known as *antichresis*, in which the creditor took possession of the land and appropriated the profits in reduction of interest. In Japan the entire profits were taken in lieu of interest. The usual transaction was for the creditor to lease the land back to the debtor as tenant (*jiki-kasaku*). For these pledges the Code declares (Art. 119) that there shall be a writing, and that unless registered the transaction shall not be valid as against third parties. The requirement of a writing was universal in Old Japan, and that of registration was also, so far as appears, without exception.

The document constituting the pledge, says Art. 120, "must contain, in addition to a precise description of the realty, the amount of the claim and the interest." Certainly the people of this country will not be put out of countenance by the new-fangled notions, for this, for instance, is what a deed of pledge customarily contained in Shinano *kuni*: "A recital that the description of the plot by area, grade of soil, and name, agrees with that contained in the land-register; a recital that a specified sum of money has been borrowed for a specified terms of years; a stipulation that the property may be redeemed on the expiration of the term by paying the amount of the debt; and a stipulation that all taxes and charges shall be paid by the creditor during the term. If the description of the piece of land takes up more than one page, it is put on a separate paper, which is also attested by the village officers and is duly referred to in the principal instrument." And what terrors can the Code have for a community accustomed to the following

process, which obtained in Echigo *kuni* for the registration of hypothecs: "The instrument is countersealed by the debtor's company and transmitted with a petition to the ward-representative; the latter searches the register to see whether a prior mortgage exists, enters in the register of the ward-assembly the debtor's name, the amount borrowed, the term, and the interest, certifies by inscription the genuineness of the instrument, and hands it to the elder, who examines, endorses, and seals it"?

The Code prescribes unconditionally (Art. 125) that the creditor "shall pay the taxes and other other annual imposts." The TOKUGAWA rule was equally plain and insistent, and was directed against all the various forms of evasion of this just principle. "Any provision that, while the pledgee shall cultivate the land and take the profits, the pledgor shall nevertheless pay the taxes and render the local services; or that the pledgor who attorns as tenant of the pledgee shall render the local services; or that the pledgor shall attorn as tenant of the pledged land and shall pay and render taxes and services * * * is unlawful." The Code perpetuates (Art. 126) the old rule that the creditor is (in the absence of special contract) to take the profits of the property, if it is cultivated or forest land, in lieu of interest, thus taking the risk of good or bad crops. In hypothecs, on the contrary (where the debtor keeps possession), the creditor of course gets only the interest on his loan. The Tokugawa Courts enforced this rule strictly, and where for some reason a pledge of realty proved invalid, they treated it as a hypothec and reduced the rental due from the tenant-debtor to the rate of legal interest.

The maximum term prescribed by the Code (Art. 116) is 30 years. Here the legislators have stepped in to clarify the obscure usage obtaining in Old Japan and to fix limits more in harmony with modern conditions. The TOKUGAWA rule was that land-pledges should not exceed 10 years, and the Courts invariably refused to recognize an agreement for a longer term. But the rule always had to be forced upon the people, for, as every one knows, public sentiment here favours giving the debtor the privilege of redemption for a long time after the expiration of the term. As a matter of fact redemption might sometimes occur (as these records show) scores of years after the original default by the debtor. In most of the fiefs this could not be done in an ordinary pledge without running against the law (unless, of course, the creditor consented); and the object was usually accomplished, in such cases, by employing the "sale with privilege of re-purchase," already described. The Code, in prescribing the limit of 30 years, recognizes that the TOKUGAWA rule never really corresponded to the sentiment of the people, and yet endeavours to set

some reasonable limit which shall keep property from being tied up too long. With the same purpose, and also for the protection of the debtor against the chance of the land turning out to be unduly profitable to the creditor, the Code allows (Art. 128) the debtor to ask for a sale of the land even before the end of the term. One more topic with reference to pledges of land. The creditor-pledgor had no power of self-appropriation on default of the debtor at the end of the term. What could be a better training for the community about to come under the Code than this, in Iwashiro *kuni*:—"If a default occurs in a hypothec, a report is made to the local office, and the land is publicly offered for sale for 30 days. If no purchaser be found, the land is sold at auction, the creditor taking the proceeds, and handing the surplus, if any, to the debtor. If no bid is received, the land is transferred to the creditor"? This is substantially what happens under modern systems. In Kii *kuni*, again, "when a debtor defaults, the ward officials call upon him, and, if no result ensues, the town magistrate is informed and the property is sold to pay the debt. The surplus, if any, is given to the debtor, if not, the creditor suffers so much loss. But sometimes, when the value of the estate is much below the amount of the debt, the land is transferred directly to the creditor." We do not notice any passages where some public act (such as appearing in Court or obtaining a transfer at the registry-office) is not said, expressly or impliedly, to be customary on the part of the pledgee.

What we have said applies in part to hypothecs also. But the registration of the hypothec was probably not so general. We find only three passages where it is said to have been an absolutely private transaction, but in many cases the attestation of the village officials on the deed was probably the only means adopted for publicity. The Code of course makes registration the rule for all hypothecs. There is little of special moment to note with reference to hypothecs, unless it be a matter of legal theory which is hardly in place here,—the remarkable distinctness and consistency with which were expressed the ideas of a security transferred to the creditor's possession (*shichi-ire*, pledge) and a security retained by the debtor (*kaki-ire*, hypothec); a usage for which we can hardly find a parallel since the days of a living Roman law. The word *nantissement immobilier*, which M. BOISSONADE has applied to the pledge of realty, is, we believe, a new coinage, and even in English the term "pledge" has always been associated with personalty only. But *shichi-ire* applies equally to both.

We have no space to notice other interesting points. We cannot refrain, however, from noting that the English so-called "equitable mortgage" (where merely the title-deeds are deposited with the creditor

as a security) seems to have been well-known in Japan. It is mentioned half a dozen times. In the Musashi *kuni*, "another kind of security is the 'title-deed deposit,' the instrument of debt being executed by the parties only and deposited with the creditor and not countersealed by the headman or company." But "in this case, if a suit arises, the debt is not recognised by the Court as having any preference over others." And this was in fact the policy followed by the TOKUGAWA Courts. Nor does the Code recognize this mode of security. Another subject of interest, upon which, however, our information in the customary records is scanty, is that of preferred claims (*privileges*),—claims having a right to be paid off before others. Of the various provisions of the Code as to the preference to be given to expenses in a last illness, etc., we find no traces in these records. The principle, however, was well understood, for the Government taxes were always preferred in the case of bankruptcy (as the chapter on Bankruptcy shows), and were ranked even ahead of hypothecs. The principle, then, being a familiar one to the people, the insertion of new classes of claims in the lists of the new Code is reduced to a mere question of legislative expediency and discretion as to those particular items—a question with which we are not here concerned.

And this we may say of the whole subject of Securities. The construction of a Code requires attention to be paid to the arrangement of numbers of details and the provision of various complicated transactions. But it is enough for us to see whether the general principles of the subject have been familiar to the Japanese people. If they have, then the reconstruction of those principles in the Code is no more open to criticism than any other piece of reformatory legislation. That these principles are familiar to them amply appears, we think, from the records we have cited.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

SMOKING ON RAILWAYS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a non-smoker, I would crave the assistance of your valuable journal in trying to get the Imperial Japanese Government Railway Department and the private railway companies of Japan, to give their officials orders to see that in the non-smoking carriages smoking is not permitted. On the Tokaido line there is generally attached to the principal trains at least one small compartment with a notice in it to the effect that smoking is not allowed in it, but unless there is a foreign lady in the carriage this notice is totally disregarded by most foreigners and Japanese, who, without so much as "by your leave," light up, and calmly puff their smoke into your face. When I am alone I never attempt to remonstrate, because I know that the non-smoker is looked upon as very selfish and unobliging if he asks for his rights, but if there is a lady I always do, and at

times I have had to take the law into my own hands. As a rule if a foreign lady is in the carriage the light will be put out if attention is called to the fact that smoking is not allowed, but ladies have told me that they have often remained in a non-smoking compartment in vain. To me, a man, it is disagreeable to have my hair and clothing impregnated with stale smoke, how much more so must it be to a lady? I would suggest to the Railway Authorities that they either abolish the concession they now give to the non-smoking second class travelling public, or give their officials strict orders to see that no smoking is allowed in them on any pretence whatever; it is far from an agreeable task for the passenger to ask the smoker to respect the notice placed in the carriage.

I remain, Sir, yours truly,
Tokyo, November 19th, 1892.

E. F.

THE LAND TAX.

[TO THE EDITOR OF THE "JAPAN MAIL."]

SIR,—I do not think it necessary to say anything more on this subject, than simply to refer to an extravagant assumption contained in Professor Dropper's last letter to you. He seems to think that the low prices of rice prevailing in the years 1884-1889 were quite normal. I thought he knew more about Japanese affairs. Anybody the least acquainted with contemporary history in this country, is very well aware that the rigorous measures which the Government pursued for the resumption of the fiat money brought about an abnormal depreciation of prices exactly during the period of time selected by Professor Droppers for the purpose of his "economic investigations." Which is more fair, to take only one extreme of a case as a basis of calculations, as Professor Droppers has done, or to strike an average between two extremes, as I endeavoured to do in my last letter?

I remain, yours respectfully,

M. ZUMOTO.

Tokyo, November 17th, 1892.

RELIGION.

[TO THE EDITOR OF THE "JAPAN MAIL."]

SIR,—Kindly allow me to make a few remarks on the subject of "Religion."

"Hold up your hands all those who think you are saved."

Some hold up their hands, others do not. What is the result? One word answers the question, "Nothing," applying both to those who hold up their hands and those who do not.

Happily, there is one thing that mankind is not, and that is, mankind is not a judge to declare whether we are saved or not. This duty Almighty God alone will fulfill, for He alone is perfect, and therefore can judge us.

If one should say, "I am saved," I ask, how can you prove it? Anybody saying, "I trust I am saved, only because of my repentance and through God's all-loving and all-merciful hand," this I can quite understand. Let us read the gospel of St. Luke, Chap. XVIII., verses 9 to 14 inclusive, concerning the prayer of the Pharisee and the Publican, also concerning those who exalt themselves compared with those who humble themselves. The Publican's prayer was simply, "God be merciful to me a sinner," and this man went down to his house justified rather than the other (the Pharisee). The Pharisee's prayer was all boast, about himself alone; this our most Blessed Lord does not want of us. This "Publican" would be one of those who would not hold his hand up, but—yes! there is that small word but—he went down to his house justified rather than the boasting Pharisee.

With all reverence due, I ask, supposing our most Blessed Lord had asked, "Hold up your hands all those who think you are saved;" how many, I ask, would hold up their hands? I venture to say, "Not a single one."

According to my experience of young men at Colleges and Schools in England, there is one thing above others that keeps them away from Church, and that is; to be told that they are not saved, that they are sinners (for we all are this), that they will go into everlasting fire, and such ranting as this. I have heard them say, "We want to be taught the Scriptures, not to be ranted at that we are this and that." And so it was that when any clergyman came and preached to us (about 650 students), in the College Chapel, about the Scriptures, there seemed to be an interest taken in the sermon. But when the sermon was one incessant slanging at us, if I may use the word, we used to shuffle with our feet and blow our noses, as a hint that we had had quite enough of it, and such a clergyman was always unpopular with us. Is it right, I ask, to frighten a man in order to convert him? No, I say, it is wrong. It must be the free will of himself alone, if he is converted.

During my course at a Military College in England, though many years have passed away since I was there, I well remember the words, "Let us stand in awe and sin not," spoken at the end of an address, by the Head Master. Those words went home to us all, even to the worst of us. That Head Master we simply loved; he was most popular with one and all; he advised us, he prayed for us, but he never asked us to "Hold up our hands if we thought we were saved."

Let us take the last verse of the late Lord Tennyson's poem "Crossing the Bar"—

For though from out our bourne of Time and Place.
The Flood may bear me far,
I hope to see my Pilot face to face.
When I have crossed the bar.

Take notice of the third line, "I hope." Even he did not venture further than using the word hope, because he knew that mankind was no judge of himself or of his fellow-beings.

I am, Sir, your obedient servant,

November 21st, 1892.

GRADUATION CEREMONY AT THE HIGHER COMMERCIAL SCHOOL.

The Second Public Graduation Ceremony of the Higher Commercial School was held on the 21st inst. in the University Lecture Hall, Tokyo. The School does not yet possess a Hall of its own large enough to admit all those desiring to be present on an occasion of such interest and importance. The new buildings of the School are now, however, in course of construction. They include a Hall of sufficient capacity to seat more than a thousand people, which will thus be the largest building of the kind in Tokyo. The day was very fine, and from a little past 12 o'clock the persons invited began to make their appearance, so that by 1 p.m., the time announced for the commencement of the proceedings, the Hall was filled. A few minutes later H.I.H. Prince Arisugawa entered and took his seat on the dais, whereupon the Director of the School, Mr. Yano, opened the meeting. The first business was the granting of diplomas to graduates. Of these there were 281, the number being exceptionally large, owing to the fact that several years had elapsed since a similar ceremony had been held. To hand each graduate separately his certificate would have involved great delay, and the Director, who had evidently reduced the whole affair to the most accurate lines of organization, caused the names of the graduates to be read out in batches, according to their years and subjects, a representative of each batch coming forward to receive the certificates for the whole batch. Needless to say that the youths who acted as delegates played their parts with characteristic Japanese freedom from solecism.

Mr. YANO, President of the School, then said:—I feel highly gratified that this second Public Graduation Ceremony has been honoured by the presence of Your Imperial Highness, Your Excellencies, and Gentlemen. When I consider that the honour thus conferred on us is indicative of the importance attached to commercial education, I feel that a heavy responsibility devolves on the graduates of this school, since they have now to take their stand in the practical world equipped with what they have learned. I, as Director of this School, have been endeavouring to my utmost to meet the needs of our community, and am glad to say that I have been enabled to send out several graduates every year. The recipients of diplomas, here to-day, are the graduates in the regular course since the 23rd year of Meiji, and the graduates in the Accountants' Course since the 22nd year of Meiji, making a total of 281 students. As most of you, graduates, are already in practical business, let me advise you to be loyal and diligent in your work, for that is the only way to fulfill what is expected of you by Society at large.

A brief reply, as follows, was read by one of the graduates, Mr. FUJIMURA, who advanced to the dais for the purpose.—It is to our great honour that this second Public Graduation Ceremony has been attended by Your Imperial Highness, Your Excellencies, and Gentlemen. We, on this occasion, beg to express our heartfelt gratitude for the kind instruction of our Director, so liberally bestowed upon us, and to state that we shall do our utmost to faithfully discharge our duties, so as not to disappoint the expectations of the community.

H.I.H. Prince ARISUGAWA then rose and said:—When I consider the importance of Commerce for advancing and developing national wealth and strength, and when I see that the Higher Commercial School is a place for preparing and supplying this country with men fitted to direct the course of Commerce, I feel much satisfaction at being present on the occasion of the Second Public Graduation Ceremony. You, graduates,

should strive to apply in practice what you have acquired theoretically, so as to discharge the duties which your country expects of you.

Addresses from the Minister President of State, the Minister of State for Agriculture and Commerce, and the Minister of State for Education, were then read out by their Private Secretaries, the Ministers themselves being unable to attend. Mr. Shibusawa, President of the Tokyo Chamber of Commerce, Captain Brinkley, and Professor Blockhuys also spoke. We reproduce below, in original or translation, these various speeches.

The number of persons present in the Hall was fully 700, the majority being leading officials or business men of standing. Such an occasion is generally taken advantage of by students and youths, who like the novelty of "Commencements," but the Graduation Ceremony of the Commercial School constitutes an exception, the greater number of the visitors being men who hold responsible positions and represent the intelligence of modern Japan in every branch. From this fact may reasonably be inferred the degree of importance attached to commercial education by the public, and the nation's wise resolution to equip its tradesmen with the qualities necessary for competition in the active field of international traffic. The Higher School was started by Mr. Yano 17 years ago, and has since then steadily continued to develop until it has reached its present state of prosperity, more than 500 students being now borne on the books. Doubtless there is room for much greater growth, but what has already been achieved is highly satisfactory. Among many features upon which the School is to be congratulated, one specially deserves notice, namely, that the same Director has presided ever since the institution was started, a fact that distinguishes the school from nearly all the other leading places of education in the capital, where the same director seldom continues to hold office for more than ten years. Among the visitors we may name H.I.H. Prince Arisugawa, Mr. Kono, Minister of State for Education; the Italian and Mexican Ambassadors; many of the principal Japanese merchants of Yokohama and Tokyo, members of the Tokyo Chamber of Commerce, some of the members of both Houses, newspaper editors, and several other private gentlemen. Invitations had been issued to many of the foreign merchants of Yokohama, but only two or three were able to attend.

When the ceremony was over, the graduates of the School met at a garden party in the grounds of the Nihonbashi Club. More than a thousand persons were present. The grounds were lighted by electricity which added not a little to the attractions of a spacious garden, laid out in accordance with the canons of genuine Japanese art. All the visitors showed faces of genuine pleasure, the young folks especially enjoying themselves most thoroughly, and, to the credit of the school over which Mr. Yano presides, behaving with perfect orderliness and decorum.

We append the various addresses and speeches:—The address of Count Ito, Minister President of State, read by one of his private secretaries, was as follows:—I regret that I am prevented from being present at the Graduation Ceremony held to-day. I have committed to paper a few words to represent my views in connection with this important occasion. Of the many and varied means for building up a nation, commerce ranks among the most important. The wealth and strength of a nation depends on the growth of its commerce. However well equipped as to its army and navy, a nation neglecting its commerce and industries, is doomed to decay and to extinction. In the West, commerce is fitly compared to war in times of peace. The establishment of this school by our Government has no other object than to bring up men well qualified to play an active part in such warfare. I hear with great satisfaction that not a few of the graduates are already rendering highly useful services in the commercial circle of our country. It is a matter of congratulation that the school is equipped with a well-qualified director and able professors, the result of whose labour is now visible in sending out new graduates who, I have no doubt, will faithfully discharge their duties and largely contribute to the advancement of the nation. Simultaneously with my strong feeling of congratulation, this important occasion has awakened in me increased expectations of what may be expected from the school and the graduates, and of the solid contribution it is likely to make to the prosperity of the empire.

The address of Count KURODA, Minister of State for Communications, read by one of his private secretaries, was as follows:—I feel highly gratified that, as the result of hard study, you have been enabled to receive your diplomas. Let me express my hopes and expectations that you will now apply your knowledge in the field of practice, there-

by leading the commercial society of this country to a better and more prosperous state. In conclusion, let me remind you of the old saying: "The way is long and the responsibility heavy. Without courage and perseverance the goal cannot be reached."

The address of Mr. Kono, Minister of State for Education, read by one of his private secretaries, was as follows:—Commerce forms the basis of national economy, and is one of the chief sources of national wealth. Not only does it require knowledge and experience, but the man who makes it his profession must devote constant attention to the growth and development of the trade conditions and potentialities of his country. Hence the vital necessity of educating well qualified men, which is the object and aim of this School. It is a matter of great satisfaction that the School has the credit of enumerating among its graduates a considerable number of men who are already rendering conspicuous service in the commercial circles of our country. I am highly gratified that you, graduates, after years of hard study, have attained the honour bestowed on you to-day, an honour not only to yourselves, but also to the nation at large. Now that you have finished your course of study, your country expects you to apply the result of your training in the field of practice; to be prudent, diligent, and persevering in your calling, and to be true and faithful in the discharge of your various duties. Let me urge that you spare no pains to fulfil this expectation.

Mr. SHIBUSAWA said:—Your Imperial Highness, Your Excellencies, and Gentlemen:—As one of the Counsellors of the School, I have had the honour of being requested by Mr. Yano to say a few words to you, and I gladly comply. As I am suffering from a cold, I fear that my voice will not reach you well, and I have therefore to beg your kind indulgence. The credit this school enjoys, as referred to in the address of the Minister of State for Education, needs no comment of mine. Many of the graduates are holding responsible positions and doing good service in the commercial community of our country. You are now about to enter into the arena of practice, and will have to meet the requirements of the public. Here we see the principle of demand and supply fully carried out, for this school is regarded as a place to bring up such men as are needed in the commercial circle. The Director, Mr. Yano, is taking special pains to distribute the right men in the right places, and happily he is specially gifted with good judgment in such matters. As the School has already given plain evidence of its good influence and useful results, any formula of congratulation which I might employ would be of little use, since congratulations are already coming to you from all sides. Let me, however, avail myself of this occasion to give expression to what I expect from the School and from its graduates. I will touch briefly, first, on the position of our commercial community as compared with that of the past and that of the West; secondly, on the relation between theory and practical business, that is to say, the degree of closeness existing between them. And in connection with these points, I desire to express one or two ideas with reference to the training of the School's students, and at the same time to give to you, the graduates, some notion of what you will have to do in the future and how you will have to do it. I do not know how it was in old times, but just before the Restoration, the commerce of our country could not be dignified by any higher name than mere peddlery, as I have often said at the meetings of financial and economical associations. The persons carrying it on hardly deserved the name of merchants. My reasons for this assertion are that the staples of production were paid by way of taxes, their transport and sale being conducted by the Government or by the *Daimios*. Nay, more, prices were sometimes fixed by Government, and commodities saleable only at the rates so prescribed. Thus it only remained for tradesmen to retail their wares as they were directed. It is little wonder that under such circumstances no great ability was displayed and that no respectability, no strong sense of morality, distinguished the merchant's calling. Things went so far that the sale of false goods may be said to have been a common practice with merchants. Look, on the contrary, at the capabilities of the commercial community at present. They can trade with China, if they do not like to go very far from home. They can buy and sell in Australia, in Europe, in America. Truly an extensive field offers for their operations. Consider, again, the question of currency in former times. The Government could always tamper with the media of exchange if they wished to do so. But now these media are considered public property. Strict laws regulate all matters of coinage, laws and regulations such as are either on a level with those of the first commercial nations of modern

times, or are rapidly approaching that level. What a change, what an improvement, as compared with days gone by! These, however, are changes of form only. Let us look at the matter from the side of actual practice. What do we find? Comparing the state of our commerce with that of America, and of England, France, and Germany, what do we see? I do not propose to fully discuss the position occupied and the influence exercised by merchants in these countries. But what a difference there is between their merchants and ours! Our Government has stimulated foreign trade. Private and individual efforts have been made in the same direction. Yet we are still far behind foreign merchants. As to imports, it should not require very much ability to buy abroad such commodities as are required here, and several commission agencies have been started. But those agencies show themselves incompetent when we have to import such things as machinery and engines of considerable size and value, those, for example, which are required for building railways and so forth. We cannot dispense with the help of foreigners. As to exports, fifteen years have elapsed since an attempt was made to establish a silk guild in Yokohama, after consultation with foreign merchants there, the object being to transact the business on equal terms. Fifteen years have passed since then. Have we succeeded? By no means. The methods of sale with respect to our principal commodities for export, are in as unsatisfactory a state as ever. On the one hand, our commercial capabilities have grown, our responsibilities have become greater, our position has been improved. But on the other, when we apply the standard of influential foreign merchants, we may be fitly compared to a child just beginning to walk. However, much we may regret the fact, such is the actual condition of our commerce. Gentlemen, I tell you that this is the grade of our commercial community. I turn now to the relation between theory and practice. It is very easy to assert that the two must have as close a relation as possible. We cannot depend wholly on theory. Without practical experience, we can do very little. That the two should advance side by side is highly necessary for the national growth. But what is the state of things now? We have certainly made considerable progress during the past twelve or thirteen years. But we must not be satisfied. The importance attached to theory by so-called business men is as yet comparatively slight, while those engaged in the study of sciences have very little practical experience, and are apt to ignore the importance of practice. We have not yet brought theory and practice into sufficiently close relationship. This is not so distinctly visible in commerce as in engineering and similar kinds of science. Disappointment is often the result of attempting to utilize men who have acquired a great deal of book-knowledge, and complaints are common on every side. Hence has resulted an unfortunate tendency to abandon attempts which would have been important ones if accomplished. Let me impress upon you that theory and practice at present do not stand in a perfectly close relationship. How, then, are we to shape our future? How are we to steer our course? Gentlemen, these are the questions, vital questions, to which I want specially to direct your attention to. It is necessary indeed in a school to go through a regular course of study, but in this Commercial School, I should like to have prime importance attached to the practical uses of anything that may be taught. Not attractive form, but actual utility should be the aim. Theory and practice must go side by side. Your ambition must not be simply to reason and to theorize. Certainly this is not what the community expects of you. It should be the duty and obligation of this School to train its students, not simply so that they shall possess theorizing ability, but so that they shall be able to play a useful part in practical affairs. I must not fail to remind you, also, that no student of this School should trust his future to chance. Do not be ready to become Government officials, or schoolmasters, even if you have the chance of so doing. Should you allow yourselves to be engrossed by that kind of ambition, you will sow the seeds of a life of failure. Some of you may be under the impression that as students of commerce you rank below students of law or of political economy. You have no right to feel so. Studying is all the same, however different the subject may be. If the object of your learning were to convert you into peddlers and haberdashers, you might well feel degraded. Were that what is generally understood by commerce, it would certainly take rank below the science of politics and kindred subjects. But, on the contrary, commerce before everything else, now-a-days, requires able, active, energetic, courageous men. Obedience is necessary in the mercantile calling, but obedience

does not require any one to degrade himself. The morality of merchants should be based on the Doctrines of Fidelity to parents, Loyalty to masters, Faithfulness and Truth. The detestable idea that false dealing is natural to tradesmen, will only tend to drag you down to a low level. I do not know the basis of European morality, but the Chinese precepts of Fidelity, Loyalty, Faithfulness, and Truth should be the foundation on which to build the merchant's character, and in addition, he must be courageous, enterprising, and ready to brave dangers whenever the occasion arises. Look at the Europeans who have made a name in the commercial and industrial world. They all possessed the qualities of courage, activity, and enterprise. How could Columbus have discovered America without these qualities. Look at Newton. Look at Watt. It was their perseverance, their courage, their enterprise, that made their names immortal. Let us thrust away from us the abominable notion that commerce and industry require no high standard of morality. Place your moral standard as high as you possibly can, and your characters as far as possible above reproach; be possessed of courage and perseverance. When you go out of this School, and come face to face with the stern realities of this practical world you will have a great deal more to learn. You must be content to commence at the lowest rounds of the ladder, but this by no means requires you to be low in morals and weak in spirit. In a word, with school training which has practical utility for its final object, and with the character of the student based on fidelity, loyalty, faithfulness, and truth, supplemented by courage, perseverance, and diligence, we shall have men well qualified, to lead our commercial community and to promote the nation's prosperity. This accomplished we shall have raised the status of merchants, and realized the true and close relationship between theory and practice. In the speech of the Minister of State for Education, Commerce was represented as constituting one of the most important factors in the strength of a nation. Allow me to lay still greater stress on this, and to say, that however great a country's fleet, however powerful its artillery, such adjuncts are virtually useless without that which really constitutes the backbone of a nation. The men that make a State truly formidable are men of commerce. We merchants, then, are an important factor in strengthening and enriching our country, and it is impossible for us to play so important a part without a high moral sense, without courage, without perseverance, and without diligence? What I have said to you to-day is what I have constantly in my mind. I am sorry my words have become rather a lecture than a congratulatory address, but I hope you will attribute it to my earnest zeal to promote the commerce of the nation to which you and I belong.

Speech of Captain BRINKLEY.

Your Imperial Highness, Excellencies, and Gentlemen,—Your Director has asked me to say a few words on this interesting occasion, and I readily comply; not that I have any claim to occupy your attention, but because of my very old friendship with your Director, and because of my admiration for the work he has accomplished. It is just twenty-four years since I first had the pleasure of meeting Mr. Yano, and appropriately enough, the meeting took place on board one of the Pacific Mail steamers in the harbour of Yokohama. That now well known line of boats had just then begun to ply between your shores and America. Very likely it has happened that in the course of your studies at this School you have traced the influence produced upon the foreign commerce and upon the general prosperity of your country by the establishment of the Pacific Mail Steamship Service, and of other similar services that have followed in its wake. So also it has happened to me more than once to estimate with strong appreciation the excellent work which your Director, Mr. Yano, has ever since that time been doing in the same cause. Twenty-four years ago the number of men in Japan might be counted on the fingers of one hand who not only possessed a thorough knowledge of a foreign tongue, but had also gained practical insight into the commercial and industrial methods of the West. Men thus equipped might aspire to high positions in Government circles, and certainly Mr. Yano might have so aspired. But to the credit of his disinterestedness and owing to the sound view he took of the nation's needs, his choice was to devote his life to the education of a true commercial spirit and to the spread of commercial knowledge. The good results of his labours are very visible to-day, and will be amply recognised when the history of this era comes to be written. To you, gentlemen, who, after years of patient application, have graduated successfully and are now about to enter the arena of practical labour, I may be permitted to recall the wise saying that a man's

Original from

schooling never really begins until he leaves school. Of no profession is this truer than of the mercantile profession, for although the theoretical knowledge acquired in the class-room may serve a useful purpose in the routine of office work, success is achievable chiefly by the exercise of qualities which have little connection with school training, the qualities of courageous enterprise, clear judgment, and rapid decision. I can recall the time when commercial colleges, such as you have here, were virtually unknown in the West; yet already England had built up that edifice of commerce on which her great empire is supported and from which her immense wealth is derived. The men who, in days when the perils of travel were almost comparable with those of war, sailed to the ends of the world in search of markets, and, speaking figuratively, always carried the flag of their country as part of their baggage—those men had never been trained in commercial colleges. The qualities that made them great merchants and untiring agents of their country's aggrandisement, had been developed in the hard service of apprentice life and by contact with the stern realities of actual trade. Do not infer, please, that I say this in disparagement of commercial schools such as the excellent institution to which you have the honour to belong. The sharp competition of modern times has made it essential that men should enter the arena equipped as thoroughly as theory and science can equip them. Moreover, out of the gradually elaborated processes of international trade there have grown rules and principles which can be demonstrated and inculcated in the class-room, and which may now be regarded as the alphabet of commerce. It is well that all this knowledge should be acquired by the future merchant on the threshold of his career, and it is especially well in Japan where, owing to long seclusion, you are still without the experience which has come to other nations without any special effort on their part. Commercial colleges, therefore, are most essential institutions in the present age, above all in Japan, and you are to be heartily congratulated on the possession of such an excellent and well equipped institution as this. But it may nevertheless be said of commerce, preëminently among professions, that a man's schooling really begins when he leaves school, and I venture to remind you that what you have to do now on the completion of your course of collegiate study, is not to imagine yourselves ready to take a prominent place in the field of commerce, but rather to apply yourselves to a thoughtful and patient investigation of practical methods with as much diligence and perseverance as you have already shown in acquiring the theory of your profession. As to that profession, permit me to congratulate you very heartily on the choice you have made. Separated as this generation is by a very short interval from feudal times, when administrators and soldiers were everything and the trader was counted altogether an inferior and unimportant being, it is not wonderful that the eyes of the rising generation should still be fixed, for the most part, on an official career. But if there is any lesson which the civilized world of the nineteenth century has learned by heart, it is the lesson that the chief duty of administrators and soldiers is to assure the unrestricted and uninterrupted prosecution of commercial and industrial enterprise. The navy of England, which, when you consider the area over which its blows can be struck, the power of concentration it possesses, and the sums spent upon its maintenance, represents the most stupendous military engine that the world has ever seen—that navy has one function to fulfil before all others, the protection of British commerce. You, therefore, in selecting commerce as your profession, have the satisfaction of feeling that you are working for the really solid and substantial interests of your country, and that you are also applying yourselves to redress the great mistake of earlier days, the misconception that trade and barter are operations unworthy of a gentleman's attention. They are, in fact, the highest operations that a man can perform in the field of practical life, since their successful performance contributes more than anything else to the power of his country and to the general happiness of its inhabitants. The accession of men like you to the ranks of commerce cannot fail to raise the status as well as the moral standard of the profession, and let me impress upon you that no mere point of sentiment is involved in this question of moral standard. I am afraid it must be admitted, and you yourselves will doubtless admit, that partly owing to the contempt in which trade and its votaries used to be held in Japan, and partly owing to lack of practical lessons, commercial integrity never reached a very high level in Japan. Honesty is to a great extent the outcome of circumstances. Philosophers have devoted many essays to discussing the problem whether men are

born good or whether they become good; whether, in short, their characters are shaped by innate qualities or moulded by environment. But actual observation has taught us at least this, that whatever a man's natural disposition may be, it is sensibly influenced for better or for worse by his circumstances. It used to be a common habit to describe the farmer as an honest, simple-hearted person, whom constant communion with nature had rendered just and straightforward. But in America, where men's capacities and morale are measured to-day by the most delicate standards ever conceived, the general conviction is that if you want to be thoroughly and frankly cheated, you have only to put yourself into the hands of a farmer. What is the explanation of such a striking change of view? It is this, that the farmer, whatever he may derive from contact with nature, is without the incomparably more powerful moral guides which practical experience furnishes. His manner of dealing with his neighbour does not materially affect his professional success. If the sun shine at proper times and the rain fall in due season, the farmer is prosperous. His affairs depend on the behaviour of the sky, and the sky treats all sorts and conditions of men with absolute impartiality. Hence the farmer is under no practical obligation to establish a reputation for integrity and uprightness. But with the modern merchant the case is wholly different. For not only does his place in the markets at home and abroad depend upon the reputation of his goods, but also the possibility of establishing a system of credit is based upon the mutual confidence existing between man and man. It is scarcely necessary to remind you what is involved in a system of credit. A great part of the potentialities of banking depends on it, and by its means the effective power of capital is enormously multiplied. One of the chief obstacles to the rapid development of trade and industry in your country is that a proper system of credit has not yet been established, and I can conceive no more laudable or useful rôle for the graduates of this College than that they should devote themselves to inculcating a general conviction of the vital truth, "honesty is the best policy." I must crave your pardon if in thus speaking I seem to reflect upon the merchants of your country, but in connection with this subject of honesty it certainly would not become me to show any want of frankness. I repeat the general opinion entertained by foreigners who have lived long in your country when I say that Japanese commercial integrity has not yet attained a satisfactory standard. That it should have done so was scarcely to be expected, for, as I have already said, honesty is to a large extent the outcome of circumstances, and the circumstances of your merchants in the past were not favourable. Not only were they free from the keen competition which makes failure certain for anyone lacking the essential of honesty, but also the inferior social grade to which they were relegated must have deprived them of any strong sense of self-respect. You, therefore, enter the field of practical affairs with exceptional responsibilities and possibilities, not your own interests alone but those of your country and your profession being involved in your conduct. Let me add one word. Some of you doubtless will take the open ports as your arena of practical study, and will therefore come into contact with the European and American merchants who are engaged in the foreign trade of your country. It is the fashion with many of your journalists to speak in strongly condemnatory terms of the resident foreign merchant; to describe him as an arbitrary, grasping sort of person, who sacrifices everything to the lust of gain. Now the foreign merchant himself does not deny that some of the methods to which he resorts in this country are theoretically objectionable. But he declares, and if you investigate the subject you will find his claim strictly true, that he is driven to these methods by the very defects to which I have already alluded, namely, by the lack of a trustworthy sense of responsibility and by the comparative absence of commercial integrity among the Japanese merchants with whom he deals. He himself would infinitely prefer to conduct his business on lines of mutual trust and confidence, and it would pay him far better to do so. Much might be said upon this subject, but I have already detained you too long to trespass further on your patience. What I want to impress upon you is that you should not allow yourselves to be too much influenced by the diatribes of superficial critics. As a matter of sentiment it might be very agreeable that whatever part of your country's foreign trade is carried on within her own borders should be in Japanese hands. But from the point of view of practical advantage it would be impossible to find any better agents than the foreign merchants at the open ports. They take upon themselves the whole risks

of the trade. On the side of imports, they bring here such goods as seem likely to be needed, and since the number of competing nationalities at the open ports puts anything like combination out of the question, these goods are offered to your people at prices including a minimum of profit; while, if purchasers are not found, the loss generally falls entirely on the foreign importer. On the side of exports, they buy the staples of production and manufacture directly from the Japanese producer or middlemen, paying ready-money for them, and accepting all the risks and responsibilities connected with their transport and sale abroad. It would, I repeat, be quite impossible to find better agents than these men who bring to your country their capital and experience, and who stand between Japan and every chance of loss. It is owing to the operation of such a uniquely advantageous agency that within the short space of thirty years there has been built up a commerce which puts tens of millions annually into the pockets of your people, and your shrewdest plan is to utilize the services of these agents for the future conduct of an enterprise which has hitherto fared so remarkably in their hands.

Professor E. J. BLACKBURN, then spoke as follows:—Your Imperial Highness, Excellencies, and Gentlemen,—Mr. Yano has requested me to say a few words on this auspicious occasion. I am afraid I could not say much which has not already been eloquently put before you to-day and at similar previous gatherings. Besides, I do not desire to trespass too much upon your indulgence, and with your permission I shall be very brief. Allow me, first of all, to express my heartfelt thanks for the very kind reception which has been accorded me on my arrival in Japan and to state how highly pleased and honoured I am at finding myself amongst you to-day. I fully appreciate the distinction which the Japanese Authorities have conferred upon me by appointing me as professor in the Higher Commercial School. Let me assure you that I am determined to try and do justice to their choice to the utmost of my ability, and to leave no stone unturned where the advancement of the Kōrō Shōgyō Gakko is concerned. I am sure the school authorities and staff are highly gratified—as I am myself—to see so many distinguished guests present at this ceremony. It shows the great interest the leading classes of this community take in Commercial Education. The more intense this feeling becomes, the more beneficial will be its influence, and a time is sure to come when, by the combined efforts of the leading public men and the graduates of your commercial institutions, Japan will reach the full mercantile development to which her character, her resources, and her position entitle her. Before I finish, I must not forget to address my warmest congratulations to the graduates who have received their diplomas to-day, and to wish them every success and prosperity in their future career. I feel confident that the training they received at the Commercial School has prepared them thoroughly for their coming struggles on the battlefield of life. I sincerely hope that they may one and all go through the fire with flying colours, and so render to their country the valuable services which are expected from them.

UNION CHURCH.

A special meeting of the members and seat-holders of the Union Church was held on Tuesday, at 5.30, in the vestry adjoining the Church, to consider the financial outlook. There were present Rev. E. S. Booth, Rev. J. H. Ballagh, Miss Crosby, Mrs. Van Patten, and Messrs. A. J. Wilkin, G. Sale, W. F. Page, T. Rose, H. MacArthur, W. D. S. Edwards, G. Crouch, F. G. Sale, G. Lay, and L. Pollard.

Mr. WILKIN, being voted to the Chair, briefly stated the object of the meeting, and reviewed the Treasurers' report. The estimated deficit at 31st January, 1893, the treasurer placed at \$416.22.—To lessen this deficit, so far as possible, the following proposition agreed to were:—1st that a Committee consisting of three ladies and three gentlemen be appointed by the Chair, to canvass the Church and Congregation, with the view of obtaining additional seat-holders. Committee chosen. Mrs. Loomis, Mrs. MacArthur, Miss Deye, and Messrs. Rose, Edwards, and Pollard:—2nd. That the vessels in the Harbour be regularly visited, and the men invited to attend and support the Church. Captain Efford and Mr. Palmer were elected as a "water" committee:—3rd. That an appeal be drawn up by the Treasurer setting forth the present condition of the finances, this to be read to the congregation. This year the income of the Church from Pew-rents has decreased, and donations also compare un-

Original from

favourably with last year. From October, 1891, the receipts were considerably augmented by having a collection each Sunday morning—previously taken twice month—and this, together with \$259.33, balance of the Pastoral Fund, enabled the church to begin the current year with \$194.22 in hand.

The Rev. E. S. BOOTH pointed out that a sum of \$3,000 in round numbers would be required to meet the expenses of the church during the year ending 31st January, 1894, and proposed that the Congregation be canvassed to secure 30 subscribers of \$100, which would realize the necessary amount.

As an amendment, Mr. MACARTHUR suggested the advisability of finding 30 guarantors of \$100 each, who would be prepared to make good any deficit that might exist at 31st January, 1894, it of course being understood, that the weekly offertory be taken up, and pew-rents collected as heretofore.

Several present opposed the proposition, notwithstanding the amendment, and when put before the meeting, as only three supported the motion, it was lost.

Other suggestions of an unimportant character came before the meeting, but were dismissed without action being taken upon them.

A vote of thanks to the chair concluded the proceedings.

THE CATTLE PLAGUE.

[TRANSLATION.]

The following Regulations have been issued by the Governor of Kanagawa Ken:—

KANAGAWA KEN ORDINANCE, No. 64.

The hereunder precautionary rules shall be observed in order to prevent the introduction of the cattle plague. Offenders against the provisions of these rules shall be liable to a fine not under two yen and not exceeding five yen.

N.B.—The present Ordinance shall be put into force on and after the date of its promulgation.

16th November, 1892.

(Signed) UTSUMI TADAKATSU,
Governor of Kanagawa Ken.

1.—The introduction of living horned cattle or sheep and their carcasses or undressed skins, coming directly from, or after having touched at Tokyo Fu, Osaka Fu, Hyogo Ken, Oita Ken, and Fukuoka Ken, is prohibited until further notice.

2.—Any one having imported living horned cattle or sheep from any other Fu or Ken not mentioned in the preceding article, shall immediately report it to the Police Station of the district.

3.—Should the death occur of any horned cattle or sheep, this should be reported to the Police Station of the district, to which at the same time the proper certificate of a veterinary surgeon must be presented, and after having obtained permission, the carcass shall be buried or chemically converted.

[TRANSLATION.]

KANAGAWA KEN ORDINANCE, No. 65.

The five Kens of Nagasaki, Miyé, Nara, Yamaguchi and Yehimé are to be added to those named in the first article of the rules for the prevention of the cattle plague, promulgated with the Ken Ordinance, No. 64, of the year 1892.

17th November, 1892.

(Signed) UTSUMI TADAKATSU,
Governor of Kanagawa Ken.

VICTORIA PUBLIC SCHOOL SPORTS.

The Autumn Sports of the Victoria Public School came off most successfully on Monday afternoon, upon the cricket ground. The afternoon turning out bright and warm, induced a large number of ladies to put in an appearance, and their presence helped in a great measure to stimulate the youngsters to do their utmost to achieve success. The popular head-master, Mr. H. L. Fardel, acted as judge and umpire, Mr. G. F. Feuton fulfilling the duties of time-keeper, while Mr. W. D. S. Edwards took charge of the starting, sending off each race well. The elder boys acted as a General Committee, and they performed their share of the work very commendably, the handicapping being remarkably well judged. The lads threw all their energies into the sports, with the superabundant zest of early boyhood, and the result was that things never got slow or tedious. Most of the races were gamely run through, and some close finishes are to be noted: The times for the flat races were very good, and will bear comparison with those for older athletes. The jumping

competitions produced some fair results; in the High Jump Drummond failed to beat Wheeler's handicap by only an inch. The little girls' race, which was arranged on the ground, was decidedly a popular event with the boys, although they had to give vent to some good-humoured badinage when the eggs fell from the unsteady spoons. At the close, Mrs. Wheeler presented the prizes to the victors, and was thanked most heartily with "three times three." Cheers for the ladies, Mr. Fardel, and his assistant, brought the function to a close.

Details:—

100 YARDS.—(SENIORS.)

FIRST HEAT.

J. Drummond, hcp. 2yds 1
W. Braess, scratch 2
H. Russell, hcp. 8yds 0
Russell was easily disposed of. Time, 13 secs.

SECOND HEAT.

Carst and Wheeler a bye.

THIRD HEAT.

J. Braess, scratch 1
J. Drummond, hcp. 2yds 2
G. C. Wheeler, hcp. 3yds 3
J. Carst, scratch 0

Braess caught up his men half way down and won easily; very little separated second and third. Time, 11½ secs.

100 YARDS.—(JUNIORS.)

FIRST HEAT.

W. Carst, scratch 1
A. Brent, hcp. 1yd 2
J. Charlesworth, hcp. 4yds 3
A good race for premier position resulted in scratch man landing it by a few feet. Time, 14 sec.

SECOND HEAT.

G. Russell hcp. 7yds 1
H. Lee hcp. 2yds 2
W. Johnstone, hcp. 4yds 0
The limit man maintained his position all through. Time, 13½ secs.

FINAL HEAT.

W. Carst, scratch 1
G. Russell, hcp. 7yds 2
H. Lee, hcp. 2yds 3
J. Charlesworth, hcp. 4yds 0

The scratch man soon forged ahead and led from half way down. A close thing for second place. Time, 13 secs.

LONG JUMP.—(SENIORS.)

G. C. Wheeler, hcp. 7in. 15ft. 9in 1
W. Braess, scratch, 15ft. 4½in 2
J. Drummond, hcp. 5in. 14ft. 2in. 0
S. Kuhn, hcp. 2ft. 12ft. 0
Wheeler won on his handicap.

LONG JUMP.—(JUNIORS.)

A. Brent, hcp. 2in. 12ft. 9in 1
W. Carst, scratch, 12ft. 6in 2
Brent beat Carst by an inch without the handicap.

HIGH JUMP.—(SENIORS.)

G. C. Wheeler, hcp. 4in. 4ft. 5in 1
J. Drummond, hcp. 1in. 4ft. 3in 2
W. Braess, scratch, 4ft. 1in 3
Wheeler again won on his handicap.

100 YARDS.—(UNDER 15.)

J. Drummond, scratch 1
G. C. Wheeler, hcp. 1yd 2
W. Carst, hcp. 3yds 3
H. Lee, hcp. 5 yds. 0
Barnett, hcp. 5yds. 0
Booth, hcp. 5yds. 0

Once again the race lay with Wheeler and Drummond, and the latter got home first by a few feet. Time, 12½ secs.

THREE-LOGGED RACE.—(50 YARDS.)

R. Sakamoto and W. Braess 1
G. C. Wheeler and J. Drummond 2
A. Kingdon and K. Ozawa 3
M. Sakamoto and A. Brent 0
H. Russell and H. Lee 0

R. Sakamoto and Braess just landed home by a foot in front of Wheeler and Drummond. Time, 15 secs.

OLD BOY'S RACE.—(220 YARDS.)

Henry Goddard, hcp. 5 yds. 1
C. Gibbs, scratch 2
W. Crane, hcp. 5 yds. 3
H. S. Goddard, hcp. 5 yds. 0
O. Poole, hcp. 5 yds. 0
H. Watt, hcp. 10 yds. 0
H. Drummond, hcp. 5 yds. 0

A very good race among the first three men. Time, 31 secs.

200 YARDS.—(JUNIOR.)

W. Carst, scratch 1
W. Johnstone, hcp. 10 yds. 2
H. Barnett, hcp. 15 yds. 0
Won easily; Barnett gave up half way round. Time, 30 secs.

QUARTER MILE.—(SENIORS.)

W. Braess, scratch 1
G. C. Wheeler, hcp. 10 yds. 0
H. Russell, hcp. 30 yds. 0
Braess came in alone, the others giving up.

GIRLS' RACE.

Miss Cassie Cook 1
Miss Hettie Kuhn 2
Miss Barnett 3
Eight little ladies ran, and the majority carried in their eggs safely. The winner came in with a walk.

SACK RACE.—(50 YARDS.)

M. Sakamoto 1
H. Russell 2
C. Helm 3
A. Kingdon, S. Kuhn, W. Smith, A. Pohl, and H. Roux, also ran. An easy win.

100 YARDS.—(UNDER 11.)

G. Russell, hcp. 3yds 1
J. Charlesworth, scratch 2
W. Johnstone, scratch 3
H. Cook, hcp. 3 yards 0
H. Barnett, hcp. 3 yards 0
The scratch men failed to catch Russell, who maintained his start to the finish. Time, 14secs.

WHEELBARROW RACE.—(50 YARDS.)

A. Kingdon and R. Ozawa 1
G. Allcock and R. Sakamoto 2
A. Pohl and M. Sakamoto 0
W. Braess and G. Wheeler 0
C. Helm and H. Russell 0
An amusing race, only the two first barrows succeeded in getting home in the orthodox style.

CONSOLATION RACE.—(220 YARDS.)

SENIORS.

H. Russell, hcp 10 yards 1
C. Helm, scratch 2
A. Pohl, scratch 0
J. Kuhn 3
Won by a foot. Time, 32 secs.

JUNIORS.

F. Booth, scratch 1
H. Lee, scratch 2
H. Barnett, hcp. 15 yards 0
H. Cook, hcp. 15 yards 0
Won easily. Time, 32 secs.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, October 20th.

This letter will necessarily pertain chiefly to *res Columbiana*: it will begin with the celebration in New York City; it will include some general items about the World's Fair; and will close with the special festivities of the dedicatory ceremonies in this city.

The celebration in New York City began Sunday, October 19th, with special religious services in most of the churches and cathedrals of the Eastern metropolis. On Monday began a series of imposing pageants, opened with a grand parade of 25,000 children from public, private, and parochial schools, from institutions and asylums, together with young men from colleges and universities. They were received by Vice-President Morton, Secretary of the Treasury Foster, Governor Flower and others. In the evening, a select audience gathered in Carnegie Music Hall to listen to a cantata entitled "Columbus," and to an oration by Hon. Chauncey M. Depew.

On Tuesday took place the great naval parade, in which two hundred vessels participated. All the harbour shipping was gaily decorated; and all available places on land and water were occupied by immense crowds of spectators. In this marine pageant not only our own, but also some French, Italian, and Spanish vessels, took part. Various salutes from the men-of-war, salvos from the batteries, and applause from the spectators made the noisy part of the demonstration. In the evening, the Roman Catholics, 25,000 strong, marched; and afterwards a gorgeous display of fire-works was made from the great bridge.

Wednesday, October 12th, was, of course, the big day. The feature of the morning was the great military parade, "fifteen miles long," with fully 50,000 men in line. It occupied six hours in

passing a given point, and has not been equalled since the grand review of the Union armies at the close of the war, in Washington. Probably 3,000,000 people witnessed the parade along the elaborately decorated streets. In the afternoon, under the auspices of our Italian-American residents, a monument to Columbus was unveiled in Central Park. In the evening, the streets, brilliantly illuminated, were packed with crowds to witness the parade of allegorical floats, presenting historical events and personages.

The celebration closed on Friday, with a swell banquet of over 400 prominent citizens and visitors. Mayor Grant presided; and Vice-President Morton, General Porter, Governor Flower, and others delivered addresses.

In many other localities, October 12th was observed as Columbus Day with various ceremonies. In this city, the Italian residents had an imposing parade in the afternoon, a banquet at sunset, and a ball in the evening. The Columbus Club, a Catholic organization, also had a grand banquet with eloquent addresses at the Auditorium that evening.

As a temporary digression from Columbian topics, the University of Chicago affords an item of interest. That institution, with its usual good fortune, is to have the largest and best telescope in the world, and a magnificent observatory. This is due to the generosity of "Baron" Charles T. Yerkes, the millionaire owner of part of our street railway system of cable lines.

Still another exhibition has been opened in this city. It comprises the original "John Raron's Fort," in which is also a collection of war relics.

In religious items, there has come a dramatic phase of the Briggs case. By a vote of 19 to 1 the directors of the Union Theological Seminary voted to dissolve the compact with the Presbyterian General Assembly.

The Episcopal Convention, recently in session at Baltimore, has made a noteworthy record in reforms. The new book of common prayer is to be much shorter, and the ritual has been revised with a view to simplicity.

Last week the National Council of Congregational Churches had a session of three days at Minneapolis; and among other matters, had a lively discussion over the "close corporation" policy of the American Board of Foreign Missions.

But it is now time to return to the World's Fair. Hon. W. C. P. Breckenridge finally declined to deliver the oration at the dedicatory ceremonies. Senator Daniel, of Virginia, was offered the position, but declined. Henry Watterson, of Kentucky, was then selected, and, in spite of the lateness of the hour, gracefully accepted the honour. There is considerable ill-feeling in Kentucky over the Breckenridge episode; but it will probably disappear before long.

A telegram from Private Secretary Halford definitely announces, that "the President will not be able to be in Chicago." Vice-President Morton will, of course, officiate in the President's place; but the absence of the latter will detract from the interest of the occasion.

The campaign is warming up a little, but is, nevertheless, remarkably quiet. It is a contest of principles rather than of parades, of thought more than torch-lights, and is a great disappointment to the professional politicians. James G. Blaine delivered one speech from the porch of Whitelaw Reid's house at Ophir Farm; and the leaders of both parties are "orating" here and there. Among the Democrats ex-Minister R. B. Hubbard is active in campaign work, and was honoured the other evening with a reception by the Iroquois Club of this city. It still looks as if the People's Party will fail to poll a sufficiently large vote to break the "Solid South," but will draw enough from the Republicans to make the latter lose some of the Western States. This means no choice by the people, and the subsequent election of Cleveland and Reid.

The U.S. Supreme Court has unanimously decided that the Miner Law, by which Presidential electors in Michigan are chosen by districts, is constitutional.

President Harrison has issued a proclamation opening to immediate settlement about 1,800,000 acres of the Crow Indian Reservation in southern Montana.

The new commercial treaty between Spain and the United States has been formally signed by Secretary Foster and the Spanish Minister. It gives great satisfaction to both sides.

The Chinese residents in America are making preparations to contest the registration provisions of the new restrictive law. Meanwhile, no act of Congress seems able to prevent the Chinese from marrying American girls; for the other day Dr. Gue Wo, of Omaha, was wedded to a Miss Cora Dewitt, of that city.

A newspaper item brings the information from the city of Mexico, that arrangements have been

made for the establishment of a colony of 1,000 Japanese of "none but the better classes" in the State of Sinaloa in that country. This movement is said to be "the result of an extended investigation" made by a commission sent out by the Japanese government.

The New York Chicago line of telephone is now formally "opened" for operation. Mayor Washbream of this city sent the first message to Mayor Grant of New York; and then others, including Prof. Alexander Bell, the inventor, held conversation. This line is 950 miles in length.

The grand jury of Allegheny County, Pennsylvania, after it had been charged by Chief Justice Paxson, of that state as to what constitutes treason against the commonwealth, returned true bills against the members of the Homestead Advisory Committee of the strikers and also against the officials of the Carnegie Company and several Pinkertons for murder and conspiracy.

There is to be a solar Eclipse this morning and afternoon; but at present writing the sky is cloudy and does not look like clearing off. It is probable, anyhow, that but little attention will be paid to it in the excitement of the dedicatory celebration. The moon may hide the sun, but it can not eclipse the great parade which will be taking place at the same time.

The Chicago Columbian celebrations began on Sunday with special services and appropriate discourses in the various churches, and will continue throughout the week. On Monday, the guests and visitors began to arrive from the four quarters, and are still arriving in crowds. There is such a jam in the down town districts, that passage along the streets can be made only with extreme difficulty. The small boy rejoices in the presence of thousands of State militia and regular troops with their bands and banners. Vice-President Morton is, of course, the guest of honour; of the Cabinet, Messrs. J. W. Foster, Charles Foster, Elkins, Wanamaker, Noble, Miller, and Rusk are here with one or more members of their families; of the Supreme Court, Chief Justice Fuller and wife, Justices Harlan, Gray, Blatchford, Shires, Brewer, and wives; the foreign diplomatic corps in large numbers, including Ye Cha Yun from Korea, Pung Kwan Yu and Yun Kwai from China, and Minister Tateno, with Tamejima Miyasaki and Lieut. S. Nakamura, from Japan. Ex-President R. B. Hayes is here; but ex-President Cleveland, with thoughtful courtesy toward his rival, detained at the bedside of a sick wife, at the last moment sent a very kindly and delicate letter of declination. Almost every State in the Union is represented by its Governor, accompanied, perhaps, by other officials, or his staff, or part of the state militia, or all together. The officials, national and local, of the Columbian Exposition, are out almost in full numbers; and have improved the opportunity by having various meetings. Other notables, too numerous to mention, are here; and the *profanum vulgare*, the *heimin*, are well represented.

The city is magnificently decorated in all quarters, especially down town and out here by the World's Fair grounds, red, white and blue and terra cotta (the municipal colour) are variously blended. Flags of all nations may be seen here and there; in one window of Marshall Field and Co.'s retail store are four Japanese flags arranged about a sixteen-petalled chrysanthemum rosette.

Last night at the Auditorium Theatre the leading citizens of Chicago gave a reception, ball, and banquet to Vice-President Morton, the Cabinet, the Supreme Court, Diplomatic Corps, Governors, Army and Navy Officers, and other prominent guests. It was a very select affair.

This morning the civil parade takes place. As it will be necessary to start early to get a good vantage point from which to view it, I must close this letter now; but as the *Japan Mail* was favoured with press privileges, I hope in my next letter to be able to give a full account of the various celebrations.

(This letter missed the last mail.)

The village of Aucun, France, is at the centre of a great basin of bituminous schist, and is interesting from a scientific as well as an industrial point of view because it contains a quantity of precious fossils. One bed yields "boghead." This matter, which has been regarded as a mineral, has been proven to be not so in reality, but an accumulation of gelatinous seaweed and of silic substance. There are also grains of pollen in enormous number, having the appearance of little round points. These grains were discharged into the air by forests of trees intermediate between the cycads and the conifers, about the close of primary times, by a phenomenon that is still reproduced in the vicinity of certain forests, giving us "rains of sulphur." By this discovery, as M. Gaudry observes, Paleontology robs Mineralogy of one of its substances.

MOUNTAINEERING IN THE JAPANESE ALPS.

BY WALTER WESTON, M.A., F.R.G.S., ENGLISH CHAPLAIN, KOBE.

Are not the mountains, waves, and skies a part
Of me and of my soul, as I of them?
Is not the love of them deep in my heart
With a pure passion?

Lucundus acti laboribus. (CICERO, DE FIN.)

"It is amid the giant heights which on three sides wall in the secluded province of Hida, that the sublimest mountain scenery of Japan is to be found," says Dixon in "The Land of the Morning," and anyone who has had opportunities of travelling amongst representative types of the scenery of Japan will fully endorse his statement. The present writer was first induced to turn his attention to these "Japanese Alps," as they well may be called, by an enthusiastic recommendation given two years ago by Professor Chamberlain, and the result was a perfect revelation of unexpected grandeur. It is probably partly owing to the fact that travelling in this mountainous district is of the roughest kind that its wild fastnesses are, as Dixon puts it, "a charmed circle within a charmed circle isolated by nature much as the whole empire was isolated by man." Of all the provinces of Japan, Hida is the most remote and least known. Few travellers, either natives or foreigners, ever penetrate the vast solitudes of the mighty ranges which on the north and east cut it off almost entirely from communication with the outer world. And yet nowhere in the bounds of the Land of the Rising Sun is there such a marvellous range, so wonderful and complete a variety of nature's beauties, to be met with. From the richness of sub-tropical vegetation, to alpine snows, nothing is wanting. When the dark cone of Fuji has lost its snowy mantle these granite peaks and castellated cliffs still bear the glittering snow upon their steep sides, and more than one great river has its volume swelled by the waters which descend from their slopes of ever-wasting, never disappearing snow.

The easiest approach into these solitary wilds is from Matsumoto on the east, or from Gifu on the south, of the boundaries of Hida.

Last summer I took the former route, and it was from the top of the Hōinkuji-tōge, between Uyeda and Matsumoto, that I got my first view of ranges and peaks such as I had hardly believed Japan could boast of. Norikura with its saddle-like summit, Jōnen-dake with its beautiful triangular form—recalling the shape of the peerless Weisshorn, queen of the Pennine Alps—and, above all, the sharp peak of Yari-gatake, the Matterhorn of Japan, in all its naked grandeur—these and countless other heights, seen across the broad plain of Matsumoto, combined to form a picture which can never fade from memory and ever will remain one of its choicest possessions.

On that occasion, a week spent in an expedition to Yari-gatake, second in height to Fuji itself, was less productive than one had hoped, through bad weather. After two nights away from our inn at Shienajima, and the exploration of a new route to the foot of the final peak—the 'Spear' (*yari*) of the mountain—we were driven back when half an hour of good weather would have landed us on the summit. Rain, however, made the rocks in a dangerous condition for climbing, and ten hours of hard work, with little food all day, had brought us too late to the last stage of the ascent. So we were compelled to accept the inevitable and turn our backs on our peak, not without one of us, at any rate, vowing vengeance upon him and determining to return another year and plant an iron heel upon the giant's head.

It was with this end, amongst others, in view, that on August 1st last my friend Dr. Miller, of Kobe, and myself left by the 9.02 a.m. train for Gifu. Our plan was to make our way into Hida from the South, and then work round to the mountains from their western side, eventually crossing the range into Shinshū, our objective point there being the town of Matsumoto.

How far our plans succeeded, I have now to tell. The journey along the Tōkaidō railway is too well known to need description, but I may mention in passing that in clear weather one can get a glimpse of the snow-streaked summits of both Hakusan in Kaga, and Ontake in Hida Shinshū, if careful watch is kept when passing through the station of Ogaki. Last November I had enchanting views of the then snow-crowned peaks, but often the summer haze prevents them from being visible. Hakusan is nearly N. and Ontake N.E. From Gifu to Seki, our first night's stopping place on the road to Takayama (the capital of Hida), is a distance of about 100 miles. The first part of the road, the Hida kaidō, is very good, but later on it becomes bad beyond expression. Warned of this, we had only engaged one *jirikisha*, into which we packed our baggage, preferring to nego-

tiate any possible pitfalls on foot, as well as to enjoy the walk through what was to be really pleasant scenery, in the calm and quiet of the dying summer day. Beyond Akutami the road crosses the Tsubokawa, an affluent of the Nagara-gawa; the view of the hills to the left and the rapids of the broad stream on the right being extremely pretty.

The last half or more of the road proved far worse even than we had been led to expect. In some places we had literally to lift the *kuruma* along, and as darkness at length fell we had to give constant attention to the baggage, for it was jolted along in momentary danger of being hurled pell-mell into the gaps yawning on every side. However, by getting all hands to the wheel, not without a frequent wish we each possessed more pairs than the nominal number with which nature had endowed us, we managed to overcome all obstacles, and after a trudge of four hours we arrived at Seki at 8.30 p.m. Here we found excellent accommodation at the "Yorozuya," additional attention being shown when the fact of my companion's therapeutic powers became known. For our landlord brought in a friend, who was ill, for examination, and as a token of gratitude for assistance given, presented each of us with a pretty little fan, and to the doctor he also gave a very neat stiletto. Some difficulty was experienced in getting *kurumas* here at anything like a reasonable rate, the reason advanced being that of the unusually bad state of the road to Takayama, and so the bargaining lasted long into the night before an agreement was reached.

As the next day's journey took us only a distance of 32½ miles, it will be at once seen that there must have been something rather rough about the road we passed over. With two men to each *inrikisha* we were off at 6.30 a.m., a lovely morning greeting us as we said our good byes and turned our faces towards Takayama. For the first seven miles or so, the road thither fully bore out the bad character it had been given, but then comes a remarkable change, the next 15 miles (the portion between Tonomura and Kanayama) being almost fit for a bicycle track nearly all the way, although the latter part is somewhat hilly. On nearing Kanayama the character of the scenery alters, growing grander as the mild hills and valleys of Mino are left behind and we draw near to ragged cliffs which wall in the swift flowing waters of the Hida-gawa.

Just outside this village is one of the most picturesque spots on the whole of the route. It is here that the Mazegawa, one of the most important tributaries of this river, comes in to swell the volume of the stream, and at the angle formed by the two a view is presented which will not readily be forgotten by those who once behold it. From Kanayama right on to Kukuino, a distance of nearly 40 miles, the road follows the course of the Hida-gawa, whose well wooded valleys and rocky ravines furnish a constant succession of scenes of varying beauty. Just after passing Shimohara, a neat village a mile or so beyond Kanayama, a picturesque temple at the foot of a magnificent grove of dark cryptomeria on the left attracts one's attention, but along the whole route it is the hand of Nature, rather than that of man, which furnishes us with a never ceasing source of wonder and delight. At one time we are passing almost within reach of the stream, at another the road winds along the edge of a precipice of 500 feet or so above, wooded from its summit to the water's edge.

Near Hiodo, 3 *ri* beyond Shimohara, the scenery is particularly striking, affording a lovely view of pine-clad islets rising from the rapids of the torrent bed.

At the former village, we are told that the day is now too far advanced to enable us to push on to the next stopping place—Gero—before night-fall. The latter part of our route has been bad enough, it is true, but the worst, the coolies say, has yet to come. The experience of the road for the last few miles has been trying, but the prospect of going on for another eight miles along anything more vile is hideous. One cannot afford, in such scenes as these, to have one's attention distracted from drinking in the charms that Nature's lavish hand holds out for our delight at every turn, by the prosaic discomforts of a *finrikisha* jolting out all the better feelings that should have play to the very full. Accordingly, we decide to stop the night at Hiodo, our resting place being an unpretentious inn on the outskirts of the little village that consists merely of a few scattered houses dotted here and there over a part of the valley rather more open than that through which we have just been making our way.

On the following day we found abundant cause to congratulate ourselves on our decision.

The road is for some distance out in the rocky face of the precipices which overhang the river on our left. Heavy rains have in some places

washed the thin layer of soil almost entirely away from the rocks beneath, and it is hard work for the *finrikisha* to get along. Having hoped to gain time on the way from Teki to Sakayama by taking them, it was somewhat of a disappointment to find them so useless. But there was no help for it, and our thoughts could not but turn with never ending delight to the fresh beauties that opened out on either hand.

Curiously enough, the most beautiful part of the route has been given the most unbecoming name of *Figoku* (Hell), apparently by reason of the fearsome aspect it presents to the beholder.

After a hard pull for some 5 or 6 miles beyond Hiodo, the road begins to improve, and a fine view greets us as the river makes a sudden bend, and passes under a picturesque bridge at the point where a branch road turns off to the Nakasendo. (This road, after crossing the boundary of Hida and Mino again, itself bifurcates, its upper parts turning round to the north-east and coming out at Fukuishima in Shinshu, whilst the lower arm takes a short cut to the south-east and joins the same great highway just after it crosses from Shinshu into Mino at Nakatsu.)

Near Gero the road loses itself in the boulders of the bed of a torrent which here dashes into the Hida-gawa on the right, and after heavy rains some difficulty must be experienced in getting *kurumas* across. Further on, at Osaka (sometimes also called 'Ossaka') we reach the loveliest of all the many beautiful scenes with which this route abounds. The village stands at the angle formed by the confluence of the Hida-gawa with the Osaka-gawa, and the sight of the wild waters of the tributary torrent as it comes rushing down a ravine on the right, combined with the stern ruggedness of the cliffs which rise up on the left, all unite to form a picture of entrancing beauty.

This, indeed, forms a fitting climax to the constant succession of charming views through which we have been passing for a day and a half, and the rest of the route is almost tame by comparison.

Another 10 miles and we are at Kukuino, where, for the present, we say good-bye to the great stream, which has afforded us such a constant source of pleasure whilst it has been our companion—though always a passer-by—during so many miles. Its name, however, is a little puzzling, as it varies, from time to time like that of most of the more important rivers of Japan, according to the locality through which it passes.

For instance, that given it at its birth from the deep emerald waters of the tarn O-ike on Norikura, whence it springs, is Adanogō-gawa. As it grows older and bigger, further on between Kukuino and Osaka, its name is changed to Masuda-gawa; whilst, curiously enough, it is not until it leaves its native province of Hida and passes into that of Mino, that it assumes the title by which it is best known, of the Hida-gawa. Near Ota, on the Nakasendo, it ceases to have any individuality, its waters being merged in those of the broad swift flowing Kisogawa whose delta embraces the broad plain at the head of Owari Bay.

From Kukuino a path follows the course of the river for seven miles as far as the village of Miza on the Nomugi Tōge from Takayama to Matsumoto, and would save a considerable distance to those who were not desirous of going on to Takayama before crossing that pass.

Leaving our *finrikishas* here—with the exception of the one containing our baggage—we applied ourselves to the crossing of the Miya-tōge, over which a remarkably good road leads, for a distance of 7½ miles, to Takayama. The summit of the pass is reached by a gentle ascent of about 1½ miles, and on attaining it a fine view of the hills on the west of Takayama is obtained. The descent from the top of the pass as far as the village and temple of Miya—the latter really giving the name to the former—is effected by a remarkable series of zigzags, the serpentine windings of this road being very cleverly arranged. It is only 24 *cho* from the top to the temple, which stands on the right hand side of the path in the shade of a fine grove of stately cryptomerias. This is the principal Shinto temple in the whole province of Hida, and is said to have been founded in prehistoric times, though the present buildings are comparatively of a recent date. The situation is very fine, and though the buildings are of the simplest character there is a solemn stateliness which is very impressive. In a shed on the right of the gateway are several wooden horses of various sizes, the smallest being apparently nothing more than a child's rocking-horse without the rockers, and presenting a ludicrous incongruity with its surroundings. Passing on from here we soon cross the river Miyagawa, and our route for a short distance follows its valley, at length coming out into the small plain in which stands the town of Takayama, the capital of the province of Hida, with a population of a little over 15,000.

Here we put up at a very comfortable inn, the Tanekaya, whose landlord, from the time he sent out a servant with a lantern to meet us on our entrance into the town, until the moment when he said a polite farewell the next morning, showed us a courtesy and attentiveness which are always most noticeable when *not* on the beaten tracks in Japan.

It was a surprise to find, on making enquiries here, that it was possible to take *kurumas* for some distance, and so save time, along the way eastwards to Hirayu, the place we had fixed upon as the basis of our operations upon the western side of the "Alps of Japan."

Accordingly our spirits rose as on the next morning we found ourselves early bowling along the road which passes out at the north-east corner of the town in the direction of the great peaks with which we were eager to make a nearer acquaintance. At first the road is somewhat rough, but later on, especially beyond Odani, it greatly improves, partly owing, no doubt, to the composition of the hills whose sides it traverses. Charming views open out from time to time in the fresh clear morning air, as we wind in and out of the hollows of the hills, now close by the side of the busy torrent hurrying down from its birth place in the great solitary mountains to join the river in the busy plain, then again looking down on its dark waters from far above as the road steadily climbs the gradients on the lower spurs of the great peaks. Perhaps the loveliest part of this charming route is that just beyond the little hamlet of Odani, some six miles out from Takayama.

Here the Niūgawa, with its dark impetuous rapids crossed at intervals by picturesque little bridges, dashes down the narrow defile between the richly wooded cliffs from its birth-place in a deep emerald lake—the Oniū-ike—which afterwards we looked down upon when climbing the higher ridges of Norikura. It is one of the summits of this peak which we now catch sight of rising far above its neighbouring satellites.

About ten miles from Takayama a neat wayside temple is passed on the left, close to the hamlet of Hiomo. It was here, as we turned to look down the valley up which we had just come, that a view, as striking as it was unexpected, met our gaze. There, 60 miles away, as the crow flies, forming an exquisite vignette in an angle of the nearer hills, rises the massive cone of Hakusan the great "white mountain" of Kaga. Its precipitous sides, "scarred with a thousand wintry water-courses" and picked out here and there with glistening slopes of snow, are sharply defined against the blue vault of heaven. There is no intervening plain to catch the eye, only the forest-clad hills in the immediate foreground, and then this grand far-off peak rising up in the angle they make as their outlines meet. The contrast between the near glorious greenery of trees of every shade and the distant grey and purple and white of this great pyramid standing solitary in the clear atmosphere of a perfect summer's day, was indescribably beautiful. It was a happy inspiration that prompted us to stop just at that spot to take some observations, for in doing so, to turn round and see this lovely picture spread out before us.

In a little less than four hours from the start, our *kurumas* come to a full stop, the road itself almost doing the same, or at any rate dwindling down to a narrow track which crosses the foot hills of the great chain and leads to the little village of Hirayu. It is about 11 o'clock when we reach Hataloko and here the *finrikishas*, for which there is no further use, are sent back, and arrangements have to be made for transporting our baggage over the pass, commonly known hereabouts as the Hirayu-tōge. This is no easy task, for we are completely in the hands of the house at which we stopped and unburdened the *kurumas*, and as this gentleman knows full well that he has us at his mercy, his demands are proportionately exorbitant. However, we had determined not to yield, and as he was in an equally obstinate state of mind, there seemed to be every prospect of a dead-lock. We had plenty of time to wait as the pass would only take about four hours to cross, so we left him to reflect until he should arrive at a better and more reasonable frame of mind. In the meantime, we fell to on our mid-day meal, and somehow or another the fact of the therapeutic powers of my companion eked out with astonishing results. For within about half an hour not only had a large proportion of the inhabitants of the village received medical attention "free of charge" but our crusty friend had so far softened as to provide us with the help we wanted at a comparatively reasonable rate. It is, however, well to bear in mind, on such occasions as these, that as the peasants in mountainous valleys usually turn out to their work at an early hour, there is always a scarcity of coolies available for transport purposes, and consequently if a man is to be induced to

leave his day's work and go off elsewhere, he generally expects to be well-paid for doing so.

It was just mid-day when we left Hatahoko, which, by the way, is well situated at the head of the valley through which we have come.

In front of us the valley divides. The left branch going up into the hills which rise between us and Hirayū, and the right penetrating far into the massive flanks of Norikura, the first of the giants of the range to which our attention is to be given. High up this valley lies the lovely little lake in which rises the Niūgawa, one of the tributaries of the Miyagawa, this again forming one of the principal feeders of the Jindzu-gawa, well known to the Japanese as almost the greatest of the swift streams that empty themselves into the Sea of Japan.

It is possible, by following a track which winds up the lovely defile towards the lake, to make the ascent of Norikura, but as we had decided to make Hirayū our head-quarters, we left this route untried, and set out, with our two porters, for that place via the Hirayū-lōge. The path winds steeply up the valley to the left, for a while near a mountain torrent of the usual noisy sort. By and by, however, we lose its companionship, and after passing a group of cottages, collectively known as Kute, we find ourselves at last out of the reach of human habitations, save here and there a solitary charcoal-burner's hut situated in an open space cleared out of the dense forest of firs, beeches, oaks, and other trees.

In a little over 2½ hours we arrive at the top of the ridge, on the other side of which, close by the summit, we find a hut tenanted only by a few more or less dilapidated stone images of Buddha. A short rest here, and down we plunge into a hollow at the bottom of which lies the little village of Hirayū, which, however, is at first hidden by an intervening slope of the steep hill side we are descending. On the way down we get good views of Norikura a little to the right, and lesser heights in front and on the left. A descent of less than an hour and we are standing at the hospitable door of Yomosaburo, and very soon afterwards we are sitting up to our necks in the hot mineral water bath close by. These waters—impregnated with iron—are conducted from the spot at which they rise, into several bath-houses in the village, by means of bamboo pipes, but as the temperature is originally some 190°, other pipes bring in a supply of cold water as well, in order to make it possible to bathe without being parboiled. The spring leaves the ground about 100 feet from the bath house furthest up the village from the inn. During the evening we had a visit from another occupant of the house, by name Mr. Kumagaye, an official in the Kanagawa department of the Agricultural Board, who was making a report on the Botany and Geology of this district. He showed us some interesting sketch maps of various sections of the neighbouring mountains, which were of assistance to us in settling our route when next day we set out for our first mountaineering expedition, the first ascent of Norikura from the N.W.

In order to do this it was necessary to spend the night somewhere on the mountain, so the next morning after our arrival at Hirayū was chiefly spent in getting information on the subject and making the necessary preparations for our climb.

As a result of our enquiries we found that it would be possible to sleep at the huts of the workmen employed at a mine situated in the hills some 4 or 5 miles from Hirayū, and from here we might be able to find some practicable route to the top of our peak. Accordingly, having secured the services of a couple of coolies overnight, we set off at 2.15 p.m., and left the village by a path to the S.E. which brought us, in a quarter of an hour, to the works where the copper from the mine I have mentioned is smelted, and, passing this, the ascent soon leads up a valley down which comes dashing the torrent of the Takahara-gawa. This eventually joins the Miyagawa on the N.W. corner of the boundary of the provinces of Hida and Etchū, that river then flowing into the Jintsu-gawa, as I have already mentioned.

A steep pull for a mile or so brings us to a point just above a magnificent cascade, formed by the Takahara-gawa near its source, which falls with a thunderous roar into a rocky basin more than 200 feet below. It was difficult to realize that this was the same as the slender silvery thread, to all appearance as light and soft as silken ribbon when seen from the village not two miles away.

In two hours from the start we found ourselves at the end of the path, and at the entrance of the little mining settlement of which we had been told. This consists of one or two long low lines of huts built on the steep hill-side in which the mines are excavated. Outside the front of the huts runs a sort of gallery or covered-in verandah, for the miners stay on here all the year round, and judging by the summer temperature as we found it, the winter cold must be intense enough to make a good

deal of protection necessary. On making as polite an application as we could—for we were alone, our porters not having yet arrived—we received a most hospitable welcome, and on accepting the kindly invitation to enter, we found ourselves in a comfortable little room, quite as cosy at least as the one in which we had spent the previous night. This, we discovered, was the office of the overseer of the mines, and served him and some of his subordinates also, for the purpose not only of office, but of dining and bed-room as well. By and by, our coolies arrived with the baggage and we immediately set to work making ourselves snug for the night. First, however, came the evening meal, and here we fared regally, being supplied by our host with a liberal quantity of octopus and sweet potatoes fried in oil, an addition to our own provisions of such an appetising character that the latter were really hardly needed.

Before turning in, we had a chat with our new friends about our surroundings. The mines, they told us, had only been working some 3 or 4 years, the quantity of copper produced being about 150,000 lbs., and that of silver 2,500 lbs. annually. A similar mine was formerly worked on the east slope of this northern spur of Norikura, and traces of the old buildings, furnaces, etc., are still to be seen in the neighbourhood of Onogawa on the Shinshū side. But for 30 years or so operations have been suspended, and the works are now deserted.

The miners at Kōzon here carry on their vocation all the year round, and as the mine is at an altitude of nearly 7,000 feet, in a somewhat exposed position, the cold in winter must be intense. The path up from Hirayū is, of course, buried deep under the snow, and as the ordinary *waraji* are unsuited for snow-walking, recourse is had to foot gear specially adapted to it. For hard snow a sort of crampon called *kana-kanyiki* is used, consisting of a flat metal band with three iron points.

When, however, the consistency of the snow will not admit of these being used, a light frame of bamboo, like a Canadian snowshoe without the interior netting, allows the walker to tread in safety over the deepest snow-drifts. About 150 labourers, of all ages, are employed, most of them being housed at night in huge dormitories in the same buildings we ourselves were occupying. This last fact, however, had its drawbacks for us, for just as we were thinking of going to *futon*, a commotion in the dormitory next to our room announced the arrival of an itinerant story-teller and his assistant *samisen* player. The workmen being unable to get down to the lowlands for their amusement, those who cater for it have to do as Malomet did to the mountain, and unluckily for us, on this occasion selected a most inopportune evening. It was hardly to be expected that when once the miners had got their mountebanks they would let them go without getting their money's worth, and as none like the Japanese so thoroughly make a business of their pleasure, this performance went on until midnight. The result was that our start the next morning did not take place until 6.30, but at that hour we found ourselves on the way. At first the coolies hesitated a good deal. "The weather was not fit," they said "it would be very dangerous—we might get benighted," and so forth. However, no notice was taken of their objections, and additional moral support came to us in the shape of a cheery old fellow who arrived at Kozan just before we started, he having come up from Hirayū that morning in order to accompany us, and so learn the way with a view to himself hereafter becoming pilot to any stray traveller who might want to follow us on this climb. He proved to be a person of surprising activity of body, and no less astonishing cheerfulness of mind, and his presence was a help to us by raising the spirits of our porters.

Our ascent began by our going down several hundred feet on a steep shale slope just below the huts, this being necessary in order to allow us to cross the torrent and get up the precipitous bank beyond at a practicable point.

Rain was falling as we got to work, and continued to close until we got clear of the forest through which we now had to make our way. This was, on the whole, the most trying part of the climb. Hidden tree stumps in the long grass lay ready to trip up the unwary one; and while attention was being given to these, an unseen branch above would be ready to catch the head. The least shake given to bush or bough brought down an impromptu shower-bath, and slippery grass brought down the climber himself. For nearly an hour this continued, and more than once the coolies wanted to give in and turn back. However, we managed to make them hold on, and at length we emerged from the forest, having rounded the spur which is thrown out between the torrent below Kozan and the one for which we were aiming and up which we wanted to climb. The altitude

of Kozan is about 7,361 feet, according to a comparison of observations by aneroid and boiling-point thermometer made the day before, but our hour's work had brought us very little above this, and it was not until after passing an awkward place which slopes down to the point at which we crossed the second torrent bed, that our ascent really began.

Far off on the right the lowest snow bed showed up dull and cheerless in the cold rain, at about 200 feet below us, but not until after a good scramble up the boulders and rocky sides of the torrent—now nearly empty of its usual stream—did we actually come into contact with snow. The rain now soon ceased, and after a halt for breakfast we again pushed on. We now turned southwards to a ridge on our left, and on overtopping this found ourselves looking down on the lake, Oniū-ike, at the head of the Hatahoko valley, from which, as I pointed out before, the Miyagawa receives a tributary, the Niūgawa, in the plain of Takayama. Northwards, the view takes in all the great peaks of the Hida chain, Yariatake, Kasadake, and many peaks of which we could not discover the names. Grand and precipitous are these granite giants of the Japanese Alps, and the cloud-curtains that veiled their lower slopes only served to heighten the appearance of their grandeur. Descending the further side of the sharp ridge we are on, and passing over a steep slope clothed with the low spreading branches of the spiky *haimatsu*, we reach a long snow slope, inclined at a moderate angle and ending in a saddle, on the other side of which is a clear lake of no great depth, surrounded on nearly all sides by rugged peaks and ridges that form a striking natural amphitheatre. At the foot of one of the most broken of the ridges some natural caves are formed, and in one of these, at an altitude of 8,820 feet, we sheltered from the wind and proceeded to fortify the inner man. After rest and refreshment came another scramble over a still steeper rocky crest, and then another gradual descent through a long stretch of *haimatsu* which eventually landed us at 11.30 at a hut built here for the benefit of those who ascend the mountain by the route from Onogawa on the Shinshū side. Leaving this—the Murodō as it is called—without delay, we made for the steep slopes in front and a short climb landed us on the sharp *arête* which runs down from the double-topped summit of the mountain and evidently forms part of the lip of the crater, for Norikura is an extinct volcano. Shortly after noon we were standing on the northernmost of the two peaks, the highest point of the mountain, the altitude of which, according to the Japanese Geological Survey map, is 10,387 feet. I think this is too high, our own calculations giving 10,150 feet as the result of the comparison of a number of aneroid and boiling-point observations.

(TO BE CONTINUED.)

IN THE TOKYO COURT OF APPEAL.

MOURILYAN, HEIMANN AND CO. V. THE GOVERNOR OF KANAGAWA-KEN—THE KEROSENE OIL CASE.

Appellant—ARTHUR H. GROOM, Manager of MOURILYAN HEIMANN & Co., Export and Import Merchants, 35, Foreign Settlement, Yokohama.

OKAMURA TERUHIKO, Counsel for Appellants. HARADA KEIGO, Counsel for Appellants.

Respondent—UTSUMI TADAKATSU, Governor of Kanagawa Ken.

TAKAHASHI SUTEROKU, Counsel for Respondent.

KOIDE RIUTARO, Counsel for Respondent.

Upon resuming, Counsel for Appellants said:—I wish to refer to another statement made by the other side. It was stated that when any portion of the kerosene was delivered, the number of cases released from the official warehouse was recorded on the back of the warrant. No doubt such was the custom practised, but the officers were not bound to do so by the Regulations. Indeed, such a process is against the rules prescribed, for every time any portion of a deposit of kerosene is delivered a new warrant should be prepared recording the number of cases remaining. But I presume this having been found troublesome, the officials adopted a more convenient form of registry. Since the Regulations do not provide for such an altered mode of recording the amount of deliveries the depositor naturally does not consider it a matter of very great importance. In short, the respondent acted thus of his own choice. The second point is whether the Chinese, who demanded deliveries of the oil, had any power to do so? I believe this is the most important question that has arisen. Now, in the first place, the ap-

pellants declare that it is not the custom of Yokohama merchants to confer such powers on Chinese employes. It is the common usage never to give such powers to the Chinese; but the respondent declares that other firms do confer such powers on Chinese, and in exhibit No. 5B the name of Shinko Yoko is mentioned as an instance. But I think there is considerable doubt as to that name being that of a Chinese; it is more probably a translation of the name of some foreign firm—of course I do not acknowledge it. For instance, the title of the Hongkong and Shanghai Bank is translated into all sorts of Chinese characters. At any rate, the fact of no such powers having ever been conferred on Chinese was clearly stated by Mr. Middleton in the Lower Court. Moreover, the representative of the appellant firm declared that he never gave any such power to the Chinese. I think that no further evidence is required to prove my contention. As I have said before, the Chinese were mere godown-keepers, and they demanded delivery of kerosene by orders signed by the representative of the appellant firm, and nothing more. They destroyed the genuine orders, however, and prepared new ones themselves, which they took to the respondent. The latter may allege that the Chinese came so often that he considered the orders which they presented to be genuine, but that does not alter the fact that they were counterfeit from the very beginning. I don't think that it is right to urge that since these Chinese orders were brought so frequently, the authorities did not care whether they were genuine or not. The culpable negligence that we complain of on the part of the respondent is, that not only did he carelessly believe the statements of those Chinese, but also, against the very provisions of the Regulations, delivered goods to Chinese in exchange for delivery orders, signed by Chinese, and having neither the signature nor the stamp of the firm, though the goods were originally deposited in the name of Mourilyan, Heimann & Co. The respondent alleged that since the Chinese had often appeared at the warehouse on behalf of Mourilyan, Heimann and Co., the warehouseman thought that Chinese always represented that firm. But such is certainly not the case. The fact is, the authorities were deceived from the very beginning, and as the deception was practised so often, they at last came to deliver goods in exchange for delivery orders signed by Chinese only. This is, indeed, the negligence with which we charge the respondent. Now I wish to draw attention to a significant fact. Will the Court look at this document? On it is affixed a stamp of the firm over the signature of the Chinese. The respondent may allege that since a stamp of the firm is on the document, the firm must acknowledge its genuineness. But that would not be in conformity with the usage of Yokohama. Even granting that the stamp is very like the stamp used by the firm—even if we grant it to be the genuine stamp, as my associate said previously—such stamp alone cannot make the order valid, for to make it conform with the Regulations it must also bear the signature of the representative of the firm. It is expressly mentioned that the signature of the owner of the goods is required on the order before it can be recognised by the authorities, therefore, the signature of a Chinaman is insufficient at the outset. Again, Exhibit No. 7B, alleges that as the first portion of the oil was delivered to the signature of the Chinese, and such fact was recorded on the back of the warrant, the proper representative of the firm could easily have discovered that a wrongful representation had been made when he drew out the remainder with his own order on the same warrant. But that could not be the case. The warrant was given to the Chinese to keep because it was known that without a delivery order signed by the proper representative, the mere production of such warrant would not enable the Chinese to draw out any goods mentioned in it. Such being the case, the appellant firm were under no obligation to examine each warrant carefully before handing it back to the Chinese. The respondent has therefore no ground for saying that the mere possession of the warrant by the Chinese was an act of negligence on the part of appellants. The only important document in delivering goods is the delivery order. At first sight, it may seem plausible to say that as soon as the warrant is produced the goods ought to be delivered, but when one thinks the matter over it soon appears that it is not so. Again, there is a document alleged by the respondent to be received from the Chinese Consulate. The appellants presented some documents to the Consul, but whether that produced by the respondent is the same or a copy of the same, we cannot tell. At any rate, the appellants incurred a great loss and to the inexperienced it was somewhat difficult to see who had been the cause of it. Owing to this difficulty the appellants instituted a

suit against the Chinese, only to discover afterwards that the real cause of the loss was the negligence displayed by the respondent, acting through his agents. The appellants can sue either the respondent or the Chinese at the Chinese Consulate. Therefore, it is incorrect to say that the Chinese Consul ordered the appellants to investigate the matter. In fact, there is no evidence to that effect. Now I come to my third point. We have experienced much trouble in regard to the documents lying in possession of the Kencho, who have refused to comply with our request to produce them. But since the Court has ruled that there is no provision in the laws of the country to compel respondent to produce the documents, we cannot help ourselves. Under these circumstances we think that the Court ought to accept Exhibit No. 5, which is a copy of the originals in the Kencho. Why does not respondent produce the documents? Is it because he thinks that they are damaging to his case? If there were no flaw in the originals, they should have been presented readily. We have preserved copies, and have presented them as evidence, and I hope the Court will accept it. On this subject, Edwards, a clerk of the appellant firm, declared that he accepted the figures as correct in the Lower Court. Such being the case there is no dispute as to the number of cases. The respondent may ask whether there are not some more cases beside those mentioned in the documents. There might have been some more, but since the money for them has been received by the appellants they are not included in this suit. Perhaps this may not seem very clear; but in these cases the proper representative prepared the orders which the Chinese received, and having obtained the oil they sold it to the parties concerned, and then paid the money to the firm. Whether the Chinese made out fresh orders on those occasions or not is unascertainable now. Even if the Chinese did prepare new orders then, and drew out a greater number of goods than were mentioned in the originals, they brought in the proper amount of money for which the original order was prepared. The appellants must therefore consider that the proper order only was presented in those instances. As the appellants incurred no loss on those portions of oil, no compensation for them is demanded. Therefore, that amount is subtracted from the indemnity demanded by us. Now, if there is no evidence to prove that the Chinese were properly authorized by the appellant firm to receive oil on their own signatures, then the money obtained by them for the oil so received was acquired by swindling, and the law of the country will allow an indemnity for it. Perhaps it may be alleged that we were negligent in not having notified the names of the properly authorised representatives of the firm to the Kencho, but such would be an erroneous conclusion; for the Kencho is aware that it is a common custom in Europe never to notify such things, and the Kencho no doubt has acted on the knowledge. Such being the case, I believe and contend that the respondent has a legal obligation to comply with the demand of the appellants.

Counsel for Respondent—The gist of the pleading of Counsel for Appellants is that in the present case it was negligence on the part of the Kencho to have delivered goods in exchange for delivery orders signed by Chinese, and accompanied by the original warrant. Now the respondent holds an exactly opposite view. That is to say, the respondent does not consider the delivery of the goods to the appellants to be a negligence at all, but that on the contrary the negligence lies solely with the appellants. But before dwelling upon that subject, I must state that there is no just reason whatever for demanding an indemnity in the present case. When we examine the report of the proceedings in the Lower Court, we find that the appellants experienced much difficulty in stating their case. But by clever pleading they maintained that the whole of the kerosene oil imported by the *Anglo-American, Milverton, and Calypso*, was wrongfully delivered, and for this an indemnity was demanded. But now they plead quite differently. If both notes are compared, the Court will find that there is much conflict. The appellants first stated that there were altogether nearly 130,000 cases of kerosene wrongfully delivered; yet the indemnity asked for now is only for about 40,000 cases. That is not more than a third of the first stated loss. The reason for this is not easily discovered. The total number of cases imported by the *Anglo-American* and other ships amounted to over 130,000, and they were all drawn out by orders prepared by the Chinese, but out of the number some eighty or ninety thousand cases are in the hands of the appellants, or they have received payment for that amount; therefore an indemnity for the remaining forty thousand cases alone is de-

manded. They allege that about two-thirds of the value of the whole amount of oil was received in money. Where did that money come from? The kerosene oil thus delivered was sold by the Chinese, and the money paid to the appellant firm. Even if it be granted that the whole was wrongly delivered, as alleged by the appellants, they have to acknowledge also that two-thirds of the loss was recovered. Thus, when the statement of the appellants is dissected, it amounts to nothing more than this: the appellants having found a shortage of 80,000 yen on their kerosene account, demand compensation for that amount from the respondent. It is as if they said that such and such deliveries were illegal because a loss was incurred by them, and, therefore, the loss must be made good by the respondent. They allege that they incurred a loss. But unless the circumstances of such loss are plainly proved, no indemnity can possibly be demanded. That is to say, it must be proved that the delivery of the oil was illegal, and by its illegality a loss was sustained by appellants. But no such process of stating or proving their case has been adopted. They simply said that all the kerosene oil imported by the *Anglo-American* was wrongfully delivered—such a statement I believe to be a mere subterfuge. They have not, I say, gone the right way to work in formulating their demands. The appellants did not at first consider the deliveries of the kerosene oil to be illegal. For when the loss was discovered they brought a suit against Akew, Shin Kitchin, and Alai, for the theft of some 70,000 yen, in the Chinese Consulate, as exhibit No. 6B will show. Though the appellants did not acknowledge it, that exhibit bears the stamp of the Chinese Consul, and it is expressly stated beneath that the Consul has forwarded a copy of the document to plaintiff for filing. It is therefore an exact copy of the petition presented by the appellant firm, in which the appellants charge those Chinese with theft. Thus, at the beginning, the appellants believed that the sum now demanded as compensation for loss sustained by them was stolen by the Chinese, and we think that they were correct in their first belief. But to resume. The most important document in withdrawing kerosene from the warehouse is the warrant. This warrant is as valuable as a promissory note or cheque. Since the Chinese always brought with them this important document, it was only natural for the warehousemen to think that they were properly authorised to do so. Such a document might never have been left in the hands of the Chinese if the circumstances of the case are as appellants allege. The appellants declare that the warrants were always put in the safe, but when a portion of the oil mentioned in a warrant was required, the warrant was handed to the Chinese, who kept it. This warrant, I repeat, is most important, for it proves that the kerosene is deposited, and when such warrant is taken to a bank the latter will advance money upon it. Again, exhibit No. 7B, shows that the Chinese demanded delivery of a portion of the goods with a certain warrant and, subsequently, with the same warrant one of the European employes of the firm drew out another portion. If the former delivery was illegal the European clerk ought to have discovered it then. For, in accordance with the Regulations, if any case of kerosene remains in the warehouse at the end of a year after deposit, a new warrant for the remaining amount must be issued in exchange for the former. Now, if the appellants do not draw out the whole amount of a deposit of oil at the expiry of a year, they must have the old warrant revised, and obtain another new warrant in exchange. They know this well, therefore, if the Chinese drew out any oil it could easily be discovered at that time. But they did not find that it was so. We have much further evidence to show that they believed that the oil was sold and the money stolen by the Chinese, and not that the kerosene was wrongfully delivered. But I will not dwell upon this point. I now wish to prove that it was not illegal to deliver goods to any Chinaman when he produced a warrant along with a delivery order signed by himself. On this point, the appellants produced the form of the application for storage, and pleaded that since it contains the words, "You are requested to deliver goods upon an order from the undersigned . . . to no other name but Mourilyan, Heimann & Co. ought the goods to have been delivered, and, therefore, the deliveries made on signatures of Akew or Alai were distinctly acts of negligence on the part of the respondent. But it must be borne in mind that the appellants drew out a number of cases with an order bearing only the signature of Edwards; this order is contained in exhibit No. 4, as well as other orders bearing the names of two or three other European employes of the firm. The orders prepared by them were not in the least degree different from those prepared by the Chinese. That is to say,

they all bore the stamp of the firm. Now, whether those clerks were authorized to sign orders or not was never published in the newspapers, or communicated to the Kencho, but in their names deliveries of oil were always demanded. The appellants place great weight upon this document, but it really is called an "Order for Delivery," and is only used for the purpose of indicating the number of cases required. The more important document is the warrant. As it is of such very great importance it should be kept in the hands of the owner alone; for it is the only proof that he possesses that the goods have been deposited, and with that alone can he show that so much or so much oil is still in the warehouse. Again, the appellants allege that it was negligence on the part of the respondent not to ascertain whether Akew or Alai, whose signatures were on delivery orders, were proper representatives of the firm or not. But that is a very one-sided view of the matter. If a stranger were to come to the warehouse and say that he was a representative of so-and-so, and demand delivery of certain goods, and if the official delivered them to him, it would undoubtedly be a gross piece of negligence. But in the present case the men who came to seek delivery were not only employees of the appellants, who had signed the original application for deposit, but they brought with them the most important document dealing with the goods—the warrant. Therefore, the present case cannot be compared with a delivery made to a complete stranger. In short, the respondent sees and acknowledges no negligence on his part in the making of these deliveries.

Another Counsel for Respondent.—In other words, it is not only right for the respondent to consider that the Chinese were proper representatives of the appellant firm, but we think it plain that the appellants conferred the power of representing them upon those Chinese. When the question of the proper representative of a firm arises, we have generally to enquire, first of all, whether the person in question holds a power of attorney or not. In the present case, however, we must determine the question by the circumstances. First, it is necessary to ascertain what power or influence Shin Kitchin, a Chinaman, had or possessed in the appellant firm. Now that Chinaman's influence was so great that he had precedence of the other employees of the appellant firm. He managed the pecuniary affairs of the firm. Therefore, in the ordinary course of business, no one would suspect or question his drawing out any number of cases of kerosene oil. It is rumoured that the object of instituting the present suit was that owing to some unpleasant issue in another commercial concern, the appellants' creditors demanded immediate payment of a debt, and, for the purpose of excusing themselves and gaining time, they alleged that they had incurred a very heavy loss through Chinese. Again, the appellants alleged that they incurred loss by not being able to deliver goods which had been contracted for. Now among the names of purchasers of oil there appears the identical Shin Kitchin, who has an account charged against him by the appellants. If the appellants thought that Shin Kitchin was such an untrustworthy character, they would not have made any agreement with him of such a nature. In Exhibit No. 3, which concerns a contract for the sale of kerosene, you will notice that the first person with whom the contract was made was Shin Kitchin. Judging from this fact alone, the statement of appellants is contradictory. Again, the appellants allege that the number of cases wrongly delivered was 130,000, yet they claim compensation for only 40,000. Why is this? Because, they say, we received payment for the others. Quite so. But the others were as much wrongly delivered, according to their statement, as were the 40,000; and if they followed their reasoning to its logical conclusion, they would see that it is not our negligence, but theirs that prevented them from receiving payment for the 40,000 cases. Again, it was their own carelessness which prevented them from not finding out the fraudulent transactions of their Chinese employees before. For the Regulations contain an express provision that after the expiration of a year a depositor of oil must apply to the authorities for a warrant of continuation of time. It is fully two years since the kerosene oil in question was imported by the *Anglo-American*, but appellants remained ignorant of what was going on. Such an admission, however, would have been damaging to their interests, so they found a pretext and said that, though proper orders were issued, the Chinese destroyed them, and prepared others. This was their statement made in the Lower Court. They now say that they issued proper orders for 80 or 90 thousand cases (for which they received payment,) but their orders were rewritten by Chinese. For the rest,—the 40,000 cases,—the Chinese prepared orders without

the knowledge of appellants. We want to know how they draw these fine distinctions? I must confess that they appear to me merely creations of the moment. Then again, according to the statement of Edwards, who gave evidence in the Lower Court, the Chinese were authorized to receive payment for all kerosene sold to native dealers, the monies being afterwards brought to a clerk who entered the amount in the books. Therefore, whenever a delivery was properly made, the money for the amount of oil released must have gone into the office, and any sum not duly paid in could easily have been discovered by reference to the books. But if the Chinese received money in payment, afterwards handing it to the clerk, it would be the easiest matter possible for them to steal some, or the whole, while on the way from the purchaser to the office. Therefore, they would be under no necessity to counterfeit delivery orders. There would be no sense in doing so, since they were allowed to receive money and pay it in as it suited their convenience. At any rate, as counsel for appellants stated that the delivery orders upon which payment was received were proper orders re-written by the Chinese, while the present suit concerns only those deliveries made on orders signed by Chinese without the knowledge of the firm, we expected that appellants would produce evidence as to the dates on which legal orders were presented and the dates on which illegal ones were brought. But appellants have not done so. I think, under the circumstances, that they have disclosed clear evidence that they conferred powers of attorney on their Chinese employees. The appellants profess to be unaware that the Chinese made out orders themselves. Well, what is the purpose these orders serve? They are simply to indicate how many cases, out of a given number contained in the warrant, were required. By merely looking at the warrant it could easily have been seen what number of cases had been delivered in the names of Chinese. In order to avoid this argument, however, the appellant firm alleges that since the warrants were left in the hands of Chinese, they, the appellants, were unaware what the Chinese did with them. For the purpose of sustaining this allegation they declared that the warrants were at first kept in the safe, but after a portion of the oil mentioned in them had been delivered, the warrants were handed over to the Chinese. We cannot believe that this was so. Indeed, I hold that this statement was fabricated to suit appellants' argument, for the facts do not hang together. If the warrant was to be kept by Chinese, it ought to have been given to them from the very beginning. We contend that the Chinese possessed the right of representing the firm, but in answer to this they allege that it is the common custom in Yokohama never to confer such power on Chinese. The Chinese are the subjects of a treaty power, and to our way of thinking it is not right to make such a distinction between them and European employees. Surely it is only natural to think that since other nationalities are authorized to represent European and American firms, the Chinese ought to have the same right too. Exhibit No. 5 shows that Chinese have demanded deliveries of oil on their own signatures, and that other European firms do leave such matters entirely in Chinese hands; therefore, in the present case, we take it that Chinese received the kerosene for their firm. Appellants called in Mr. Middleton, who stated that it was not the custom in Yokohama to confer such powers on Chinese. But Middleton is not specially engaged in the kerosene trade, and even he declared that he could not definitely say that it was not the common custom ever to confer such powers on Chinese. Such being the case, the respondent had no obligation to inquire whether the Chinese were excluded from enjoying that competence according to the established custom in Yokohama. One more point, and I will conclude; it is in reference to the signature. In depositing oil the application for deposit must be signed by the same representative who signs the application for delivery; this the appellants do not deny. They stated in evidence that Edwards signed the delivery orders; but it must be noted that the same Chinaman who signed the delivery orders signed an original application for deposit too, in a manner similar to Edwards. It is only natural, therefore, to suppose that the signature of the same Chinese when attached to a delivery order, was as valid as when attached to an application for deposit. If the court refers to Exhibit No. 7a., which we presented to-day, it will find that previous to 1890, the date of the last kerosene imported, Chinese always demanded deliveries on their own signatures. This fact alone plainly proves that Chinese have the right to represent the firm. There is another point which I would draw attention to. How do foreigners transact business with Japanese merchants? In appli-

ants' firm the kerosene business is entirely managed by Chinese in their employ, who receive payment for goods from the Japanese on behalf of the firm. That is the common practice. It is owing to the Kencho considering the warrant to be a more important document than the delivery order, which merely indicates the number of cases the depositor desires to withdraw, that the respondent compels the depositor to produce the warrant every time any portion of oil is delivered, so that the number of cases remaining may be recorded on the back of the document. The warrant is therefore of the greatest importance, and, realising this, the appellants kept it in the safe: the mere act of subsequently handing it to the Chinese to keep, proves that the latter were properly authorized to represent the firm. In short, the respondent perceives much negligence on the part of appellants, but fails to discover any in his own conduct. He therefore declines to comply with the demand for an indemnity.

Counsel for Appellants.—There is a great difference between the competence vested in by the Chinese and the negligence displayed by appellants. The argument that it was negligent on the part of appellants to allow the warrants to be kept in the hands of Chinese, and also that by so doing they conferred the right of representing the firm upon the Chinese, is most puerile. Even if there was negligence on the part of appellants, the respondent cannot say that he is not responsible for the wrong deliveries. For when the warrant alone was produced, no delivery ought to have been made. Since the respondent carelessly believed the person who produced the warrant to be a proper representative of the firm, his negligence in the matter is clearly proved.

Another Counsel for Appellants.—I desire to speak as briefly as possible. The respondent has just said that if the Chinese stole the money or sold the goods by any deceitful act, the appellants ought first of all to have made a thorough investigation. We made such an investigation, as is shown in Exhibit No. 5-A. That is to say, we compared the dates of deliveries and the number of cases withdrawn on those occasions, and we found that their number exceeded that which was demanded by the original and proper orders. We have done all that we could to discover how the money was stolen by the Chinese on those occasions. Again, respondent alleges that we fabricated our statements concerning the preservation of the warrant in the safe. He is very much in error in making that allegation. Generally speaking all transactions in oil are made when the goods are landed at the Haroba; they are generally delivered at once to the purchasers, and what remains over from such transactions are stored at the warehouse. We should incur a loss if we were to keep goods at the warehouse any longer than is necessary; therefore, as soon as a contract is concluded an order is made out and sent to the warehouse at once. It is distinctly not right to say that the warrants were left in the hands of Chinese entirely, or that the story was fabricated afterwards to suit our convenience. Again, respondent said that the frauds arose from our not examining the warrant, but as my associate counsel has already said, there is no necessity to examine the document, because, unless a proper delivery order was sent out by the appellants, no delivery could possibly be made. In regard to the Chinese, I want to say a few words. The respondent says that since the Chinese are also subjects of a treaty power, there is no reason why they should be excluded from enjoying the same rights as other foreigners. The argument itself may be just, but we must consider their position among the white races. They have never occupied the same social position as Europeans, and to them no power of representing a firm is granted in Yokohama, as Middleton declared in the Lower Court. The respondent, again, said that Middleton's chief business was not in kerosene, but Middleton is well acquainted with the business affairs of Yokohama, and he declared that it is not the custom in Yokohama to confer such rights on the Chinese. Another point which was raised I must also explain. In our account-book, said the respondent, is recorded a contract with Shin Kitchin, therefore he was an influential member of the firm's employees from that time, etc. But really he had no power or influence in the firm; he was merely a godown-keeper. Again, to sell kerosene to the Chinese is not at all an important matter. It is on all fours with a man who buys a newspaper from a news-monger. That is to say, as long as the money is paid the article can be delivered to him. The respondent attaches the greatest importance to the warrant, but the appellants lay stress on the delivery order. It is not necessary to examine the warrant to see how many cases are still undelivered, as the account-book will show it plainly. The recording of the number on the back of the warrant is simply to save the warehousemen the trouble of counting

the cases. The delivery order, however, states the number of cases to be delivered by the respondent: with it only can delivery be obtained. Therefore, it is more important that the warrant. For instance, I deposit a certain sum of money in a bank, and when I go to draw it out, if the signature on my cheque is not my own, what will happen? Or, supposing that my money was paid out to the bearer of a cheque because the name upon it looked like mine but really was a forgery, am I to be blamed for negligence? Of course not. I think there is no difference between these two cases. In the Lower Court, as well as here, the respondent alleges that he thought the Chinese were properly authorized to represent the firm, but since they had no such authority they cannot be called proper representatives of the firm. Some other circumstances may have induced the respondent to believe that the Chinese were proper representatives of the firm, but since they are not stated, and as he has been deceived, he must be held responsible for the loss.

The Judge—You say that the Chinese have no authority to represent the firm in withdrawing goods. Do you acknowledge that they have such authority in depositing them?

Counsel for Appellants—No, we acknowledge neither.

The Judge—What has become of the suit against Shin Kitchin?

Counsel for Appellants—It is not yet concluded.

Counsel for Respondent—I wish to draw your attention to one other point. The appellants rely on the statement made by Middleton, but as I have said before, he did not say that what he stated was an established custom. The gist of the pleading of the respondent is, firstly, that in the present case the Chinese were believed to be authorized to represent the firm; secondly, that the conduct of appellants plainly showed that the Chinese were authorized to represent the firm. For instance, when a *bando* is standing behind the counter of some shop, the public knows at once that he is authorized to sell the goods of his employer. Even if he were privately prohibited from selling, such prohibition would not affect the public knowledge. And thirdly, the respondent is not at fault in the present case.

Another Counsel for Respondent—Whether out of the 130,000 cases delivered, those for which the appellants received the money were withdrawn on proper orders, and the rest on orders signed by Chinese, is uncertain. But at any rate the appellants did not issue orders for the amount lost, because they have proved that some oil was withdrawn by the Chinese on their own orders, for which no money was received. If such is the case, the appellants ought to know which and which lots were properly withdrawn out of the 130,000. If they allege that no orders were issued for those 40,000 cases, then they must indicate the dates on which proper deliveries were made. We can then subtract these from the remainder and ascertain the exact number of cases lost. The appellants have not explained this point at all.

Counsel for Appellants—It is alleged that we have not explained the cause of the loss. We have plainly proved that it arose through the respondent's negligence. Respondent has also misunderstood the distinction between a full power of attorney and a part-power of attorney, but neither can be applied to the present case.

The Judge—We shall close the pleadings now. Judgment will be delivered at 10 a.m. on Tuesday next.

The Court rose at 5.20 p.m.

The judgment of the Appeal Court in this suit, where indemnity is demanded for alleged wrongful delivery of kerosene oil, is as follows:—

JUDGMENT.

The appeal is dismissed; and the costs shall be paid by the appellant.

FACTS AND POINTS IN DISPUTE.

Statement of the Appellant—The appellant firm have been engaged in importing kerosene oil from abroad, and selling it to Japanese merchants ever since 1888. From May, 1890, to February, 1891, they imported 203,525 cases of kerosene oil by the *Anglo-American*, *Milvorton*, and *Calyppo*. Now, in accordance with the provisions of Treaties concluded with Foreign Powers, the Japanese Government, in 1880, promulgated Regulations relating to the warehousing of explosives. By these Regulations no imported kerosene oil is allowed to be stored in any private warehouse; it must be deposited in the official Warehouse at Nakamura, which is controlled by the Governor of Kanagawa Prefecture. In compliance with such Regulations, the Appellants deposited in the said Warehouse 129,792 cases of kerosene oil, imported by the above-named ships. When a depositor seeks delivery of his goods, he is required to present an order addressed to the official in charge of the Warehouse;

and the latter is bound to deliver the number of cases mentioned on the order. This procedure is expressly provided in the Regulations relating to Explosives Warehouses. Such being the process, the appellants were in the habit of issuing delivery orders on each occasion of concluding transactions with Japanese merchants. In November, 1891, the appellants, however, discovered that though they had issued no orders, 43,476 cases of kerosene oil had been delivered to some persons. The appellants thereupon investigated the matter, and discovered that the oil had been taken out of the Warehouse by Su Kessei Akew, Ali, and Akon, Chinese in the employ of the appellants firm. The said Su, a Chinaman, was the caretaker of the appellants' stores, and his duty was to receive or deliver imported goods, the other three Chinamen being employed to assist him. When withdrawing kerosene from the explosives Warehouse, these Chinese used to obtain orders from the appellant firm, which orders they were supposed to take to the Warehouse, and then having obtained the oil, to hand it over to the purchaser. But in the present case, the above Chinamen prepared delivery orders themselves without the knowledge of the appellant firm, and by means of them withdrew the deposited kerosene, the official at the Warehouse carelessly delivering the kerosene in exchange for such counterfeit orders. The Chinamen having obtained possession of the kerosene by these means, afterwards brought a certain sum of money to the appellant firm, and obtained *bond fide* delivery orders; so that the appellants could not discover the fraud. Moreover, the appellants placed confidence in the Japanese Authorities, and did not imagine that such a fraudulent practice could possibly occur. By the above fraudulent procedure, all the kerosene imported by the said three ships was delivered to the above Chinamen in exchange for delivery orders signed by themselves. But, according to the appellants books, 43,476 cases should still be remaining in the warehouse. The Chinamen in the employ of the appellant firm were engaged in a menial capacity, and had no right to issue any document in the name of the appellant firm. Besides, it is the general custom among foreign merchants in Yokohama never to entrust any such weighty responsibilities to the Chinese in their employ; and the officials at the Warehouse ought to have been cognisant of the fact. Therefore any delivery made by the officials against an order signed by Chinese alone was an act of negligence on the part of the officials, and inasmuch as the appellant firm have not yet drawn out 43,476 cases of kerosene, they are persuaded that they have a right to demand indemnity from the respondent, with whom the goods were deposited, and that the responsibility of the loss rests on his shoulders. Notwithstanding the facts of the case as stated above, the Yokohama Local Court delivered judgment in favour of the respondent, on the ground that the officials acted rightly in delivering the goods to the Chinamen, the latter being proper representatives of the firm, and that no negligence had been shown. Such a judgment is not only contrary to the facts of the case, but also in contravention of the laws of the land. For even if the respondent considered that the Chinamen were authorized to represent the firm in some matters, particular the fact of their power to act as its agents in this matter was not thereby affected. Therefore the appellant firm cannot be satisfied with the former decision, and do now appeal from it, and pray for the reversion of that judgment.

REASONS.

The gist of the appellants' case is briefly this: The damages demanded by the appellants are for the loss of 43,476 cases of kerosene oil, which, having been deposited by the appellants in the Warehouse of the respondent, were subsequently lost, the cause of the loss being that the respondent delivered the cases to certain Chinamen in the employ of the depositors. Now, according to the Warehouse Regulations, when goods are to be withdrawn from the warehouse, the depositor must present a delivery order signed by himself; and the officials in charge of the goods make delivery only upon such order. But the respondent made deliveries to Chinamen upon orders signed by themselves, and thus the appellants incurred loss. Therefore, the respondent must be held responsible for that loss. Thus the question arises whether the deliveries made by the respondent to the Chinese were legal, or in other words, whether they could be considered proper deliveries and valid as towards the appellants. The form of application for storage, annexed to the Warehouse Regulations, contains the following words:—"To be delivered only on application signed by ourselves." This would appear to prohibit the signature of any agent. But according to the statement contained in document No. 7, one Edwards signed his name as agent for the

appellants, and his signature was admitted by the appellants to be valid. Further, the appellants have admitted that they were in the habit of authorizing European and American members of their staff to represent them. Therefore, the Court must conclude that, regardless of the form prescribed in the Warehouse Regulations, any signature of agents is of equal force with the signature of principals as between the appellants and the respondent, and that the respondent might lawfully deliver upon orders signed by agents. But the appellants allege not only that the Chinamen in their employ are engaged in a menial capacity, but also that the common custom of foreign merchants in Yokohama is never to entrust representative functions to Chinamen in their service. The Court must consider, then, whether these particular Chinamen were entrusted with such functions or not. According to the Warehouse Regulations, a depositor of goods, when desirous of withdrawing them from the Warehouse, must produce the original storage warrant, as well as an order for delivery. It is also provided that the total number of cases of oil shown on the face of the storage warrant may be delivered in several lots at the depositor's option. This warrant, therefore, is as valuable as the goods themselves, and a document of such value ought not to be left at the free disposal of *employés* alleged to be of an inferior grade. The appellants, however, admit that these receipts, though kept at first in a safe, were, after delivery of a portion of the goods, left in the hands of the Chinamen; in other words, warrants without which no delivery could possibly be obtained, were always entrusted to the keeping of the Chinamen in question. Secondly, some of the endorsements on the warrants show that plainly recorded deliveries were made on the signatures of Chinamen, and, notwithstanding the fact that the number of cases remaining after such deliveries must have been counted, Edwards, who was properly authorized to represent the appellant firm, withdrew portions of remaining cases by means of the same warrants without ever objecting to the deliveries as recorded. Lastly, certain delivery orders, presented by the respondent and signed by Chinamen, bear the stamp of the appellant firm above the signature—the very same stamp that appears on other orders signed by Edwards, all of which are admitted by the appellants to be the valid stamp of the firm.

From these three facts, it is to be inferred that the said Chinamen were in fact authorized to represent the appellant firm. If a suitor appearing in this Court desires to establish such an exceptional principle as that members of a certain nationality are excluded from the exercise of privileges exercised by other nationalities, he must prove clearly to the Court that such exception really exists. The only evidence on this point furnished by the appellants was the statements of Middleton and two others, and these persons were not examined as witnesses, but were simply permitted to submit unsworn testimony. These assertions, therefore, are insufficient to prove the alleged exceptional position of Chinamen. Moreover, no statement made by them could in any way affect the significance of the three facts above mentioned. It must be held accordingly, that the Chinamen were properly authorized to represent the appellant firm, and that the deliveries made to them by the respondent were proper deliveries, and not less valid than if they had been made to the appellants themselves. The respondent cannot, therefore, be held responsible for the loss incurred. The decision of the Court below in dismissing the case was correct, and, in accordance with Art. 424 of the Code of Civil Procedure, the present appeal is dismissed, and in accordance with Art. 72 of the same Code, the costs must be borne by the appellants.

HASEGAWA TAKASHI, Chief Judge.
TAKAYA TSUNETARO, Judge.

HIRATA KOSABURO, Judge.
MAYEDA KOKAI, Judge.
Tokyo Court of Appeal.

The Germans are now making a collection of the languages spoken in their colonies—that is, their agents are preparing dictionaries of these languages as rapidly as possible. The task is no small one. In East Africa, the languages number 50; in South-west Africa, 12; in Cameroons, 23; in Togo, 5 or 6; and in the German South Sea possessions, at least 50. In addition are many dialects which are almost entitled to rank as distinct languages.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday evenings at the Club Rooms, No. 86, Main Street.

SOLUTION OF PROBLEM No. 44.

WHITE.

1—R to R 3
2—Kt (B 3) to Q 5 (double ch. and mate)

2—Kt x P (mate)

2—Kt to R 4 (dis. ch. and mate)

2—Kt mates at K 2

2—Kt mates at B 4

2—Kt to Kt 5 (dis. ch. and mate) of Kt

Correct solutions received from W.H.S., Scacchi, Omega, Omicron, J.W.E., Digamma, M.A.W., J.D., and S. E. Unite.

Additional correct solution of No. 43 received from O. Balk.

G.B. (Yamaguchi).—You have overlooked Black's defence of K x Kt when you play R to Q 5.

PROBLEM No. 46.

By H. J. C. ANDREWS.

BLACK.

WHITE.

White to play and mate in two moves.

The following notice is posted in the local Club Rooms:—

YOKOHAMA CHESS CLUB.

PRESIDENT'S PROBLEM COMPETITION.

1892.

The President has offered a prize for a short competition, of the nature and on the conditions stated below, among the members of the Club, and it is hoped that as many members as possible will take part in it.

There will be in all nine problems to be solved, and one problem to be composed.

A problem for solution will be given each week, commencing on Tuesday the 6th December. By the kindness of the Manager of the *Japan Mail*, printed slips of the problems will be sent under cover to each member of the Club on Tuesday in each week while the competition lasts. Solutions must be sent to the President at No. 172, not later than noon of Thursday in the next following week. Acknowledgments of the correct solutions received will appear, by the courtesy of the Chess editor of the *Mail*, in the Chess column of that journal on the Saturday following.

The original problem—which may be of 2 or 3 moves—must be sent in on or before the 31st January. The solution should be written on the back of the diagram. Blank forms can be obtained from the Hon. Secretary.

Competitors will be credited with as many points for each complete solution of a problem, as the problem consists of moves, and similarly as to the composition of the original problem, if sound.

JOHN GRIFFIN,
Secretary.

Yokohama, 24th November, 1892.

The October number of the *British Chess Magazine* contains a full account of the Congress at Belfast. In the Master's tourney Blackburne and Mason tied for first and second prizes. We copy one of the games between these celebrated players which finally resolved itself into a duel between knight and bishop. The way in which White manoeuvres with his King is also worthy of special note:—

VIENNA OPENING.

WHITE?(Blackburne.)

BLACK (Mason.)

1—P to K 4

1—P to K 4

2—Kt to Q B 3

2—Kt to K B 3

3—P to B 4

3—P to Q 4

4—B P takes P

4—Kt takes P

5—Q to B 3

5—P to K B 4

As a novelty (attributed to Mr. S. Lipschutz), this move did fairly good service in the New York Tournament, 1889, when it was opposed by 5 Kt takes Kt, or 5 Kt to Q B 3

..... But at Amsterdam, later in the same year, in the game Mason v. van Foreest, the latter adopted the text reply, viz., 5 P to K B 4, which seems to be the *coup juste*. At Manchester, 1890, it was used successfully as a defence to Mackenzie v. Mason, while quite recently, in the match Blackburne v. Lasker, when the attack proceeded somewhat as in the present instance, the defending player won.

6—Kt to R 3? 6—Kt to Q B 3

..... This, with the check following, means the sacrifice of a Pawn, but with much justification, as presently appears.

7—B to Kt 5

7—Q to R 5 ch.

8—K to B sq.

8—B to B 4

9—Kt takes P

Better, perhaps not to take the Pawn, but to play 9 K to Kt 5, so as to be able to shut out Bishop.

10—B takes Kt

9—Castles

11—Q Kt to B 4

10—P takes ■

12—P to Q 3

11—B to R 3 ch.

13—P to K Kt 3

12—Q R to K sq.

14—K to Kt 2!

13—Q to Kt 5

..... Bad; 14 R takes P, offering the sacrifice of the Knight, would be far stronger and still give Black a fine game.

15—K takes Q

15—P to Kt 4

..... Forced, as the Black Knight had no escape.

16—P takes Kt

16—P to Kt 5 ch.

17—K to Kt 2

17—P takes Kt ch.

18—K takes P!

18—P takes P

19—R to K sq.

19—R takes P

20—B to K 3

From this point the game is virtually in Mr. Blackburne's hands. The Pawn at K 5 must eventually fall.

21—K to Kt 2

20—B to Q 3

21, B takes P (P), R to K Kt 4; and White is in danger, but King cannot retire to Kt 2.

22—Q R to Q sq.

21—P to B 4

23—P to B 4!

22—B to Kt 2

24—R to K B sq.

23—R (K 4) to B 4

25—R to B 2

24—B to B sq.

26—R to Q 5

25—R (B 4) to B 2

27—R takes R

26—R to B 4

28—Kt to Q 5

27—It takes R

29—K takes R

28—R takes R ch.

30—B to B 4

29—K to B 2

The exchange of Bishops is all needed to make victory secure. The ending, however, possesses some interest as an example of accurate play—Knight v. Bishop.

31—K to K 3

30—K to K 3

32—K takes P

31—B to Kt 2

33—B takes ■

32—B to B 3

34—P to K Kt 4

33—P takes B

35—P to K R 4

34—P to Q R 4

36—Kt to B 4 ch.

35—B to R 5

37—P to Kt 3

36—K to K 2

38—Kt to Q 5 ch.

37—B to B 3 ch.

39—K to B 4

38—K to B 2

40—P to Kt 5

39—P to R 5

41—P takes P

40—P takes P

42—P to R 5

41—B to Kt ■

43—Kt to K 7

42—K to Kt 2

44—Kt to B 5 ch.

43—B to Kt 7?

44—Resigns.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Omi Maru*, from Otaru via ports:—Mr. K. Kitagaki and Mr. M. Kajima in cabin; 4 passengers in second class, and 69 passengers in steerage.

Per British steamer *Ravenna*, from Hongkong via ports:—Mr. and Miss Beckett, Messrs. J. A. Scherer, M. Mess, and A. S. Hill in cabin; Mr. G. H. Waggott, Mr. G. Kircher, Mrs. S. Wander, and Mr. and Mrs. Sessnet in second class, and 1 Chinese and 6 Japanese in steerage.

Per Japanese steamer *Takasago Maru*, from Yokkaichi:—Mr. Hamada in second class and 24 passengers in steerage.

Per Japanese steamer *Sendai Maru*, from Otaru via ports:—Mrs. Morihara and 2 children in cabin; 31 passengers in steerage.

Per American steamer *City of Rio de Janeiro*, from San Francisco:—Mr. and Mrs. J. D. Hanbury and 2 children, Rev. R. B. Peery, Mr. and Mrs. F. F. Marx, Mr. and Mrs. B. O. Squier, Messrs. H. Kessler, W. A. Wilson, Ito Kumao, and John Murphy in cabin. For Hongkong: Mr. Chas. H. Cowan, U.S. Consul Manila, Mrs. Kimball, Mrs. L. Cohen, and Mrs. E. Remington in cabin.

Per Japanese steamer *Takasago Maru*, from Yokkaichi:—22 passengers in steerage.

Per Japanese steamer *Sendai Maru*, from Kobe:—1 passenger in cabin; 20 passengers in steerage.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Mr. C. S. Rice, Mr. and Mrs. Yoshisuye, Mr. S. Yamada, Captain Ed. H. Housberry, Mr. T. Miyagi, and Mr. E. Bird in cabin; Miss Yamada, Miss Hayashi, Messrs. S. Okami, Yamada, and S. Ichimura in second class, and 72 passengers in steerage. For Vancouver, B.C.: Dr. Chas. Begg in cabin.

DEPARTED.

Per French steamer *Natal*, for Shanghai via Kobe:—Messrs. E. Nissi, M. Eason, Wilkinson, K. Koka, Hercuet, Lord Cecil Manners, Messrs. F. L. Savill, Frank Nicholls, Mrs. and Miss Asse, Messrs. K. Takagi, P. N. Gaustau, Fukuda, Tachihara, Sakurai, Kaneyama, John Steedman, and Charles Roguers in cabin.

Per Japanese steamer *Kobe Maru*, for Shanghai and ports:—Mrs. Mann, Miss L. Cobb, Miss Graham, Miss Chittenden, Miss F. A. Duffield, Col. S. Masuno, Messrs. E. Whittall, J. Baston, Chas. A. W. Willsitt, and A. F. dos Remedios in cabin; Mrs. J. Kato, Miss Y. Uchiyama, Miss F. Yasu, Miss Ueda Moto, Messrs. Anami, Y. Miyasaki, S. Negoro, and Tung Chee Shin in second class, and 39 passengers in steerage.

Per American steamer *City of Rio de Janeiro*, for Hongkong:—Miss Lucy Dunlop, Miss Edna Cole, and Mr. Chas. B. Hicks in cabin.

Per British steamer *Ravenna*, for Hongkong via ports:—Lady Mabel Fitzgerald, Lady Nesta Fitzgerald, Mr. B. F. Norris, Mr. B. B. Garvey, Mrs. Hosken, Mr. and Mrs. Valentine, Mr. O. Meyer, Mr. G. Nagasaki, Mr. and Miss Beckett, Colonel Coffin, R.E., Mr. Todoroki and servant, Miss Byrne, and Miss Gearing in cabin.

CARGOES.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Treasure, \$100,000.00.

Per French steamer *Natal*, for Shanghai via Kobe:—Raw Silk for France, 354 bales; Waste Silk for France, 372 bales.

Per British steamer *Ravenna*, for Hongkong via ports:—Silk, 144 bales; Waste Silk, 349 bales.

REPORTS.

The Japanese steamer *Omi Maru*, Captain F. Brown, reports:—Left Otaru the 15th November at 1 p.m.; had light variable winds and fine weather. Arrived at Hakodate the 16th at 8 a.m. and left the 17th at noon; had light wind, fine weather, and high southerly swell. Arrived at Oginohama the 18th at 10 a.m. and left the same day at 4 p.m.; had moderate wind and fine weather. Arrived at Yokohama the 19th November at 3 p.m.

The Japanese steamer *Sagami Maru*, Captain Pender, reports:—Left Kobe the 18th November at noon; had moderate N.E. and E. winds to Oshima with cloudy weather; at 9 p.m. passed Oshima, with moderate breeze from N.E. and continuing to Rock Island, which was passed the 19th at 1.30 p.m.; wind hauling to N.W. and W. with moderate breeze and fine, clear weather to Kanon-saki, which was passed at 6.15 p.m.; thence to port moderate N.E. winds and fine, clear weather. Arriving at Yokohama the 19th November at 7.40 p.m.

The Japanese steamer *Takasago Maru*, Captain Nirei, reports:—Left Yokkaichi the 20th November at 10 a.m.; had fine, clear weather and moderate north-westerly gale right up to Omai-saki, which was passed the 21st at 5.40 a.m.; when wind shifted to N.E. and blew pretty stiff. Arrived at Yokohama the 31st November at 3.30 p.m.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Otaru the 17th November at 2 p.m.; had light to strong S.S.W. winds and fine weather; at midnight wind hauled to N.N.W. with overcast sky. Arrived at Hakodate the 18th at 8.50 a.m., fine weather throughout the passage. Left Hakodate the 20th at 8 a.m.; had moderate breeze and thick with snow to 8.20 a.m.; thence fresh W.N.W. and N.W. winds with clear weather and following sea. Arrived at Oginohama the 21st at 6 a.m. and left at 1 p.m.; had moderate to fresh N.W. winds and fine, clear weather remaining so to Noshima; thence wind hauled to the northward, moderate breeze and cloudy weather. Arrived at Yokohama the 22nd November at 2 p.m.

The American steamer *City of Rio de Janeiro*, Captain Smith, reports:—Left San Francisco the 5th November at 3.55 p.m. Arrived at Yokohama the 23rd November at 3.40 p.m. Passage, 17 days, 6 hours, and 17 minutes. Had strong N.W. to S.W. winds with heavy sea the whole passage.

The Japanese steamer *Takasago Maru*, Captain Nirei, reports:—Left Yokkaichi the 23rd November at 4.43 p.m.; had overcast dull weather and north-easterly breeze to Omai-saki, which was passed the 24th at 1 a.m.; thence wind changed to south, and increased to moderate gale and thick foggy weather. Arrived at Yokohama 24th November at 10.25 a.m.

The Japanese steamer *Sendai Maru*, Captain Tiple, reports:—Left Kobe the 23rd November at 10 a.m. Arrived at Shiotsu at 1.10 p.m. and left at 5 p.m.; had light easterly winds till passing Oshima; thence moderate southerly winds and rain with high southerly sea to Rock Island; thence to port moderate northerly winds with high head sea. Arrived at Yokohama the 24th November at 10 p.m.

The British steamer *Fushiki Maru*, Captain Barstow, reports:—Left Fushiki the 21st November at 6 a.m.; Kinkasan abeam at 2.38 p.m. on the 23rd, had light breezes all the way; at midnight the same day, cloudy and dark weather with heavy swell and falling barometer; Inuboye abeam at 8.58 on the 24th, wind increasing, with overcast and cloudy weather; at 3 p.m., experienced heavy gale, with terrific squalls and very heavy rain; barometer reading 28.98; hove the ship to with head to the northward and remained hove to till 6 p.m., shipping quantities of water, with very heavy sea; wind and sea then decreased.

ing, put ship on her course again. Arrived at Yokohama the 25th November at 7 a.m.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 19th November at noon; had strong N.E. winds and cloudy weather to Nagasaki, where arrived the 21st at 9.30 a.m. and left the same day at 5 p.m. Arrived at Shimomoseki the 22nd at 6 a.m. and Kobe the 23rd at 10.30 a.m.; fresh northerly winds and clear weather. Left Kobe the 24th at noon; had strong N.W. gale to Rock Island; thence strong N.E. winds to port. Arrived at Yokohama the 25th November at 6.30 p.m.

VESSELS ON THE BERTH.

The following vessels are advertised as on the berth:—

For NEW YORK via Ports, Quick Despatch, the "PORT ADELAIDE."—Dodwell, Carlill & Co.

For HONGKONG via Kobe and Shanghai, November 28th, the "EMPEROR OF JAPAN."—Frazar & Co.

For VLADIVOSTOK via Fusan and Gensan (from Nagasaki), November 28th, the "SATSUMA MARU."—Nippon Yusen Kaisha.

For SAN FRANCISCO, November 29th, the "P&RU."—P. M. S.S. Co.

For SHANGHAI and Ports, November 29th, at Noon, the "YOKOHAMA MARU."—Nippon Yusen Kaisha.

For LONDON via Kobe and Hongkong, on or about December 1st, the "TITAN."—Butterfield & Swire.

For HONGKONG via Kobe and Nagasaki, December 2nd, at 9 a.m., the "NURNBERG."—Nord-deutscher Lloyd.

For CHIMULPO, via Shimomoseki, Nagasaki, and Fusan (from Kobe), December 6th, the "GENKAI MARU."—Nippon Yusen Kaisha.

For SAN FRANCISCO, December 8th, the "OCEANIC."—O. & O. S.S. Co.

For CANADA, United States, and Europe, via Vancouver, B.C., December 9th, the "EMPEROR OF INDIA."—Frazar & Co.

For TACOMA, Wash., via Victoria, B.C., December 13th, the "TACOMA."—Dodwell, Carlill & Co.

LATEST COMMERCIAL.

IMPORTS.

Cotton Goods generally are up all round, and held firm, owing to the smart rise at producing centres. Yarns and Shirtings especially are strong, but owing to the very limited stock on hand we do not raise quotations in our list below—which must be considered the nominal market

prices. Woollens do not appear to share in this buoyancy, and are quiet, with the exception of fancy Flannels, which show some activity.

COTTON PIECE GOODS.

Grey Shirtings—84lb, 384 yds, 39 inches	11.65 to 2.22
Grey Shirtings—84lb, 384 yds, 45 inches	1.85 to 2.65

EXPORTS.

RAW SILK.

Our last was of the 18th instant. Since then settlements on this market amount to 486 piculs, divided thus: *Hanks*, 42 piculs; *Filatures*, 238 piculs; *Re-reels*, 131 piculs; *Kakeda*, 75 piculs. In addition to these figures, direct shipments have been 161 bales, making the total export business of the week 650 piculs.

The market remains unchanged, with rather more doing and a firmer tone at the close. The silks now on offer present but a poor assortment, especially in coarse sizes. In European sorts, there is still a fair range to select from, including some very good summer-reeled silks. In American sorts, summer reellings are a thing of the past and our quotations for such sizes are for cold weather silks.

There has been some business done each day of the week, and at closing there seems to be a speculative demand, one buyer taking considerable quantities of such *Filatures* in full sizes as now exist.

Arrivals of visible supplies are considerably less than last year, and the quality of the stock now offered is far below that which was on hand at the same time last year.

Exchange has still further declined until four months' Credits on London touched 2/10. There is a slight rebound at the close.

There have been two shipping opportunities since we last wrote. The American mail steamer *Belgic*, on the 19th instant, carried 1,159 bales for the New York trade and the French mail, on the 20th, had 354 bales for Lyons. These departures bring the present export figures to 28,054 piculs, against 23,009 piculs last year and 8,981 piculs to the same date in 1890.

Hanks.—Some little business for Europe, so-called Shimane being done at \$605.

Filatures.—Some few purchases from day to day, chiefly in sorts available for Europe. *Usen*, \$840; second quality, \$800, with lower grades at prices ranging from \$790 to \$750. In full sizes, suitable for America, there has been little done, with the exception of the speculative purchases mentioned above, consisting of good medium *Shinshu* *Filatures* at from \$820 to \$840.

Re-reels.—Rather more doing in this department, 5-Gil chop having been done in some quantity at \$775. Very common *Bushu* have been booked at \$580, with intermediate grades at intermediate prices.

Kakeda.—The trade has fallen off, buyers having skimmed off the cream of the present stock. Quotations unchanged.

In *Oshu* and *Taysam* kinds, no business.

WASTE SILK.

Here there has been a large trade amounting to 1,800 piculs, divided thus: *Cocoons*, 120 piculs; *Noshi*, 972 piculs; *Kibiso*, 798 piculs. No direct shipments this week.

Prices are the turn in favour of buyers, but holders will not give way to any very great extent. If they would do so, more business could be done. The stock is reduced, arrivals not keeping pace with sales; but there are still 17,000 piculs on offer, besides plenty more to come forward. Under these circumstances, the market cannot be considered strong at the quotations which we give below.

Shipments this week have been as follows:—French mail, 20th instant, 287 bales *Waste*, with 85 bales *Cocoons*, for Lyons and neighbourhood. The German mail steamer *Niobe*, on the 22nd, took also 15 bales *Waste* for Basle. These departures bring the present export figures up to 14,043 piculs, against 11,367 piculs last year and 11,368 piculs at the same date in 1890.

Fierced Cocoons.—The higher grades seem to be nearly exhausted and the business for the week

Original from

consists of one parcel of Seconds at \$90, with a large lot of *Waste Cocoons* at \$178.

Noshi.—A large trade in *Oshu Tegara* at \$125, also in *Foshu Noshi* assorted, ranging from \$50 to \$72½. One parcel *Oshu* entered at \$130, with some *Filatures* at \$140; *Fine Bushu*, \$135; *Echigo* \$100, and one superlative parcel of *Foshu* at \$76.

Kibiso.—*Filatures* have been well patronized, prices ranging from \$90 to \$105. In *Hira* kinds, long lines of *Foshu* and *Bushu* have been done at prices ranging from \$42 to \$32, with some *Mino* at \$38. *Zaguri* of various grades are also entered in the list at from \$40 to \$65, according to quality.

In *Mawata* and *Sundries* there has been no business, holders asking too much for their wares.

17.

THE GREATEST WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BARNES, in his work entitled "The Nile Tribes in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out 1 quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. CONNOR, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout Word.

B O S

*** Gold Capsule.

** Blue "

* Green "

Exquisite blendings, possessing a flavour so rare, a character so novel and so entirely their own, that they may fairly claim the very first place among high-class stimulants. Clever judges pronounce them *unique and unrivalled*.

B.O.S. Whiskies are remarkable for their "delicious individuality of flavour," mellowness and softness on the palate—"A very Nectar," in marked contrast to ordinary blended Whiskies, which are more or less dominated by one or other of the Whiskies used in blending.

B.O.S. is sold in square white bottles, labelled and capped, the quality being notified by a small label on each bottle. The Proprietors are skilled blenders of Scotch Whiskies, but in all the experience of their Firm, extending nearly over the present century, they have never been able to accomplish anything so fully complying with the most exacting tests, as is now presented in these special blends of B.O.S.

Correspondence invited from Firms who desire to handle our Whiskies.

PEASE, SON, & CO., LEITH, SCOTLAND.

YOKOHAMA: SATURDAY, DEC. 3RD, 1892.

MARRIAGE.

On November 30th, 1892, before Her Majesty's Consul, James Troup, Esq., and afterwards at Christ Church, Yokohama, by the Rev. E. Champneys Irvine, M.A., CLARA EDWINA, youngest daughter of Geo. E. Rice, Esq., Yokohama, to WILLIAM WALLACE CAMPBELL, of Thornhill, Quebec, Canada.

DEATH.

At Kanazawa, on December 1st, MARY ALLEN WEST, of Chicago, Associate Editor of the *Union Signal*.

SUMMARY OF NEWS.

THE annual St. Andrew's Ball has been given in Yokohama with great *téte*.

THE first snow fall in Toyama for the present season was experienced on the 25th ult.

H.I.H. THE EMPEROR performed the ceremony of opening the fourth session of the Imperial Diet on the 29th instant.

It is stated that the sittings of the Imperial Diet will probably be prolonged in consequence of the accident to the Premier.

THE managers of various branches of the Nippon Yusen Kaisha have arrived in the capital to hold their general meeting.

THE Glyptic Exhibition in Ueno Park, Tokyo, which was to be closed on Tuesday last, will remain open until the 5th inst.

THE Japanese Representative to Italy and Mrs. Nakajima left Yokohama on the 29th ult. for Kobe, by the 12.30 p.m. train.

A COLLISION occurred in the Inland Sea on the morning of the 29th ult. between the steamer

Ravenna and the *Chishima Kan*, in which the latter was sunk and a great many lives lost.

COUNT ITO has met with a severe accident, which is likely to incapacitate him for the discharge of his official duties for some weeks.

THE Budget for 1893-94 has been presented to the House of Representatives. There is an excess of 2½ million *yen* on the side of Revenue.

THE sale at home of the *Aikoku*, a Japanese magazine published in America, was prohibited by the Home Minister on the 26th ult.

COUNT INOUE, as Acting Minister President, made a lengthy statement of the Government's policy in the House of Representatives on the 1st instant.

A TELEGRAPHIC message received by the Government states that Major Fukushima arrived at Kiatchka on the 26th ult., and left for Irkutsk the following day.

A MEETING attended by Counts Yamagata, Goto, Kuroda, and Inouye, Viscount Nire, and Mr. Watanabe was held at the residence of the Premier on Saturday afternoon.

A FIRE occurred on the night of the 25th ult. at 10 o'clock in an abode at Kizagatacho, Asakusa, Tokyo, destroying two houses and partly damaging nine.

COUNT INOUE, Minister of State for Home Affairs, was commanded on the 28th ult. to represent the Premier until Count Ito is able to attend business of State again.

MR. OKUMA UJIHIRO, a famous sculptor, who has just completed the statue of the late Omura recently erected at Kudan, Tokyo, has received an order for a statue of the late Count Yamada.

A TELEGRAM from Ishikawa Prefecture, dated the 28th ult., announces that the bill for the abolition of arming police constables with sabres has been passed at a meeting of the Prefectural Assembly.

A MARRIAGE has been arranged between a daughter of Count Oki, ex-President of the Privy Council, and an influential resident of Kobuhara in the neighbourhood of Nikko, Yashu Province.

AT 10 o'clock on Tuesday morning an outbreak of fire took place in a kerosene refinery at Fukagawa, Tokyo, and the whole of the buildings were burnt down. A house near by was considerably damaged.

A TELEGRAPHIC message from Kobe reports that the bill for the abolition of the use of sabres by police constables in Hyogo Prefecture was passed at a meeting of the Prefectural Assembly held on the 29th ultimo.

COUNTS INOUE, Yamagata, Kuroda, Goto, and Oyama, Viscount Niire, and Messrs. Mutsu, Kono, and Watanabe, Ministers of State, held a conference on the afternoon of Tuesday last at the residence of the Minister of State for War.

THE Bill for the expenses of rebuilding Prisons, amounting to over *yen* 254,400, to be defrayed during the period extending from the 26th to the 30th fiscal year, was rejected at a recent meeting of the Kanagawa Prefectural Assembly.

THE marriage arranged between H.I.H. Prince Kani Kuninori and Lady Daigo Yoshiko took place in Kyoto on Saturday last. Mr. M. Uda, Assistant Superintendent of the Bureau of Palace Superintendence in the Imperial Household

Department, has been despatched by Their Majesties the Emperor and Empress with Imperial presents to the newly married couple.

TELEGRAPHIC intelligence from Osaka dated the 26th ult. announces that the Osaka City Assembly has resolved to devote *yen* 13,638 towards the expenses of surveying the port of Osaka, which is to be reconstructed by the citizens.

It is stated that Mr. Takahashi Kenzo, who lately resigned the Directorship of the *Official Gazette* Bureau in the Cabinet office, intends to start a newspaper in the interests of independent principles and entirely free from the range of party quarrels.

ON the evening of the 26th ult., 16 Japanese gamblers were captured in a police raid on a house at No. 151, in China-town, Foreign Settlement, Yokohama. Over 40 persons are said to have been indulging in gambling when the house was visited by the police, but the majority got clear away.

THEATRICAL performances by the party of Danjiro, Kikugoro, Fukusuke, and many other leading actors of Tokyo, in aid of the Fukuden-Kai (a charitable asylum), will be given at the Kabuki Theatre, Kobikicho, Tokyo, during the three days ending on the 4th inst. The performances will commence at 10 a.m.

At a meeting of the Cabinet, held on the 28th ult. at the official residence of the Minister of State for Finance, there were present Counts Yamagata, Kuroda, Oyama, Inouye, and Goto, Viscount Niire, and Messrs. Mutsu and Kono. The proceedings lasted from ten in the forenoon until half-past four in the afternoon.

A VIOLENT gale, accompanied by heavy rainfall, visited Shizuoka Prefecture on the afternoon of the 24th ult. The storm commenced about one o'clock, and an hour later it reached its utmost severity, although continuing for two hours longer. Thirteen houses were damaged at Nishikida-mura in the Kimizawa District. One female was crushed to death and five dwellings damaged at the foot of Fuji.

THE Import trade continues healthy and strong, and a quotable rise can be reported both in Yarns and Grey goods, as both English and Bombay spinnings, as well as heavy and light Shirtings, have been sold at improved rates. Buyers, however, are not well supplied, and must come into the market and pay prices of which they are at the moment somewhat shy. Wool-lens are quiet, though there have been enquiries, but holders are strong and will not look at present offers. There is a little more life in the Metal trade, Bar Iron being taken in larger quantities, but there is no alteration in values. The Kerosene market is healthy, sales being good at full figures. There was a rush upon Sugar after writing last week, and nearly 30,000 piculs of Browns were taken. This sudden and unexpected raid upon the stock put all Browns up 10 cents per picul, but nothing worth reporting has been done since and prices all round might be called nominal. The Silk trade continues to flourish, and exporters have found nearly 1,000 piculs for shipment. Prices keep up, and all silk with any pretension to quality is held for high figures. Waste Silk has also been freely taken, and prices are fully maintained. There is nothing to report in Tea. Exchange has fluctuated again, and if there is any alteration at the close it is a tendency towards a rise, though rates here have been a point lower than the London price of silver seemed to warrant.

EDITORIAL NOTES.

THE VERNACULAR PRESS ON THE POSTPONEMENT OF THE CODES.

THE Bill to postpone the operation of the Civil and Commercial Codes which passed the Diet last session, but failed to obtain the Imperial Sanction until the 22nd ult., that is to say, three days before the assembly of the Diet, has naturally evoked much journalistic comment. From time to time we have referred to the impatient criticisms evoked by the apparent hesitation of the Cabinet to advise the Sovereign definitely, and in order to complete the subject, its importance being exceptional, we shall now give a brief resume of the comments published on the occasion of the announcement of the Imperial Sanction.

The *Nichi Nichi Shimbun* observes that though all other Bills which passed the Diet obtained Imperial Sanction within ten days after the close of the session, the Codes Bill alone was withheld till almost the last day before the opening of the next session. It is clear that the Government hesitated to solicit sanction for a long time, and their uncertainty may be gathered from the fact of appointing a Committee to examine the Codes. The *Nichi Nichi* finds it strange that the most experienced and ablest statesmen in the empire could not come to a decision about such an inevitable question for so long. Since, however, the Cabinet at last obtained the Imperial Sanction it is not necessary to animadvert upon past procedure. We must wait to see what the future will bring forth. The Government will probably allege that they delayed to seek sanction because they deemed the subject worthy of profound consideration. But since they have now obtained sanction, they must proceed, without any further delay, to publish the projected method of amending the Codes. As the subject is of the gravest importance, the Government ought once to appoint a Committee of experts, who shall examine into the defects of the laws. Many months have been spent considering the question, but the Ministers of the Crown ought to have known that these months could have been profitably employed in improving the Codes, had a Revision Committee been appointed at once. It is stated that the Government intends to amend the Sections relating to Companies, Bankruptcy, and Bills of Exchange in the Commercial Code, and to submit them to the Diet during the present session. The *Nichi Nichi* approves this programme, but asks what the Government intends to do for the other parts which are also of very great importance. It concludes by saying that the Imperial Sanction has been given not for mere postponement but for amendment, and that therefore the Government ought to announce a programme of revision at once.

The *Choya Shimbun* sums up the history of the Codes from the beginning in the following sentences:—"The first question was whether Japan required Codes? The second, whether their promulgation had taken place too soon? The third, whether they were good Codes? And the last, what method should be adopted in amending them?" The last question now invites decision; and it will be better, thinks our contemporary, to leave the matter in the hands of the Government, since there is need of learned experts, and the Government can command the services of the majority of these. But inasmuch as the Diet may disagree with the amendments, and fresh delay may thus be caused, it is advisable to request the Diet to present petitions, pass resolutions, and adopt representations which may serve as indications of parliamentary desires.

According to the *Hochi Shimbun*, the public knew well that Count Ito would not have courage to oppose the resolution of both Houses of the Diet by counselling the Sovereign to withhold sanction from the Bill for postponement. Hence, every one expected to see that sanction ultimately extended. But, on

the other hand, the influence of the advocates of immediate enforcement was so great, among them being the members of the last Cabinet who hoped to see the resolution of the Diet rejected, as well as some members of the present Cabinet who entertain the same view. Thus Count Ito was placed in an awkward position. To adopt either alternative would make some foes. But time refused to stand still for him, and at last he was compelled to obtain the Imperial Sanction a few days before the opening of the next session. He waited, indeed, until the very last day allowed by Art. 32 of the Law of the Houses. The *Hochi* therefore prefers to say that Art. 32, rather than the Ito Cabinet, obtained the Imperial Sanction. As the question is one of the gravest importance it is strange that Count Ito did not decide his policy when he organized the present Ministry. If he had done so, he need not have hesitated till the very last day allowed by the Law of the country. Moreover, he furnished the public with materials for merriment by appointing the Codes Committee. The original object of the Committee was to ascertain what argument could be advanced for enforcing the Codes, but the Minister President was compelled to change his purpose, and to direct the investigation towards determining the possibility of enforcing portions of the Codes. Finally, he has again been obliged to alter his mind, and to have recourse to the amendment of certain portions of the Commercial Code. Apart from all these things, however, Count Ito has merited public approval by adopting the Diet's Bill. The only fault is that his resolution came very late.

The *Mainichi Shimbun* asks why the Imperial Sanction was withheld till the very last day; why the Codes Committee was appointed; and why the Committee consisted of equal numbers of advocates and opponents of the Codes, its President having a casting vote in favour of their immediate enforcement. It is stated that Count Ito also was in favour of postponement at first, but he was converted to adopt the enforcement view. Ultimately, however, seeing that the country was indignant at his regarding the resolution of the Diet so lightly, and that the question would be brought up in the next session, he changed his opinion once more, and at last obtained the Imperial Sanction. Thus, during the last few months, the opinion of Count Ito changed several times.

The *Shogyo Shimpō* alleges that the defects of the Codes are well known, and that the object of postponing their operation is to amend them. But it is stated that the Government intends to present portions of the Commercial Code for immediate enforcement in the next session. As the necessity for the enforcement of these sections is felt, they may pass the Houses. But do they require no amendment? The object of those who voted for the Postponement Bill was to amend those portions specially. Therefore, if these particular laws pass the Diet, the members who voted against them will be gravely disappointed. Whether the rest of the Commercial Code may be enforced immediately or not, they do not care. The parts they desire to see amended are precisely those which it is proposed to enforce. If the sections to be now re-submitted require no amendment, they ought to have been separated from their context by the Diet before the Bill for the postponement of the whole was voted. The *Shogyo* expresses a hope that the whole will be amended instead of cutting the Codes into small portions, a course not provided for in the Bill.

The *Kokkai* publishes a brief leader on the subject in its wonted vein:—"The Bill for postponing the operation of the Codes may be compared to difficult parturition. The infant made many unsuccessful attempts to come into the world, and was born at last with much difficulty just a day before the opening of the next session. On that day the advocates of postponement must have rejoiced, and its opponents

been a prey to indignation and disappointment. Mr. Razor (the Minister for Foreign Affairs) murmured that Treaty Revision could not be accomplished for some time; Count Natural Right (Count Oki, ex-President of the Privy Council) was wroth with the peoples' progress in jurisprudential discrimination, and Count Code (Count Yamada, late Minister for Justice) sighed at the uncertainty of human affairs in this nether world."

THE GAME REGULATIONS.

We observe that the crusade instituted by local journals in Kobe against the action of H.B.M.'s Chargé d'Affaires in connection with the Game Regulations has fared as such attacks usually fare in the Far East: the original ground of assault has been entirely ignored and a new issue is raised, the change of front being concealed behind customary politenesses, as, for example, that the *Japan Mail* is a "hired jester" and so forth. At the outset the Chargé d'Affaires was said to have "fallen into a deep ditch dug for him by the Japanese" because he had re-enacted Japanese Regulations and made them binding on his nationals. Now the chief complaint against him is that in re-enacting the Regulations he has appended penalties more severe than those occurring in the Japanese Regulations themselves. It apparently escapes the notice of his assailants that the re-enacted regulations issued by Her Majesty's Chargé d'Affaires were drafted by legal experts—as, for instance, the Judge of Her Britannic Majesty's Court for Japan—who may reasonably be supposed to know how such work should be done, and what penalties accord most closely with the provisions of British law. Even assuming, however, that the editor of a journal like the *Hyogo News* knows more about such matters than trained legislators, the inconsistency of his position would not be less comical. His perturbation was originally due to an apprehension that these Game Regulations must be regarded as "the first of a formidable series of laws" designed to deprive foreigners of the privileges enjoyed by them in Japan, above all of the privilege of exemption from Japanese jurisdiction. To avoid such a terrible consummation, our contemporary would have had the Chargé d'Affaires merely direct his nationals' attention to the fact that such and such a Notification had been issued by the Japanese. Direct his nationals' attention to the fact, for what purpose? Obviously in order that they might obey the provisions of the Notification. So, then Her Majesty's Chargé d'Affaires is supposed to have fallen into a pit dug by the Japanese, because, forsooth, he does not declare Japanese enactments binding, as they stand, upon his own nationals, but employs the power of re-enactment vested in him by the British Government expressly to preserve his nationals from the semblance of any obligation to obey Japanese laws. He converts a certain Japanese regulation into a British form, so that it shall not, in its Japanese form, possess any binding force for British subjects, and he adds British penalties to laws drafted by British lawyers, because the very fundamental principle of extraterritoriality is that Japanese penalties shall not be enforced against British subjects. Thereupon, the loudest champions of extraterritoriality cry out that he is surrendering the extraterritorial fort because in the first place, he did not make the Japanese Regulations binding in their entirety without re-enactment; and because, in the second, he did not adopt the Japanese penalties as they stood. If these critics know their own mind, they take very good care that others shall not know it.

Many strange things have been written about these Regulations. One is, that "the French Minister refused to recognise the Japanese Ordinance." That is simply a falsehood. Another is that "the German Minister restricted himself to the issue of a Notification." That is also untrue, for the German Minister issued no Notification at all. He doubtless instructed the German Consuls, however, and they issued a notification. What was the notification? It

was an official declaration that the prohibitions of the Japanese Game Regulations must be observed by all German subjects desiring to enjoy their privileges; that the penalties prescribed by German law should be applied to enforce those provisions; and that in cases not covered by German law, a fine of from 3 to 150 marks, or imprisonment, failing payment of the fine, should be resorted to. Germany, in short, applied the prohibitions of the Regulations in their entirety to her subjects, enacting special penalties to meet contraventions not contemplated by her own laws. All the other Powers, we believe, have adopted the same course, though probably with slightly varying methods. The United States of America, indeed, maintains that Japanese laws, as such, are always binding upon her citizens, and the present Consul-General has carried this principle to its logical issue; for he has accepted the mere fact of the enactment of the Regulations by Japan as entailing upon his nationals the obligation to obey them. Other Powers, however, have been obliged to take some action, for, as we explained at the outset, no foreigners to whom the prohibitions of the Regulations had not been extended would be competent to enjoy their privileges. It is incredible that so much confusion and perplexity should have been displayed about a matter so simple and rendered so familiar by precedent.

THE ACTION AT LAW AGAINST VISCOUNT SHINAGAWA.

THE suit instituted by Mr. Oba Kikujiro against Viscount Shinagawa has fared as might have been expected. Mr. Oba is the chief founder of an association called the Saimin Club, which has its head-quarters in Kamiheyemon-cho, Asakusa, Tokyo. The members of the Club appear to have put their heads together, and concluded that it would be worth while to try the experiment of arraigning the late Minister of State for Home Affairs on a charge of illegal interference in the general elections. Mr. Oba accordingly instituted proceedings in the Tokyo Local Court, and prayed that Mr. Shimada Saburo, leader of the *Kaishin-to* in the House of Representatives, Mr. Kono Hironaka, leader of the *Jiyu-to* in the same House, and Mr. Tatekawa Umpei, who was put up by the Radicals to set forth the Opposition's case against the Government when a memorial to the Throne was proposed last session, should be summoned as witnesses. The suit would certainly have been most interesting had it been allowed to proceed, though our cannot easily conceive that such issues as the complainants advanced could not be tried by an ordinary Law Court. They alleged, in the first place, that official interference in elections being calculated to excite the people and provoke breaches of the peace, was an offence against the law; in the second, that it was a violation of the Imperial Prerogative and the Imperial virtue, as well as opposed to the spirit of the Constitution; in the third, that it was a violation of the rights appertaining to the people under a constitutional system of government; and in the fourth, that Viscount Shinagawa, as Minister of State for Home Affairs at the time and therefore responsible, must be held to have acted in defiance of the 276th and 277th Articles of the Criminal Code. The Articles run as follow:—

276.—Every public functionary who, acting in that capacity, shall have compelled a person to commit an act which he had no right to commit, or shall have unduly hindered him from exercising a legal capacity, shall be punished with simple imprisonment for a period of from eleven days to two months and a fine of from 2 to 20 yen.

277.—Every magistrate, every officer of the public administration, or every officer of police, who, having known of a flagrant offence committed against the person or goods of an individual, and shall not have immediately proceeded to protective measures, shall be punished with simple imprisonment for a period of from fifteen days to three months, and a fine of from 2 to 20 yen.

A petition in the above sense was duly laid before the Tokyo Local Court, but that tribunal, after brief consideration, declared itself incompetent to entertain such issues, and declined to hear the case. The Opposition are certainly to be commended for the resolution they have

shown in pushing this question of official interference. It seemed most desirable that a parliamentary Committee should be appointed to investigate the matter thoroughly, but, as was pointed out in the House of Representatives at the time, a parliamentary committee would have possessed no power to summon witnesses or conduct a thoroughly efficient inquiry. One feels inclined to regret that the Administrative Court cannot be reached, for, whatever be the rights of the case, widespread dissatisfaction seems to prevail still. On the other hand, it is very conceivable that the efforts now made to revive the matter may be entirely in the nature of political capital. The action of the *Jiyu-to* in the session just commenced will afford an opportunity of gauging the real sentiments of the Opposition.

CUSTOMS RETURNS.

THE following is a summary of the customs Returns for October, showing the foreign trade of the empire for the month:—

	1891.	1892.
Exports	7,096,452.570	10,184,846.890
Imports	5,540,188.350	6,216,919.330
Total exports and imports	12,636,640.920	16,401,766.220
Excess of exports	2,096,262.570	3,967,927.560
CUSTOMS DUTIES.		
Exports	229,915.008	229,915.008

THE "KAISHIN-TO" AND THE "JIYU-TO."

THE quarrel between the *Kaishin-to* and the *Jiyu-to* has not been made up, nor do present appearances indicate any likelihood of a speedy settlement. An impression prevails, on the contrary, that Mr. Shimada Saburo's utterances, to which exception is taken, were not a mere incident, but rather an accurate expression of feelings that had long been growing and have now become too acute to be ignored. The provocation has been entirely on the side of the *Kaishin-to*. For some time back their organs have been saying, or hinting, disagreeable things about the *Jiyu-to*, the latter, however, refraining from all retort. The fact appears to be that the *Jiyu-to* are not sufficiently implac-

able to please the *Kaishin-to*. The programme of the latter is to steadily continue a destructive policy until the Government is compelled to accept their dictation, whereas the *Jiyu-to* are now adopting a constructive platform, in part at any rate, and seem not indisposed to judge the Cabinet's measures solely on their merits. We do not imagine that the rupture which has now occurred will have visible effects within the walls of the Diet in the immediate future. But it is not unlikely to grow wider under the stress of parliamentary debate, and certainly the contingency of a genuine coalition between the two parties has been relegated to a very distant date.

THE BARRISTERS' EXAMINATION SCANDAL REVIVED.

THE first examination of Barristers was abandoned on the second day, owing to the questions having been divulged; and a fresh examination was held in the Kinkikan on the 24th ult. But again a rumour went abroad that the questions had been sold for a sum of from yen 15 to 20, and that over a hundred candidates had purchased them, promising to pay the money when they had passed the examination. The rumour was first circulated by the Teikoku News Agency, but its truth has not yet been ascertained. However, a crier named Omachi Chikara was expelled from the examination hall on the 25th instant. One of the Inspectors of Examination, seeing reason to suspect that Omachi had brought a book into the hall, watched him closely, and finally detected him in the act of copying out a passage from Mr. Tanaka Yusunoshin's work on Civil Procedure. He was at once expelled from the hall. It seems to us most unlikely that the reported sale of the papers on this second examination should be true, as every precaution would naturally have been taken against such a contingency.

THE "KOKUMIN-NO-TOMO" ON CURRENT TOPICS.

THE following comments on current topics are taken from the *Kokumin-no-Tomo*:—What price is Count Ito going to pay for the support of the Popular party? It will not do to pay either too much or too little. Has he no better policy to pursue? Has he nothing else to fall back upon, than soothing words and alluring baits?

It is good that the Department of the Navy has awakened to the necessity of reforms. But no reform will be of any avail, unless it is radical and thorough. The retirement of a few decrepit officials will be inadequate to procure the consent of the Diet to the construction of war-vessels.

Count Itagaki's advocacy of the augmentation of the Navy must be regarded as a concession on his part to his enemy. The example of a superior is always followed by his inferiors with added zeal. A day will come when the Count will repent of his present conduct.

Mr. Matsuda Masahisa of Kyushu, Mr. Hoshi Toru of the Central Provinces, and Mr. Kono Hironaka of the North-East, were once regarded as men of firm resolution and strong purpose. But what are they now doing? With the rise of their reputation they have become afraid of making enemies, and there are a hundred indications that they have unconsciously been transformed into weak and passive politicians. This eminent trio of Radicals would do well to reflect on their conduct.

To mention the worst features of their characters,—the Radicals are foolish, while the Progressionists are cunning. Fools are liable to be deceived, and cunning folks are apt to be hated.

We are glad of the diplomatic appointments of Mr. Nakashima Nobuyuki and Mr. Oshi Masami, because the non-official circle has thus been relieved of the presence of these equivocal persons. We hope that we may, in a similar manner, get rid of men like Mr. Suehiro Shige-yasu, Mr. Arai Shogo, and Mr. Oi Kentaro.

The Saitama Prefectural Assembly has been dissolved on account of its vote of want of con-

fidence in the Governor and Chief of Police. May we not consider this as an inevitable result of the half-hearted manner in which the punishment of local officials charged with interference in elections has been carried out? We implore the Government to take decisive measures, beginning with the Prefectural Government of Saitama. Otherwise the question of official interference in elections will again, in the coming session, lead to a vote of want of confidence in the Ministry.

REMARKABLE EXPERIMENTS IN HYPNOTISM.

On Thursday morning, says a London paper of Oct. 14, at the Charité Hospital, Paris, the series of experiments which are being made by Dr. Luys of the "exteriorisation" of the human body were continued. Thanks to the kindness of Dr. Luys, a Dalziel representative was allowed to be present at the séance. So complete was the exteriorisation of the subject that Dr. Luys was able to transfer a woman's sensibility into a tumbler of water. The tumbler was then taken out of sight of the hypnotised person, and the representative was invited to touch the water, and as his hands came in contact with it the woman started as in pain. This experiment was repeated several times, the requisite precautions being taken that the hypnotised subject should not see the contact between the hands and the water. The water retained the sensibility for a considerable time, and, if drunk before the sensibility is exhausted, the patient falls into a deadly swoon. Dr. Luys was also able to confirm the wonderful discovery made by Colonel Roche, administrator of the Ecole Polytechnique, who found that it was possible to transfer the sensibility of a hypnotised person to the negative of a photograph of the subject, and that the subject not only felt but showed signs of any mark made on the negative. Supposing, for instance, a scratch was drawn with a pin across the hand on the negative after it had been charged with sensibility, the subject would shriek with pain, and a few instants later a mark similar to that made on the negative would be visible on the hands of the subject. Dr. Luys tried the experiment on Thursday several times with an extraordinary sensitive subject now at the Charité, and each time with considerable success. The experiments, are creating a great deal of interest in the scientific world.

CATTLE DISEASE.

The cattle plague is gradually spreading all over the empire, though the Authorities spare no pains to check it. It is now reported that in the Rokugo District near Tokyo, 3 oxen caught the disease on the 21st instant, and were destroyed at once. In Kyoto the plague made its appearance on the 9th instant, and up to the 19th 9 oxen had died from it. On the 20th 9 more were swept away, and on the following day another case of the worst kind was destroyed. In Osaka, 14 cases were reported in two days, namely, the 20th and 21st instant. There have been altogether 429 cases from the beginning, and out of them 244 died and 185 were killed. On the 22nd the number of new cases was sixteen, and there is every sign of increase. In Wakayama Prefecture one case has been reported, and in Oita Prefecture the disease is spreading very rapidly. From the 15th to the 23rd 96 cattle altogether were destroyed and it is stated that out of that number 13 had been imported from Korea. In Hyogo Prefecture 81 were destroyed in a week, and the plague is reported to have spread over 17 districts. A fresh case was also detected in Shirokane, Tokyo, on the 24th instant. The Governor of Kyoto at first prohibited the import of live cattle only, but as the disease spread throughout the prefecture, he extended the prohibition to hides of cattle or sheep. The Governor of Hyogo Prefecture has forbidden butchers to export cattle to Awaji or any other provinces, and if the interdiction is violated, a heavy fine is to be imposed. Nara, Iwate, and many other Prefectures have also stopped the importation of cattle or sheep from other places, and the Kanagawa Kencho has

suspended the opening of the meat market till further notice.

With reference to the above, it may not be amiss to allude to a prejudice commonly prevailing in consequence of the epidemic. Many people have interdicted the use of beef and milk altogether in their households, or at any rate have deprived themselves of these everyday staples of diet. Now it has been abundantly proved by experience, and is admitted by experts, that no such uneasiness need be felt. In the first place, nothing is less likely than that diseased meat would be purchased by a cook, or served for use if purchased. Not only are drastic precautions exercised officially to prevent the moving about of infected cattle or the hawking of their flesh, these precautions being employed solely to prevent the spread of the epidemic; but also the chances of any open-eyed person's purchasing the beef of a diseased beast are most remote. In the second place, supposing infected beef to be purchased, cooked and eaten, no danger to the health of the person consuming it need be apprehended. The idea of having made a meal on such flesh—were any one hungry enough and sufficiently blunt-palated to do so—would certainly be disagreeable, and might even prove nauseating were the fact discovered in time. But beyond this partially sentimental objection, there is no reason to be at all disturbed. People may go on enjoying their steaks and sirloins as complacently as ever, if they can afford to be entirely complacent in the face of constantly increasing prices. As for milk, there is scarcely a remote probability of a diseased cow having any to give, and if a small quantity were obtained, nobody would be hurt by it.

THE TANKO RAILWAY COMPANY.

The Sixth General meeting of the Tanko Railway Company was held in the Koseikan at 2 p.m. on Friday last. Some 99 shareholders assembled; and Mr. Takashima Kayemon, Director of the Company, took the chair. The last half yearly account was read out. It ran as follows:—

Total revenue	702,672.016
Total expenditure	550,369.970
Profit	52,302.046
Subsidies	109,825.199
Balance	1,462.420
Total Profit	263,589.665
Payment towards Original Expenditure	1,000.000
Payment towards Tanko Mine Expenditure	3,437.500
Reserve	7,393.000
Rewards and Sundry Expenditure	10,350.000
Dividend (7½ per cent.)	239,850.000
Balance	1,559.165
Total	263,589.665

Mr. Amenomiya Keijiro, one of the principal shareholders, then rose and, after congratulating the Company on the satisfactory results of the working, explained that the large fires at Sapporo and Kotaru had caused a depression of trade and industry in Hokkaido. Moreover, the fisheries on the western coast had been exceptionally unsuccessful during the last half year, many a capitalist had failed and the goal market was far from being prosperous. Indeed it might be said that the last half year had been a particularly bad time for the company. Yet, owing to the energy of the Director and the other officers of the company, a dividend of 7½ per cent. could be distributed, without touching the reserve. For such a happy result the shareholders should feel heartily thankful. At the same time he hoped that during the next half year the Company would economize its expenditures and obtain a larger revenue from coals, so as to be able to pay the same per centage of dividend, for they had to remember that their earning power would be crippled during the winter owing to the suspension of communications by

snow and frost. Mr. Takashima, Director of the Company, replied that as all necessary preparations had been made for the winter season, the rail service would not be suspended even in the depth of winter. At present there was a population of 400,000 in Hokkaido, and they cultivated about 200,000 *cho* (500,000 acres) of formerly waste land. On this basis there was land enough for an increase of 200,000 emigrants annually; and he hoped to see a million more inhabitants in five years. With a population of 400,000, the company could realise a net profit of 300,000 *yen*; therefore, an increase of a million more, supposing that each spent 1 *yen*, would enable the company to obtain one million *yen* profit per annum. But even though such a figure could not be reached, it was certain that the Company's prospects were improving gradually. A proposition relating to the appointment of officers was then discussed, the object being to abolish the official nomination of officers, and make them elective. There was much opposition, and at last the measure was rejected by a large majority. The Standing Committee of five was ultimately elected as follows:—

Mr. Shibusawa Eiichi	1,208
Mr. Tanaka Heihachi	1,137
Mr. Yuchi Sadamoto	1,000
Mr. Tojo Itatsuke	1,037
Mr. Saionji Kinnari	602

MR. MINAYE.

The injury suffered by Mr. Minaye at the hands of a *soshi* on the 25th ultimo proves to have been very slight. It is expected that he will be able to attend the opening ceremonial on the 29th. Last session it was deemed advisable to attach guards to members of the Lower House, but as this precaution will not, for the present at all events, be taken, the Chief of Police is said to have issued specially stringent instructions to the constables on duty in and about the Houses, so as to prevent any further outrages by *soshi*. Meanwhile, seven members of the *Chuo-dantai* have been arrested on suspicion of complicity in the attack made by Susa Kakichi on Mr. Minaye. Among the seven is Kojima Heikichi, who was wounded by a servant of Mr. Minaye on the 16th instant.

"AZUMA."

SIR EDWIN ARNOLD has been reading "Azuma" to a select little coterie of fourteen, mostly journalists, who met at the office of Major J. P. Bond, in the Everett House, New York. We, who have had the pleasure of hearing the play, need scarcely say that the New York audience was delighted. We gather from the comments accompanying the account of the *stance* that arrangements have not yet been concluded for the publishing or acting of the drama. One passage is quoted, the only one that Sir Edwin would allow to be made public property. The reason for his complaisance with regard to this particular part is said to have that the passage had already been printed in a Japanese paper, but that is probably a misconception. At any rate the passage is one of the many gems with which the play abounds:—

Two reigns ago—
The Emperor Toba ruling—a vast bird
Haunted Shikanozaki's craggy head,
In Yamato. A monstrous, snow-white bird;
Its spread wings like the mid-sails of a junk;
Its beak a blacksmith's shears; its talons twinned
Hooks of black bronze. And, when the women laid
Their babes upon the rice-sheaves, oftentimes
A whistle would be heard among the pines,
As though a typhoon whirled, and then would fall
The roar of those wide, terrible, white wings,
Casting their swift, dark shadow, and the scream
Of the hungry eagle swooping on the babe
With eyes ablaze, and silencing the cry—
Save for the mother's ears—of that soft prey,
Whose tender limbs the savage talons seized
And bore aloft; while some ran for their bows,
And some flung idle stones; and some made speed
To follow as they might the ravisher;
But always to the hollows of the hills
Safe made he flight.

THE CANADIAN-PACIFIC ROUTE.

ARRANGEMENTS have been completed, says the *Singapore Free Press*, for another transhipment of Imperial Marine over the Canadian-Pacific route. The troopship *Tyne* has left Sheerness

for Halifax with new crews for the cruiser *Hyacinth*, and the sloops *Daphne* and *Nimphé*, which are to be recommissioned at Esquimaux for a further term of foreign service. The *Lyne* has orders to arrive at Halifax on October 30th, and the 23 officers and 420 men who make up her company will then proceed to Vancouver, a similar number of officers and crew returning from Vancouver to Halifax on their way to England. Once again, therefore, has the Admiralty given practical evidence of its appreciation of the Imperial value of the Canadian higher-way.

MR. JAMES STEVENSON.

A VERACIOUS and polished person by name James Stevenson has been undergoing the process of interviewing in San Francisco. Stevenson appears to have resided at one time in Yokohama. He calls himself an architect, but if he ever occupied any such position here, it was without the knowledge of the public. He is a wild and evil-tongued exaggerator, to use no rougher term, and following the propensity of his kind—a propensity with which experience in Yokohama has rendered us very familiar—he seeks to substitute violence of expression for veracity. He declares the Japanese to be “the worst set of unprincipled scamps under the sun” and “the wickedest rascals under the sun in all points of honour or trustworthiness.” This fanatic hyperbole is merely amusing. Did it stand alone, we might charitably regard the man as nothing worse than the victim of a screw loose—he does, by the way, carry a loose screw about his person for the purpose of demonstrating his diatribes by showing how Japanese “brass screws” are in reality steel screws coated with brass. But Stevenson does not stop short at exaggeration. He has recourse to direct falsehood. “Rudyard Kipling,” he says, “refused to be personally conducted when he was in Japan, and, as consequence, his opinion on what he saw is voted locally the only correct one published to-day.” “Personally conducted” according to Mr. Stevenson’s definition, means to be “taken in hand by officials wherever a man goes and shown around over prepared ground.” No man receives such treatment in Japan unless he brings special letters of introduction entitling him to it. Mr. Rudyard Kipling did not bring such letters. Not the slightest notice was taken of him by the Japanese. They did not even come to a dinner given to him by the foreign members of the Tokyo Club. To say that “he refused to be personally conducted” is a falsehood. So too of this larger lie attributed to Mr. Stevenson:—

“Japanese merchants will go round to all the foreign firms in their settlement and give the same order for a certain class of goods. When the goods arrive they repudiate all their contracts, go bankrupt, and a confederate starts in and buys cheap on a flooded market.”

In his anxiety to vilipend the Japanese this Stevenson represents the foreign firms as a set of silly greenhorns capable of being taken in by any adventurer.

Unprincipled romancers like this man Stevenson are common enough, and would not be worth notice were it not for the extreme comicality of such persons posing as judges of morality in any form, but above all in the form of honesty. Incapable themselves of telling the truth, they naturally see an Ananias in every one else. The old rule as to the pot’s capacity to detect the kettle’s colour is often illustrated in such matters. It is, for example, both instructive and amusing to note the character of the local journalists who chiefly devote themselves to denouncing the want of integrity and the general depravity of the Japanese race. These very men, in the pursuit of their own profession, are absolutely dead to every sense of honour, fairness, or veracity. They deliberately pervert the arguments of their opponents, carefully abstain from allowing their readers to see any but their own side of a case, falsely attribute to an adversary statements and opinions which he never dreamed of advancing or entertaining, devote their pens solely to abuse, and make it an invariable rule to trace everything to the

worst conceivable motives. Yet these are precisely the persons who prate loudest about commercial integrity and the high principles of the “superior races.” No more revolting spectacle could be conceived. It is the most unsightly form of hypocrisy, and that it immeasurably lowers all Westerns in the eyes of discriminating Japanese, there can be no manner of doubt.

A Correspondent, signing himself “F.” takes us roundly to task for commenting severely on the remarks attributed to Mr. James Stevenson by an interviewer of a San Francisco journal. “F.” declares that “the report of the interview was most certainly garbled.” On what evidence he makes this assertion we do not perceive. Possibly he knows Mr. Stevenson to be a man incapable of uttering the wild exaggerations attributed to him by the San Francisco Journal. We, however, as “F.” rightly conjectures, have no personal knowledge of Mr. Stevenson whatever. We are acquainted with him only through the declarations assigned to him by his interviewer. Our criticisms had reference entirely to those declarations, and until Mr. Stevenson himself denies that he made such statements, we must not only adhere to our condemnation, but also supplement it by saying that we consider it moderate and gentle in view of the monstrous expressions put into Mr. Stevenson’s mouth by the San Francisco interviewer. It is very well now for a resident of Yokohama to stand forward and “object strongly” to Mr. Stevenson’s views being judged by “an apocryphal account of a supposed interview.” Perhaps the interview never took place. Perhaps, if it did take place, the language used by Mr. Stevenson was flagrantly misrepresented. But it is for Mr. Stevenson, and for Mr. Stevenson alone, to furnish conclusive information on these points. The hypotheses of a correspondent at this side of the ocean, however justified they may be by friendship or by previous knowledge of Mr. Stevenson’s character, cannot weigh effectively against a published report of views avowedly couched in the *ipsissima verba* of Mr. Stevenson himself. We cannot look beyond the interview, so long as Mr. Stevenson takes no step to contradict it. If he does so, we shall be found very willing to assist in dispelling the injurious impression now prevailing as to his veracity and judgment.

Writing on this subject, we desire to make one further comment. Here we have a correspondent addressing to newspaper columns a vigorous letter of protest against an estimate which he considers unjust to the character of an absent friend. With such a correspondent we have the heartiest sympathy. It is a thousand pities that men do not show more practical activity in such matters. The tyranny of the press would very soon be broken if every one of its unjust and unsupported criticisms were immediately challenged whenever questions of personality were concerned. “F.” must not imagine, therefore, that because we are unable to soften any of our comments so long as the alleged interview remains uncontradicted, we have any desire to see them vindicated by Mr. Stevenson’s silence. On the contrary, we shall be pleased if proof be forthcoming that Mr. Stevenson is misrepresented by his interviewer. But there is another aspect of the affair: what of the Japanese people whom Mr. Stevenson is depicted as having calumniated so cruelly? Is the crusade of vindication to be conducted entirely on behalf of Mr. Stevenson’s veracity, and is no blow to be struck on account of the nation at whose expense his gross exaggerations were uttered? That, surely, would be very one-sided justice. “F.” “strongly objects” to Mr. Stevenson’s being called “a wild and evil-tongued exaggerator” and “an unprincipled romancer” because an “apocryphal account of a supposed interview” represents him as using statements which justify even more condemnatory epithets. But what Mr. Stevenson said was that “the Japanese are the worst set of unprincipled scamps under the sun” and “the wickedest rascals under the

sun in all points of honour and trustworthiness.” He could not possibly have vilipended the Japanese nation more radically and cruelly had he deliberately set about doing so, and he must bear the brunt of such sweeping calumnies so long as he refrains from repudiating them. That his friends should be solicitous about his reputation for veracity we can well understand. But that the injustice done to him by a careless interviewer—if, indeed, the fault really lies with the interviewer—bears any comparison with the injustice done by him to the whole of the Japanese nation, we cannot for a moment admit.

THE VALUE OF LIFE IN CHINA.

As an example of the value set upon life in China the following extract from the *Peking Gazette* is worth reading:—

A month or two ago it was announced in the *Gazette* that T’an Hsiu-kang, General at K’ailua in Yünnan, was cashiered in order that that he might be tried for causing his servants to put to death his two concubines belonging to him and a man with whom they had run away. The trial has now taken place, and sentence has been passed by the Governor-General. As appears from his report, the two women were living for the benefit of their health in a house away from their husband. A small official, temporarily stationed in the same place, formed an adulterous connection with them. When his duty was finished and he was leaving, he persuaded them to go off with him. The news reached the General, who sent a petty officer with orders to kill all the three. He followed them up, caught them in a house, and shot the man, but was prevented by the people there from slaying the women. He took the women away with him, but left them *en route* while he hurried to report to the General what he had done. He also showed the General the *quene* and one ear which he had cut off from the corpse as proofs of the adulteress’s death. The General who was still implacable sent him back with a servant, giving them strict orders to put the women to death. The servant killed them, and buried them with their paramour. The Governor finds that there is no punishment for a husband who kills his concubine’s paramour on the spot; but for putting the women to death at a different time and place the General must be condemned to receive a hundred blows. As he has been cashiered, this may be taken as the equivalent of the beating. His agents, the petty officer and the servants, who slew the woman, and committed a further offence by surreptitiously burying them, are ordered to receive eighty blows. The former, however, has been cashiered, and the latter is dead, no further notice therefore need be taken of either.

MILK AND MEAT.

A SCIENTIFIC man of the highest standing writes to us as follows on the subject of milk in times of cattle epidemic:—“No one probably can say with absolute assurance that milk taken from an infected cow is innocuous. But it is nevertheless possible to form some satisfactory conclusions. I myself drink milk and let it be drunk without hesitation, and when I analyse my reasons I find them to be these:—No one has ever heard of cattle disease communicating itself to man in any way. Only gastro-enteric diseases can be easily communicated through the mouth—such as cholera and typhoid. Poisons, as you know, may be sucked from wounds with impunity provided there are no excoriations of the lips. “Matter,” and many other things active under the skin or in the blood, such as small-pox virus, may also be swallowed without detriment: the stomach digests the microbes. Thus, even if diseased (not typhoid) milk should be swallowed, no harm is to be expected. Again, the precursory fever of cattle plague will rapidly suppress the secretion of milk in cows, so that milk taken from infected cattle must be a rarity in the market, and perhaps the term “diseased” cannot properly be applied to such milk. Lastly, diseased milk will in most cases betray itself by peculiarities in appearance, smell, and taste, and thus arrest attention. I may mention that the use of milk is not interdicted at present to the patients in at least one of the principal hospitals of Tokyo. The regulations of the Sanitary Department are instituted, not for the sake of the health of the population, except in so far as that all meat which has not been slaughtered, and that in a healthy state, should be condemned as unfit for human consumption, and liable to produce diarrhoea and other troubles perhaps, while eating at least disgusting. The regula-

tions have for their prime object the stamping out of the disease, and aim at saving the country, through its cattle-dealers and carters, a vast loss of property in beasts."

THE KEROSENE OIL CASE.

MESSRS. MOURILYAN, HEIMANN AND COMPANY take strong exception to a portion of the speech of one of the Counsel for the defence in the recent Kerosene Oil Case, as reported in these columns, and have addressed to us a protest which we publish elsewhere. So far as the Counsel is concerned, we are entirely at one with our correspondents. No barrister has a shadow of right to stand up in open Court, and prefer an injurious charge against one of the parties to a suit unless he is prepared to substantiate his words. The language used by counsel in this particular instance was not only calculated to impair the credit of Messrs. Mourilyan, Heimann and Company, but also attributed to them dishonest motives in bringing the action. There is no excuse for such a method of defence, and we hold with our correspondent that it disgraces the Japanese Bar. But we cannot agree that the Court and the Respondent also should be included in the condemnation. The Court might, and we trust that a British Court would, have subsequently condemned recourse to methods so discreditable. But modern Courts extend great latitude to barristers: latitude which, in our opinion, often amounts to a flagrant abuse, though it finds defenders among jurists of note. Whatever view may be taken, however, of the Court's sin of omission in failing to reprimand the offending barrister, we really do not see why the latter's unfortunate client should be included in our correspondent's denunciation. It is not just, neither is it warrantable, to assume that the Kanagawa Prefectural Authorities instigated Counsel to make the obnoxious insinuation, and most certainly they did not profit by it, for its effect upon their cause could only be injurious. However, our correspondent's indignation is naturally somewhat comprehensive, and we cannot wonder that it should be so.

"A Japanese Student" addresses us on the subject of the Kerosene Oil Case, with special reference to the objectionable remarks made by one of the Counsel for the defence. Our correspondent's comments seem just in the main. Counsel for the Appellant ought certainly to have taken immediate and strong exception to the unwarranted insinuations of the Counsel on the other side, and in the failure to take such exception the public has certainly detected perfunctoriness. But as to the action of the Court, we cannot agree that its silence in the face of such remarks may be condoned by a plea of perfunctoriness on the part of Appellant's Counsel. The Bench does not wait to be instructed as to its duty by the Bar. There are many examples of Judges in England who, without so much as a hint from Counsel, have pronounced most unequivocal and damning condemnation of the methods pursued by a barrister for the prosecution or defence. The Japanese tribunal had an opportunity in the present case of showing its resolve to keep the Courts of this country free from abuses which are unfortunately becoming only too common in the West. It failed to take advantage of the opportunity, which is to be regretted for the sake of its own reputation. Many persons will doubtless hold that there was no abuse at all, and that the best Western authorities sanction the expressions used. But for our own part, we cannot approve such devices. On the other hand, we cannot but agree that in attributing to the respondent the incentive of these objectionable insinuations, Messrs. Mourilyan, Heimann and Co. have committed the very same offence as that which they charge against the respondent's Counsel. There is no evidence whatever that the respondent was either directly or indirectly a party to the insinuations made by his counsel. On the contrary, when, as our correspondent points out, the case was conducted in the lower Court by the official who doubtless in-

structed the counsel acting in the Court of Appeal, not a word was uttered to which exception of any kind could be taken. It is not just or warrantable to invite public condemnation of the respondent, namely, the Governor of Kanagawa or the Councillor of the Prefecture, on the strength of an entirely unsupported suspicion that either the one or the other inspired the improper aspersions uttered by Counsel in Court.

With reference to this kerosene oil case, we take the opportunity of expressing regret that our editorial comments on the proceedings in the Appeal Court should have appeared while a further appeal to the Supreme Court was pending. As a matter of fact the article had stood in type for several weeks, and was not published until, as our information led us to believe, the time for reference to the Supreme Court had long passed.

TENNYSON.

THE home papers by this mail are full of Tennyson. England, bereft of her "Golden-mouthed Virgil," seems to be fully sensible of the large place he occupied in her affections. The burial ceremony in Westminster Abbey is minutely described. But, after all, what need is there to write of such things? Tennyson remains with us wherever and however his body may have been hidden from our sight. Yet there were many interesting incidents connected with the ceremony. That exquisite poem, "Crossing the Bar," one of the poet's last productions, was sung as an anthem, to music by Professor Bridge. The music was criticized by some as jerky, but the general verdict appears to have been that its onomatopoeic effects were very fine. The *Pall Mall Budget* says that the words and phrases were finely brought out, especially in the second line, where the "one clear call" "echoed through the building with thrilling effect." After this the choir sang Tennyson's last poem—"The Silent Voices"—said to have been dictated to his wife only a few days before his death. Lady Tennyson had composed the music for these ten lines.

It has been generally agreed, as already pointed out by a correspondent in these columns, that the particular part of "Cymbeline" which occupied the expiring poet's latest thoughts—he died with his finger between the leaves—was the celebrated "Song":—

Fear no more the heat o' the sun,
Nor the furious winter's rages;
Thou thy worldly task hast done,
Home art gone, and 'tween thy wages
Golden lads and girls all must,
As chimney-sweepers, come to dust.
Fear no more the frown o' the great;
Thou art past the tyrant's stroke;
Care no more to clothe and eat;
To thee the reed is as the oak;
The sceptre, learning, physic, must
All follow this, and come to dust.
Fear no more the lightning flash,
Nor the all-dreaded thunder-stone;
Fear not slander, censure rash;
Thou hast finished joy and moan:
All lovers young, all lovers must
Consign to thee, and come to dust.

The *Pall Mall Budget* says:—

Few of the Laureate's manuscripts have yet come into the market, but the half-dozen which have changed hands so far have been the subject of keen competition in the sale-rooms. The proof-sheets, with autograph corrections, of "Idylls of the Heath" sold for £25 10s. The manuscript of "Poems to the Queen" realized £30; of "The Daisy," £24 10s.; of "The Letters," £18 10s.; of "Stanzas to the Rev. F. D. Maurice," £25; of "The Brook," £51. All these consisted only of a few pages each. A portion of the manuscript of "Maud" was bought a year or two ago for £111.

"Crossing the Bar," of which Canon Ainger speaks as "too sacred for praise or comment," is said by the Canon to have been written in Tennyson's eighty-first year, on the occasion of the poet's journeying across the Solent en route from Aldworth to Farringford. But another authority asserts that the poem was composed many years previously, in response to a reproach

from the poet's nurse who complained that he had never written any hymns. Henry Montagu Butler, the Master of Trinity College, Cambridge, has rendered "Crossing the Bar" into Latin verse, adding the following stanza:—

*Vespertina sonat vox "carbasa pande" monentis;
"Ne timeas portum linguere, Rector adest."
Nulla mora in nobis: ingens iterabimus æquor
Hoc Duce securi, nec piget ire domum.*

Three of the poets who aspire to the vacant laureateship have printed short *in memoriam* pieces to the dead master of song. The first, Mr. Lewis Morris, writes in *The Times*:—

Thy years were come to harvest; homespent years
Of reverence from without, of love within.
A perfect life, health, riches, honours, fame,
All these were thine, no prize was left to win;
Scant sorrow, save that fine despondency
Which fans the smouldering genius into flame;
Only two brief experiences of tears,
The dear friend lost in youth, the son in age;
Bracing thy soul to bear whatever should be.
Such lives Fate grants not often or for long,
And rarest to the suffering ranks of song.
Why should we mourn, save for our private pain.
And friendship which shall never come again?
Our race can never lose thee, whose fair page,
Rich with the harvest of a soul inspired,
So many a weakling life and heart has fired;
Thou art not wholly gone, but livest yet
Till all our England's sons their tongue forget.

Mr. Alfred Austin, who also contributes to the columns of *The Times*, writes:—

A wailing cometh from the shores that veil
Avilion's island valley; on the mere,
Looms through the mist and wet winds weeping bleak
A dusky barge, which, without oar or sail,
Fades to the far-off fields where falls nor snow nor hail.
Of all his wounds He will be healed now,
Wounds of harsh time and vulnerable life,
Fatigue of rest and weariness of strife,
Doubt and the long deep questionings that plough
The forehead of age but bring no harvest to the brow.
And there life will be comforted; but we
Must watch, like Percival, the dwindling light
That slowly shrouds him darkling from our sight.
From the great deep to the great deep hath he
Passed, and, if now he knows, is mute eternally.

The third, and to our thinking the most beautiful, is from the pen of Sir Edwin Arnold, and appears in the *Daily Telegraph*:—

No moaning of the bar. Sail forth, strong ship,
Into the gloom which has God's face for light.
No dirge, but proud farewell from each fond lip,
And praise, abounding praise—Fame's full starlight
Lamping thy tuneless soul to that large room
Where thou shalt choir with angels. Words of woe
Are for the unfulfilled; not those whose moon
Of genius sinks full-orbed, glorious, aglow.
No moaning of the bar. Musical drifting
Of time's waves turning to the eternal sea;
Death's soft wind all thy gallant canvas lifting,
And Christ thy pilot to the peace to be.

ACCIDENT TO COUNT ITO.

ON Sunday afternoon, at 3 o'clock, as the Minister President was driving out of the gate of his residence in Nagatacho in a *jinrikisha* drawn by two men, the vehicle was met by the carriage of Princess Komatsu, which unfortunately happened to be coming out of the opposite gate at the same moment. The *jinrikisha*-drawers, in order to avoid a collision with the carriage, turned sharply to the right, and in doing so overturned the vehicle, the Minister President being thrown out with considerable violence. His Excellency received a severe cut on the temple, and four of his upper front teeth were broken. He did not lose consciousness, though unable to rise from the ground. Dr. Hashimoto was soon in attendance. He pronounced the wounds to be of no special gravity, but said that, in view of the Count's years, forty days would probably be required to restore him completely to health. There are two cuts on the left temple. They are separated externally, but communicate internally. There is also a cut extending from the lower lip down to the chin, so deep that stitches have had to be put in. It is difficult to understand exactly how such injuries were received, but the most reasonable theory is that the Count was thrown head foremost against the hub of the hind wheel of the Princess' carriage. Happily the skull is unhurt, and there are no symptoms of concussion. We need scarcely say that the event caused Original Intimement. All the great folk of

the capital crowded to the Count's residence with anxious inquiries. The poor Princess was so terribly distressed and alarmed that she stood for a long time in the vestibule of the Minister's house, quite unable to speak. Despite the favourable report of the physicians a feeling of keen anxiety prevails, for the Count has not enjoyed robust health lately, and it is understood that such a severe shock may not be without troublesome consequences in the case of a man over fifty years of age. Up to 2 a.m. on Monday morning, no fever had supervened, and the patient was in a satisfactory condition.

We are requested to state that owing to the above accident, Countess Ito will be unable to receive on the 29th instant.

Count Ito, we are happy to say, is progressing favourably. Considering the extent of his injuries there has been very little fever—only 1.7°—and his spirits and appetite are good. He claims to have a distinct recollection of every detail of the incident and to have retained full possession of his senses from first to last. In all probability such was the case, for he walked firmly into his residence, called for water, and washed his wounds himself. He denies that his head or any part of his body struck the carriage of Princess Komatsu, and alleges that his injuries were caused entirely by colliding with stones. It was supposed that the wounds about the mouth and the injury to the teeth would entail silence for several days, but the patient is able to talk and does not appear to suffer from the effort. Of course visitors are strictly excluded, but it is not easy to keep the Minister President entirely tranquil. On Monday morning he sent for the Minister of State for Finance, and conversed with him for some time. A meeting of the Cabinet, which had been arranged to take place on Monday in the Count's residence, was held in the house of the Finance Minister, the business of the hour being the completion of the Budget.

Count Ito's condition on Tuesday was most satisfactory. The slight fever of the preceding day and night had entirely subsided, and the wounds gave every indication of rapid healing. It appears that only two stitches were required, and that they were applied inside the lower lip. The front teeth, originally said to have been completely broken out, have not been broken at all, but owing to the shattering of the gum it was apprehended that they would have to be removed. There is hope now, however, that they may be saved. The event is the topic of the hour in Tokyo. The leading vernacular newspapers comment on it in terms of unanimous and evidently genuine sympathy. They all discuss its bearing on the political situation, and their view is remarkably uniform. We reproduce the gist of some of their comments:—

The *Nichi Nichi Shimbun* declares that often as the Ministry has changed, no statesman so able and learned as Count Ito, has ever directed affairs. Every one waited anxiously to hear this father of the Constitution propound his policy in the Diet. But most regrettably two days before the opening of the session he met with a severe accident, and is compelled to remain inactive for some forty days. It is one of the greatest misfortunes that could have happened in the political world. But as the present Cabinet consists of the ablest statesmen the Empire, it may fairly be assumed that despite the Count's absence his colleagues will follow the policy mapped out by him with their advice. The physicians declare that there is no danger to the Count's life so that some consolation exists. The *Nichi Nichi* hopes that he will soon recover and be able to serve the nation for years to come.

The *Kokkai*, says that when Shingen died Kenshin, his peer and enemy, sighed and said:—"Alas, a noble fellow is dead. I have lost my match!" Again, when Count Okuma was wounded the Anti-Treaty Revision Party's organs all grieved and exclaimed:—"Alas, Count

Okuma is *hors de combat* and we have lost our match!" Now Count Ito has been wounded just on the eve of the opening of the Diet. Have the Popular Party spirit enough to lament that they have lost their match?

The above question of the *Kokkai* elicited immediate replies from all the principal organs of the Popular Party. The *Jiyu*, the Radical organ, says that Count Ito stood at the head of the last and strongest clique of clan statesmen when he formed the present Cabinet, and that as his policy is not yet published, the public are most anxious to hear it. But now a misfortune has befallen him, and the Popular Party are struck dumb with disappointment. The *Jiyu* concludes a brief leader with an expression of sincere hope that the Count will take the utmost care of his wounds, so as to be able soon to appear before the Popular Party, and fight them stoutly, the end in view being the real attainment of constitutional government.

The *Kaishin-to* organs, the *Hochi*, the *Mainichi*, and the *Yomiuri*, all express very similar opinions. They hope that the Count will soon recover, and enter the lists against their Party. The *Mainichi* adds that as the Count's wounds are on his head, the other Ministers of State ought not to weary his brain with political consultations.

MARRIAGE OF MISS C. RICE.

IN a quiet and unostentatious manner, but amid the best wishes of everybody in the slightest degree known to or connected with the bride and bridegroom, were celebrated on Wednesday (St. Andrew's Day), in Christ Church, the nuptials of Miss Clara Edwina Rice and Mr. W. Wallace Campbell. The happy young bride, who so recently came to the "crossing of the stream where womanhood and childhood meet," is the third daughter of Mr. G. E. Rice. She is well known as one of our most charming vocalists—one who has never begrudged the services of her voice at any of our local concerts and entertainments, whether for charity or the public weal. Miss Rice is also the champion lady tennis-player of Yokohama. Mr. Campbell, the bridegroom, is deservedly popular for his genial *bonhomie*, and in the world of aquatics—both on and in the water—has gained for himself no inconsiderable niche as a successful athlete. Mr. E. W. Tilden was best man, and the bride was accompanied by her sister. As the party left the altar the Wedding March was played by Miss Wilcox, and rendered in such a spirited manner as is seldom heard in Yokohama. Many tangible proofs of the warm appreciation in which the young couple are held, graced the gift-table within the last few days.

CONCERT AT THE ACADEMY OF MUSIC.
